GOLD. With a gold production for the United States and colonies of \$92,590,300 in 1916, as compared with \$101,035,700 in 1915, there was a corresponding decline in other coun-

tries so that the total production fell below the figure of \$468,724,918 for 1915, which recorded the high water point in the world's gold production. California and Colorado produced 928,000 fine ounces in 1916. The value of the output of Nevada was \$9,064,700. Alaska produced 780,037 fine ounces valued at \$16,124,000. The 1917 and 1916 production by States is given in the accompanying table.

successful operation towards the end of the year and was designed to deal with certain specific conditions. Conditions in this country were such that under more favorable circumstances additional dredging could be carried on. See METALLURGY AND FINANCIAL REVIEW.

**GOLD COAST.** A British crown colony and protectorate, with Ashanti and the Northern Territories, extending for 334 miles along the

PRODUCTION OF GOLD IN THE UNITED STATES DURING THE CALENDAR YEARS 1916 AND 1917

State or Territory	Gold—1917		Gold—1916

Totals	4,085,589	\$84,456,600	4,479,056	\$92,590,300

At the end of 1917, it was estimated that the gold output of the world was valued at about \$430,000,000 or approximately six per cent less than the 1916 output. The 1917 figure, it should be remembered, was but an estimate although it seemed assured that the production was considerably less than that of the previous year and the increased cost of labor and supplies naturally tended to discourage production as the value of the gold produced remained unchanged.

Dredging operations for gold continued where the machinery had been installed in previous years, but without any notable advance. The usual success was achieved in California and Colorado, while in Alaska existing plants were operating but without any great success as the cost of fuel and labor worked against substantial profits in the territory. In British Guiana and Colombia, the work of the year was fairly successful, and in the latter country, an oil-electric-driven dredge was ready for installation. In Australia, 40 gold dredges were reported operating, but the total dividends from all were said to be exceeded by the earnings of a single dredge in the United States, and in New Zealand, the dredging was hardly more profitable. Dredging continued in the Philippines and machinery of advanced types was in operation. Russia under normal conditions would have made considerable advances in the dredging of gold, and while conditions on the more distant properties were favorable for operation, political events naturally were against further installations or investments. In Chosen, a 10-ft. all-steel electrically driven dredge went into

Gulf of Guinea. Area of the colony, 24,200 square miles; of Ashanti, 20,000; of the Northern Territories, 35,800—total, 80,000. Population of the colony, 853,766; Ashanti, 287,814; Northern Territories, 361,806. Accra, the capital, had 19,585 inhabitants.

\* Including bullion and specie.

The comptroller of customs says in his report: "The colony may congratulate itself once more on its virtual immunity during the year from the consequences of the war, and on being able to increase its trade in spite of the disturbed markets abroad and shortage and uncertainty of shipping at home. No doubt a large proportion of the increased value of imports, but by no means the greater, was due to inflated prices, but that these prices did not discourage or stop imports is more of a tribute to the wealth of the colony and the prodigality of its possessors when it comes to buying what they want. The holding up of the 1916-17 cacao crop for want of shipping was a disappointment, of course, and might easily have led to drastic economies among the natives, but that such an occurrence is not regarded as serious and that the accumulated wealth of recent and more prosperous years is readily available for

present necessities, and even luxuries, is a very striking indication of the colony's financial progress."

**GOLD MOVEMENTS IN 1917.** See FINANCIAL REVIEW.

**GOLF.** The executive committee of the United States Golf Association cancelled all its annual tournaments in 1917 following the declaration of war. The big Eastern associations took the same step with the result that only the Western and Southern organizations held title competitions. The abandonment of these fixtures, however, did not sound the doom of this sport for the year as in their stead a host of exhibition matches were arranged, the proceeds from which were turned over to the Red Cross and various other war relief funds. An appeal was made by Howard F. Whitney, secretary of the U. S. Golf Association, to 1497 golf clubs throughout the country with the result that more than \$75,000 was raised in special one-day tournaments, and a grand total of \$500,000 during the season.

Charles E. (Chick) Evans, holder of the amateur and open titles had no occasion to defend his laurels in 1917 and took part in none of the tournaments held. He played several exhibition matches during the year, his best work being accomplished in a four-ball contest at the Whitemarsh Valley Club where he and Norman H. Maxwell defeated James Barnes and Edward Loos, two Philadelphia professionals after two extra holes. It was the fine work of Evans that made the victory won by him and his partner possible.

Francis Ouimet, who later joined the colors, was invited by the Western Association to compete in the amateur tourney and carried off the title. Ouimet was ineligible to compete under a ruling of the U. S. G. A. but the Western body refused to support the contention of the former that Ouimet in selling golf paraphernalia had lost his standing as an amateur.

The Western open championship was won by James M. Barnes who established a record of 283 for 72 holes. Robert Jones hailed as the "boy wonder" of Atlanta, Ga., captured the Southern amateur title. Another youngster to distinguish himself was Norman H. Maxwell who won the United North and South amateur championship from a field including such veterans as John G. Anderson and Gardiner W. White of New York and William Fownes of Pittsburgh, Pa.

Miss Alexa Stirling of Atlanta, women's national champion, did not take part in any tournaments during the year. This left the field clear for Mrs. William A. Gavin of Baltusrol who won the women's Metropolitan Golf Association championship. She also defeated Jerome D. Travers in a 36-hole handicap match in which Travers allowed her nine strokes in each eighteen. In the West Mrs. F. C. Lette of Cincinnati retained her title by defeating Miss Elaine V. Rosenthal in the final match.

**GOMPERS, SAMUEL.** See UNITED STATES AND THE WAR.

**GÖRZIA.** The Italian form of Görz, capital of the Austrian crownland of Görz and Gradisca (q.v.). See WAR OF THE NATIONS.

**GÖRZ AND GRADISCA.** A crownland of Austria, lying between Venetia on the west and Carniola on the east. Area, 1127 square miles. The population according to the census

of December 31, 1910, was 260,721, as compared with 232,897 in 1900. In 1910 the number of Austrian subjects was 249,893; of these, Slovenian was the vernacular of 154,564 (61.85 per cent); Italian (including Ladin), 90,119 (36.06 per cent); German, 4486 (1.80 per cent). Of the population in 1910, Catholics numbered 259,488 (99.53 per cent); Evangelicals, 749; Jews, 338. About 59 per cent of the inhabitants were dependent on agriculture. The capital is Görz (Goritz, Gorizia); population (1910), 30,995. The crownland has a unicameral diet of thirty members and is represented in the Austrian Reichsrat by six members.

**GOTCH, FRANK.** The retired heavyweight champion wrestler of the world died on December 16, 1917. He was born at Humboldt, Iowa, on April 28, 1878. He was the first man to use the famous "toe hold." He won the world's title from Jenkins, in 1904. His greatest match was probably the one in 1910, when he pinned Zbyszko's shoulders to the mat in six and one-quarter seconds. His wonderful endurance was shown in his first match with Hackenschmidt, when the latter gave up the contest after two hours and three minutes of gruelling wrestling. Gotch retired from the mat in 1911.

**GOUCHER COLLEGE.** A non-sectarian institution for the education of women, at Baltimore, Md. There were 704 students in the fall of 1917 and 54 members of the faculty; of the latter about twelve were additions over the previous year. Volumes in the library numbered 35,000. Productive funds amounted to over \$1,000,000 and the income in 1917 was \$160,000. A gift of \$250,000 from the General Education Board and the Rockefeller Foundation was received in 1917. Goucher College was founded in 1885. President, Wm. W. Guth, Ph.D.

**GOVERNMENT OWNERSHIP.** See RAILWAYS.

**GRAIN.** See FOOD CONTROL; OATS; WHEAT; ETC.

**GRATAOAP, LOUIS POPE.** Dean of the curators of the Museum of Natural History in New York City, died on December 19, 1917. He was born in Brooklyn, N. Y., in 1850 and graduated from the College of the City of New York in 1869. He then studied at the School of Mines at Columbia University and later did research work in geology and mineralogy. He became assistant curator in mineralogy at the Museum of Natural History in 1876 and in 1900 was made curator in the same branch. Later he became head of the conchology department also. His work in public education at the museum was especially noteworthy. Among his publications are: *Geology of the City of New York*; *Popular Mineralogy*; *A Woman of the Ice Age*; and *The Certainty of a Future Life on Mars*.

**GRAVEURE, LOUIS.** See MUSIC, Artists.

**GREAT BRITAIN.** THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. A constitutional monarchy. The capital is London. Great Britain consists of England, Scotland, and Wales, but the term "Great Britain" is often used to mean United Kingdom. England and Wales in many respects are regarded as a single division of the United Kingdom. Attached to the United Kingdom, but regarded neither as parts of it nor yet as colonies, are the Isle of Man and the Channel Islands. All of these terms are comprehended in "British Isles." The United Kingdom and its possessions, that is, all

territories subject to the ultimate control of the Parliament at London, constitute the British Empire.

**AREA AND POPULATION.** The area of the United Kingdom, including inland water, is stated at 121,331 square miles; with the Isle of Man and the Channel Islands, 121,633 square miles. The latter area is about 58.2 per cent of the area of Germany, or somewhat less than the combined areas of Missouri and Arkansas (122,755 square miles). The population of the United Kingdom, as estimated for June 30, 1914, a month before the outbreak of the great war, was 46,089,249, thus distributed: England and Wales, 36,960,684; Scotland, 4,747,167; Ireland, 4,381,398. The estimated population of the United Kingdom on June 30, 1914 (46,089,249), was about 68 per cent of the estimated population of Germany on the same date. As estimated for June 30, 1915, the civil population of England and Wales was 35,358,896; the total population of Scotland, 4,785,598; the population of Ireland, taking into account the movements of the military, 4,337,000. The table below shows by divisions the area, the population present according to the censuses of April 1, 1901, and April 3, 1911, and the average density per square mile in 1911:

	Sq. m.	Pop. 1901	Pop. 1911	Dens.
England *	50,874	30,818,043	34,045,290	669
Wales .....	7,466	1,714,800	2,025,202	271
Scotland .....	30,406	4,472,108	4,760,904	156
Gr. Britain...	88,745	37,004,946	40,831,396	460
Ireland .....	32,586	4,458,775	4,390,219	135
U. Kingdom...	121,331	41,458,721	45,221,615	373

Br. Isles....	121,633	41,609,091	45,370,530	374

\* Including Monmouthshire.

The population of England, Wales, and Scotland has steadily increased; the rural population of Scotland, however, is virtually stationary. For Ireland the 1841 census showed the maximum population. Census returns at different periods have been as follows:

	E. & W.	Scot.	Ire.	U. K.
1841....	15,914,148	2,620,184	8,196,597	26,730,929
1861....	20,066,224	3,062,294	5,798,967	28,927,485
1871....	22,712,266	3,360,018	5,412,377	31,484,661
1881....	25,974,489	3,785,573	5,174,836	34,884,848
1891....	29,002,525	4,025,647	4,704,750	37,732,922
1901....	32,527,843	4,472,103	4,458,775	41,458,721
1911....	36,070,492	4,760,904	4,390,219	45,221,615

Of the total population, the percentage in England in 1841 was about 56.1 and in 1911 about 75.3; Wales, 3.4 and 4.5; Scotland, 9.8 and 10.5; Ireland, 30.7 and 9.7.

In 1911, males in the United Kingdom numbered 21,946,495, and females 23,275,120 (1061 females to each 1000 males), distributed thus: England, 16,421,298 males and 17,623,992 females (1073 females to each 1000 males); Wales, 1,024,310 and 1,000,892 (977); Scotland, 2,308,839 and 2,452,065 (1062); Ireland, 2,192,048 and 2,198,171 (1003).

In England and Wales, the percentage of the population in urban districts in 1911 was

78.1, as compared with 77.0 in 1901 and about 50.2 in 1851. The urban population was 28,162,936, and the rural 7,907,556. There were in 1911 97 urban districts (counting the administrative county of London as one district) in England and Wales, with a population of over 50,000 each; the population of these districts was 17,251,009, or 47.8 per cent of the total. Estimated population of "Greater London" (693 square miles) in 1914, 7,419,704; administrative county of London (117 square miles), 4,518,021. The table below shows for the larger municipalities after London the estimated population in 1914:

Birmingham .....	860,591	Stoke-on-Trent .....	239,515
Liverpool .....	768,926	Salford .....	233,970
Manchester .....	781,830	Leicester .....	231,152
Sheffield .....	472,234	Cardiff .....	186,763
Leeds .....	457,507	Bolton .....	184,026
Bristol .....	361,573	Croydon .....	178,511
West Ham .....	294,476	Willesden .....	167,000
Bradford .....	290,642	Rhondda .....	156,000
Kingston-upon-.....		Sunderland .....	152,436
Hull .....	287,472	Oldham .....	150,056
Newcastle-upon-.....		East Ham .....	142,905
Tyne .....	271,523	Birkenhead .....	135,789
Nottingham .....	264,970	Blackburn .....	134,015
Portsmouth .....	241,748	Brighton .....	133,186

In Scotland, estimated burgh populations were as follows in 1915: Glasgow, 1,072,793; Edinburgh, 326,901; Dundee, 178,574; Aberdeen, 164,307; Paisley, 88,717; Leith, 81,178; Greenock, 77,695; Coatbridge, 44,612; Motherwell, 41,741; Kirkcaldy, 40,796.

In Ireland, the estimated population of Dublin (with suburbs) in 1914 was 406,000; Belfast, 399,000. The county borough of Cork had in 1911 76,673 inhabitants; Londonderry, 40,780; Limerick, 38,518.

The table on the following page shows the total number, together with the rate per thousand of population, of births, deaths, and marriages in each division of the United Kingdom. The figures for marriage rate represent not the number of marriages but the number of persons married per thousand of population.

In 1914 and 1915 respectively, illegitimate births in England and Wales numbered 37,329 and 36,245; in Scotland, 8879 and 7875; in Ireland, 2943 and 2953.

The table below shows for various years the number of passengers that arrived in or left the United Kingdom from or for countries out of Europe, distinguishing British and aliens (the last column shows the number of British passengers from and for the United States):

	British	Aliens	Total	U. S.
Arrivals	1905. 122,712	77,906	205,198	61,373
"	1910. 164,139	134,640	298,779	58,623
"	1913. 227,643	144,975	372,618	77,014
"	1914. 293,870	170,022	359,892	77,171
"	1915. 329,652	17,537	147,189	47,296
Departures	1905. 262,077	188,422	459,662	122,370
"	1910. 397,848	221,011	618,859	132,192
"	1913. 469,640	232,051	701,691	129,169
"	1914. 293,204	158,234	451,438	92,808
"	1915. 104,919	21,588	126,507	37,763

\* In 1905, 4573 arrivals and 9163 departures were not distinguished as either British or aliens.

**PUBLIC EDUCATION.** See preceding YEAR BOOKS. The compilation of statistics of school attendance in England and Wales is suspended during the war.

\* Cwt.

Figures in the foregoing table are subject to revision. The food situation caused by the great war has proved an unprecedented stimulus to British and Irish agriculture. The scarcity of male labor necessitated to a greater degree than ever before the use of machinery, especially the tractor for plowing; and it is not unlikely that for the most part the cultural methods thus forced upon the people will remain permanent. In England in 1917 tractor plows placed in cultivation large areas of grass lands that had not been turned in perhaps half a century. Preliminary returns indicated a greater agricultural development in Ireland in 1917 than in Scotland. In 1917 Ireland had over 47,000 acres more under wheat than in 1916, about 27,000 acres more under barley, about 392,000 acres more under oats, and about 123,000 acres more under potatoes. In 1915 the Irish acreage under flax was 53,143, in 1916 about 91,000, and in 1917 special efforts were directed toward increasing this crop.

The total area under cultivation in the United Kingdom (including the Isle of Man and the Channel Islands), as reported for the first week of June, 1915, was 46,675,407 acres, as compared with 46,763,816 acres in 1914. The cultivated area in 1915 was distributed as follows: Great Britain, 31,834,497 acres; Ireland, 14,719,688; Isle of Man and the Channel Islands, 121,222. The following table shows the total acreage under principal crops in 1915, the production in 1914 and 1915, and the yield per acre in 1915 (the figures for acreage include, while those for production exclude, the comparatively small returns of the Isle of Man and the Channel Islands):

Farm live stock in June, 1915, and 1916, with percentage of increase: horses, 1,711,858 and 1,834,215 (increase 6.2 per cent); cattle, 12,171,452 and 12,451,540 (2.3); sheep, 28,275,970 and 28,849,655 (2.0); swine, 3,795,131 and 3,615,891 (decrease 4.7 per cent). See AGRICULTURE.

**MINING.** In 1915 persons employed at mines numbered 973,473, of whom 768,542 males worked under ground and 199,270 males and 7661 females above ground. By far the most important mineral mined is coal, and the most important metal is iron. The coal output in 1916 was about 255,850,000 tons, as compared with 253,206,081 tons in 1915. Counties having the larger shares in the 1915 output were: Yorkshire, 40,357,917 tons; Durham, 33,737,985; Glamorgan, 33,110,247; Lancashire, 21,405,832; Derbyshire, 16,652,123; Lanarkshire, 15,393,799; Monmouthshire, 14,224,795; Staffordshire, 13,353,364. Spot value of coal raised in 1915, £157,830,670, as compared with £132,596,853 in 1914. For production of iron ore and metals, see the 1916 YEAR BOOK.

**SEA FISHERIES.** Wet fish (exclusive of salmon and shell fish) reported as landed on the coasts of the United Kingdom in 1915 amounted to 8,637,665 cwts., valued at £9,776,-

'729; in 1914, 18,155,126 cwts., £11,228,829; in 1913, 24,657,116 cwts., £14,229,311. The value of shell fish landed in 1915 was £389,174; in 1914, £401,812; in 1913, £463,642. The haddock catch in 1914 and 1915 respectively was valued at £1,645,759 and £2,337,128; cod, £2,321,617 and £2,131,470; herring, £2,115,899 and £1,632,368; hake, £685,416 and £310,265; mackerel, £223,138 and £267,300; whiting, £397,462 and £379,008; mackerel, £223,138 and £267,300; sole, £359,386 and £228,859.

COMMERCE. In respect to the figures of imports and exports since August, 1914, the accounts of goods imported do not include certain goods which, at the time of importation, were the property of the British Government or the governments of the other Allies. The accounts of goods exported include goods bought in the United Kingdom by or on behalf of the governments of the other Allies, but do not include goods taken from government stores or goods bought by the British Government and shipped on Government vessels. The table below shows total imports, imports reexported, and net imports (that is, imports for home consumption). The figures here given are exclusive of specie and bullion, of foreign merchandise transhipped under bond, and of diamonds from the Union of South Africa.

	Total Imports	Reexports	Net Imports
1911	£680,157,527	£102,759,134	£577,398,393
1912	744,640,681	111,787,691	632,852,990
1913	768,734,739	109,575,087	659,159,702
1914	696,635,113	95,474,166	601,160,947
1915	851,893,350	99,062,181	752,831,169
1916	948,506,492	97,566,178	850,940,314

Total exports, reexports (exports of foreign and colonial produce), and domestic exports (exports of British and Irish produce) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

	Total Exports	Reexports	Dom. Exps.
1911	£556,878,432	£102,759,134	£454,119,298
1912	598,961,180	111,787,691	487,223,439
1913	634,820,826	109,579,037	525,245,289
1914	526,195,528	95,474,166	430,721,357
1915	488,980,629	99,062,181	384,868,448
1916	603,845,885	97,566,178	506,279,707

In 1914 imports and exports of gold and silver specie and bullion amounted to £70,595,001 and £41,488,125 respectively; in 1915, £21,388,527 and £46,578,689.

The following table shows total imports of merchandise, valued in thousands of pounds:

	1914	1915	1916
FOOD, DRINK, AND TOBACCO	296,969	380,875	419,167
Non-durable	221,463	290,657	321,284

<b>Total domestic exports.</b>	<b>480,721</b>	<b>384,868</b>	<b>506,280</b>

\* Excluding boots and shoes.

The value of domestic exports in eleven months of 1917 was reported at £488,168,477, as compared with £466,351,247 in the corresponding period of 1916 and £350,920,929 in that of 1915.

Wheat imports in 1914 amounted to 103,926,743 cwt.; in 1915, 88,867,900; in 1916, 100,070,320. Of the latter amount, 64,544,100 cwt. were from the United States, 21,551,000 from Canada, 5,611,900 from India, 4,495,700 from Argentina, and 3,699,620 from Australia. Imports of wheatmeal and flour in 1914, 10,060,223 cwt.; in 1915, 10,482,170; in 1916, 9,960,325. Leading imports for home consumption in 1914 and 1915 respectively: Wheat, 103,245,748 and 88,488,693 cwt.; wheatmeal and flour, 9,838,903 and 10,066,335; maize, 37,499,833 and 45,837,969; rice, rice meal, and flour, 5,998,717 and 10,338,697; butter, 3,893,029 and 3,806,743; margarine, 1,520,462 and 2,049,137; cheese, 2,380,277 and 2,677,854; raw cocoa, 55,832,547 and 90,204,089 lb.; fresh and refrigerated beef, 8,223,028 and 8,238,907 cwt.; fresh and refrigerated mutton, 5,113,131 and 4,651,028; bacon and hams, 5,836,475 and 7,772,242; sugar (in equivalent of refined), 32,836,751 and 32,119,082; tea, 317,478,084 and 316,813,863 lb.; cotton, 1,647,869,800 and 2,303,978,100 lb.; wool, 421,635,102 and 811,505,193 lb. The total cotton import in 1915 was 2,647,616,100 lb., of which 2,022,385,900 lb. from the United States and 448,490,800 lb. from Egypt. The total wool import in 1915 was 934,495,242 lb., of which 426,163,648 lb. from Australia, 200,031,839 lb. from New Zealand, 136,565,278 lb. from British possessions in South Africa, 88,677,709 lb. from South America, and 65,432,255 lb. from British India.

Some of the exports (produce of the United Kingdom) in 1914 and 1915 respectively: cotton yarn, 178,496,800 and 188,169,200 lb.; cotton piece goods, 5,735,744,500 and 4,748,452,900 yds.; woollen tissues, 81,996,700 and 92,330,600 yds.; worsted tissues, 70,304,400 and 55,769,500 yds.; jute yarn, 34,706,800 and 36,732,100 lb.; jute piece goods, 134,743,100 and 109,156,200 yds.; linen piece goods, 178,893,200 and 128,776,400 yds.; oil cloth, 43,602,400 and 30,900,300 sq. yds.; spirits, 10,103,096 and 8,912,750 proof gals.; manufactured tobacco and snuff, 34,899,549 and 36,179,465 lb.; coal (exclusive of bunker coal), 59,039,880 and 43,534,560 tons; wool, 38,458,000 and 32,002,900 lb.; iron and steel and manufactures thereof, 3,884,153 and 3,196,983 tons.

The table below shows the total imports of merchandise consigned from and the total exports of merchandise consigned to the principal countries, in thousands of pounds sterling.

	Imports		Exports

<b>Total, incl. others.</b>	<b>71,126</b>	<b>53,356</b>	<b>68,963</b>	<b>51,142</b>

At the end of 1914 and 1915 respectively, the number of vessels, with net tonnage, comprising the British merchant marine was as follows: sail, 8203 vessels, of 793,567 tons, and 8019 vessels, of 776,761 tons; steam, 12,682 vessels, of 11,621,635 tons, and 12,771 vessels, of 11,650,349 tons; total, 21,065 vessels, of 12,415,202 tons, and 20,790 vessels, of 12,427,110 tons.

Number and net tonnage of vessels (other than war vessels) built in the United Kingdom in 1914 and 1915 respectively: sail, 281 vessels, of 29,107 tons, and 158 vessels, of 12,942 tons; steam, 858 vessels, of 1,006,065 tons, and 394 vessels, of 397,212 tons; total, 1139 vessels, of 1,035,172 tons, and 552 vessels, of 410,154 tons.

In 1914, 129 merchant vessels, of 196,564 tons

net, were built for foreign owners; in 1915, 30 vessels, of 35,708 tons net. In 1914, 327 merchant vessels on the British register, of 398,929 tons net, were sold to foreign countries; in 1915, 98 vessels, of 156,697 tons net. See NAVAL PROGRESSES.

The situation at the close of the year 1917 was outlined as follows:

"No complete figures are available as to the construction and destruction of shipping in 1917 as yet. On the basis of reliable estimates the net deficit created by the German submarines appears to be in the neighborhood of 1,000,000 tons gross. This figure is reached as follows:

"The British Admiralty reported the loss of 717 ships of over 1600 tons gross and of 280 ships of less than that tonnage during the period beginning with the last week in February, 1917, and ending December 23. Estimating the size of the larger ships at 3800 tons and of the smaller at 1000 tons, the British losses aggregate 2,984,000 tons for this period and something more than 3,000,000 tons for the year.

"Prior to February, 1917, British losses constituted about 60 per cent of the total tonnage destroyed. There is no reason to believe that this ratio materially changed. This means that the destruction of tonnage reached at the end of 1917 an aggregate of about 5,000,000 tons gross.

"The shipyards of the Entente and of the United States are estimated to have accounted for an output during 1917 of 2,500,000 tons gross, making a total with the production of other nations of 3,000,000 tons. The difference between production and destruction, therefore, works out at 2,000,000 tons, against which must be set approximately 1,000,000 tons of German and Austrian ships seized by the United States and Brazil.

"The task of the Allied shipbuilders is first to make good this deficit, while continuing to keep pace with U-boat destruction. After this has been accomplished the great need for additional tonnage must be met and the responsibility of supplying America's requirements rests solely on the United States. The other Allies will have enough to do to expand their merchant marines for their own needs."

See SHIPPING, and SUBMARINE OPERATIONS.

**COMMUNICATIONS.** On December 31, 1915, the length of railway line open to traffic in the United Kingdom was 23,709 miles; on December 31, 1914, 23,701 miles; which represented 55,663 miles of single track. Of the 23,709 miles of line open to traffic in 1915, 13,430 miles were of two or more tracks and 10,279 miles of single track. England and Wales had 16,418 miles of line (of which 11,007 miles double or more); Scotland, 3882 (1696); Ireland, 3409 (727). In consequence of special arrangements made in connection with the war, financial returns of the railways for 1914 and 1915 are incomplete, but the following figures are reported for those years respectively: total paid-up capital (including nominal additions), £1,341,220,000 and £1,347,312,000; average rate of dividend or interest, 3.52 and 3.53 per cent (on account of the nominal additions made to the capital, these rates are lower than they otherwise would be); gross receipts, £139,098,365 and £144,860,250; working expenses, £88,173,232; net receipts, £50,925,133 and £51,481,378; proportion of working expenses to gross receipts, 63 and 64. Gross receipts and working expenses in England and Wales in 1915, £124,117,292 and £80,470,368; in Scotland, £15,665,652 and £9,658,292; in Ireland, £5,077,306 and £3,250,212.

Length of tramway line and light-railway line at the end of 1914, 2703 miles, of which 2213 miles were in England and Wales, 317 miles in Scotland, and 173 miles in Ireland. See CANALS.

During 1917, the railways of Great Britain were run entirely with a view to military considerations, and with due regard to economies.

A system of pooling freight cars came into force on January 2, 1917, while at the same time a number of simplifications in the systems of accounts and records pertaining to passenger goods and other traffic were instituted. In January, 1917, passenger rates were raised about 50 per cent, and the Irish railways which for two years of the war had been outside of the Government control were taken into it. The increase in passenger rates was not so much to increase revenue as to reduce the amount of traveling, so that the lines could be entirely at the disposal of the military authorities for the transport of troops and freight, especially munitions and supplies. In 1916 and 1917, rails and rolling stock were transported to France, and British railroad builders from Canada laid a number of important and useful lines, on which British rolling stock was operated by the Railroad Corps, recruited from practical British railroad men. In this way the army in France was aided, as rails could be torn up and relaid, and used rolling stock shipped across the Channel much quicker than material of this kind could be manufactured.

In their organization and operation on a war basis the railways of Great Britain continued to grow more efficient, although various shortages in equipment and particularly in rolling stock were felt. Some idea of the immensity of the operations can be appreciated by the fact that up to the end of 1915 "moves were made overseas of 100,000 officers, 2,586,000 other ranks, 542,000 horses." In the same period in addition to supplying various small camps, there were sent out to France "388,000 tons of food, 553,000 tons of forage, 59,000 tons of fuel, and 29,000 tons of medical stores; 17,338,000 gallons of petrol and 4,911,000 gallons of oil. 491,000 mail bags were carried and 14,000 tons of parcels. The total tonnage of stores shipped out to our army was also not inconsiderable and had as some of its principal items 184,000 tons of engineering stores, 131,000 tons of ordnance, 92,000 tons of clothing, 40,000 tons of sand bags, 27,000 tons of entrenching and camping equipment, 13,000 tons of barbed wire, 12,000 tons of tentage, as many of canteen, and as many of saddlery and harness." These figures for the war up to 1915 were exceeded in 1916 and in 1917, although there were no statistics available. This condition and the future of the British railways naturally was a matter of discussion, and president of the Board of Trade, Sir Albert Stanley, speaking to the Associated Society of Locomotive Engineers and Firemen, whose unions had been demanding an eight-hour day, said that "the present system of railways control would continue for some time after the war." This and other declarations aroused considerable interest in view of the changed economic and political conditions, although nothing definite was settled in this connection. One effect of state control, however, had been that the Government was forced to realize the existence of the trade unions, and had formulated negotiations with them with the result that trade unions increased in number and influence, and labor conditions were tending toward a situation that might be difficult in the future.

The year under review was marked by a number of operating economies and a decrease in service for the general public. Trains were reduced and the railways were authorized to

refuse to carry luggage exceeding 100 pounds a passenger. Cheap fare facilities were withdrawn with the exception of workmen's tickets, season tickets, and other combinations. Dining and restaurant cars were withdrawn, and the collection and delivery service was curtailed. Traffic dispatched by passenger trains had to be prepaid and the regulations regarding demurrage on railway stock were rigorously enforced. In fact, various powers that would have been considered most extraordinary were assumed by the Board of Trade, and Great Britain virtually had an experience of Government operation.

On July 4, 1917, an important scheme was published by the controller of coal mines, whereby England, Wales, and Scotland were divided into twenty areas, so that each area would take its supplies from certain fixed districts of production, so that the consumption of coal would take place as near the producing mines as possible. It was estimated that this plan would result in saving of rail transport of not less than 700,000,000 ton miles annually, while the movement of coal was arranged in certain well-defined directions. This measure was taken to prevent the unfortunate conditions of the previous winter, due to the lack of coal in certain districts, and its irregular receipt in others. In the opinion of some critics, the question of privately owned freight cars which in many cases were hauled back empty was another serious element in the British railway situation that had not been removed in 1917.

There was practically no new railway construction or other work more than what was necessary for maintenance during the year, 1917, on account of the scarcity of labor and the necessary materials as well as other conditions due to the war.

On January 1, the Irish railways passed under the control of the Government to be administered by an Irish Railway Executive Committee in a manner similar to that of the British railways, while on March 1, the canals belonging to private companies were taken over by the Government and were to be operated in coördination and coöperation with the railways. The tendency towards Government ownership was marked further by the Government control of all tramway undertakings which were placed under the administration of a special committee; the object of this change was to facilitate the transportation of munition and other workers to and from places of employment and to cut down the unessential services as to seaside resorts.

During the year, there were various advances in wages to paid workers on British railways in response to demands. Thus on April 12, the men who received a war bonus of 10s. per week and boys having one-half of this amount, were granted an increase of 50 per cent, and on August 8, the bonus was converted into standard wages so that every day and Sunday duty could be calculated at a higher rate. A strike was authorized by the Associated Society of Locomotive Engineers and Firemen, numbering some 30,000 members, who wanted an eight-hour day, but the president of the Board of Trade in reply intimated that before the railways passed from the control of the Government at the end of the year, this and similar questions would be investigated, and at the same time, the matter of increased compensation was referred to

the committee on production, which granted an extra 5s. Other employees asked for a revision of wages and an additional 6s. was awarded, which was increased by another shilling by the committee on production. At the end of the year, all men received an extra 21s. per week, all youths 10s. 6d., all women over 18 years old, 8s. 6d., and all girls under 18 years, 4s. 3d. See LABOR.

One of the evils of the lack of national standardization was shown in the war work of the British railways. These railways had not been organized either on the military basis of the Germans and other continental nations, or on the other hand, so as to secure interchangeability of equipment, such as was practiced on American lines. Accordingly, there were three kinds of brake arrangements, so that the rolling stock of the different companies could not always be made up into one train even after it had been decided to interchange the various cars, and to secure their through transportation. Furthermore, on these lines, width of the rolling stock and the interval between the different tracks varied at times, so that in making up trains, the officials had to use unusual care.

**FINANCE.** The legal standard of value is gold. The monetary unity is the pound sterling. Par value of the pound sterling, \$4.86656; exchange value, October 1, 1917, \$4.755. In years ended March 31, revenue (receipts into the exchequer) and expenditure (issues out of the exchequer chargeable against revenue) have been as follows, in thousands of pounds sterling:

	1912-13	1913-14	1914-15	1915-16	1916-17
Rev. . .	188,802	198,243	226,694	336,767	573,428
Exp. . .	188,622	197,493	500,474	1,559,158	2,198,113

For the year ending March 31, 1918, estimated revenue, £638,600,000; estimated expenditure chargeable against revenue, £2,290,381,000; estimated deficit, £1,975,000,000. Details of estimated revenue, 1917-18: customs, £70,750,000; excise, £34,950,000; estate duties, etc., £29,000,000; stamps, £8,000,000; land tax, £650,000; house duty, £1,950,000; income tax (including super-tax), £224,000,000; excess profits duty (including munitions levy), £18,000,000; additional taxation, £20,000,000; land value duties, £400,000 (total tax revenue, £569,700,000); postal service, £24,200,000; telegraph service, £3,250,000; telephone service, £6,250,000; crown lands, £600,000; sundry loans, etc., £7,500,000; miscellaneous, £27,100,000 (total non-tax revenue, £68,900,000); total revenue, £638,600,000.

Details of estimated expenditure chargeable against revenue, 1917-18: national debt (inside the permanent or fixed annual charge), £17,000,000; national debt (outside the permanent or fixed annual charge), £194,500,000; payment to local taxation accounts, etc., £9,700,000; other consolidated fund services, £1,695,000 (total consolidated fund services, £222,895,000); army, navy, and ministry of munitions, £33,000 (nominal, the full expenditure being included in the last item, votes of credit); old age pensions, £12,200,000; labor exchanges, insurance, etc., £8,542,000; education and other civil services, £40,482,000 (total civil services, £61,224,000); customs, excise, and inland revenue, £5,249,000; post office services, £25,980,000 (total supply,

services, which include civil services, £92,486,000; votes of credit (for military and naval operations, etc.), £1,975,000,000; total, £2,290,381,000.

The total national expenditure from August 1, 1914, to December 22, 1917, was reported at about £6,250,000,000; of this, £1,472,000,000 was raised by revenue, the remainder by various borrowing operations.

At the end of 1917 the British national debt was increasing at the rate of at least £1,000,000,000 every six months. At the end of the fiscal year 1917, that is, on March 31, the estimated gross liabilities of the state were about £3,900,000,000. The gross liabilities as officially reported for March 31, 1916, were £2,197,439,245, consisting of the following: funded debt, £318,460,277; estimated capital liability in respect of terminable annuities, £26,158,871; unfunded debt, £1,796,129,496; other capital liabilities, £56,960,601. Excepting this last item, these liabilities constitute the so-called dead-weight debt, amounting on March 31, 1916, to £2,140,748,644, as compared with £1,108,817,076 on March 31, 1915, and £661,270,091 in 1914.

Toward the end of 1917 the total cost of the war to the United Kingdom from August, 1914, to April, 1918, was estimated at £6,292,000,000. It was believed that the votes of credit in the fiscal year 1917-18 would exceed the budget estimate (£1,975,000,000) and reach the sum of £2,300,000,000. Votes of credit from August 6, 1914, to October 30, 1917, were as follows, in fiscal years:

Votes of Credit 1914		Votes of Credit 1916	
Aug. 6.....	100,000,000	Feb. 21.....	300,000,000

Average daily cost of the war to the United Kingdom, in 1917: April 1 to May 5, £7,457,000; April 1 to June 9, £6,723,000; April 1 to October 27 (unofficial calculation), £6,411,000.

**GOVERNMENT.** The Liberal ministry of Herbert Henry Asquith, which came into power April 8, 1908, was succeeded May 25, 1915, by a coalition ministry, in which Mr. Asquith retained the premiership. On December 7, 1916, David Lloyd George accepted the post of prime minister, continuing as such through 1917. Near the end of 1917 the ministers who constitute the cabinet were as follows: Prime Minister and First Lord of the Treasury, David Lloyd George; Lord High Chancellor, Baron Finlay; Ministers Without Portfolio, Viscount Milner, George N. Barnes, Sir Edward Carson, and Lt. Gen. Jan C. Smuts; Lord President of the Council, Earl Curzon (the foregoing formed the "War Cabinet"); Lord Privy Seal, Earl of Crawford; First

Lord of the Admiralty, Sir Eric Geddes; Secretary of State for Home Affairs, Sir George Cave; Secretary of State for Foreign Affairs, Arthur James Balfour; Secretary of State for the Colonies, Walter Long; Secretary of State for War, Earl of Derby; Secretary of State for India, Edwin S. Montagu; Chancellor of the Exchequer, Andrew Bonar Law; Minister of Munitions, Winston Spencer Churchill; President of the Air Board, Baron Rothermere; President of the Board of Trade, Sir Albert Stanley; President of the Local Government Board, W. Hayes Fisher; President of the Board of Education, Herbert A. L. Fisher; President of the Board of Agriculture and Fisheries, Rowland E. Prothers; Chief Secretary to the Lord Lieutenant of Ireland, Henry Edward Duke; Postmaster-General, Albert Illingworth; Secretary for Scotland, Robert Munro; Chancellor of the Duchy of Lancaster, Sir Frederick Cawley; First Commissioner of Works, Sir Alfred Mond; Attorney-General, Sir Frederick Edwin Smith; Minister of Blockade, Lord Robert Cecil; Minister of Labor, George H. Roberts; Pensions Minister, John Hodge; Food Controller, Baron Rhondda; Shipping Controller, Sir Joseph P. Maclay; Director-General of National Service, Sir Auckland Geddes; Reconstruction Minister, Christopher Addison.

#### HISTORY

**THE OPENING OF PARLIAMENT.** Parliament was opened by the king on February 7, but without the usual ceremony. Instead of the customary robes and regalia the king came in his uniform, as Admiral of the Fleet, and his example was followed by the other dignitaries. In the king's speech he said that the response of the Allies to the American president's invitation had outlined their war aims as far as possible.

**NATIONAL SERVICE BILL.** There had been long discussions of the need of a comprehensive plan for National Industrial Service, and on February 6, the measure was introduced requiring all men between the ages of eighteen and sixty-one to be enrolled. Volunteers also were to be asked to engage in any trade that might be assigned to them at a minimum wage of twenty-five shillings a week. The director-general of the service, Mr. Neville Chamberlain, was to have a position in the ministry. In the course of debate on it on February 22, the Government gave their assurance that they had no intention of shutting down the unessential trades entirely. It proposed that after a certain date no further laborers between the ages of seventeen and sixty-one should be engaged in such trades without the assent of the director-general. The Government wanted offers from those engaged in essential as well as those in the unessential trades. Down to that time there had been 60,000 offers of service in the New Industrial Army. It was decided that the best policy was not to put a penalty clause in the bill, but to put both the volunteers and the employers on their honor. Industrial compulsion, the Government argued, could not be introduced under the bill, and to remove all misgivings the Government gave the assurance that they would not use the powers that Parliament conferred on them for

making any change not sanctioned by present legislation without going to Parliament for special authority. The bill was passed in March. Working men in general accepted it, despite their fear of industrial conscription.

**ENEMY ALIENS.** On February 14 there was a debate in Parliament on the question of enemy aliens. A member declared that German life in London continued to be as it had been two years before, that there were German restaurants, German notice boards, etc., in the heart of the city. He referred to Germans who were carrying on business without interruption and said he had observed in one establishment that nearly one-third of the employees were German. He wanted to know why 4294 enemy aliens, including 287 of military age, had not been interned. To this Sir George Cave replied that it now would be necessary to reconsider all the cases of enemy aliens who were still at large and that it was his intention to find out how many of those who had not been interned were able to work. It would be furthermore necessary to consider in future the exclusion after the war of suspected aliens of England and Great Britain.

**CONSCIENTIOUS OBJECTORS.** For the enforcement of compulsory military service a tribunal was created in order to deal with conscientious objectors, that is to say, to test the validity of their pleas. It was said that due regard was paid to those who objected on religious grounds and that all had a chance to prove their sincerity. The others were placed in detention camps for the purpose of seeing how serious their objection was. The average sentence was for 112 days, after which the objector was released, and if he again refused to do the work of national importance required by a military authority he was sentenced for the original length of time and forty-two days besides, the term increasing with each new offense. A large majority of the men who had been objectors were found afterwards to be at work on matters of national importance.

**PARLIAMENTARY SESSION.** On April 18 both Houses adopted resolutions expressing the appreciation of the British nation for the course taken by the United States in entering the war. On the previous day the House of Commons had passed the second reading of the bill for the extension of the life of Parliament by a vote of 286 to 52. Parliament was to remain in existence until November. The chief opponents were the Nationalists on the ground that no solution of the Home Rule problem had been found. John Dillon, the spokesman of the Nationalists, declared that they would oppose the measure at every stage. Mr. Bonar Law, spokesman for the Government, said that the Government earnestly desired a settlement and hoped that a better spirit would prevail. See below *Irish Question*.

**THE BUDGET.** The new budget was introduced on May 2. There had been expectations of new taxes, and none were introduced, but there were increases of three existing taxes. The chancellor of the exchequer had decided that it was too difficult to create the machinery required for new taxation. The principle that had obtained throughout was still respected, namely, that revenue aside from loans must show a balance over what would have been permanent charges if war expenditure did not exist.

Therefore the tax had to provide enough revenue to make up for the increased charges as a result of further borrowings. The income tax was not increased. The taxes that were increased were the entertainments tax, the tobacco duty, and the excess profits duty, which in the opinion of financial critics generally seemed the right ones for the purpose. The increases were not heavy. The extra amount on entertainment tickets was to be no higher than a penny or two pence, and the increase on tobacco was only 1s. 10d. a lb. It was estimated that the former would raise one and one-half millions and the latter six millions of revenue. The excess profits tax was to be raised from 60 per cent to 80 per cent on profits over the standard of the time before the war. It was estimated that this would yield an extra twenty millions. For budget estimates for 1917-18 see above under *Government*.

**ELECTORAL REFORM.** The conference appointed in 1916 to draw up a plan of electoral reform reported to the House of Commons in March and a bill founded upon this report was introduced on May 15th. This made very radical changes in the qualifications for the franchise and provided for woman suffrage (see below). Progress was made on it during the year. It passed its third reading in the House of Commons on December 7 and was under discussion by the Lords at the close of the year.

**WOMAN SUFFRAGE.** On June 19 the House of Commons voted the principle of Woman Suffrage by a majority of 330 out of 440. There was a debate in which the main points on the opposite side were that the present house had no real right to introduce such a measure; that women had not suffered from the lack of the vote; that women were averse to taking strong measures; that the measure was based on a false view of what women ought to do; and that their proper sphere was in domestic and local affairs. These arguments were not taken seriously and in general the debate brought out no important points. See *WOMAN SUFFRAGE*.

**THE IMPERIAL WAR CABINET.** Plans for a war conference were announced early in January. It was decided to invite the prime ministers of the Dominions of London. They were to become temporary members of the war cabinet and to take part in the discussion of all measures affecting the Dominions, the conduct of the war, and the negotiations of peace, having the same weight in the council as the British ministers themselves. This was a departure from precedent, for until recently the Dominion ministers were not even admitted to the meetings of the Imperial Cabinet.

The Imperial War Cabinet held its first meeting in Downing Street on March 20. It was to serve as an Executive cabinet for the empire and was invested with responsibility for the decision of all matters pertaining to the war, including, of course, all questions of foreign policy; also all matters pertaining to the ultimate settlement and to the conditions following the war. The representatives from the over-sea dominions and India were as follows: Canada, Sir Robert Borden (Prime Minister), Mr. Robert Rogers (Minister of Public Works), and Mr. J. D. Hazen (Minister of Marine); India, Mr. Chamberlain (Secretary of State for India), advised by Sir James Meston (Lieut.-Governor of Agra and Oudh), Sir S. P. Sinha (the first

Indian member of the Viceroy's Executive Council), and the Maharaja of Bikanir (representing the Ruling Chiefs); Newfoundland, Sir Edward Morris (Prime Minister); New Zealand, Mr. W. F. Massey (Prime Minister), and Sir Joseph Ward (Minister of Finance); South Africa, General Smuts (Minister of Defense); Australia was not represented at the first meeting on account of the inability of the Premier, Mr. Hughes, to be present. See *AUSTRALIA, History*.

The matters that came up before it were in some instances of a confidential nature and could not be made public. Certain of the resolutions, however, were published. One of the most important of these was that in regard to the constitution. It declared that an improvement in the constitutional relations of the different parts of the empire was needful, but that it should not be undertaken during war time. A special Imperial conference should be summoned as soon as possible after the war. The basis of such a readjustment should be the admission of the Dominions and India to a share in foreign policy and foreign relations, while preserving all their present powers of self-government. It should provide effective arrangements for constant consultation on matters of common Imperial concern. Other important resolutions related to the means of developing Imperial resources. The conference expressed its support of the principle that each part of the empire while having due regard to the interests of the Allies should give specially favorable treatment to the products of other parts of the empire, and that arrangements should be made for inducing those who intended to emigrate from the United Kingdom to choose places under the British flag; that the safety of the empire required that special attention be paid to the production and transportation of a sufficient food supply, to the control of national resources within the empire, especially those which are necessary for national purposes, and to the use of these resources by manufactures carried on within the empire. The conference urged the Government to carry through the necessary legislation to this end. Specifically it was proposed that there should be established in London an Imperial mineral bureau in which the self-governing parts of the empire should be represented. The conference approved the increase of the Board of Trade service and its extension throughout the empire and it recommended that the governments concerned should coöperate in the effort to develop inter-Imperial trade. It favored a uniform policy throughout the empire in regard to naturalization. In the matter of defense, the conference resolved that the Admiralty should be asked to work out after the end of the war the most effective scheme of naval defense to be submitted for consideration to the governments concerned; and emphasized the importance of developing a sufficient production of naval and military material in all parts of the empire and of assimilating as far as possible the military stores and equipment throughout the empire. It recommended that an expert committee representative of all parts of the empire should be appointed as soon as possible to consider the various standards and principles.

**INDIAN COTTON QUESTION.** The duties on cotton imports to India caused much discontent in

Lancashire. The free traders took a hand in the controversy that arose. The main points in it were as follows. The Indian Customs Tariff was abolished in 1882 owing chiefly to the demand of Lancashire. In the nineties, however, a general tariff of 5 per cent upon imports was introduced in India, whereupon Lancashire objected and the Government compelled India to impose a countervailing excise upon certain cotton yarns produced in India mills. Not long afterward all cotton yarns were exempted from duty, but a special low import duty of 3½ per cent was imposed upon woven cotton and an equivalent excise upon cotton goods woven in Indian mills. From this time (1896) the Indian cotton duties remained on this basis which was, of course, very favorable to Lancashire. In 1916 the revenue from opium having disappeared the import tariff of India was increased from 5 per cent to 7½ per cent, but neither the excise nor the cotton import duty was changed. The government of India then sought permission to raise cotton import duties to 7½ per cent, leaving the excise duty unchanged. The Asquith Government refused this on the ground that they wished to avoid contentious questions. When India, however, offered of her own accord to contribute £100,000,000 for the cause of the war Mr. Lloyd George's Government consented to allow the increase on the cotton import duty. In India the cotton excise duty had caused great discontent not only on account of the damage done to the native industries, but especially on account of the spirit of the measure, which seemed particularly unfair. The opponents of the duties argued that it was a pure and simple protection against the products of India; that moreover Lancashire did not really need this excise duty, for the competition of the Bombay mills with the Lancashire ones included only a part of the goods sent to India.

**STOCKHOLM CONFERENCE.** The Labor party held a special conference in London on August 10 to decide the question of sending delegates to the Stockholm conference. The result was a strong vote in favor of this course on condition that the conference be advisory, and not binding. The votes represented were as follows: For sending delegates—1,846,000 against 550,000; majority—1,296,000. It repeated its decision before adjourning on August 21, but by a majority of only 3000, owing to the change of the miners' votes, numbering about 600,000, which now were cast against the conference. Meanwhile the Government had refused to grant passports. On September 4 the Trades Union Congress at Blackpool declared by a vote of 2,849,000 to 91,000 against the international conference at Stockholm "at the present moment," but at the same time demanded an international labor conference as a necessary measure before concluding peace. To bring about such a conference it was necessary first to promote a general agreement in aims among the working classes and the parliamentary committee was instructed to take all possible measures to that end.

**LABOR PARTY.** Toward the end of October a programme was made public for the reconstitution of the Labor party. The chief changes were: The provision for individual membership instead of enrollment of trade councils, etc., exclusively as heretofore; the establishment of a local Labor party in each constituency, with separate sections for men and women; the in-

crease of the National Executive from a membership of sixteen to twenty, including four women; the statement of the objects of the party in a more specific way. Among the objects now put forth were that of promoting the interests of all producers "by hand or by brain" without distinction of occupation. This was taken as an indication that a vigorous campaign would be carried on by the Labor party at the next general election. Its leaders estimated that the new electoral measure would add about 8,000,000 to the electorate, of whom 6,000,000 would be women.

**IRISH QUESTION: RÉSUMÉ.** Aside from Great Britain's part in the war, which is treated in the article **WAR OF THE NATIONS**, the Irish question absorbed more attention during the year than any other. For the better understanding of it, the course of events since the rebellion of 1916 will be briefly reviewed. While order was outwardly restored after the suppression of the rebellion, there was everywhere evidence of irritation, anger, and uncertainty. The Castle Government having been wrecked, the Asquith Ministry set itself the task of building up a new régime which should be more equitable. To that end as noted in the preceding **YEAR BOOK**, Lloyd George was sent to Ireland to act as a messenger of peace and to ascertain the means of reorganization. The pacification of the parties seemed almost impossible on account of the division between the men of Ulster and the Nationalists, and the irreconcilable attitude of the Sinn Féin. The last-named, though conquered, was regarded as a party of martyrs and elicited a certain sympathy among the people at large. It seemed impossible to found a government on these shifting sands. Lloyd George began by trying to bring together Redmond and Carson and he drew up a scheme that was to confer immediate Home Rule upon Ireland while excluding the six counties of Ulster. This was to be a temporary arrangement which should be revised after the war at an Imperial conference. As soon as this plan was known it became the target for critics of all parties. Some declared it would break the truce which since the beginning of the war the parties had concluded with one another and would put a premium on rebellion. To others the compromise meant the dismemberment of the empire. Yet, it was necessary to act promptly, for affairs were going from bad to worse. Martial law was still in force, and according to many had no other effect than to turn more and more people into Sinn Féiners. During the summer of 1916 the spirit of revolt was openly manifested. Seditious emblems were displayed; officers and soldiers were insulted; and even the republican flag reappeared. Mr. Lloyd George pursued his course, begging everybody to lay aside his personal preferences for the sake of the country, and he finally won over to his programme the party chiefs and the dissenters. The conventions of the majority and minority elements finally voted for the Lloyd George arrangement, though with the least possible enthusiasm. Nevertheless, the point was carried. It now remained to bring the English parties to accept the plan. Here there was danger of failure. The Coalition Government had seemed always to arrive at its conclusions too late. In this instance it exasperated people not only by its delay, but by taking back

a part of what it had granted. At the demand of some members of Parliament and to maintain its own unity it had given out that it would reduce the Irish representation at Westminster after the next elections. Again, Lord Lansdowne had launched a thunderbolt in an aggressive speech in which he spoke of the need of serious alterations in the Home Rule arrangement. Then, what was even worse, there was disagreement as to the plan for excluding Ulster, that is to say, whether that exclusion should be temporary or permanent. The bitterness of party spirit seemed to increase at the very moment when compromise was attempted. The Ulster Unionists blamed the Nationalists for exploiting the public peril in their own interests and the Nationalists accused Ulster of sheer, senseless obstinacy. The chiefs of the Irish Nationalists found their authority on the wane. At first they had insisted that Home Rule should be imposed without regard to the minority and now, in accepting the exclusion of Ulster, they agreed to a plan that permitted the minority to check the majority. They were thus in the awkward position of having agreed to an arrangement which they themselves had denounced as the dismemberment of Ireland. The Sinn Féin came more and more into evidence. It began to express its hopes, prepare its programme, and glorify openly the chiefs of the rebellion as saints and martyrs. There was chosen as president of the Gaelic League one Sergeant MacNeil, then in prison, of whom a young priest in his pulpit exclaimed that he would rather be in his place than King of England. Moral anarchy was gaining ground and the Government seemed committed to the policy of hands off. However, there was a limit to that policy. The Government appointed Mr. Duke, a Unionist, as successor to Mr. Birrell, and a little later Lord Wimborne of the former Government reappeared as Lord Lieutenant. Thus the Castle régime, which Mr. Asquith had said was ruined, was set up again. In all this the policy of Mr. Asquith was criticized as that of "Wait and see," and he was called a political Micawber.

Another important aspect of the problem was the draft issue. The rebellion had begun by drying up the sources of voluntary recruiting. The losses at the front were heavy and Ireland still abounded in men fit for military duty and, in fact, excellent material for soldiers. From the north of Ireland recruits continued to come but not from the west or south. Out of the male population of the island it was estimated early in 1917 that there were about 600,000 men fit for service, of whom 200,000 or 300,000 could be recruited and every day it was more necessary to fill the gaps in the ranks of Irish regiments. The question was whether, if the men refused, it would be necessary to force them into the army, that is to say, to impose upon Ireland the draft, which England, Scotland, and Wales had accepted. This was the subject of long and bitter controversy during the entire autumn of 1916 and the winter and summer of 1917. The Unionists had no doubt on the point. They thought the safety of the country was more important than the loss of freedom and demanded immediate compulsion. Some favored putting this out as an ultimatum or a bargain: No conscription, no Home Rule. Others, having the same end in view, but more

sympathetic, insinuated that compulsion might be the best and quickest means of fusing the two races into that unity which was the dream of the Irish Nationalists. The death of Maj. Redmond, who had fallen at Messines while fighting by the side of the Ulstermen had had a considerable sentimental influence, as indicating the unity brought about by fighting in a common cause. With the exception of the Sinn Fein, the Irish did not repudiate the cause of the Allies and they wished to win the war, but they held that Ireland, though insulted and ignored, had done its duty splendidly and pointed to the fact that it had already furnished 160,000 men, not counting the Irish immigrants who had gone over seas and who had formed so large a part of the Australian, Canadian, and New Zealand contingents. Mr. John Redmond in a letter to the *Times* declared that in the army and navy together there were 173,772 Irishmen from Ireland alone and that from 20 to 25 per cent of the troops from over seas were of Irish blood. In short, the Irish race, according to him, was represented in the war by not less than half a million men. He contended that their exploits were overlooked in the official reports. Other arguments of the Nationalists were: That conscription would introduce the Prussian military caste system among the Irish people; that if there were to be conscription it should only be imposed by a national Parliament and not by the Parliament at Westminster which was a foreign institution; that it was unfair to impose it on Ireland when it had not been imposed on Canada; and, in general that it would be the height of folly to introduce it at the hands of a Government which had postponed Home Rule to the disgust of the whole people of Ireland, crushed the rebellion with violence, and restored the old Castle régime. There would arise, they said, in every village a civil war and they characterized the conscription movement as a trick to discredit the political future of Ireland. On the other hand appeal was made to the supreme duty of winning the war and of saving Ireland from herself, for her present course would result, after the war, in her shame and isolation. When her own sons at the front were calling upon her for assistance she ought not to refuse. Refusal also would cause the loss of her friends over-seas. These appeals had been in vain. In the House of Commons Mr. Redmond had introduced a vote of censure on behalf of the Nationalists to the effect that the Government now maintained in Ireland contradicted the very principles for which the Allies were fighting, namely, the liberation of oppressed nations, and was responsible for the misfortunes of the country, and that every attempt to impose the draft upon Ireland would encounter the active resistance of the party and of the people. The obvious need of men at the front, however, as it became more and more pressing, placed Mr. Redmond in an embarrassing position. He could not reconcile his duty toward the empire with the rights of Ireland. He rejected conscription, but undertook, in return for the immediate granting of Home Rule, a campaign for voluntary enlistment. Nothing came from this campaign. On the other hand England did not dare enforce conscription. The secretary of state, Mr. Duke, himself admitted that any attempt to impose conscription forcibly upon Ireland in her present

humor would lead straight to disaster. The Government was in the dilemma of choosing between the necessity of supplying troops at the front and the necessity of maintaining peace at home. This was the problem before Lloyd George, who was chosen above all because of his supposed fitness as a war minister.

**DISCUSSION OF THE IRISH QUESTION.** There was a debate on the Irish question in the House of Commons on March 7, which ended in the withdrawal of Mr. Redmond and his followers from the House. The point in question was the demand of the Nationalists for an immediate settlement on the basis that Ireland should receive at once the grant of the free institutions which had long been promised to her. The Government was urged to turn over a new leaf in its relations with Ireland and to make some arrangement with the Nationalists, who, it was said, would go to any length to meet the objections of Ulster. On the other hand the representative of the Ulster Unionists declared that under no circumstances would they consent to go under a Home Rule Parliament. Finally the prime minister outlined the policy of the Government. He said that the fundamental facts in his opinion were that the centuries of ruthless injustice on the part of the British had filled the Irish with an inveterate hatred, whereas in the northeastern part of Ireland the people were as hostile to Irish rule as the Irish were to British rule. There were two questions then: (1) Whether the Government was prepared to grant self-government to Ireland; and (2) whether it was prepared to defy the opposition of the northeastern portion of Ireland. The Government was ready to do the first, but not the second. It wished to grant Home Rule to that part of Ireland which plainly demanded it, but it did not wish to take any action to enforce Home Rule in the part of Ireland that detested it. To bring out the Government's point the prime minister moved an amendment which declared any settlement to be welcome which did not involve the coercion of any part of the Irish people. This was received with jeers by the Nationalists. The prime minister further declared that the only practicable method was to call in some outside authority and entrust it with the work of adjusting the interests concerned. He suggested that the presence of distinguished dominion statesmen in England at that time might offer the means of doing this. Then followed a speech by Mr. Redmond in which he bitterly criticized the Government and characterized the prime minister's policy as temporizing. He warned the country of the prospect of a revolutionary uprising in Ireland and charged the Government with playing directly into the hands of the revolutionists. On the conclusion of his speech he appealed to his colleagues to leave the House and when he departed he was followed by sixty Irish members, who shouted and cheered as they went. On March 8 the Nationalist party met in the House of Commons under the chairmanship of Mr. Redmond and issued manifestoes to the President of the United States and the prime ministers of the Dominions, in which they declared their unqualified support of the war to its successful ending and their uncompromising opposition to the Government.

On April 14 Parliament met again after the

MARQUIS OF LANSDOWNE

Easter recess and the Government secured the second reading of the bill to prolong the life of the present Parliament. It was opposed by Mr. Dillon on behalf of the Irish Nationalists. He declared that his party was unanimously in favor of a general election. When the vote was taken it was found that only fifty-two votes were cast by the Nationalists against the 286 which were cast for the bill. At this time the prospects of an agreement on a measure for Home Rule were not promising. The Government did not seem to be able to form a plan and the Ulster Unionists showed no signs of weakening. The effect of America's entry into the war was to dishearten the extreme elements and it was hoped that that would lessen their power to do harm. On April 12 the Irish conference committee made certain overtures at Dublin Castle toward a Home Rule compromise. On April 13 the general assembly of Irish County Councils had its annual meeting in Dublin, passing a resolution that any project which should exclude any portion of Ireland would cause the greatest discontent among Irishmen throughout the world. In general there was a tendency to bring increasing pressure to bear upon the Government for immediate action.

Much was made of sentiments quoted from the newspapers and from prominent men in dominions over-seas and in the United States. In Australia the Senate by a vote of 28 to 2 passed a resolution in favor of Home Rule. In Canada, Cape Province, and the United States the press discussed the question with much feeling and found the solution in Home Rule. They all seemed to believe in the healing effect of self-government and all invoked their own example—the United States, the pacification that followed the Civil War; South Africa, the turning of rebels into loyalists after the Boer War—the transformation of a Botha and a Smuts into defenders of the empire. As to the United States Lord Brice declared that until the Irish problem was solved there could not be a really cordial union between Great Britain and America.

On Easter Monday, the anniversary of the rebellion, some disorders occurred at Dublin and Cork. The flag with the republican colors (green and yellow) was hoisted by the Sinn Féin on the ruins of the post office and many appeared in the streets with crêpe on their arm and the rosette of the Sinn Féin. The riot, though unimportant, called attention to the number of young men of military age who were idle.

On April 19 at the Mansion House at Dublin a meeting was held at the instance of Count Plunkett consisting of 500 delegates of the Sinn Féin, Gaelic leagues, and Nationalist parties, including many young priests. This meeting they called "the first convention of the Irish people upon the native soil." Its object was to proclaim Ireland a free nation and to assert her rights to be represented at the peace conference after the war. Lloyd George finally saw that the time had come when temporizing must cease, that continuation meant not only the shame of the empire but its danger. He resumed his conferences with the moderate members of both camps, who, taken together, constituted the majority.

**THE IRISH SITUATION IN MAY: MR. LLOYD GEORGE'S PROPOSAL.** The question of form was

extremely difficult. It was necessary to decide whether the excluded area should be limited to the four Protestant counties or include also Tyrone and Fermanagh with their Catholic majority, whether, in other words, it should be at the option of the counties or, as they put it, "clean cut." The essential condition for the immediate granting of Home Rule was the exclusion of Ulster. This plan was checked at once by the protest on May 7 of the eighteen Roman Catholic bishops and of the three bishops of the Church of Ireland in an appeal addressed to the Irish people against either the permanent or the temporary partition of Ireland. Three days later in the election of South Longford in the stronghold of Nationalism the Sinn Féin triumphed over the Constitutionalist by thirty-seven votes. The young men had rallied to the radical side, while their fathers voted for the Constitutionalist. Not all who rallied to the Sinn Féin, however, were republicans. Many were simply discontented and voted with it as a protest against the present order of things. Yet a definite stage had been reached. The principle of neither coercion nor partition was generally accepted and never before had the desire for a peaceful settlement been so strong. The extremists were in a small minority. All the rest wished once and for all to bury the Irish spectre. Another element in favor of a settlement was the fact that Ireland had never before been so prosperous. This pointed to the conclusion that the feeling was moral or sentimental rather than based on economic grounds. The fundamental fact was that Ireland knew and felt herself to be a nation and now that the spirit of liberty was abroad in the world her hopes were revived. Lord Cecil remarked to the consternation or amusement of Parliament, "There is no way of transferring Ireland to another country, and sometimes I regret it." Lloyd George now published a letter to the chiefs of the two great Irish parties, in which he offered a new solution: To Nationalist Ireland he offered immediate Home Rule, from which were excluded the six counties of Ulster. Then between the two Irelands he suggested the establishment of a national council consisting of delegates from each, who would deal with the common affairs and above all maintain the moral unity of the country which was provisionally cut in two. This council was nicknamed "the Bridge over the Boyne." This plan failing, he proposed as an alternative a convention of Irishmen of all parties and faiths for the purpose of drafting for their country a constitution which should put an end to the unfortunate disorders from which it had too long suffered.

The chief provisions of the Government plan, which was sent to the Nationalist leader, Mr. Redmond, on May 16, were as follows: Its purpose was to secure an immediate settlement, which should concede the largest possible measure of Home Rule without prejudicing later arrangements. In the first place a bill was to be introduced for the immediate application of the Home Rule Act to Ireland with the exception of the counties of northeast Ulster; this to be subject to reconsideration by Parliament at the end of five years unless it was brought to an end by the action of the Council of Ireland. The bill was to provide for a Council of Ireland to be composed of two delegations: First, all members returned to Parliament from the excluded

area, and, second, an equal number of members from the Irish Parliament. This Council should be called on the initiative of any six members. Its powers included first, private legislation for both included and excluded area; second, recommendation to the Crown that any act of the Irish Parliament should be applied to the excluded area; third, the incorporation under the Home Rule Act of the whole of Ireland, subject to the consent of the majority in the excluded area; fourth, recommendation of solutions of Irish problems. The Government believed that the financial arrangements of the Home Rule Act should be revised. It recommended that the bill be considered by a conference formed on the same lines as the recent conference on electoral reform. Mr. Redmond, speaking for the Nationalists, and Mr. William O'Brien, speaking for the Independent Nationalists, while declaring themselves utterly opposed to the specific scheme, strongly favored the plan for a convention. On May 21 the Government announced that it would immediately summon a convention in Ireland to draw up a plan for a constitution of the Government of Ireland and submit this plan to the British Government. The Crown was to nominate the chairman. The Government was ready to accept the responsibility for taking all the necessary steps towards securing the necessary legislation from the Imperial Parliament, if an agreement should be reached by the convention. The convention if it were to succeed must proceed with closed doors.

**THE IRISH CONVENTION.** The southern Unionists soon showed an inclination to accept the proposal for a convention and the Ulster Unionists seemed on the whole well disposed. The Sinn Feiners, however, were intractable. At their National Council on May 23 they decided that they would accept the convention only on condition that it should be free to declare an Irish republic and that the British Government should pledge itself to ratify the decisions of the convention. It was estimated that about 30 per cent of the Irish Nationalists were Sinn Feiners, but it was not known how many of them sympathized with that action of the council. On June 11 the prime minister announced that invitations were about to be issued to a convention of 101 members. The Government was making special efforts to get representatives of the normal life of the country by requesting each county council and county bureau to send its chairman. The chairmen of the small towns and districts were then to be invited to send two members for each of the four provinces. The Church, it was expected, would be represented by four Roman Catholic bishops, the Primate and the Archbishop of Dublin representing the Protestant Church and the moderator of the Irish Presbyterian assembly; and labor was to be represented by five delegates who were to be invited from the trade councils of Dublin and Cork and the trade unions of Belfast. As to political representatives these were to be in the following proportions: Nationalists, five members; Ulster Unionists, five members; O'Brienites, two members; Irish peers, two members; Southern Unionists, five members. The date fixed for the meeting of the new body was July 25. It assembled on that day at Trinity College, Dublin, the Right Honorable H. E. Duke presiding. Its proceedings were not made public and down to the

close of the year its results were not known.

**THE RADICAL ELEMENT IN IRELAND.** On June 15 the Government announced that all prisoners held as a result of the rebellion in Ireland would be released without reservation. It declared that it had satisfied itself that by this act of mercy the public security would not be endangered and it took this course in the hope that it would promote better feeling on the eve of the convention. This did not have the soothing effect anticipated. Rioting was reported in Cork on the return of the released prisoners, June 22, when windows were smashed and republican flags hoisted, and attacks were made on the jail. There was also rioting in the streets and the crowd attacked the recruiting office and pulled down the flags of the Allies. At last the mob began to use their revolvers and several policemen were injured. The military were then called out and machine-guns were mounted. The police charged and used their bayonets. It was reported that one was killed and thirty were wounded. These disorders following upon similar disorders in Dublin showed a spirit that was anything but favorable to the success of the convention.

A sign of increasing power on the part of the Sinn Feiners was forthcoming in the result of the East Clare election on July 11, which gave the Sinn Fein leader, Mr. De Valera, a vote of about 5000 as against a vote of about 2000 to his opponent, who was an official Nationalist. The policy on which Mr. De Valera ran for the office was absolute independence for Ireland; representation at the peace conference after the war; revolution if necessary, but only when England's difficulties gave rebellion a good chance of success; the repudiation of Ireland's share of the national debt; and the resolution to subdue Ulster if Ulster should resist the new government, provided that the Sinn Fein party succeeded in winning independence for Ireland. There was much comment on the fact that the Roman Catholic Church had so little effect in restraining the radicals. The clergy, it was said, paid no attention to the instructions of the bishops and revolutionary agitation was going on without encountering the opposition of the priests. In short, it seemed that a new generation in Ireland was being educated in republican ideas without any opposition on the part of the Church. At the Kilkenny election in August, the Nationalist candidate was defeated by a representative of the Sinn Fein. This was the fourth victory for the Sinn Feiners within a few months. Toward the end of October a Sinn Fein convention was held in Dublin and the well-known Sinn Feiner, Mr. De Valera, spoke openly on rebellion and the necessity of throwing off the rule of England. The convention did not result in any definite policy, but in general it pledged the party to the use of any and every available means for the destruction of British authority in Ireland, whether military aggression or peaceful penetration. The president declared himself in favor of physical force when the moment was favorable and the convention passed a resolution pledging the party's executive to an appeal to arms if in their judgment it seemed necessary.

An important debate took place in Parliament on October 23 in regard to the Government's course toward the Sinn Feiners. Mr. Redmond

said that foolish arrests for making speeches that amounted to nothing and foolish measures of repression, together with the seizure of arms from the national volunteers and the harsh treatment of Sinn Fein prisoners, had greatly irritated public opinion and had had the effect of strengthening the cause of Sinn Fein. Mr. Duke, after pointing to the fact that the general course of the British Government toward Ireland had resulted in preserving that country from all the miseries of war, went on to say that the repressive measures were justified. Throughout Ireland young men who had not been drafted were enrolled in organizations that were hostile to the empire, for the purpose of starting a new rebellion, and that some of the men who had organized this movement were the very ones who had been released from prison. He characterized the conditions in Ireland as anarchistic. Later Mr. Lloyd George declared it to be the Government's firm intention to put down any movement toward rebellion. The Government could not overlook such matters as the making of seditious speeches, the manufacture of arms, and the drilling of men who, had they lived in Great Britain, would have been drafted. He pointed to the fact that Germany had nearly succeeded in landing arms in Ireland in 1916 and that since then arrangements had been made by Germans for another attempt.

An unfortunate incident at the end of September tended to promote the interests of the Sinn Feiners. Thomas Ashe, a national school teacher, prominently concerned in the Irish rebellion and subsequently in an attack upon the police in County Meath when several of the latter were killed, had been sentenced to death. Later the sentence was commuted to penal servitude for life. In the general amnesty of June he was released with others, but in August was again arrested and tried on the charge of attempting to excite disorder by a public speech. The sentence of the court martial was a year's imprisonment at hard labor and he was sent with other Sinn Fein prisoners to Mountjoy prison, where he and they went on a hunger strike. On September 28 Ashe was forcibly fed, but collapsed soon afterwards and died a few days later in the hospital. It was found that he had been suffering from a weak heart. His funeral was the occasion of a very impressive demonstration in the streets of Dublin, including a large procession in which various Sinn Fein clubs, Nationalist organizations, and representatives of political, civic, and language societies, trade unions, and women's leagues participated.

The inquest decided that he had died from heart failure caused by removal and forcible feeding while he was in a weak condition. The jury censured the Dublin Castle authorities for not having acted more promptly when the serious condition of Ashe was brought to their notice. The Ashe case irritated public sentiment and the Sinn Feiners renewed their agitation. Mr. De Valera continued to deliver speeches of a very radical character. He declared that Ireland was entitled to be free. His party, he said, could not agree with Mr. Redmond and Mr. Dillon because his party aimed at an independent republic. It was unfortunate that the world could not be ruled by moral force, but since arms were the only legitimate means of

gaining freedom he advised the Irish volunteers to keep their powder dry. He said that if he himself were removed it would not check the movement, for there were thousands of Irishmen ready to take his place.

**GREECE.** A maritime kingdom in the south-east of Europe, situated in lat. 35° 40' 40" 10' N. and long. 18° 20' 25° 50' E, between the Ionian and Aegean seas. It consists of twenty-six nomes, or departments, besides Crete and the new Turkish cession.

The capital is Athens. The country is composed of a continental portion, almost separated into two parts by the gulfs of Patras and Lepanto on the west, and the gulf of Aegina on the east; the archipelago of the Aegean Sea; and the Ionian Islands. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented.

**AREA AND POPULATION.** The area previous to the Balkan wars was given at 64,657 square kilometres (24,964 square miles), with a population in 1907 of 2,631,952. The area of the twenty-six nomes, and also of Crete, together with that of the new Turkish cession, is given as 120,057 sq. kilometres (46,345 sq. miles), and the population as 4,698,599. The majority of the people belong to the Greek Orthodox Church. Education is compulsory but is not well enforced and illiteracy is common.

Besides Crete, with an area of 8618 square kilometres, the area acquired from Turkey includes the insular districts of Lesbos, Samos, and Chios, the estimated area of which is 4018 square kilometres, and, on the mainland, the districts of Saloniki, Kozani, Florina, Serres, Drama, Janina, and Prevesa, aggregating about 42,760 square kilometres. In March, 1916, Greece took formal possession of Epirus (q.v.).

**ECONOMIC CONDITIONS.** Agriculture is the principal industry, though the methods are antiquated; the chief crops are currants, grapes, cereals, tobacco, citrus fruits, olives, and figs. In the Patras district the anticipated production for 1917 of olive oil totaled 100,000,000 pounds; olives for export, 4,000,000 pounds. Local wholesale price of oil, 24 cents per pound; olives, 14 cents. Owing to the great scarcity of food since the entry of Greece into the war, it was anticipated that a large part of the wine crop would be cut off on account of the increased consumption of grapes as a food in place of other sustenance. However, the vintage of 1917 is now estimated as greater in quantity than that of 1916, being reported at from 5,962,000 to 6,625,000 gallons.

The Greek legation made the following announcement March 11: "A ministry of supplies has been established in Greece to meet the necessities arising from the Allied blockade of Greek ports and the resulting difficulties of transportation of supplies for Greece. The minister of supplies has telegraphed the Greek legation in Washington to hasten the shipment of wheat for the relief of the starving population of Greece.

"All reports from Greece received by the Greek legation indicate that the suffering among the Greek people is beyond description. An epidemic of intestinal inflammation among children due to the quantity of bread to which the Greeks are reduced results in many deaths daily in the capital alone. The lack of coal has forced factories to suspend and the masses are

suffering not only from hunger but dire poverty due to lack of work."

Political conditions in Greece were unsettled and trade was accordingly affected. Imports and exports were restricted; tonnage was scarce and freight rates were high; and interruptions to the telegraph and postal services caused much inconvenience. The Greek merchant marine prospered until steamship sailings were stopped altogether at the end of November. Notwithstanding the adverse conditions, some enterprises were very successful, bank deposits increased, and the agricultural, live stock, and wine industries, together with mines and quarries, profited from the high prices commanded by their products during 1916. Although labor was plentiful, owing to the arrival of refugees from Asia Minor and the Balkan States, who replaced men taking part in the mobilization, wages in continuing occupations advanced from 40 to 60 per cent above the 1915 level.

In December, 1916, prices of foodstuffs had increased from the corresponding month of 1915 as follows: Vegetables, 40 per cent; potatoes, 15 per cent; meats, 40 per cent; butter, 50 per cent; olive oil, 15 per cent; and cheese, 40 per cent. In some cases as much as \$1 per pound was paid for white flour. The hotels and restaurants reduced the size of portions and added extra charges for covers, etc. Maximum prices were fixed by local authorities, but were frequently evaded.

The table at the foot of the page shows the mineral production of Greece for 1914 and 1915, the latest statistics available.

COMMERCE. The total value of imports into and exports from Greece for 1914 and 1915 (the latest figures available) by countries is shown in the following statement, values in thousands of dollars:

	Imports		Exports	
	1914	1915	1914	1915
America, North and South	2,684	14,209	3,346	2,989
Austria-Hungary	5,924	8,907	1,067	84
Belgium	496	29	781	84
Bulgaria	577	160	55	217
Egypt	313	564	1,986	4,187
England	9,232	7,449	7,287	9,183
France	2,165	2,364	1,845	2,295
Germany	2,690	859	1,525	1
Italy	1,794	1,946	2,805	2,906
Netherlands	766	700	1,790	8,865
Rumania	494	80	107	288
Russia	5,163	127	413	82
Switzerland	100	41	165	134
Turkey	905	149	263	14

In the following table are shown the total values of the principal classes of imports into Greece and exports from the kingdom for two years:

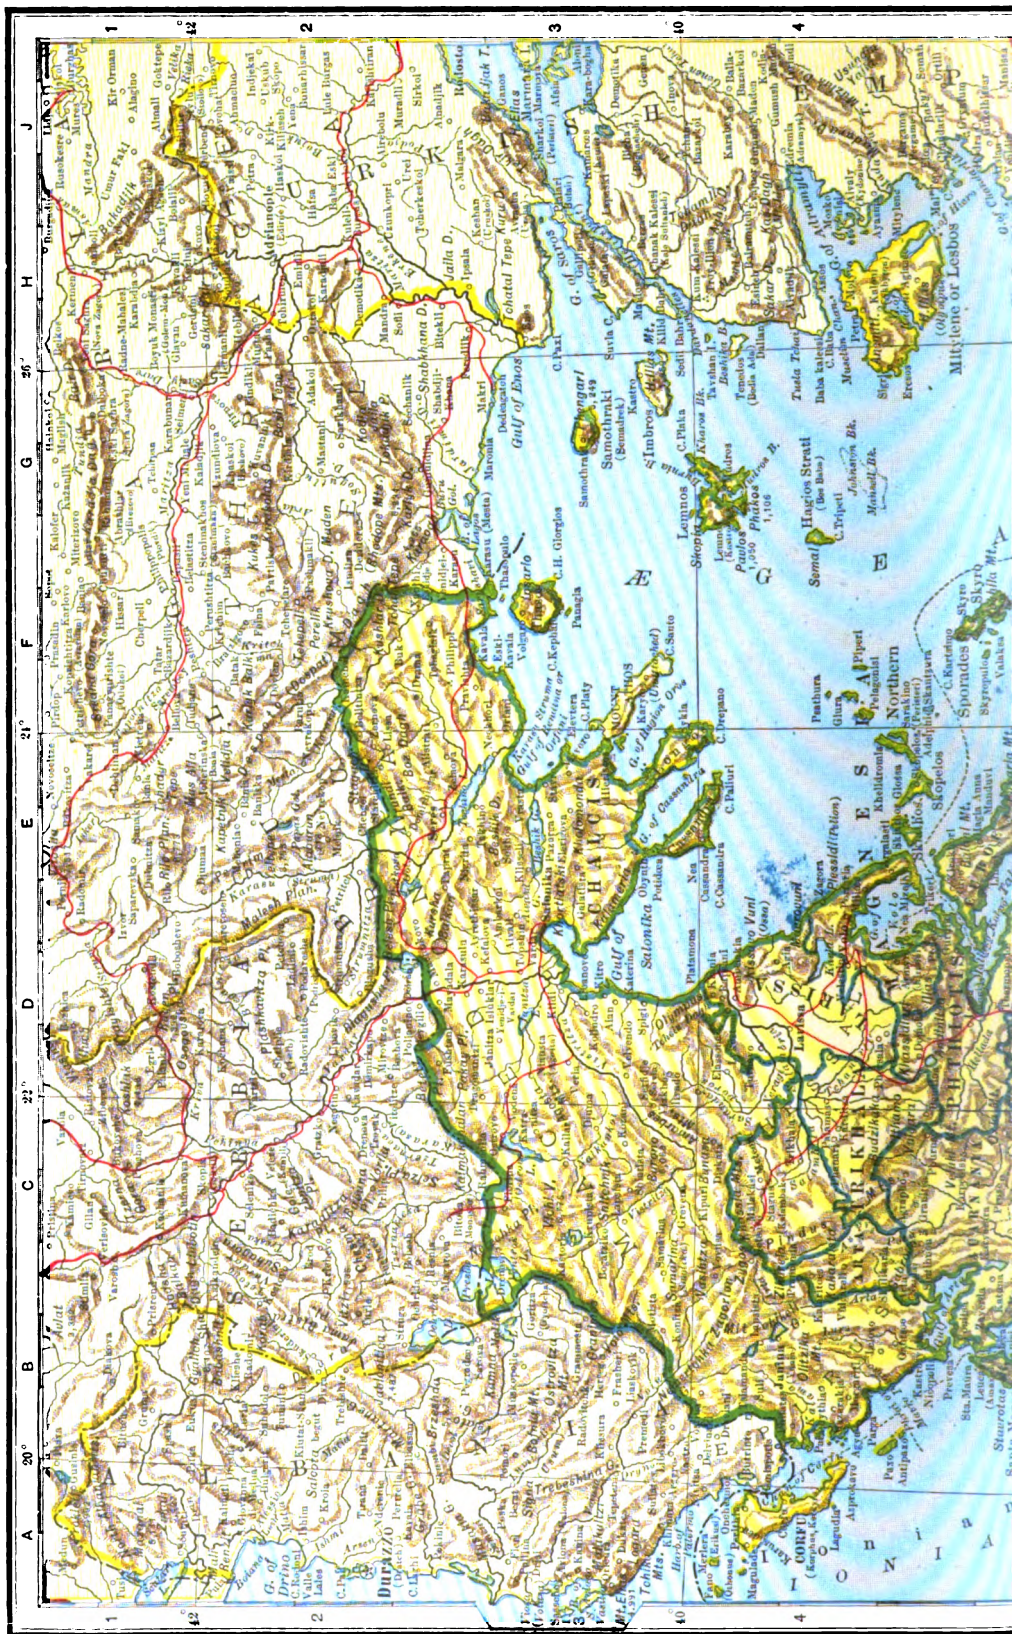

Imports	1915	1916
Agricultural products	\$12,421,545	\$18,821,903
Animal products	462,364	856,918
Chemical products & drugs	1,517,845	3,279,560
Cotton, yarns & fabrics	3,870,046	4,539,357
Esparto & hat-making materials	276,962	572,016

Sugar & sugar products	14,082	1,154
Wines & liquors	3,212,688	1,952,507
All other articles	92,003	35,957
Total	\$26,258,470	\$20,433,280

The government prohibited the export of butter in 1916, and none was shipped; a similar restriction was placed on cheese, and the amount sent to the United States was only one-nineteenth of that in 1915. Salted fish, much of which used to come to Piræus from Dalmatian ports for transshipment, declined by two-thirds during the past year because of war conditions. The interruption of communication with the island of Chios, where nearly all the gum mastic exported through the Athens district is produced, caused a decrease in that item. No opium was

Minerals	1914		1915

shipped. The Allied authorities control the export of emery, an abrasive important in the manufacture of munitions.

It is estimated that the provinces of Thessaly and Phthiotis produced in 1916 about 19,750,500 pounds of tobacco, which brought prices ranging from 41 cents to 55 cents per pound. Canned vegetables declined by nearly 60,000 pounds, but increased in value, owing to the scarcity of tonnage and the advanced cost of canning materials. Prices of native wines tripled in 1916; and, the production being diminished, Greece absorbed a large portion of its output. Liqueurs and brandy exports increased by 27,000 gallons.

**SHIPPING.** From its merchant marine Greece is estimated to have raised a net profit of 220,000,000 drachmas during 1916. In the merchant marine January 1, 1916, were included 329 sailings, of 85,750 tons, and 433 steamers, of 829,091. By decree of October 8 (O. S.), 1917, all Greek passenger vessels of 300 or more tons dead-weight capacity and all cargo vessels of 1000 or more tons dead-weight must be equipped with complete wireless installations of not less than 30 miles radius as soon as may be possible. After January 1-14, 1918, no Greek vessel falling within the divisions named above will be allowed to leave a Greek port unless fully equipped with wireless installation. Infraction of this rule to be punishable by fine and imprisonment.

The Greek Cabinet, January 20, discussed at length a British proposal to lease the Greek merchant marine. It was decided to take measures to assure the retention of the number of ships necessary to provide the foodstuffs which Greece requires. Two considerations already had put Greek ship-owners in the hands of the Entente, namely, coal and insurance. The latter, it was pointed out, might be secured in the United States, but the former, it was decided, was sufficient to induce owners to accede to the proposals of Great Britain. The Allied propositions were accepted, January 23, by the ship-owners.

**FINANCE.** The Greek drachma has maintained an excellent position in the foreign exchange market. Its stability is accounted for by the establishment of Greece as a creditor nation in foreign financial centres and by the limitation of imports by foreign governments, which permitted Greece to purchase before the blockade only absolute necessities, chiefly wheat, rice, and some coal, and hence to avoid extraordinary expenses and the inauguration of any new enterprises.

The following figures show the gain in deposits in the leading banks from December 31, 1915, to December 31, 1916: National Bank of Greece, 346,500,000 to 397,000,000 drachmas; Bank of Athens, 56,500,000 to 64,000,000 drachmas; Commercial Bank of Greece, 13,500,000 to 24,500,000 drachmas; the Popular Bank, 28,500,000 to 34,000,000 drachmas; total increase, 74,500,000 drachmas.

Revised figures for the 1915 budget (including the new territories) are given below in thousands of drachmas:

Revenue	1,000 dr.	Expenditure	1,000 dr.
Direct taxes .....	60,539	Public debt .....	68,681
Indirect taxes .....	84,819	Pensions, etc. ....	16,754

		Extraordinary ....	418,010
		Total .....	698,769

The foreign debt was reported December 31, 1916, at £45,863,692.

**RAILWAYS.** By a royal decree published in the government *Gazette* of November 7-20, 1917, the state assumes direction and management under the title "Greek State Railways" of the following railways and portions of systems already in operation: the Piræus-Demerli-Papapouli Railway, with its Chalkis and Styliados branches; the Papapouli-Platy line with "junction line" from the bridge of Axios to that of Topsin; that portion of the Saloniki-Monastir Railway on Greek territory; that portion of the Saloniki-Skopia Railway on Greek territory; all of the Saloniki-Dedeagatch Railway on Greek territory.

The state railways will constitute a special branch of the government service under the Royal Ministry of Communications, which will constitute an administrative council composed of directors and suitable boards.

**GOVERNMENT.** Freed of her pro-German king, Greece, on June 29, severed relations with the Central Powers. By this action the government "considered war to exist," not regarding a formal declaration of war to be necessary. The ministry at the end of 1917 was made up as follows:

President of Council and Minister of War, Eleutherios Venizelos; Interior, Emmanuel Repoulis; Marine, P. Countouriotis; Public Domain and Interior Colonization, A. Michalacopoulos; Finance, Mil Negrepontis; Public Instruction and Worship, A. Dingas; National Economy, G. Sideridis; Food Control, L. Embiricos; Minister for Assistance to Refugees, Sp. Simos; Foreign Affairs, N. Politis; Communications, A. Papanastassiou; Justice, J. Tairimocos.

It was officially announced, January 1, 1917, that Earl Granville, counsellor of the British Embassy in Paris, had been appointed representative of the British Government to the provisional government of Eleutherios Venizelos at Saloniki, with the title of diplomatic agent. Following similar action on the part of Great Britain, the French government, January 3, appointed Robert de Billy, formerly counsellor of the French Embassy at Rome, as French diplomatic agent to the government set up by Venizelos.

Entente officials who were to administer the Allied control in Greece reached Athens, January 18. The arrivals included a British military mission headed by Gen. Phillips, and an Italian mission headed by the ex-chief of the Italian mission formerly charged with the reorganization of the Greek police.

## HISTORY

**DIFFICULTIES OF THE ALLIES WITH THE GOVERNMENT.** The note of the Allies as narrated in the preceding YEAR BOOK was submitted to the

Greek government on December 31, 1916. It was immediately followed by expressions of irritation in the press, and by hostile demonstrations toward the Allies which the Greek government did not suppress. On January 2 the king conferred with a number of the pro-German ex-ministers. Meanwhile, there were loud demands in the streets for a rejection of the note and strong evidence of a wish to declare war against the Allies. Some suspected that the king and his prime minister, Lambros, favored war and that they were hoping Germany would come to their aid. Large numbers of the Venizelists continued to be arrested in the capital and in Thessaly the reservists attempted to cut the railway line from Larissa to Athens. At all points of the country meetings were held to denounce the Allies and in nearly all the cities the municipal councils changed the name of the streets called Venizelos to the "18th of November" (that is to say, to December 1 new style in honor of the outbreak of that date against the Allies). On January 5 the government replied that it would accept certain of the conditions in the note of December 31, but it made so many exceptions that this practically amounted to a refusal. Among the reasons that encouraged the king to continue this policy was the fact that Italy was not in harmony with the Allies in their demands. Italy did not sign the note of December 31, but presented a separate note on the ground that she could not support the Allies' claim in regard to the Venizelists. She alleged that to do so would be to interfere in the internal affairs of Greece, but the recognition of Venizelos had displeased Italy for the Italians were more hostile to him than many of the pro-German Greeks. The Greek government took advantage of this difference of opinion, but a conference of the Allies was held at Rome and Italy finally accepted the entire terms of the note. A new ultimatum was submitted to the Greek government on January 9 and in this the Italian government joined without reserve. The Greek cabinet now replied, January 10, in a manner that was still unsatisfactory but more yielding. It evaded certain points, especially as regards the dissolution of the leagues of reservists and the transportation of the Allied troops by way of Larissa and it tried to impose certain conditions, namely, the raising of the blockade and the indication of the manner in which the Venizelists should be indemnified. The anti-Venizelist press continued to attack the Allies and the peace note of President Wilson gave the king occasion to declare that no country which was not involved in the war had suffered so much from it as Greece. About the same time a German representative arrived in Thessaly and this was taken as a sign that Germany would come to the aid of the government. The Allies, however, submitted a new ultimatum on January 13 and Greece thereupon seemed to give way. The Venizelists were released; the leagues of reservists disbanded; the transport of troops and arms into the Morea was rapidly executed. The garrison at Athens which led in the revolt on the Allies on December 1 left the city without any disorder and on January 24 the government presented its formal excuses to the representatives of France, Great Britain, Russia, and Italy for the attack of December 1. The ceremony took place

at the Zappeion where the flags were saluted by the troops and by the people. Nevertheless, some of the demands of the Allies were not yet satisfactorily adjusted and the blockade which had begun on December 8, 1916, still continued. On February 2 Greece requested of the Allies the lifting of the blockade on the ground that their demands had been complied with, but on February 19 the Allied legations declared that the demands had not been fulfilled completely, especially with reference to the delivery of arms. On March 8 a telegram was sent by Mr. Lloyd George in reply to the request that the blockade be raised. He said that the Allied governments would be glad to raise the blockade as soon as they were convinced that the conditions of the ultimatum of January 5 and of the notes of December 8 and 14 were fulfilled by Greece and that the blockade would have already been raised but for such instances as the mining of the Corinth Canal and the continued activity of the reservists.

In the middle of April the situation in Greece was reported to be very serious. The demands of the Allies were still disregarded. The Lambros government had done nothing. The government disputed over various questions and had not taken a single step against the Germans or pro-Germans. The German agents were reported to be everywhere in Thessaly. Bands of irregular troops were organized in the neutral region and came frequently into conflict with the French. The reservists were said to be in relation with these irregulars. Complaint was made of this matter to the Greek government and certain officers were accused of organizing this hostile movement, but the government returned the reply that the officers in question were above suspicion. Between two and three thousand Greek troops were allowed to pass back to the mainland of Greece wearing their uniforms. Upon the protest of the Allies the government began to demobilize these troops, but this was not carried out.

On May 1 a congress of representatives of the Greek colonies was held and they voted a resolution against King Constantine. On May 4 the ministry of Lambros fell and was succeeded by the ministry of M. Zaimis. The fall of the Lambros cabinet was welcomed by the Allies, as he had followed a policy of delay and opposition, whereas it was supposed that M. Zaimis would be less difficult.

ATTITUDE OF VENIZELOS. On May 30 M. Venizelos was reported in the press to have declared reconciliation with King Constantine to be impossible. He accused the king of being in constant relation with Germany, of trampling the constitution under foot, of turning traitor toward obligations of the treaty with Serbia, and of leading Greece to ruin. He was, moreover, no longer a king, but merely a party chief. It was the opinion of M. Venizelos and his ministers that the most important thing for Greece was that the dynasty of Constantine, like the Turks, should be expelled, bag and baggage. After the war Greece could have a constitutional assembly at which the people could decide whether they preferred a republic or a monarchy. If they preferred a monarchy, the crown could be offered to some one who was worthy to be king. The provisional government had occupied the rich province of Thessaly because the crops which were on the point of

being harvested were very rich and it was known that the king's government was about to issue a decree requisitioning them; if the government succeeded in seizing these crops it would be able to provision the army for a long time.

**THE POLICY OF THE ALLIES.** Demand for a more vigorous policy on the part of the Allies now became urgent, as illustrated by the following comments in the press: The new prime minister, M. Zaimis, while pretending to desire friendly relations with the Allies, was in the opinion of the latter simply trying to gain time in order to take possession of the harvest in Thessaly, which was exceptionally good and would, perhaps, suffice for the support of the royal army to the close of the year. This policy of temporizing had been the constant characteristic of all the recent ministries. The king himself declared that the war was approaching its end and that it was useless to resort to new measures. In certain quarters the policy of the Allies was regarded as too hesitating. The idea that it was necessary to defeat the Bulgarians before settling affairs with Greece was condemned by these critics, who maintained that the Greek difficulty would have to be cleared up before it was possible to beat the Bulgarians. The Bulgarians once defeated, King Constantine would at once take sides with the Allies. In London it was not believed, apparently, that the necessary condition of success on all the fronts was that the enemy should be deprived in advance of aid and supplies. Even in France this view was not strongly supported. Despite the accession of Lloyd George the old policy continued to rule. The Allies were blamed also for their engagement in their declaration of January 8 that in return for certain promises of M. Lambros they would not permit the extension of the Venizelist movement. But in spite of that engagement they still possessed liberty of action since they had expressly reserved it to themselves for maintaining by their own means on land and sea the safety of their army if there was any obstacle thrown in the way by the Greek government to the execution of its promises within the next fifteen days. This time had long since expired. The show of good will on the part of the government was taken by some to be simply a trick. The attitude of the French cabinet seemed to be firm on this point, but it was a question whether it could win over the Allies of France to a firm and radical policy toward the Greek government. Popular opinion in England also seemed to favor such a policy; but the Government had apparently not been ready to adopt it. These critics inquired why when the national sentiment in all the three protective powers of Greece was entirely favorable to the provisional government and utterly hostile to the government of Constantine there should be further delay in acting in accordance with this sentiment and in suppressing out and out that barrier of the neutral zone, which permitted the royalists to keep their grip on Thessaly. Why, they asked, should not the Greek people be left free to act through their chosen representatives and their volunteer army, and why leave the field free in Greece to our enemies? It was reported that the Venizelist army at Saloniki and in Macedonia already numbered 48,000 men and 1900 officers, a larger number than the effective army of all Greece in times

of peace. It provisioned itself regularly in the islands where there were from 15,000 to 20,000 additional volunteers under military training. One of the volunteer divisions of the Greek army had distinguished itself in battle with the Bulgarians and had received special praise from Gen. Sarraill. The rest of the army asked nothing better than to be allowed to see active service.

**ABDICATION OF KING CONSTANTINE.** Finally the Allies decided to intervene actively and control the affairs of Greece. M. Jonnart, formerly governor-general of Algeria, was appointed high commissioner for the Entente Powers. On June 11, having arrived in Greece, he conferred with the prime minister, M. Zaimis, with a view to obtaining from the government guarantees for the security of the army of the East, the reestablishment of the unity of the kingdom, and the putting into effect of the constitution. On the following day, June 12, King Constantine abdicated, designating as successor his second son, Prince Alexander. On June 13 the ex-king left Greece and his successor issued a proclamation announcing his accession to the throne. M. Jonnart issued a proclamation to the Greek people on June 16 and on the following day M. Venizelos, who was head of the government at Saloniki, sent a congratulatory telegram to the French prime minister, M. Ribot. On June 20 the Greek minister of the interior, on the demand of the high commissioner, published the list of persons who were to be expelled from Greece, and on the same day King Alexander addressed a letter to the prime minister, Zaimis, on the subject of restoring the unity of Greece. The proposal of the government to nominate a committee of two members of the Zaimist ministry and two Venizelist ministers to negotiate on the subject of political unity for Greece was approved by M. Jonnart. On June 25 the king accepted the resignation of Zaimis and called upon Venizelos to form a new ministry. This new ministry (see above *Government*) under Venizelos as president of the council was constituted on June 27. On June 29 the new prime minister in a speech to the people announced his intention of suspending the law which forbade the removal of magistrates. On the following day diplomatic relations between Greece and the Central Powers were broken off. The Greek minister at Berlin, M. Theotokis, resigned on July 1. All these events took place without disturbance, as did the meeting of the Greek troops on July 2 on the occasion of the king's accession to take the oath of allegiance. On July 7 the government decided to call together the Chamber, which had been elected on May 29, 1915, and dissolved by King Constantine. The Chamber reopened on July 25, but adjourned on July 27 in order to choose its committees. On July 28 the French troops evacuated Athens.

The proclamation in which the king announced his abdication and bade farewell to Greece was as follows:

"Yielding to necessity, accomplishing my duty towards Greece, and having in view only the interests of the country. I am leaving my dear country with the crown prince, leaving my son, Alexander, on the throne. Still, when far from Greece, the queen and I will always preserve the same love for the Hellenic people. I beg all to accept my decision calmly and quietly, trusting in God, whose protection I invoke for the nation. In order that my bitter sacrifice for my country may not be in

vain I exhort you, for love of God, for love of our country, and if you love me, to maintain perfect order and quiet discipline, the slightest lapse from which, even though well intentioned, might be enough to cause a great catastrophe. The love and devotion which you have always manifested for the queen and myself in days of happiness and sorrow alike are a great consolation to us at the present time. May God protect Greece."

The new king's proclamation to the Greek people issued also on June 12 was as follows:

"At the moment when my august father, making a supreme sacrifice to our dear country, entrusts to me the heavy duties of the Hellenic throne, I express but one single wish, that God, hearing his prayers, will protect Greece; that He will permit us to see her again united and powerful. In my grief at being separated in circumstances so critical from my well-beloved father, I have a single consolation: to carry out his sacred mandate, which I will endeavor to realize with all my power, following the lines of his brilliant reign, with the help of the people, upon whose love the Greek dynasty is supported. I am convinced that in obeying the wishes of my father, the people by their submission, will do their part in enabling us, together, to rescue our dear country from the terrible situation in which it finds itself."

The reason for the dethronement of the king was explained by M. Ribot on June 14. After outlining the course of Allied diplomacy in Greece and admitting that it had suffered from lack of unity on the part of the powers he said that they had finally come to the same policy and thereupon appointed M. Jonnart as high commissioner to carry it out. A British and French force was first sent into Thessaly to seize important military points. It had met with no resistance except at Larissa, where part of the garrison offered a feeble opposition. Everywhere the people had joined the government of Venizelos. The representative of the powers had shown the Greek government that he had come merely to aid Greece in regaining her national unity. It was impossible to accomplish this if the king, who had repeatedly violated the constitution and shown himself hostile to the protecting powers, should be permitted to reign. His eldest son also was unacceptable on account of his known hostility to France.

**THE POINTS AT ISSUE.** A summary of the long-standing difficulty between the Allies and the ex-king's government may be of service.

The expedition in the Near East had been severely criticized both in France and England as useless and the criticism increased when the Allies followed a temporizing policy with the Greek government in spite of its plainly pro-German attitude. The Greek government had from the first been a menace to the Allies, who feared that the moment their army advanced in Macedonia the king's forces would attack them in the rear or cut off their communications. The reason why the Allies followed their hesitating course toward Greece was said by many to be due to the opposition of the former Russian government to a more radical course toward Greece. Constantine, encouraged by the course of the Allies, continually intrigued with Germany and was deterred from active hostility only by the blockade. Now, if he could possess himself of the crops of Thessaly he would deprive the Allies not only of important aid, but would weaken the Venizelists, who themselves were counting on a portion of the harvest. The king's arguments on his own behalf were given at some length in

the preceding YEAR BOOK. He argued that had Greece gone into the war on the side of the Allies she would have been destroyed at once under the blows of the Austrians, Germans, Turks, and Bulgarians. He characterized as absurd the pretension that the Allies were fighting on behalf of the weak and the oppressed. He implied that Greece would share the fate of the other little nations that had entered the war. He laughed at the idea that the Allies and their partisans were fighting on behalf of the constitutional liberties of Greece. He remarked that the present war took little account of constitutional liberties—that if the parliament stood for war it was good, that if it voted for peace it was bad and in the pay of Germany. He denied the charge that his party was pro-German: he said the general feeling was never in favor of the Germans, but it also was never in favor of committing suicide for the sake of the Allies. He declared that Greece was the victim of the Allied ministers in Athens, who had seen fit to put themselves at the head of a party, that is to say, the Venizelists, and act against the government. He predicted that neither Germany nor the Allies would be defeated, but that the war would simply drag on until each side was exhausted, and that peace when it came would not take into account the rights of small nationalities.

On the other hand the contention of the Allies was that in the first place the king's government had not carried out the pledges that it made in December, 1916. In the second place the whole course of his government had been not only hostile to the Allies, but against the wishes of the majority of his own people. In March, 1916, M. Venizelos, supported by a strong majority in the Greek Chamber, had proposed to intervene on behalf of the Allies. The king dismissed him, dissolved the Chamber, and tried by corrupt means to control the elections. In the following October M. Venizelos, who was returned to parliament by the will of the people, caused the Chamber to vote that Greece would go to the aid of Serbia in accordance with the treaties. The king dismissed him again, and the Chamber was a second time dissolved. The king's ministers contrived to be elected, the larger part of the voters absenting themselves, and others voting under the direction of their superior officers. From March 6, 1916, to June 11, 1917, Greece, whose constitutional government was guaranteed by treaty, was deprived entirely of constitutional rights except during the six weeks of the last ministry of Venizelos. A vast public debt had been incurred; trade was stopped; and the king, in addition to this, had laid on the country the virtual burden of war since he kept the army on a war footing. The best citizens of Greece had formed a government at Saloniki and the Allies in supporting that government and forcing the abdication of Constantine were delivering Greece from her own oppressors. They were made guardians of the Greek constitution by former treaties. The Allies accused the king of betraying military information to the Germans. They declared that when the French army prepared an offensive its plan of concentration was communicated to the Germans by way of the royal palace; then again, the king had shown himself a traitor on December 1, 1916,

when gatling guns were trained on the Allied marines.

**THE NEW GOVERNMENT.** One of the first acts of the ministry was the dismissal from the public services of all the Pro-Germans who had been especially objectionable under the former government. There were about fifty arrests of officers of the army and navy and more were threatened. It was announced that the government intended to prosecute those who had been concerned in the crimes of December 1, 1916. It was also announced that action would be taken against the Metropolitan, who had in a public ceremony pronounced an anathema against M. Venizelos in December, and that meanwhile the relations between the Holy Synod and the government must remain in suspense. On July 2 the troops and officers in Athens publicly took the oath of fidelity to the country, king, and constitution. The Allies ceased to exercise their control over the administration except as regards customs duties and passports, and promised to relinquish these also after a short time. The relations of Greece and Italy were not clearly understood. It was known that M. Venizelos did not wish the Italian troops to retain the possessions that they occupied and desired that what belonged to Greece should be returned to her. It was planned to discuss this subject at a conference in Paris. This took place afterwards and went into the matter thoroughly.

There had been at first a good deal of alarm occasioned by King Alexander's unexpected announcement that he would follow in the footsteps of his father, but it was soon established that this did not really represent his views and that in fact it was not written by the king but by a statesman who wished to conciliate the sympathizers with the ex-king.

The views of M. Venizelos as to the situation were as follows:—The abdication of King Constantine was, from the point of view of the Venizelists, a necessary condition for the renewal of the alliance with Serbia. In his opinion the large majority of the Greek people desired the overthrow of the monarchy and the establishment of a democratic form of government. However, in the present crisis the people were prepared to fulfill the wishes of the powers and to give Constitutional Monarchy a new and fair trial; but they held it necessary to revise the constitution so that the democratic character of the monarchy should be clearly defined and no king should ever be able to say to a responsible minister as King Constantine had said to Venizelos, that he was not responsible to the will of the people.

Here and there the new government had to deal with agitators who were trying to undermine it and to rouse public opinion against the Entente Allies, nevertheless an improvement in the general condition was reported. The Chamber appointed a commission to look into the question of bringing to trial certain members of the former ministries. It then adjourned. While the policy of leniency and pardon for legal offenses was generally followed the government did proceed against some of the most violent of its former enemies. It took measures against Herr Streich, who was one of the most active agents of Germany. Gradually the Greek army was organized under the direction of a French military commander, Gen. Braquet. A

good many of the officers who had served the king now came forward and confessed their error and sought pardon. While Greece was preparing to aid the Entente Allies she demanded some aid from them in return. A serious and widespread crisis had developed. The scarcity of food was growing more severe and the needed importations did not arrive fast enough or in sufficient quantities. Greece asked the Allies to reinforce her merchant fleet with a number of vessels. The treasury and the financial conditions were in a bad state. To aid in this particular a French authority on finance, M. Sergeant, of the bank of France, was sent on a special mission to Athens. As to relations between Greece and Italy they seemed to be in a fair way toward settlement. Italian troops evacuated Jannina, and Italy recognized the rights of Greece over northern Epirus. Both of these concessions produced an excellent effect on the Greek capital.

On October 22 the Greek Chamber confirmed the recommendation of the commission that advised the impeachment of the Gounaris Cabinet. The vote was 125 to 19. The Chamber also decided to summon before the high court the ministers of the Lambros Cabinet, with two exceptions; and ten deputies were chosen to act as prosecutors at the trial. See **WAR OF THE NATIONS**; **ARCHÆOLOGY**.

**GREEN, ADOLPHUS WILLIAMSON.** An American lawyer and capitalist, died March 8, 1917, in New York City. He was born in Boston in 1843, graduated at Harvard in 1863, and after an interval of six years, during which he was principal of the Groton, Mass., high school and librarian of the New York Mercantile Library, he began to study law in the office of Evarts, Southmayd, and Choate. Admitted to the bar in 1873, he began practice in Chicago. For two years (1882-84) he served as attorney for the village of Hyde Park, Ill., and later in a like capacity for the South Park Commissioners. He built up a successful practice, especially as a corporation lawyer. In 1890 he helped to organize the American Biscuit and Baking Company and in 1898 formed the National Biscuit Company. Of this corporation, which became famous for its products and as one of the largest employers of labor in the country, Mr. Green was early general counsel and member of the executive committee, later chairman of the board of directors, and, after 1905, president. He devised an air-tight package to replace the selling of crackers in bulk, introduced new sanitary methods, and built up his business by clever advertising. Every year he traveled through the country, personally inspecting the hundreds of agencies maintained by his company.

**GREENLAND.** A Danish Arctic colony. Estimated area, 2,200,000 square kilometres (849,420 square miles). Area of settlements (colony proper), 88,100 square kilometres (34,015 square miles). Population of colony proper, 13,517. Trade is restricted to Denmark. Principal exports are seal and fish oil, seal skins, and blue fox skins. The director resides at Copenhagen.

**GREGORY, CASPAR RENÉ.** A German theologian, killed in battle April 9, 1917. He was an American by birth and education, but had been resident in Germany since 1876, first as sub-editor of the *Theologische Literaturzeitung* of Leipzig and from 1889 as professor of theology in the university there. Born in Philadelphia

in 1846, he had graduated at the University of Pennsylvania in 1864, and after theological studies in Philadelphia and Princeton went to Leipzig, where he received the Ph.D. in 1876. Honorary degrees came to him from Yale, Pennsylvania, Glasgow, and Leipzig. Professor Gregory early aided Dr. Charles Hodge to publish his *Systematic Theology* (1870-73) and from that time he devoted himself largely to scholarly writing. Among his works were: *Prolegomena* to the eighth edition of Tischendorf's *Novum Testamentum Graece* (1884-94); *Testkritik des Neuen Testaments* (3 vols., 1900-09); *Einleitung in das Neue Testament* (1909); *Die Schriften Carl Wesselys* (1910); *Die Koridethi Evangelien*, with G. Beerman (1913). Although an elderly man at the outbreak of the European War, Professor Gregory insisted on enlisting in the German army as a private. He celebrated his seventieth birthday at the front and rose to be lieutenant before his death. At various times he had made lecture tours of the great universities and seminaries in the United States and Canada, and in 1885 he declined the chair of New Testament Greek at Johns Hopkins.

**GRENADA.** A British West Indian colony, consisting of the island of Grenada, which is the most southerly of the Windward Islands group, and some of the Grenadines. The area of the island is about 119 square miles; the Grenadines have an area of about 14 square miles (Carriacou, the largest, 8467 acres); so that the area of the colony is stated at 133 square miles. At the 1911 census, the population of the colony was 66,750 (6886 in Carriacou); estimate of December 31, 1915, 71,567. The capital and chief town is St. George's (population, 4916); it has an excellent harbor. About 2 per cent of the inhabitants of the colony are Europeans, almost all the rest being negroes. Sugar culture is declining, and cacao is the crop of chief commercial importance. Imports and exports in 1915 were valued at £260,495 and £466,318 respectively. Revenue in 1915-16 amounted to £96,420; expenditure, £103,992. Public debt, £123,670.

**GRENADINES.** See GRENADA; and SAINT VINCENT.

**GREY, ALBERT HENRY GEORGE, fourth EARL.** A British administrator who died at his home in Northumberland, England, on August 29, 1917. He was educated at Harrow and at Trinity College, Oxford, where he graduated in 1873. He early entered upon a political career and in 1878 was sent to the House of Commons as a member of the Liberal Party, although he was unseated on account of a technicality the same year. Later he was returned and was a member from Northumberland continuously from 1880 to 1886. In 1886-87 he was Administrator of Rhodesia, South Africa, and from 1898 to 1904 was a director of the British South African Company. He was a close friend of Cecil Rhodes in his work of consolidating British power in South Africa. He was appointed Governor-General of Canada in 1904, succeeding his brother-in-law, Lord Minto. His term was supposed to expire in 1909, but it was extended for two terms of one year each, it is said, upon the earnest request of Canadians, among whom he was extremely popular. He inaugurated the new provinces of Alberta and Saskatchewan in 1905. Earl Grey was also very much interested in social reforms. He supported some Salvation Army projects for a

time and was interested in attempts to reform the retail liquor trade. He was also an able financier, an energetic, tireless, and always modest administrator. He was a friend of J. H. Choate (q.v.), Theodore Roosevelt, William H. Taft, and many other prominent Americans. He published *Hubert Hervey: A Memoir* (1899).

**GRIFFIN, W. S. Rev. Dr. Griffin**, who had been in the Methodist ministry for a period of sixty-eight years, died on October 13, 1917. He was born near Hamilton, Canada, ninety-one years ago. He had the reputation of being the oldest minister in the Methodist Church. He was ordained at the Hamilton (Canada) Conference in 1849, and was much in demand on the Niagara peninsula, where his jocular manner was often a great attraction at any special gathering. He subsequently held charges in Hamilton, Chatham, St. Catharines, Guelph, Stratford, Brantford, and Toronto. He was interested in the church superannuation movement and twenty-five years ago was appointed treasurer of the fund, a position which he held until his death.

**GROSVENOR, CHARLES H. GENERAL.** A soldier and a politician, died on October 30, 1917. He was born in Pomfret, Conn., on September 20, 1833. He taught school in the West for a while and then was admitted to the bar in 1857. The outbreak of the Civil War saw him a private in the 18th Ohio Infantry. By September, 1861, he was a commissioned major. His rise in the army was rapid and he had the rank of a brigadier general when he was mustered out of service in 1865. He entered upon a political career in 1874 when he went to the Ohio House of Representatives and was a member of the House of Representatives at Washington from 1885 to 1891 and again from 1893 to 1907. He was a picturesque figure in Republican politics during this period. He was the author of an authoritative life of President McKinley and the editor of the *Book of Presidents*.

**GUADELOUPE.** A French colony composed of two main and a number of smaller islands of the Lesser Antilles. Area, 1780 kilometres (687 square miles); population, 212,430. The capital is Basse-Terre. The leading products for export are cacao, coffee, and sugar. On November 22, 1917, application was made for a 75-year franchise to cover the building and operation of 118 miles of narrow gauge electric railways for the transportation of passengers, mail, baggage, and freight. This project involved the control of two waterfalls for power.

**GUAM.** An insular possession of the United States situated in the Pacific Ocean, lying between 13° 13' and 13° 39' north latitude and 144° 37' and 144° 58' east longitude; area estimated, 225 square miles. Acquired from Spain by the Treaty of Paris, 1898. Captured by the United States naval forces under Capt. Henry Glass, U. S. N., June 21, 1898, formally taken possession of by the United States, February 1, 1899. For administrative purposes Guam comes under the Navy Department, and, to facilitate such administration, the whole island with surrounding islands and cays has been designated as a Naval Station. The governor, who is a naval officer designated by the president, is also commandant of the naval station, Guam.

The population of Guam, exclusive of officers

and enlisted men of the navy and marine corps and their families, on July 1, 1917, was 13,916, of whom 13,897 are classed as "natives" and the remainder as "foreigners." Of the latter, the largest number are Japanese, 114. Only 58 are classed as Americans. Death rate per thousand 17.5, birth rate 46.4.

The imports for the fiscal year ending June 30, 1917, exclusive of naval and military stores and supplies, were \$286,651.95, of which all but \$53,466.78 was received from the United States and its possessions. Exports, \$86,529.95. The principal export was copra, of which 761,474 pounds were shipped to Japan and 1,472,576 to the United States. The principal imports were lumber, rice, flour, tinned and fresh meats, canned provisions, automobiles, kerosene and gasoline, liquors, tobacco, clothing, and cotton goods.

The revenues of the insular government in 1917 were \$94,182.86, expenditures \$93,629.56. Guam is a station of the Commercial Pacific Cable Company and cables from Manila, Yokohama, Midway, and Yap Islands are landed here. A high power radio station was constructed by the Navy Department. The U. S. Department of Agriculture maintains an experiment station in Guam. The port of entry is Apra Harbor, five miles from Agaña, the seat of government. Apra is closed to foreign vessels except by special permission of the United States government. During the fiscal year ending June 30, 1917, thirty-eight vessels having a total tonnage of 115,295 visited the port.

The governor in 1917 was Capt. Roy C. Smith, U. S. N., who assumed office May 30, 1916.

**GUATEMALA.** The most northwesterly of the Central American republics. It borders both the Caribbean Sea and the Pacific Ocean. The capital is Guatemala City.

**AREA AND POPULATION.** On account of the unsettled boundary with Honduras, estimates of area vary considerably. One estimate is 48,290 square miles, an area a little smaller than that of Louisiana; another estimate is 43,641 square miles. About 60 per cent of the people are Indian, and most of the remainder mestizo. The total population is estimated at upwards of 2,100,000. Births in 1916, 66,668; deaths, 46,443. Guatemala City had in 1917 an estimated population (very largely white) of over 100,000. The estimated population of Quezaltenango is about 34,000; Cobán, 31,000; Totonicapán, 29,000.

**EDUCATION.** Elementary instruction is free and nominally compulsory. Illiteracy is still common, but during his long presidency Estrada Cabrera has sought to promote education, a purpose he reiterated in a message to the Congress March 15, 1917. In 1915 there were 1899 public primary schools, with 65,904 pupils enrolled; in 1916, 1942 schools, with 67,152 pupils. Schools of higher grade in 1916 numbered 21. There are a law school, a medical school, and a few other institutions for professional instruction. There is no established church, but the prevailing religion is Roman Catholicism.

**PRODUCTION AND COMMERCE.** Guatemala is a fertile country, yielding many tropical and sub-tropical products. The most important crop is coffee; the normal yield is about 100,000,000 pounds, of which about four-fifths are for export. Coffee exportation before the great war was largely to Germany. The estimated coffee

yield in 1916-17 was about 80,000,000 pounds. The reported yield of other crops was as follows in 1916, in quintals of 101.4 pounds: corn, 6,110,000; wheat, 344,041; rice, 135,547; beans, 180,000; potatoes, 248,000. Reported sugar production in 1916, 971,623 quintals. Banana yield in 1916, 9,351,485 bunches, of which 3,177,426 were exported. In some parts of the country, cattle raising is a profitable industry; cattle at the end of 1915, 619,895. Forest products include rubber, chicle, dyewoods, cedar, and mahogany.

Imports and exports have been valued as follows:

	1913	1914	1915	1916
Imp. ..	\$10,062,328	\$9,331,115	\$5,072,476	\$8,539,294
Exp. ..	14,449,926	12,754,027	11,566,586	10,637,886

Principal imports in 1914 and 1915 respectively, in thousands of dollars: cotton goods, 1289 and 786; foodstuffs, provisions, and liquors, 545 and 538; linen, hemp, and jute goods, 225 and 252; paper, etc., 165 and 147; iron and steel, 516 and 121; leather, 143 and 95. Leading exports in 1914 and 1915 respectively, in thousands of dollars: coffee, 10,392 and 8949; bananas, 1017 and 1082; hides, 370 and 541; sugar, 354 and 333; woods, 302 and 176; rubber, 95 and 49. Imports from and exports to principal countries in 1915, in thousands of dollars: United States, 3752 and 6881; United Kingdom, 577 and 1322; Germany, 146 and 50; France, imports, 124; Mexico, 2 and 144; Central America, 3 and 134. In 1913, imports from Germany were valued at \$2,043,329, and exports thereto at \$7,653,557.

**COMMUNICATIONS.** Transportation is carried on largely by wagon or on mule back. There are a few good roads and in recent years considerable attention has been given to road building and improvement. The main line of railway is in the southeastern part of the country, connecting Puerto Barrios, on the Caribbean, with San José, on the Pacific, via Amates, Gualán, Zacapa, Guatemala City, Amatitlán, and Esquintla; the distance is about 270 miles. The total length of railway open to traffic in the republic is reported as 563 miles (906 kilometres).

Telegraph, about 4400 miles, with 245 offices. Post offices, about 400.

**FINANCE.** The legal standard of value is silver. The value of the silver peso fluctuates with the price of silver; on October 1, 1917, it was 71.05 cents. The currency of Guatemala is inconvertible paper. The approximate average value of the paper peso in 1915 was 2½ cents; on October 1, 1917, it was about 2¾ cents. Estimated revenue and expenditure for 1916-17, 66,200,000 and 63,095,693 pesos paper. Customs duties are the principal source of revenue. Estimated expenditure for 1917-18, 64,780,957 pesos paper, including 23,139,148 pesos for the public debt, 10,310,707 for war, 7,704,370 for public instruction, and 7,141,930 for fomento. Foreign debt (December 31, 1915), £2,357,063, including unpaid interest, £844,603. Internal debt (1914), 117,853,635 pesos paper.

**GOVERNMENT.** The legislative power is exercised by the National Assembly (69 members, elected by direct vote for four years) and the Council of State (13 members, in part elected by the Assembly and in part appointed by the president). The president is elected for six

years by direct vote. The president in 1917 was Manuel Estrada Cabrera (born 1857), who succeeded to the executive office in March, 1898, and subsequently was elected for terms ending March 15, 1905, 1911, 1917, and 1923. First designate, Gen. Mariano Serrano; second designate, Gen. Manuel Duarte—both elected by the National Assembly May 24, 1917. In consequence of disturbances along the frontier which were supposed to be of German origin, martial law was declared in the country on April 9. On April 28 relations with Germany were formally broken off. See EARTHQUAKES.

**GUIANA.** See BRITISH GUIANA; DUTCH GUIANA; and FRENCH GUIANA.

**GUNS.** See MILITARY PROGRESS.

**GUTHRIE, GEORGE WILKINS.** An American lawyer and diplomat, died in Tokyo, Japan, March 8, 1917. He was born in Pittsburgh, Pa., 1848, and all his life was identified with that city. After graduating from the Western University of Pennsylvania (now University of Pittsburgh), A.B. in 1866, A.M. in 1868, and from the law school of Columbian (now George Washington) University, he began the practice of his profession in his native city. Early entering Democratic politics, he served as associate counsel for the Tilden electors before the Florida Returning Board in 1876, and in 1884 was assistant secretary of the Democratic National Convention. He became known for humanitarian and civic activities, and in 1896 was reform candidate for mayor of Pittsburgh. Although unsuccessful at that time, he was elected in 1906 and held office for three years, greatly improving municipal conditions during this period. In 1902 he was unanimous choice of the Pennsylvania Democratic Convention for lieutenant governor. The University of Pittsburgh and Trinity College gave him honorary degrees. President Wilson appointed Mr. Guthrie ambassador to Japan in 1913 and he died while at this post. He represented the United States at the funeral of the Dowager Empress in 1914 and at the coronation of the new Emperor in 1915. His body was sent home on the Japanese cruiser *Asuma*.

**GUY, GEORGES GUILLAUME.** A French actor, died in Paris February 28, 1917. He was born in Paris in 1857. Guy was "discovered" by the comedy actor Berthelier, who came to the pension of the Frères de Passy, where Guy was at school, to organize plays for fête days. At nineteen he went into musical comedy. His talent as a violinist he used to good effect in *Un lycée de jeunes filles*. At the Folies-Dramatiques, he played in *Boccaccio* and *La princesse des Canaries*, then went over to the Théâtre de Cluny, and for two years toured in the United States with Maurice Gros. After his return his acting in the rôle of the Vicomte de Saint-Florimond in *Champignol malgré lui* in 1892 placed him in the front rank of comic actors of the time. After several years he left the Folies for the Variétés, where, with a few excursions to other playhouses, all the rest of his stage life was spent. In 1904 he had a great success as Leonard in *Varennas*, with Sarah Bernhardt. At the Renaissance he appeared with Guitry in a number of plays. Guy's greatest record was made in the operettas of Offenbach, Hervé, and others, such as *Le petit Faust*, *Orphée aux enfers*, *La vie parisienne*, *Les brigands*, *La périchole*, etc. He also appeared each year in one

or two new light comedies. His work was characterized by spontaneity, drollery, variety. His mimic gift was remarkable, and he kept himself free from vulgarity. He was often proposed for the Comédie-Française, but remained faithful to the Variétés till his death.

**GUYNEMER, E. G.** See AERONAUTICS.

**GYMNASTICS.** The nineteenth annual intercollegiate gymnastic championships were held at New Haven, Conn., the University of Chicago being the winner with a total of 14½ points. Haverford was second with 10 points and Princeton third with 9 points. Other colleges to score were: Pennsylvania, 8; New York University, 6; Harvard, 5; Rutgers, 5; Yale, 2; Amherst, ½. The individual winners were: horizontal bar, Sturridge, Pennsylvania; side horse, Dyer, Chicago; parallel bars, Campbell, Harvard; club swinging, Summerrill, Rutgers; flying rings, Crossman, Haverford; tumbling, Veavey, Chicago.

The Norwegian T. and A. C. was the victor in the national Amateur Athletic Union championships contested at New York City, scoring 27 points. The other teams finished as follows: National Turn Verein, 18; New York A. C., 13; Socialer Turn Verein, 6; Grace Club, 5; West Side Y. M. C. A., 5; New York Turn Verein, 4; First Bohemian A. C., 4; Cascade A. C., 4; 92d Street Young Men's Hebrew Association, 3; Philadelphia Turngemeinde, 3; Rutgers A. A., 2; Woodstock Turn Verein, 1.

The winners in the various events were: rope climbing, F. Seibert, Grace Club; long horse, B. Winshensen, Norwegian T. and A. C.; tumbling, A. W. Nugent, National T. V.; horizontal bar, F. Hell, Socialer T. V.; Indian clubs, R. W. Dutcher, New York A. C.; side horse, C. Zenker, New York T. V.; parallel bars, B. Jorgensen, Norwegian T. and A. C.; flying rings, O. Poll, National T. V.; all-around, B. Jorgensen, Norwegian T. and A. C.

**HAGUE, ARNOLD.** A distinguished American geologist, died in Washington, D. C., May 14, 1917. He was born in Boston in 1840. After graduating from Sheffield Scientific School, Yale, in 1863, he studied for three years abroad, at Göttingen, Heidelberg, and the Freiberg School of Mines. As assistant geologist in the United States Geological Exploration of the 40th Parallel between 1867 and 1877, he investigated mines and mining processes in Montana, working under the noted geologist Clarence King. Beside individual chapters in the general report of the exploration, he wrote, with Samuel F. Emmons, a report of a detailed survey across the Cordilleras of North America from the Great Plains to the Sierra Nevada. In 1877-78 Dr. King served as government geologist of Guatemala and in 1878-79 made mine examinations for the Chinese government. Thereafter he was a geologist on the United States Geological Survey. After making a special study of the Eureka district, he wrote a book on this subject. Beginning in 1883 he was best known for his work in the development of the Yellowstone National Park. He studied not only the geology of the region, but its flora and fauna, and its availability as a public pleasure ground, and made valuable reports to the government. With others he wrote *Geology of the Yellowstone National Park* (1899), and alone he published an *Atlas of the park* (1904) and *Origin of the Thermal Waters in the Yellowstone National*

*Park* (1911). Dr. Hague gained an international reputation and received many honors. Columbia University gave him the degree of Sc.D. and Aberdeen that of LL.D., he was vice-president of three International Geological Congresses, member of the National Academy of Sciences, and in 1910 president of the Geological Society of America. In 1896 he served as a member of the commission appointed by the National Academy of Sciences to prepare a plan for national forest preserves.

**HAIG, Sir DOUGLAS.** See WAR OF THE NATIONS.

**HAIGHT, CHARLES COOLIDGE.** An American architect, died at Garrison, N. Y., February 9, 1917. Born in New York City in 1841, he graduated at Columbia University in 1861, taking his A.M. there three years later. In 1862 he enlisted in the 7th Regiment of Maryland Volunteers and later he was lieutenant and captain in the 39th New York Volunteers. Wounds received in the Battle of the Wilderness forced him to leave the army. Mr. Haight designed many notable buildings, and was particularly successful in his work for colleges. He planned the old buildings of Columbia University on Madison Avenue, New York, now demolished, the General Theological Seminary group, and at Yale University Vanderbilt, and Phelps Halls, the university library, Mason, Sloane, and Osborn laboratories, and new dormitories for the Sheffield Scientific School. In New York, besides the buildings already noted, he is represented by St. Ignatius Church, the New York Cancer Hospital, the Havemeyer house on Fifth Avenue, the garrison chapel on Governor's Island, and two armories. At Hartford, Conn., is his Keney Memorial Tower. In 1906 Yale conferred an honorary M.A. on Mr. Haight.

**HAITI.** A West Indian republic. It occupies the western part of the island of Haiti; the eastern part of the island is the Dominican Republic. The capital of the republic of Haiti is Port-au-Prince.

**AREA, POPULATION, ETC.** The estimated area of the republic is 28,676 square kilometres (11,072 square miles). The population was estimated in 1912 at 2,500,000; it is not unlikely, however, that the number of inhabitants does not exceed 2,000,000. In density of population, Haiti disputes with Salvador first place among American republics. About 90 per cent of the people are negroes, and most of the remainder mulattoes. The official language is French; a French dialect is spoken by the common people. The largest city is Port-au-Prince, which is supposed to have over 100,000 inhabitants. According to a 1917 enumeration, the population of Cap-Haïtien is 18,900. Other towns of some importance are Les Cayes, Gonaïves, Jérémie, and Port-de-Paix. There are about 200 national schools and five public lycées, in addition to private schools.

**PRODUCTION, COMMERCE, ETC.** Agriculture and other industry are in a backward state on account of inadequate transport, the lack of thrift and progressiveness among the people, and years of governmental instability, which discouraged the introduction of foreign capital. The leading crop commercially is coffee; other crops of some importance are cacao, sugar cane, tobacco, and cotton. Logwood is a valuable product.

Statistics of the foreign trade have not been

issued officially in recent years. According to consular advices, imports in 1913 were valued at \$8,100,125; in 1914, \$7,612,792; in 1915, \$4,344,763; in 1916, \$10,312,000. For both 1915 and 1916, export values are estimated at about \$13,000,000. Imports are largely from the United States, exports largely to France and the United States. Exports in 1914 and 1915, respectively, in thousands pounds: coffee, 78,512 and 36,879; cacao, 6088 and 3468; cotton, 3122 and 1762; logwood, 54,519 and 65,600; cottonseed, 5369 and 533; goatskins and hides, 1265 and 669. The honey export in 1914 was 1,264,690 gallons and in 1915 668,630 gallons.

Railway, including light railway, about 225 kilometres (140 miles); telegraph line, 124 miles; post offices, 31.

**FINANCE.** Haiti has an inconvertible paper currency. The monetary unit is the gourde; its approximate value in 1916 was 16 cents and on October 1, 1917, 18.3 cents. The greater part of the revenue is derived from duties on imports. Export duties and import surtaxes are payable in American gold. The reported revenue for the year ended September 30, 1916, was \$3,909,980 and 3,836,032 gourdes paper. The sanctioned expense budget for that year was \$3,999,732 and 3,479,821 gourdes paper. This budget was continued for the fiscal years 1916-17 and 1917-18. Public debt July 1, 1914, \$25,892,181 and 13,534,812 gourdes paper. According to *Le Nouvelliste*, a newspaper of Port-au-Prince, the foreign debt (gold) on December 31, 1916, amounted to 120,912,060 francs. Public finance is under American control.

**GOVERNMENT, ETC.** The legislative power is exercised by the National Assembly, which consists of two chambers: the Chamber of the Communes (99 members elected for three years by direct vote) and the Senate (39 members, elected for six years by the Chamber of the Communes). The president is elected for seven years by the two chambers in joint session; he is not eligible for reelection except after the interval of at least one term. The president in 1917 was Philippe Sudre Dartiguenave, elected August 12, 1915. A virtual protectorate by the United States over Haiti was established by a treaty ratified by the National Assembly in November, 1915, and by the United States Senate February 28, 1916. According to a report published on April 24 a new cabinet known as the Conciliation Cabinet was appointed with M. Chatelain as prime minister and minister of foreign affairs. On May 4 the president sent a message to Congress asking that war be declared against Germany. This followed the destruction by the Germans of the French steamer, *Montreal*, which carried five Haitians among the crew and three among the passengers. On May 11, however, after considering the subject, Congress refused to declare war on Germany, but it adopted a resolution protesting against the submarine warfare and it empowered the president to break off relations with Germany if the latter refused to make reparation for the loss of lives and to give guarantees for the future.

**HALIFAX DISASTER.** The most serious catastrophe of the year outside of the war stricken regions of Europe occurred on December 6 when a large section of the city of Halifax, Nova Scotia, and the town of Dartmouth directly across the harbor, were wrecked

as the result of an explosion of a munitions vessel and a following conflagration. The French munitions ship *Mont Blanc* was bound from New York for Bedford Basin, Halifax, and was passing up the Narrows leading from the harbor to the Basin. The Belgian relief ship *Imo* was passing out to sea and had reached a point in the Narrows near Pier 8. Owing, it was alleged, to a misunderstanding of signals the *Imo* did not stop until too late and crashed into the *Mont Blanc*, piercing her on the port side almost to the engine room. After the collision, the *Mont Blanc*, which carried a deck cargo of gasoline, almost instantly burst into flames, and was abandoned by her crew by the order of the captain, as he realized that an explosion was inevitable. About twenty minutes after the ship had been abandoned, the expected explosion of the large cargo of munitions occurred, and the north end of the city and the town of Dartmouth opposite on the easterly side of the harbor felt its full effects.

The explosion took place about 9 o'clock in the morning just as the business day of the city had begun, and whole blocks of dwellings particularly in Richmond opposite the scene of the explosion, were leveled. After the explosion fire broke out in many places simultaneously, so that it was impossible for fire engines and firemen to make any headway, and the fire virtually burned out of its own accord.

The cargo of the ship was said to be 2800 tons nitro-glycerin and trinitrotoluol, and so severe were the effects of the explosion that many believed in the first confusion that a German Fleet was bombarding the city, or that an attack was being made by Zeppelins. In Halifax proper the zone of destruction extended from the North Street railway station as far north as Africville to Bedford Basin, covering an area of about  $2\frac{1}{2}$  square miles, and this territory was absolutely laid waste, either by the explosion or by the following fire. Along the water front, great damage was done to the shipping and many of the crews of the vessels in the harbor perished.

The Central Passenger Station in the city was wrecked and many lives were lost of persons in it. Practically all the buildings and the freight yards were demolished and about 400 freight cars were destroyed, most of them by fires following the explosion. Some seventy or more passenger cars were badly damaged and at the Richmond station many employees were killed and injured as well as in the freight yards. Of the seventy trainmen reporting at that station ordinarily, but ten came on duty on the Monday morning following the disaster.

It was said at first that some 2000 persons were killed and many were rendered homeless by the explosion and fire, and a large portion of the majority included children in the public schools in the north end. Many injuries were occasioned by broken glass, while the blizzard that developed on the following day enforced rescue workers to suspend their operations and added to the death record those who perished of cold and hunger in the ruins of the shattered buildings.

The report submitted to the General Relief Committee by J. H. Wingfield estimated 1500 killed, 4000 seriously injured, 20,000 rendered homeless, and a total property loss of \$50,000,000 as a result of the fire and explosion. The

total number of identified dead numbered 854 and the unidentified 304, making a total of 1158 bodies recovered.

The value of homes destroyed or damaged beyond repair was not less than \$7,000,000. The damage to homes that could be repaired, plus the value of furniture and personal effects lost, was estimated at \$8,000,000. Damage to civic, provincial, government, military, naval, church, institutional, and industrial property was \$25,000,000. These figures give a total property loss of \$40,000,000 but they were only estimates of a tentative character, and in any event did not cover so-called replacement value. It was estimated that temporary shelter and relief for at least six months must be provided and this it was stated would cost about \$5,000,000. In addition the number permanently disabled and families deprived of their means of support would probably involve another \$5,000,000 so that the sum of \$50,000,000 was given as a conservative estimate of the damage done.

Naturally in connection with the explosion rumors of treachery developed, and also that it was engineered by Germans or German sympathizers. Investigations were held, but so far as announced at the end of the year, no evidence of the kind developed. There were of course, in the port of Halifax, elaborate harbor improvements as described in the *YEAR BOOK* for 1915, where cargoes of various munitions of war were ready for shipment.

The American Red Cross shipped two relief trains including a special base hospital unit from New England, and the city was put under martial law. American seamen from a war vessel off the coast, landed and assisted in the rescue work. An appropriation of \$1,000,000 for immediate relief was made by the Dominion government, and an appeal was sent out throughout the province asking for the collection of between \$20,000,000 to \$25,000,000 to carry on necessary relief work. Colonel R. S. Low of Ottawa, a civil engineer and contractor, was placed in charge of the clearing operations.

In connection with the Halifax disaster, a number of interesting developments occurred as to the liability of the fire insurance companies. If it could be shown that the losses were occasioned solely by the explosion, and there was no subsequent damage by fire, it was believed that no liability would attach to the insurance companies; while if the loss was due partly to explosion and partly to fire, the question assumed to be one for the government to construe; or if as was charged, the damage resulted from the explosion of government munitions, the government should assume the loss. On the other hand, if the loss was occasioned solely by the fire, the various insurance companies naturally were responsible. At the end of the year a distinct feeling was developing that the Dominion government should in large part reimburse the citizens for losses entailed, in that due military precautions were not observed.

**HAMILTON COLLEGE.** A non-sectarian institution for the education of men, located at Clinton, N. Y. In the fall of 1917 there were 198 students and twenty-three members of the faculty. The library contains 72,000 volumes and 20,000 pamphlets. Productive funds amounted to \$1,200,650 and the income therefrom to \$60,000. A bequest of \$200,000 was received from Col. Payne. A course in mili-

tary art and science was added to the curriculum in 1917. Hamilton College was founded in 1812. President, Frederick Carlos Ferry, LL.D. **HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.** A non-sectarian co-educational institution for the education of negroes and American Indians (principally the former) located at Hampton, Va. In the fall of 1917 there were 1838 students enrolled in the several departments and 130 members of the faculty. Sixty-three students and nine members of the faculty left to enter government service in 1917. Volumes in the library numbered 38,342. Productive funds in 1917 amounted to \$3,087,624 and the income to \$129,497. Hampton Institute was founded in 1868. On the death in 1917 of the principal, Reverend Hollis Burke Friswell, D.D., LL.D., Rev. James Edgar Gregg was elected to succeed him. William Howard Taft is president of the board of trustees.

**HARBORS.** See DOCKS AND HARBORS.

**HARCOURT,** EUGÈNE D'. See MUSIC, Choral Societies.

**HARVARD UNIVERSITY.** A non-sectarian institution of learning at Cambridge, Mass. In the fall of 1917 there were, exclusive of Summer School and Extension Teaching, 3684 students enrolled as follows: College, 1681; Graduate School of Arts and Science, 296; Graduate School of Business Administration, 93; Architecture, 18; Landscape Architecture, 7; Bussey Institution, 6; Divinity School, 59; Law School, 296; Medical School, 386; Dental School, 211; Special, 37; registered at Harvard in the Engineering and Mining Schools in coöperation with the Massachusetts Institute of Technology, 519. There were 922 members of the faculty. The following professors died during 1917: Hugo Munsterberg, Charles P. Parker, H. Langford Warren, Josiah Royce. Professor Barrett Wendell, professor of English, resigned and was made emeritus professor. Professor W. A. Neilson resigned to assume the presidency of Smith College. Professor E. C. Moore resigned to assume the presidency of the Los Angeles State Normal College. William Morse Cole was made professor of accounting, and William James Cunningham was appointed to the James J. Hill professorship of transportation. Professor Rudo Francke, professor of history of German culture and curator of the Germanic museum, resigned, and was appointed professor emeritus and honorary director of the Germanic Museum. Henry Moore Bates, dean of the Law School of the University of Michigan, was made professor of law in place of Professor Kales; Charles T. Copeland was made associate professor of English; Walter F. Dearborn and Henry Wyman Holmes were made professors of education; William Duane was made professor of bio-physics; Theodore Lyman and George Washington Pierce of physics; Edward Wyllys Taylor of neurology, and Henry A. Yeomans of government. John Livingston Lowes of Washington University, St. Louis, was elected professor of English. Maj. William Francis Flynn, U. S. A., was appointed professor of military science and tactics. Col. P. J. Azan and Lieut. A. Morize were appointed lecturers on military science and tactics. Lieut. F. Greene, U. S. N., was appointed lecturer on naval science and tactics. Volumes in the library including pamphlets number 1,800,000. The amount of productive funds in 1917 was

\$32,400,000, the income from which was approximately \$3,200,000. The university received by gift: \$2,272,000, including \$200,000 for the general use of the Museum of Comparative Zoölogy; an anonymous gift of \$387,942, precise purposes not yet specified; \$50,000 gift of Mrs. William H. Bliss for scholarships and instruction in forestry; \$75,000 from the estate of Peter Paul Francis Degrand: French works and periodicals in the exact sciences; \$70,000 from Dr. Henry J. Dorr: Chair of Research and Teaching in Anæsthesia; \$93,000 from Alexis Irénée DuPont: the Department of Chemistry; \$145,733.50 from the estate of Mrs. John E. Hudson: John E. Hudson professorship of archæology; \$50,893.80 from the estate of William S. Murphy: Murphy Scholarships; \$100,000 from the class of 1892 as a Twenty-fifth Anniversary Fund. During the year of 1917 the alumni of Harvard undertook to raise a fund of \$10,000,000 to add to the Endowment Fund of the University. Nearly half a million of this fund was raised when America entered the war and the project was postponed. A valuable collection of ethnological material from the Bagobo, Ata, and Moro tribes of Mindanao and from the Sulu region of the southern Philippine Islands was received as a gift to the Peabody Museum from Edward Boroditch, Jr. The Graduate School of Business Administration opened a new department which contained a library of business devices. The centennial of the Harvard Law School which would have been celebrated in 1917 was postponed indefinitely. Mrs. Josephine Spencer Gay of Brookline presented to the College Library a collection of selected books from the collection of the late Frederick Lewis Gay. The Supreme Court of Massachusetts handed down an undivided opinion in 1917 that the terms of the agreement between Harvard and the Massachusetts Institute of Technology were contrary to the intention of the late Gordon McKay as expressed in his will making a bequest to Harvard University for education in Applied Science. This agreement was made in 1914 and provided that instruction in certain branches of engineering was to be given through coöperation between the two institutions in the buildings of the institute at the cost of a portion of the income from the Gordon McKay bequest. In accordance with records compiled for the *Harvard Alumni Bulletin* more than 5000 former students and graduates of Harvard were taking part in the war at the end of 1917. Before the outbreak of hostilities Harvard organized a Reserve Officers' Training Corps and with the assistance of the French Ambassador six disabled French officers were assigned to teach military science at Harvard. A course was also established to prepare undergraduates interested in naval training for examination to be ensigns in the naval reserve; forty-seven students were registered in it at the end of 1917. Harvard coöperated with the Naval Reserve Radio School established in the Cruft High Tension Electrical Laboratory. The university was founded in 1636. President, Abbot Lawrence Lowell, LL.D.

**HAVERFORD COLLEGE.** An educational institution, under the control of the Society of Friends (Quakers), located at Haverford, Pa. In the fall of 1917 there were 170 students and thirty members of the faculty. Volumes in the library number 72,181. Productive funds in

1917 amounted to \$2,577,574 and the income therefrom in the year 1916-17 was \$122,095. Lyman Beecher Hall, professor of chemistry, retired; William Edward Lunt was appointed to be the first Gideon Scull professor of English constitutional history; Elihu Grant was called from Smith College to be professor of Biblical literature. The Hinchman Astronomical Fund of \$10,000 was received under the will of Charles S. Hinchman. Haverford College was founded in 1833. President, William Wistar Comfort, Ph.D., Litt.D.

**HAWAII. POPULATION.** The total population of the islands in 1910 was 191,909. This has increased rapidly since that year, and the estimated population on June 30, 1917, was 250,627. Of the total estimated, 102,479 were Japanese; 23,990 were Hawaiians; 19,100 Filipinos; 15,850 were part Hawaiian; 22,100 Chinese; and the remainder were Porto Ricans, Korean, Spanish and other Europeans, and Americans.

**AGRICULTURE.** There was little change in the agricultural conditions in 1917. The imports of foodstuffs for human consumption amounted to \$10,419,371, an increase of \$2,606,012 over 1916. The sugar imported during the year amounted to 581,318 tons, valued at \$62,743,372. The pineapples exported were valued at \$8,933,056, or a total for the two products of \$71,676,428, compared with a value in 1916 of \$63,299,290. The Territory during the year enjoyed unusual agricultural prosperity. The fric-

public lands, to whose work hydrographic activities are more closely related. The division of entomology was changed into a division of plant inspection to care for plant quarantine and inspection to prevent injurious insects from entering the Territory. The board, as reorganized, consists of five divisions: Forestry, plant inspection, entomology, animal industry, and marketing, all of which are supported by specific appropriation out of the general revenues.

**COMMERCE.** The imports for the fiscal year amounted to \$46,358,341, compared with a value of \$34,098,210 in 1916. The exports amounted to \$75,115,983, compared with a value of \$64,670,852 in 1916. The following tables show the imports and exports by countries for the fiscal years 1916 and 1917.

**TRANSPORTATION.** The progress of the Territory is peculiarly dependent upon the development of transportation facilities, due to the fact that it is isolated, and is compelled to look to the continental United States as a market for its products and also a supply depot for its needs. Traffic between the islands is carried on chiefly by the Interisland Steam Navigation Co., which operates a fleet of seventeen steamers. During the fiscal year, this company carried 79,215 passengers, and 402,093 tons of freight. The Oahu Shipping Co. operates seven steamers. Traffic with the mainland is carried on by the American-Hawaiian Steamship Company, the Matson Navigation Company, and

\* Mostly pineapples.

tion between the laborers and plantationers was averted chiefly by the means of a bonus which aimed at a just participation in the profits. The Bureau of Agriculture and Forestry, which cared for the interests of pure agriculture in the Territory, was affected by laws passed in the 1917 session of the legislature. The division of hydrography was transferred to the department of

the Great Northern Pacific Steamship Company. The latter carries chiefly tourists. The greater part of the freight is carried by the American-Hawaiian Steamship Company. During the year this company retained two of its largest steamers, each with a 14,000 tonnage, for the transportation of sugar from Hawaiian Island ports to San Francisco. Direct service between

Hawaii and New York previously carried on by this company was suspended. The Matson Navigation Company handles a larger part of the traffic, freight and passenger, between the Territory and the Pacific coast. It operates 309 steamships. In addition to these lines, several of the large oil companies in the United States operate vessels between the mainland and the Territory. These were devoted to the carrying of oil chiefly for fuel purposes. The transportation with Asiatic countries is maintained by the Pacific Mail Steamship Company, the China Mail Steamship Company, and the Toyo Kisen Kaisha of Japan. The Canadian-Australian Royal Mail line operates passenger and freight steamers which may stop at Honolulu. Several other important lines make regular stops at this port.

The total steam railway mileage of the Territory in 1917 was 312. The line having the longest mileage was on the Island of Oahu. The total number of passengers carried on the road in 1917 was 1,621,685. The freight carried amounted to 1,223,746 tons. There were 595 miles of private railway leading to plantations.

**EDUCATION.** The total number of pupils enrolled in the public schools at the end of the fiscal year was 32,282, an increase of about 7 per cent over 1916. The total number of schools was 168. The teachers numbered 855, 716 female and 139 male. The average daily attendance during the year was 30,293. Of the total number attending school, 13,804 were Japanese, 4744 Portuguese, and about 7000 Hawaiians and part Hawaiians. The total expenditure for school purposes was \$898,047.

In addition to the regular schools, there are in the Territory 137 Japanese schools given over to the teaching of the Japanese language and other subjects peculiarly Japanese. These were attended by about 14,000 Japanese pupils.

There were enrolled in the College of Hawaii during the year, 110 pupils, of whom 79 were Caucasian and 13 Chinese. The remainder were Japanese, Hawaiian, Korean, and Hindu. The faculty included 12 professors and about 20 assistants.

**FINANCE.** The assessable property of the Territory on June 1, 1917, was \$231,920,919, an increase of \$25,000,000 over the value of the previous year. At the beginning of the fiscal year, there was a cash balance of \$539,388. The receipts amounted to \$5,944,752, and the disbursements to \$5,689,735, leaving a cash balance at the end of the year of \$794,406. The bonded debt of the Territory was decreased \$150,000 during the year, and at the end amounted to \$7,874,000.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include two industrial schools, one for boys and one for girls. These include, receive, and care for all the delinquents of all ages and nationalities who are not paroled or put on probation by the Juvenile Court in Honolulu, or by the judges of other courts sitting as juvenile judges. A Detention Home was established during the year to care for children awaiting trial, dependents not yet provided for, and in some cases paroled juveniles. There are two Territorial Reform Schools, and a Territorial prison. A new prison building was under construction during the year.

**HEALTH AND SANITATION.** The Territorial

Board of Health has general supervision over the public health work in the Territory, although some is handled by the local governments. During the past year the health condition was good. The government employs twenty-five physicians, who, during the year, visited over 10,000 homes, and examined 18,185 school children. The principal considerations of the board of health are: Leprosy, tuberculosis, sanitation, and pure food. During the year there were 1864 contagious and infectious diseases. A rat and mosquito campaign was carried on during the year with satisfactory results. An efficient system of medical inspection is carried on in the public schools. There were three cases of plague during the year, all of which terminated fatally.

**POLITICS AND GOVERNMENT.** Owing to the position of Hawaii as the largest military outpost of the United States, there was great activity in the Territory following the declaration of war with Germany. The National Guard of Hawaii was brought in numbers and plan of organization to the maximum which could be obtained under voluntary service. Three regiments were organized with the minimum number in Hawaii, Maui, and Kauai. In Oahu a regiment of maximum numbers and other detachment units were organized. These organizations policed the islands, thus relieving the regular army of this duty. At the outbreak of the war there were eight war-bound German merchant vessels and gunboats interned in the port of Honolulu, and in addition several merchantmen in the port of Hilo. These were all seized by the United States Navy Department upon the declaration of war, and the greater part of them were at once under commission.

**LEGISLATION.** The ninth legislature of the Territory commenced its biennial session on February 21, and remained in session for sixty days. Among the laws of importance enacted were the following: A commission was created to increase, conserve, regulate, and control the food supply of the Territory; the banking laws were revised; the pay of teachers in the public schools was made a minimum of \$40 a month; the laws for the parole of prisoners were amended; an elaborate insurance law was provided for; provision was made also for a school for the blind and other defective children; the voting of citizens absent in the army and navy was provided for.

**TERRITORIAL OFFICIALS.** *Executive:* L. E. Pinkham, Governor; C. P. Iaukea, Secretary; I. M. Stainback, Attorney-General; C. J. McCarthy, Treasurer; B. G. Rivenburgh, Commissioner of Public Lands; C. R. Forbes, Superintendent of Public Works; H. W. Kinney, Superintendent of Public Instruction; M. G. K. Hopkins, Auditor; W. E. Wall, Surveyor; W. P. Jarrett, High Sheriff; Will Wayne, Private Secretary to Governor. *Delegate to Congress:* J. K. Kalanianaʻole.

**HAY.** The 1917 hay crop of the United States according to the Department of Agriculture was 94,930,000 tons, produced on 69,988,000 acres. The production of tame hay was 79,528,000 tons, grown on 53,516,000 acres, the average yield per acre being 1.49 tons, and the production of wild hay, 15,402,000 tons from 16,472,000 acres, or at the rate of 0.94 ton per acre. The total value of the cultivated hay crop at \$17.09 per ton, the average farm value received December 1, 1917, was \$1,359,-

491,000, the highest ever recorded. The crop of wild hay at \$13.49, the corresponding price per ton, was valued at \$207,834,000, making a total value of \$1,569,325,000 for the two crops. It was estimated that about 24.4 per cent of the tame and 18.1 per cent of the wild hay crop would be baled, making 18,638,000 and 2,761,000 bales, respectively.

On May 1, 1917, the stocks of hay of the 1916 crop on farms amounted to 12,488,000 tons. The leading States in acreage in 1917 were Nebraska, New York, South Dakota, Minnesota, Iowa, Missouri, Pennsylvania, and Kansas, representing over 40 per cent of the total area. The blue grass crop of Kentucky was very light and the seed production was only about one-third normal. The total yield of all hay in Canada, surpassed only in 1911 and 1916, was placed at 13,379,000 tons from 7,824,000 acres and was valued at \$160,000,000. England and Wales reported a total production of 7,550,000 tons, or 1,280,000 tons less than in 1916 but nearly 1,000,000 tons more than in 1915. The clover seed crop of Italy was short partly as a result of dry weather but mostly on account of cutting the crop for forage before the seed was ripe. Owing to a backward season the price of hay in Holland reached \$48 per ton during the late spring of this year. Reports regarding the hay crop of other countries were not available.

**HAYES, EDWIN LOUIS.** An American soldier, oldest of surviving Civil War generals, died in Verona, N. J., January 1, 1917. He was born at Ellicottsville, N. Y., in 1820, a cousin of the future president, Rutherford B. Hayes. From a captaincy in the Northwestern Rifles, he was transferred shortly after the beginning of the Civil War to the 44th Illinois Volunteers. He soon rose to be major, and by 1863 was lieutenant colonel of an Ohio regiment, but was captured the same year and sent to Libby prison. There he remained eleven months, during which time he helped build the famous underground passageway by which a number of Union men escaped, but which rheumatism prevented him from utilizing. Later, after further confinement in Belle Isle and Andersonville prisons, Hayes participated with distinction in the battles of Franklin and Marshallville, and was promoted colonel and then brevetted brigadier general. His administration of confiscated property at Wilmington, Del., brought him an appointment from President Lincoln as Reconstruction Governor of North Carolina. After five months he was sent north to look after confiscated property in New York City. Here he was credited with saving the government millions of dollars. General Hayes entered business as a commission merchant and later dealt in stocks and bonds, not retiring till after he was 90 years old. He helped to found the Republican party.

**HEBERT, LOUIS PHILIPPE.** A Canadian sculptor, born at Sainte-Sophie d'Halifax, Quebec, in 1850, who died on June 10, 1917. He studied in Montreal, Rome, and Paris, where he later settled. In 1882 he won the prize offered by the Canadian government for the statue of Sir Georges Cartier (Ottawa); he was elected to the Royal Canadian Academy in 1883 and won the Confederation medal presented by the government in 1894. His princi-

pal works are the bronze statues of *Maison-neuve* (his most popular work) and five others in Montreal; the Cartier, Mackenzie, Macdonald, and Queen Victoria monuments in Parliament Square, Ottawa; the Laval Monument, Quebec; and the Home Monument, Halifax.

**HEIFETZ, JASCHA.** See *MUSIC, Artists, Instrumentalists.*

**HELMERT, FRIEDRICH ROBERT.** A German geodesist, who was born at Freiberg, Saxony, in 1843, and who died on June 15, 1917. He was educated at the Polytechnic of Dresden and Leipzig University; in 1869-70 was observer in the Hamburg Observatory, and in the latter year became instructor in geodesy in the Technical College of Aix-la-Chapelle. In 1886 he was appointed director of the Royal Geodetic Institute of Prussia, and in 1887 professor of geodesy in Berlin University. In addition to contributions to various technical periodicals, he published among other works: *Die Ausgleichung nach der Methode der Quadrate*; *Die mathematischen und physikalischen Theorien der höheren Geodäsie*; *Beiträge zur Theorie des Reversionspendels*; *Schwerkraft und die Massenverteilung der Erde.*

**HENGELMÜLLER, VON HENGERVÁR, LADISLAUS, BARON.** An Austrian diplomat, died at Abbazia, Istria, in April, 1917. He was born in 1845 and early entered the diplomatic service. He is said to have been responsible for establishing friendly relations between Count Karolyi, then Austrian ambassador in London, and Mr. Gladstone, who had just become premier (1880) soon after violently attacking Austrian Balkan policies. Baron Hengelmüller was for many years Ambassador to the United States, coming as minister in 1894 and leaving in 1912 to be succeeded by Dr. Constantin Dumba. He wrote several books, among them *Hungary's Fight for National Existence.*

**HEREDITY.** See *ZOOLOGY.*

**HERTLING, GEORGE F. VON, COUNT.** German chancellor. Count von Hertling was born in Darmstadt in 1843. He studied at Münster, Munich, Berlin, and in Italy, and in 1882 became a professor of philosophy at Bonn. He served in the Reichstag from 1875 to 1890 and from 1896 to 1898. In 1912 he was made Bavarian minister of foreign affairs and prime minister. In September, 1917, he became chancellor of the German Empire. See *WAR OF THE NATIONS, The Diplomacy of the War.*

**HERZEGOVINA.** The southern part of the Austro-Hungarian territory of Bosnia and the Herzegovina. It is situated between southern Dalmatia and Montenegro. See *BOSNIA AND THE HERZEGOVINA.*

**HESSE.** A grand duchy of western Germany, consisting of detached parts and forming one of the constituent states of the empire. Capital, Darmstadt. Area, 2968 square miles. The population at the census of December 1, 1910, was 1,282,051, as compared with 1,119,893 in 1900, 817,000 in 1864, and 562,000 in 1816. The average annual increase was 0.88 per cent from 1816 to 1910, and 1.35 per cent from 1900 to 1910. In the latter year, communes having upwards of 2000 inhabitants aggregated a population of 776,263. Evangelicals numbered 848,004 (66.15 per cent); Roman Catholics, 397,549 (31.01 per cent); other Christians, 6707 (0.52 per cent); Jews, 24,063 (1.88 per cent). Hesse has a bicameral diet. The grand duke in 1917

was Ernst Ludwig, born in 1868 and succeeded his father, Ludwig IV, March 13, 1892.

**HIGHWAY IMPROVEMENT.** See ROADS AND PAVEMENTS.

**HINSHAW OPERA PRIZE.** See MUSIC, Opera.

**HISTORICAL ASSOCIATION, AMERICAN.** A national organization for the promotion of historical studies. The thirty-third annual meeting of the association was held at Philadelphia, Pa., December 27-29, 1917. At the same time the following societies and associations met: American Archaeological Institute, American Economic Association, Association of the History Teachers of the Middle States and Maryland, Mississippi Historical Association, American Philological Society, American Political Science Association, and the American Sociological Society. At the sessions of December 27, among the leading topics discussed were: "The Background of American Federalism," by Andrew C. McLaughlin; "The Significance of the Nineteenth Central States in the Middle of the Nineteenth Century," by Frederick J. Turner; and "Relations between the United States and Mexico, 1867-84," by Herbert E. Bolton. A joint subscription luncheon was given by the American Historical Association and the Political Science Association at the Bellevue-Stratford, followed by an address on "A Government Experiment in War Publicity," by Guy Stanton Ford. The Historical Society of Pennsylvania held a conference of archivists, and at different meetings and joint sessions ancient, general, English, and American historical subjects were discussed. In the evening a dinner was given for the women members of the American Historical Association. The presidential address on "The Editorial Function in American History," was made by Worthington C. Ford. There was a reception and supper by the Historical Society of Pennsylvania to the members of the American Historical Association.

On December 28 there were joint sessions on Medieval Church History and American History, and conferences on Military History and War Economies. At a meeting devoted to Recent Russian History, Alexander Petrunkevitch of Yale University gave an address on "The Role of the Intellectuals in the Liberating Movement in Russia." In the evening there was a general session of the Historical Society of Pennsylvania. On the closing day, December 29, a conference of historical societies was held and a paper was read on "The Relation of the Hereditary Patriotic Societies and the Historical Societies, with Especial Reference to Cooperation in Publication," by Judge Norris S. Barratt. The paper was followed by a discussion. A Conference of Teachers of History was held, also conferences on Far Eastern History and South American History. In the evening there was a joint session with the American Economic Association, the Political Science Association, and the American Sociological Society. The publications issued in 1917 were: *Annual Report for 1914*, volume I; *The Leveller Movement*, by Theodore C. Pease (essay awarded Herbert Baxter Adams prize, 1915). The off-

cers elected in 1917 were: President, William Roscoe Thayer; first vice-president, Edward Channing; second vice-president, Jean Jules Jusserand, French Ambassador to the United States; secretary, Waldo G. Leland; treasurer, Charles Moore.

**HITCHCOCK, GILBERT M.** See UNITED STATES AND THE WAR.

**HOBSON, JOSEPH.** A Canadian engineer who was born in Guelph, Ontario, in 1833, and who died December 19, 1917. He studied surveying and engineering and entered the service of the Grand Trunk Railway as an assistant engineer on construction west of Toronto. He afterward became assistant engineer on several lines, in Nova Scotia, Ontario, and Michigan; was resident engineer of the International Bridge, Buffalo (1870-73); was appointed chief engineer of the Great Western Railway (1875); and from 1896 until 1907, when he retired, he was chief engineer of the Grand Trunk Railway system. In 1890-91 he built the St. Clair Tunnel, Ontario, and in 1897 had entire charge of the reconstruction of the Victoria Jubilee Bridge, Montreal.

**HOCKEY.** The Seattle Metropolitans of Seattle, Wash., won the Stanley Cup, emblematic of the professional hockey championship of the world by defeating Les Canadiens, champions of the National Hockey Association. The Metropolitans captured three of the four games contested and earned the distinction of being the first United States hockey team to gain possession of the famous trophy. The scores were: Les Canadiens 8, Metropolitans 4; Metropolitans 6, Les Canadiens, 1; Metropolitans 4, Les Canadiens 1; Metropolitans 9, Les Canadiens 1. Four teams entered the series played for the American Amateur Hockey League title, the laurels going to the Boston Athletic Association for the second year in succession. The Boston players met with only one defeat, that at the hands of the Crescent Athletic Club of New York City, in the six games played. The final standing of the other sevens was: Crescent A. C. won 4, lost 2; Arena Hockey Club, Boston, won 2, lost 3; Irish-American Athletic Club, New York City, won 0, lost 5.

A feature of the season was the inter-city series between New York and Boston women players. The first game contested in Boston was won by the Hub seven, the score being 3 to 2. The New York aggregation took the second game played in New York by a score of 1 to 0. The third and deciding game also played in New York was won by the home team, the count being 3 to 2.

A triple tie existed for the intercollegiate championship. Yale won two of the three games played with Harvard; Harvard defeated Princeton twice; while the Tigers took two of their three games with Yale. Dartmouth, which played only one game each with Yale, Harvard, and Princeton, won from Yale and Princeton and lost to Harvard.

**HOG CHOLERA.** See VETERINARY MEDICINE.

**HOGS.** See GARBAGE AND REFUSE DISPOSAL.

**HOLLAND.** See NETHERLANDS.

**HOLTON, HENRY DWIGHT.** An American sanitarian, died February 12, 1917, in Brattleboro, Vt. Born at Rockingham, Vt., in 1838, he graduated in 1860 from the University Medical College in New York, and returned to be identified with his native State for the rest of his life. In the Civil War he served as surgeon

of the 12th Vermont Volunteers. From 1873 to 1886 he was professor of pathology and therapeutics in the University of Vermont, and during part of this time also medical examiner for the Vermont Asylum for the Insane. From 1897 he was secretary and executive officer of the State Board of Health. Previously he had seen something of political life as a member of the State Senate and House of Representatives and as delegate to the Republican National Convention of 1896. At 31 Dr. Holton was president of the Connecticut River Valley Medical Society, and he received numerous other honors, serving at various times as president of the Vermont State Medical Society, the American Congress of Tuberculosis, and the American Public Health Association, as vice-president of the American Medical Association, and as president of the board of trustees and chairman of the executive committee of the Pan-American Medical Congress of 1893. As a leading promoter of the public health movement he gained an international reputation, and was elected to various foreign as well as American scientific societies. He published articles and monographs and *Posological Tables* (2 eds.).

**HOLY CROSS, COLLEGE OF THE.** An educational institution for men conducted under the direction of the Roman Catholic Church, located at Worcester, Mass. In the fall of 1917 there were 621 students and twenty-nine members of the faculty. About thirty students left college in 1917 to enter government service. Volumes in the library numbered 42,000. Productive funds in 1917 amounted to about \$100,000 and income therefrom to \$4000. The College of the Holy Cross was founded in 1842. President, Rev. Joseph N. Dinand, S. J.

**HOME GARDENING.** See AGRICULTURAL EXTENSION WORK.

**HOME RULE.** See GREAT BRITAIN, *History*.

**HONDURAS.** A Central American republic. Capital, Tegucigalpa.

**AREA, POPULATION, ETC.** The estimated area is 114,670 square kilometres (44,274 square miles). The population is estimated at about 650,000, but this figure may be a little too high. The 1910 census returned 553,446 inhabitants. Most of the people are Indian. The largest town is Tegucigalpa, with perhaps 30,000 inhabitants.

Elementary instruction is free and nominally compulsory. In 1915, there were 922 elementary schools, with 37,786 pupils enrolled; in 1916, the number of schools was 865, teachers 1083, and children of school age 73,257. There are a few institutions for secondary and professional education. The normal and commercial schools at Tegucigalpa in 1916 had 540 and 191 matriculates respectively.

**PRODUCTION, COMMERCE, ETC.** The most important crop commercially is bananas, which are cultivated especially along the Caribbean coast. The corn crop provides the staple food of the people. Other crops are sugar cane, tobacco, coffee, coconuts, rice, beans, millet, and yucca. In some parts of the country, cattle raising is a profitable industry. Some gold and silver are mined, but there is little other development of the large mineral resources.

In the year 1914-15, imports and exports respectively were valued at 16,153,500 and 8,640,932 pesos silver (equivalent to \$5,874,000 and \$3,142,157 with the gold premium at 175);

in 1913-14, imports 16,562,325 pesos and exports 8,553,327 pesos (equivalent to \$6,624,930 and \$3,421,331 with the gold premium at 150). Foreign trade is almost wholly with the United States. The chief export is bananas.

Length of railway reported in operation in 1917, 579 kilometres (360 miles). The most important railway is the National, which extends from Puerto Cortés to Potrilloa. Telegraphs (1915), 7830 kilometres (4865 miles) of wire; post offices, 278.

**FINANCE.** The legal standard of value is silver. The monetary unit is the peso, of 25 grams of silver, .900 fine. With the rapid rise in the price of silver in 1917, this coin advanced in value, being worth about 71 cents on October 1. On the same date, peso bank notes were worth about 40 cents. Revenue is derived chiefly from customs and from monopolies of spirits, tobacco, and explosives. For the year ended July 31, 1916, reported revenue and expenditure were 5,271,103 and 5,193,989 pesos silver respectively, as compared with 6,682,891 and 6,461,467 for the fiscal year 1915. The reported foreign debt, with arrears of interest (unpaid since 1872), stood at £25,871,222 December 31, 1916. Internal debt July 31, 1916, 4,016,332 pesos silver.

**GOVERNMENT.** The legislative power is exercised by the Congress of Deputies, consisting of forty-two members elected for four years by direct vote. The executive authority is vested in a president, assisted by a cabinet; the president is elected for four years by direct vote and is not eligible for the next term. President for the term beginning February 1, 1916, Francisco Bertrand.

**HONGKONG.** An island (about 32 square miles) off the southeast coast of China, at the mouth of the Canton River, which, with a strip of territory on the mainland leased from China (376 square miles) and about four square miles of the Kowloon Peninsula, forms a British colony. Civil population (1911), 456,739 (Chinese, 444,664); 1915 estimate, 509,160. Capital, Victoria (219,755). This island is the centre of an enormous trade. Being a free port, no trade returns are available.

There is little land suitable for tillage on the island, though in the leased territory the Chinese cultivate considerable tracts. Granite quarries are worked, and various manufacturing industries are operated. Shipbuilding and repairing are important industries.

**HOOKWORM.** The investigations of the International Health Board of the Rockefeller Foundation brought to light a source of continuous reinfection by hookworm in the Chinese miners. More than a hundred thousand miners were employed in the mines of Hunan Province alone and they were recruited mainly from farmers who worked barefooted in the moist, larva-infected soil, which was fertilized, according to Chinese practice, by human excrement. Thus the disease was carried back and forth in a way that was difficult to remedy. In the United States Dr. Cumming, director of the Bureau of Communicable Diseases, and of the California State Board of Health, and Joseph H. White of the United States Bureau of Mines, studied hookworm disease as it occurred in the deep gold mines of California. About 40 per cent of miners working in some of the mining districts of California, contract

the disease, which is endemic in these localities. While the ultimate source of the infection had not been determined the immediate source was of course the careless disposition of human excrement. The soil in mines very soon becomes polluted with hookworm larvae which are capable of boring through the intact skin and gaining entrance to the body through the unprotected feet. Hookworm eggs were said to remain infectious for as long as a year after being evacuated, even when exposed to changes of temperature and sunlight on the surface of the ground; but in mines they appear to remain infectious for an even longer period, because temperature conditions are uniform. Cumming and White recommended that the feet of miners be well protected by intact shoes, that every employee should be examined for hookworm infection; and that those found infected should undergo treatment until cured. Moreover, all miners should be reexamined yearly and no applicant for work employed unless he is absolutely free from the disease. It was also urged that miners should be instructed in the cause and means of prevention of hookworm disease, so that they may take proper precautions.

Hookworm disease appears to be very prevalent in Siam. According to Dr. M. E. Barnes, 7677 individuals were examined during the six months ending August 31, 1917, of whom 5669 were found to be infected and 3614 of them were put under treatment.

**HOOVER, HERBERT C.** National Food Administrator. Herbert C. Hoover was born at West Branch, Iowa, on August 10, 1874. He was graduated from Leland Stanford University in 1895 and immediately began his profession of mining engineer, beginning as a common laborer. He rose rapidly and became wealthy through his development of gold mines in Australia. Later he was engaged in exploration in China, when the Boxer rebellion broke out. He and his wife were among those who defended Tien-Tsin during the siege. From that time until the outbreak of the war he lived in London, carrying on mining enterprises in Burmah, Mexico, Australia, China, California, and Russia. With the war came a call for him to head the Commission of Relief in Belgium. He faced a very serious problem. He had to feed and clothe the men, women, and children on very limited resources and under adverse conditions. When the United States declared war President Wilson offered him the post of Food Administrator. At first he declined to accept it, but later reversed his decision. See UNITED STATES.

**HOPS.** The world's hop production and trade in 1917 were very much upset by the war of the nations. The markets of enemy countries were closed to each other, and the demand for hops and hop products had further fallen off as the result of the reduction in brewing in several of the more important beer consuming countries. Beer production in Germany and Austria during 1917 was reported as only about 50 per cent normal. Lupulin or hop meal, a fine, yellow, resinous powder obtained from hops and used by brewers and also by the drug trade, is manufactured largely in Austria, which in normal times exports about 15,000 pounds annually, mostly to the United States and Sweden; but owing to the interrup-

tion of international communication the product practically disappeared from the world's market.

The available figures relative to European hop production in 1917 were limited to England where the yield amounted to about 225,000 hundredweights. In the United States the yield, as estimated by the Department of Agriculture, was 27,788,000 pounds, as compared with 50,595,000 pounds in 1916. Only 29,900 acres, or 14,000 acres less than the preceding year, were devoted to the crop. The average farm value of the crop, December 1, 1917, was 33.7 cents per pound as against 12 cents the year before, and on this basis the total value reached \$9,363,000, being greater by \$3,290,000 than the value of the preceding crop. Of this year's yield, California produced approximately 58 per cent, Oregon 18 per cent, Washington 17 per cent, and New York 6 per cent. The consumption of hops by brewers in this country for the year ending June 30, 1917, amounted to approximately 42,000,000 pounds. By December 1, 1917, fully 80 per cent of the year's crop had passed from the producers' hands at the highest price since 1892.

See LIQUORS.

**HORTICULTURE.** Weather conditions in 1917 were not conducive to a general heavy yield of fruits and vegetables either at home or abroad. Nevertheless the acreage yields as a whole were somewhat better than in 1916 and the total production of staple vegetables, owing to greatly increased plantings to meet war conditions, was far above normal. Increased cost of production and handling and congested railroads were largely responsible for the prevailing high prices, from which no relief was in sight at the close of the year.

Of the commercial vegetable crops in the United States, 442,536,000 bushels of white potatoes were produced in 1917 as compared with 286,953,000 bushels in 1916; sweet potatoes, 87,141,000 bushels as compared with 70,955,000 bushels; dry beans, 15,701,000 bushels as compared with 10,715,000 bushels; onions, 13,554,000 bushels as compared with 7,832,700 bushels; cabbage, 502,700 tons as compared with 252,310 tons; canned peas, 9,829,153 cases as compared with 6,686,000 cases; and canned corn, about 11,000,000 cases as compared with 9,130,000 cases. The total apple crop amounted to 58,203,000 barrels as compared with 68,194,000 barrels in 1916; peaches, 45,066,000 bushels as compared with 37,505,000 bushels; and pears, 13,281,000 bushels as compared with 11,874,000 bushels. A severe freeze in Florida together with frost, and scorching June weather in California reduced the orange crop from 24,433,000 boxes in 1916 to 12,832,000 boxes in 1917. For the shipping season ended October 31, 1917, California shipped a banner crop of 54,360 cars of citrus fruits as compared with 45,234 cars for the same period in 1916, and 24,344 cars of fresh deciduous fruits as compared with 18,000 cars in 1916. The increased shipments were due principally to large yields of lemons and grapes.

But few specific data on European production were available. The British Isles produced a large white potato crop of about 29,865,000 bushels, whereas other vegetable crops, especially beans, were short. There were large crops of grapes in Italy and parts of France.

Fruit production was generally better in the Mediterranean districts than elsewhere but transportation facilities were very poor.

**FOREIGN TRADE.** For the fiscal year ended June 30, 1917, the United States exported fruits worth \$37,653,160; vegetables, \$22,290,710; nuts, \$1,741,037; or a total of \$61,684,907 as compared with \$52,917,740 in 1916. The imports for the same period were: fruits, \$25,315,943; vegetables, \$29,150,889; nuts, \$32,865,014; a total of \$87,331,846 as compared with \$55,257,800 in 1916. There were notable increases in exports of peanuts for oil extraction, 22,413,297 bushels as compared with 8,669,430 bushels in 1916, and of dried beans, peas, and canned vegetables to supply the allied armies. Export trade in many lines was restricted by an active home demand from the public and the newly-created fighting forces of the United States. To relieve the shortage in the United States 9,747,987 bushels of beans, peas, lentils, onions, and potatoes were imported, as compared with 2,628,484 bushels in 1916. Unprepared cocoanut meat to the amount of 247,036,099 pounds and shelled peanuts amounting to 27,180,748 pounds were imported in 1917, as compared with 110,077,844 pounds of cocoanut meat and 19,392,832 pounds of shelled peanuts in 1916. Nursery stock worth \$3,955,709 was imported in 1917.

The orange, lemon, and citron peel trade of Canada was being furnished by American instead of European firms. The canning of evaporated vegetables had become an important industry in British Columbia. One factory had a contract for 1,000,000 pounds for the British army in 1917. Queensland shipped 10,000 cases of canned pineapples to England for the army. Citrus planting was rapidly increasing in Australia. Official statistics showed nearly 10,000 acres of oranges and 700 acres of lemons in Queensland, South Australia, West Australia, and Victoria. Japan entered the Australian trade with large shipments of dried fruits and nuts for the Christmas season. As a result of the hurricane in August, 1916, Jamaica's cocoanut, cacao, and banana crops were seriously reduced in 1917. A severe hurricane in September, 1917, blew down over 70,000 coconut trees and smaller numbers of other trees.

**WAR GARDENS.** In order that the big commercial vegetable crops in America might be released, as far as possible, for army supplies, various government, State, and private agencies inaugurated a nation-wide home garden and home conservation movement early in 1917, the result being that some six and one-half million war gardens were carried on, covering more than a million and a half acres, fully three times the acreage in 1916. The produce from these gardens has been estimated at a value of \$350,000,000. Experts in home economics assisted in special campaigns for the proper utilization and conservation of these supplies. The crowded cities were not neglected and unusual supplies of vegetables and fruits were canned and dried in homes where no garden space was available.

Aggressive campaigns were also conducted in Great Britain, in connection with which small tracts were allotted, seed supplied, and assistance provided. A "panel of patriotic gardeners" numbering over 100 was formed by the Board of Agriculture in coöperation with the Royal Horticultural Society, to give free advice and in-

struction to allotment holders and production societies.

In France wide powers were conferred upon the authorities for promotion and development of private gardens and large numbers were also established by the municipalities, by labor organizations, by agricultural societies, and schools. In order to furnish an adequate supply of vegetables for the French army a great vegetable nursery was established at Versailles. In 1917, 25,000,000 plants of different vegetables were raised and distributed for culture by soldier labor in the immediate vicinity of the armies and at depots and garrisons. In 1918 it was intended to produce 150,000,000 plants in addition to which about 30,000 tons of seed potatoes and 1200 tons of seeds other than potatoes were to be sown directly in the gardens in the rear of the armies. The total cost of producing 25,000,000 plants in 1917 was 40,798.5 francs or \$7874.11; the amount realized by the soldiers' gardens represented upwards of \$2,500,000. It was proposed to establish a similar plant nursery for the English soldiers. In some cases a divisional agricultural officer was appointed, and millions of cabbages, etc., were planted by soldiers in the ruined districts of France and Belgium.

**MARKETING FRUITS AND VEGETABLES.** The Bureau of Markets of the Department of Agriculture arranged to investigate and certify to shippers the condition as to soundness of fruits and vegetables and other food products when received at important central markets. The inspection service was inaugurated in twenty-four of the large markets. Data on the carload movements of fruits and vegetables and of live stock, now embracing returns from approximately 1000 officials, are telegraphed daily by more than 400 different railroads. A coöperative experimental reporting service was begun early in the year in the large wholesale farmers' market at Providence, R. I., on fruits and vegetables grown in the neighborhood. The service was successful in stabilizing local prices and was extended to the markets at Boston and Springfield, Mass., Albany, N. Y., Cleveland, Ohio, Grand Rapids, Mich., St. Paul, Minn., and Denver, Colo.

The department greatly extended its investigations dealing with the improvement of refrigerator car equipment for fruits and vegetables. The results clearly demonstrated that with improved car construction, proper loading, and judicious salting the upper tiers can be cooled to a temperature as low or nearly as low as that usually maintained in the bottom tiers under ordinary refrigeration with the present equipment. The freezing investigations proved that a little more insulation with the provision of floor racks will eliminate over 90 per cent of the freezing now occurring in the shipment of citrus fruits from California. They also indicate that, as regards economy and efficiency the year round, proper car construction and insulation will pay better than the installation of expensive and uncertain heater equipment that is useful only during the freezing season.

The department found that the time elapsing between the first appearance of corn silks and the stage when the ear is in prime table condition is practically constant for all varieties tried, sixteen days, so that by marking, the ears

OF VEGETABLES WERE PRODUCED

WAR GARDENS OF EMPLOYEES OF INDUSTRIAL PLANTS

may be harvested at the proper stage without opening the husk to judge of maturity.

Experiments at the Massachusetts Experiment Station indicated that cut asparagus stalks might be held for a week with very little deterioration in quality by placing the stalks under refrigeration, below 45° F., and in a close atmosphere to prevent evaporation. Recent experiments conducted by the Department of Agriculture showed that sweet potatoes best were stored at a temperature of from 55° to 60° F. The average shrinkage in three standard varieties stored at these temperatures for 152 days was 12.5 per cent.

**PROTECTION OF FRUIT AGAINST LATE SPRING FROSTS.** A new product, "agelarine" (antifrost), appears to have been successfully used in France for coating fruit trees before the blossoms appear, thereby retarding their blooming period several weeks without injuring the buds. Agelarine, which is patented and protected by the French government, is said to be a vegetable derivative compounded from plant juices. It is applied with an ordinary spray pump and assumes a waxy consistency when exposed to the air.

**PROMISING FRUITS AND PLANTS.** Noteworthy fruit introductions, tested on the New York State Experiment Station grounds and reported on in 1917, include the J. H. Hale and Pearson peaches, Drap d'Or plum, Empire raspberry, and Good Luck strawberry. New varieties of trees and plants sent out for trial under northern prairie conditions by the South Dakota Experiment Station included the Ivan and Dolgo crab apples, Sereda, Adno, and Hibkee apples, some seeding plums, a Turkestan radish and Siberian muskmelons and watermelons collected by N. E. Hansen, Siberian forms of almond, buckthorn, and Lavatera, Manitoba hazelnut, and the New Ulm black walnut. Coöperative experiments reported by the Hawaii Experiment Station showed that Chinese litchi seed for propagating purposes may be shipped in good condition from Hawaii to southern Florida where litchi culture is being established. The Department of Agriculture developed a number of varieties of chestnuts which showed considerable promise as nut-producing trees. Especially promising results were obtained with hybrid chinkapins.

The department also successfully developed some strains of sweet corn that possessed a satisfactory degree of worm resistance and which, it is believed, should bring about the extension of sweet corn production in the South, where at present the ravages of the corn ear worm practically prevent its cultivation.

**INSTITUTIONS, SOCIETIES, ETC.** The University of London established a B.Sc. degree in horticulture, and had under consideration the recognition of the Royal Horticultural Society's school and research station at Wisley as a school of the university. The new experimental farm at Morden, South Manitoaba, was to be devoted largely to experimental work in horticulture. A tract of about 285 acres of land had been secured. The Pennsylvania College was to develop a tract of sixty acres as a means of furnishing instruction in commercial fruit growing. The Oregon College was erecting a horticultural products building to be equipped with the view of studying problems in food conservation. C. G. Woodbury, horticulturist at Pur-

due University and Station, was appointed as director of the station on September 1. Horace Cardinell, a 1914 graduate of the Oregon College, was appointed horticulturist for the Brazilian government for work in the comparatively undeveloped section of the country.

At the thirty-fifth annual session of the American Pomological Society, Boston, November 1, the society voted to establish a new class of membership to be composed of State, provincial, and district members. The State organizations were empowered to nominate vice-presidents of the society and send delegates to the annual conventions. Dr. L. H. Bailey was elected president for the ensuing year. The National Congress of Horticulture, meeting at the same place, took up for discussion and further consideration the establishment of a rational basis for making Federal farm loans on orchards. Mr. Horace Roberts was elected president of the Congress for the ensuing year. At the annual meeting of the Society for Horticultural Science, New York, December, 1916, it was voted to change the name of the society to The American Society for Horticultural Science.

Following protests by numerous scientific organizations and others, it has been decided to resume publication of the *Key Bulletin*, which was suspended as a war economy measure a short time ago.

**NECROLOGY.** Philippe le Veque de Vilmorin, the head of the world-renowned French seed house, Vilmorin-Andrieux and Co., of Paris, died June 30 at the age of 45 years. Parker Earle, retired pomologist, for 20 years president of the American Pomological Society died on January 12 in his eighty-fifth year. Arthur G. Gulley, for 23 years professor of horticulture at the Connecticut College, died August 16 at the age of 68 years. John Howard Hale, member of the Connecticut Public Utilities Commission, horticultural lecturer and writer, and one of the foremost apple and peach orchardists in the United States, died October 11 in his sixty-fourth year. Arnold V. Stubenrauch, professor of pomology at the University of California, and for many years pomologist in the United States Department of Agriculture, died on February 12 at the age of 46 years.

**BIBLIOGRAPHY.** Among the contributions to horticultural literature in 1917 were the following: L. H. Bailey, *The New Standard Encyclopedia of Horticulture* (Vol. vi, New York); G. W. Johnson, edited by J. Fraser and A. Hemley, *Johnson's Gardeners' Dictionary and Cultural Instructor* (new edition, London); F. A. Waugh, *The Natural Style in Landscape Gardening* (Boston); Prince von Pückler-Muskau, translated by B. Sickert, edited by S. Parsons, *Hints on Landscape Gardening* (Boston); C. V. Piper and R. A. Oakley, *Turf for Golf Courses* (New York); W. Trelease, *Plant Materials of Decorative Gardening: The Woody Plants* (Urbana, Ill.); P. Pacottet, *Viticulture* (3rd ed., rev. and enl., Paris); U. P. Hedrick et al., *The Peaches of New York* (New York State Station Rpt. 1916, pt. 2); S. W. Fletcher, *The Strawberry in North America and Strawberry Growing* (New York); J. G. Boyle, *Vegetable Growing* (Philadelphia and New York); F. W. Card, *Bush Fruits* (rev. ed., New York); E. N. Reed, *Late Cabbage* (New York); W. P. Wright, *A Book about Potatoes and other Vegetables* (London); Ellen E. Shaw, *Garden Flowers of Spring*,

*Garden Flowers of Summer, Garden Flowers of Autumn* (3 vols., Garden City, N. Y.); M. Free, *Flowers of Winter Indoors and Out* (Garden City); Mrs. E. Harding, *The Book of the Peony* (Philadelphia and London); J. J. Taubenhause, *The Culture and Diseases of the Sweet Pea* (New York).

**HOSPITALS.** In spite of the demands made on the public purse for war hospitals, a great number of new facilities for taking care of the sick have been undertaken and completed throughout the United States, some of the more important of which are mentioned below. In New York City the Rockefeller War Hospital was formally opened on July 12, in the presence of several of the directors of the medical departments of the United States government and their staffs. The institute is called the Rockefeller Demonstration Hospital and Dr. Simon Flexner and Alexis Carrel, among others, gave demonstrations, and outlined the purpose of the hospital, which is mainly the instruction of army and navy surgeons in the latest and most effective methods of treating the wounded.

The Sage Hospital Bill, which provides for the creation of a commission to develop and correlate the activities of various State hospitals for the insane in New York, was signed by Governor Whitman. The commission consists of the chairman of the State hospital commission, State engineer, State architect, chairman of the financial committee of the State legislature, and two other members. The bill carries appropriations of \$20,000 for the expenses of the commission, \$100,000 for new buildings at the Middletown State Hospital, and \$299,255 to be applied in beginning construction of a new State hospital on the site acquired in 1911 at Marcy, near Utica.

In Chicago a new municipal contagious disease hospital was opened on January 7. The building is five stories in height, and will probably be known as the Alfred C. Cotton Hospital. Four floors at present are devoted to scarlet fever patients. The Chicago Lying-in Hospital and Dispensary was opened on July 28. The institution is called the Joseph Hobart Moore Memorial, is seven stories in height, and has beds for 120 patients.

The new Iowa State hospital for epileptics was formally opened on September 3 at Woodward. Wisconsin made two additions to its hospital equipment, the first being an addition to St. Vincent's Hospital, Green Bay, erected at a cost of \$75,000; the second the new St. Joseph's Hospital, Portage. The University of Nebraska Hospital, a four-story building, accommodating 120 patients, was opened on September 1. The new building of St. Joseph Hospital, Kansas City, Mo., was dedicated March 24. The structure cost \$750,000, is seven stories in height, and is designed to care for 250 patients. A twenty-room addition to the Park Hospital, Livingston, Mont., was completed at a cost of \$20,000. It has a bed capacity of fifty. A \$100,000 addition to the Deaconess Hospital, Great Falls, Mo., was also completed.

Canada has opened a great many convalescent hospitals during 1917, owing to the necessity of taking care of great numbers of returned soldiers only partially cured. It is stated that the finest of these homes or hospitals in Canada will be the old Loyola College, Montreal, which has been altered for the purpose. It also will be

the headquarters of the Canadian Hospital Commission. This commission will soon establish another hospital four miles from Montreal, to accommodate about 600 returned soldiers. It will be situated on eighty acres of ground and will be constructed of huts. The Brant House, formerly a summer hotel at Burlington, Ont., near Hamilton, was fitted up as a convalescent hospital, capable of accommodating 300 returned soldiers. In England on July 5 was opened the new extension of the Ontario Military Hospital, Orpington, Kent. This new extension doubles the capacity of the hospital, which will now accommodate 2800 patients.

The new Presbyterian Hospital at Santurce, Porto Rico, was opened with much ceremony, since it is probably thought to be the finest institution of its kind on the island. It is built entirely of concrete and cost \$145,000. The new Panama Private Hospital with accommodations for fifty beds was opened. An imposing new hospital was erected in Madrid, Spain, through the munificence of Señora Curiel. The hospital and its grounds fill an entire city block, and beds are provided for 200 charity patients. The completion is reported of a new hospital in Peking, China, costing nearly \$300,000, and planned by American architects. The building is fireproof and consists of three stories and basement. It is equipped with all the modern surgical and bacteriologic instruments, and is under the direction of Dr. Wu Lien-Teh, who was educated in Cambridge, England. The resident staff will be selected from Chinese graduates of medical schools of foreign countries as well as China, and all the other employees are to be natives. The Rockefeller Foundation has awarded contracts for the building of two hospitals to cost \$3,000,000, and both will be for the work of the China Medical Board. The new Universitäts-Frauenklinik was opened in Munich. It is said to be the largest hospital for women in Germany. The building alone cost \$750,000, and the equipment nearly one-third as much. The institute is to be under the direction of Professor Döderlein.

Among the great number of bequests and donations given to hospitals the following may be mentioned: St. Mary's Free Hospital for Children, New York City, \$15,000; St. Luke's Hospital, New York City, \$25,000 by the will of Miss Susan Mount; German Hospital, Philadelphia, \$20,000; Polyclinic and Philadelphia Lying-in Hospital each \$10,000 by the will of William P. Baltz; Long Island College Hospital, Brooklyn, a donation of \$50,000 by friends of the late Dr. J. A. McCorkle; Columbia War Hospital, New York City, a donation of \$175,000 from Mr. Daniel G. Reid; Gaylord Farm Sanitarium, Hartford, Conn., a donation of \$100,000, from Mr. Henry H. McHarg; various hospitals in Vermont, Massachusetts, and Rhode Island, donations of \$600,000 by Ira D. Calef; St. Luke's Hospital, Bethlehem, Pa., \$90,000 from the Bethlehem Steel Company; St. Bartholomew's Clinic, New York City, \$10,000; Morristown, N. J. Memorial Hospital, \$100,000; Germantown Dispensary and Hospital, \$100,000; St. John's Guild, New York City, \$50,000; and the Babies' Hospital and St. Mary's Free Hospital for Children each \$100,000 by the will of Mrs. Mary Warden Harkness. The New York Hospital was left a sum estimated at between \$4,000,000 and \$5,000,000, for the establishment of a urologic

1. GENERAL ARRANGEMENT OF BUILDINGS

2. INTERIOR SHOWING ONE OF THE WARDS

WAR HOSPITAL OF THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH

department, and Johns Hopkins Hospital, Baltimore, \$200,000, both by the will of James Buchanan Brady.

The Polyclinic Hospital, New York City, received \$47,767; New York Skin and Cancer Hospital, \$23,883, by the will of Mrs. Mary Palmer Draper; The Pennsylvania Hospital for the Insane, a contingent bequest of \$100,000, by the will of James Anspach; Flagler Hospital, St. Augustine, Fla., \$125,000, by the will of Mrs. Robert Worth Bingham, to rebuild the hospital, which was burned in 1916; Orthopedic Hospital, Philadelphia, \$30,000, by the will of Lillie G. Newton; Methodist Episcopal Hospital, Indianapolis, \$75,000, from the estate of Mrs. Emma Messick; Lincoln Hospital and Home, New York City, \$81,000, New York Orthopedic Dispensary and Hospital, \$40,615, and St. John Guild, \$240,000, by the will of Mrs. Helen Juilliard; Adirondack Cottage Sanatorium, New York, one-half the residuary estate of Robert W. Patterson, which is valued at about \$1,000,000; Lakeside Hospital, Cleveland, \$1,000,000, and St. Vincent's Charity Hospital, Cleveland, \$200,000, by the will of Oliver H. Payne; St. Luke's Hospital, New York City, \$100,000, by the will of Mrs. Ellen S. James; St. Vincent's Hospital, New York, \$260,000, for a cancer hospital to be operated as a branch of the institution; Germantown Hospital, Philadelphia, a donation of \$110,000, as a memorial for her daughters, by Mrs. William G. Warder; Montefiore Home and Hospital, New York, a donation of \$100,000, by Jacob H. Schiff; Hahnemann Hospital, New York, \$72,494, by the will of Juliet C. Percival; Hahnemann College and Hospital, Philadelphia, a bequest of \$40,000, by the will of Marcus N. Darr; Children's Hospital, Milwaukee, a donation of \$150,000 from Ferdinand Schlesinger, contingent on the raising of a like sum by the hospital association; Lakeside Hospital, Cleveland, \$200,000, by the will of Washington S. Tyler. George F. Geisinger, Memorial Hospital, Danville, Pa., received an endowment of \$1,000,000, by Mrs. Abigale E. Geisinger.

**HOUSE, EDWARD M.** See UNITED STATES AND THE WAR; and WAR OF THE NATIONS, *The Diplomacy of the War; Military Operations* (20).

**HOWARD UNIVERSITY.** A non-sectarian co-educational institution open to students without regard to race but known principally for the education of negroes. In the fall of 1917 there were 1063 students in the university, 266 in the academy, and 109 members of the faculty. Volumes in the library numbered 31,381. Productive funds in 1917 amounted to \$309,413.71 and the income therefrom to \$13,154.87. Additional income amounted to \$187,258.61. Howard University was founded in 1867. President, S. M. Newman, A.M., D.D.

**HOWLAND, WILLIAM BAILEY.** An American publisher and publicist, died in New York City February 27, 1917. He was born at Ashland, N. Y., in 1849, and after graduating from Williston Seminary made a start in the newspaper business. He was owner successively of the *Kinderhook Advertiser*, the *Chatham Courier*, *Outing*, which he founded in 1882 and published for three years, and the *Cambridge (Mass.) Tribune*. In 1890 he accepted the business management of the *Outlook*, which he served for 23 years as publisher and part owner and

which he helped to build up into a great national journal. In 1913 he became associated with Hamilton Holt in the control of the *Independent*. This periodical, under the broader policies pursued, increased its circulation from 23,000 to more than 100,000. The Independent Corporation, of which Mr. Howland was president, took over *Harper's Weekly* and incorporated it with the *Independent*, and purchased *Suburban Life*, which it renamed the *Countryside*. Mr. Howland's public services were many. He was one of the founders of the American Civic Association, and its treasurer from 1904 till his death. He was largely responsible for the movement to preserve Niagara Falls and their environs and became president of the Commissioners of the State Reservation established at the Falls. Moreover, he led in the movement to have Sulgrave Manor, the ancestral Washington home in England, preserved as a public shrine. Mr. Howland was long treasurer of the Congregational Home Missionary Society and of the Society for Italian Immigrants. From Toronto University he received the degree of LL.D. The American Institute of Graphic Arts elected him its first president and the American Periodical Publishers' Association its second president, and he was a life member of the National Arts Club, where a memorial meeting was held after his death.

**HULL, EDWARD.** A British geologist and physiographer, died November 26, 1917, at London. He was born in Antrim, Ireland, in 1829 and was educated at Trinity College, Dublin. Appointed to the Geological Survey of the United Kingdom in 1850, he became nineteen years later the professor of geology in the Royal College of Science. In 1883-84 he was the head of a scientific expedition to Palestine for the Palestine Exploration Fund. Much of the material gathered in this expedition was used in his *Physical Geology of Arabia Petraea and Palestine* (1886) and in his *Mount Seir, Sinai, and Western Palestine* (1905). His other published works include: *Building and Ornamental Stones* (1872); *The Coal Fields of Great Britain* (5th ed., 1905); *Physiology* (1888); *Physical Geology and Geography of Ireland* (2nd ed., 1891); *Volcanoes, Past and Present* (1892); *Our Coal Resources* (1897); *Sub-Oceanic Physiography of the North Atlantic Ocean* (1912). In 1910 he published his *Reminiscences of a Strenuous Life*. During the war he devoted much of his time to the work of the British War Coal Commission.

**HUNGARY.** A kingdom of central Europe, forming a part of the Austro-Hungarian monarchy. The area is 125,641 square miles, or somewhat more than the combined area of Iowa and Missouri. The population at the census of December 31, 1910, was 20,886,487, as compared with 19,254,559 in 1900. The kingdom consists of "Hungary proper" and Croatia and Slavonia. Sometimes Transylvania, the eastern portion of the country, is not regarded as a part of Hungary proper. Hungary proper, including Transylvania, has an area of 109,216 square miles; its population in 1910 was 18,264,533, as compared with 16,838,255 in 1900. The capital is Budapest, which, after Vienna, is the largest city of the monarchy. See AUSTRIA-HUNGARY; CROATIA AND SLAVONIA; TRANSYLVANIA.

**HUSSEIN KEMAL PASHA, PRINCE.** The first Sultan of Egypt after the declaration

(December, 1914) of a British protectorate over that country, died in the second week of October, 1917. He was a son of Ismail Pasha and was born about 1850. Hussein Kemal was unusually well educated in Egypt and Paris, where he was on intimate terms with the family of Napoleon III. He left the capital after the overthrow of the monarchy and afterward held a number of important posts in Egypt, such as inspector of Upper and Lower Egypt, minister of public instruction, of public works, the interior, war, and finance, which made him especially eligible for the position of sultan.

**HUSTING, PAUL O.** United States Senator Paul O. Husting was accidentally shot and mortally wounded by his brother while duck shooting. He died on October 21, 1917. He was fifty-one years old, and was elected to the Senate in 1914 at the first direct senatorial election in Wisconsin. He was the grandson of Solomon Juneau, the first white settler on the site of Milwaukee and the founder of that city. Politically Senator Husting had been a loyal supporter of President Wilson and a bitter opponent of his colleague, Senator La Follette.

**HYDE, WILLIAM DEWITT.** An American college president who was born at Wichendon, Mass., in 1858. He was graduated from Harvard in 1879 and from Andover Theological Seminary in 1882. Ordained to the Congregational ministry in 1883, he was a pastor at Newark, N. J., in 1883-85, and thereafter was president of Bowdoin College, also holding the chair of mental and moral philosophy. He was often referred to as the "Boy President." He is author of *Practical Ethics; Social Theology; Practical Idealism; God's Education of Man; The Art of Optimism; The New Ethics; The College Man and the College Woman; Self-Measurement; The Teacher's Philosophy In and Out of School; The Five Great Philosophies of Life; The Quest of the Best.*

**IOELAND.** A Danish crown colony. Area about 40,456 square miles, of which 16,245 square miles inhabited; population, 85,183. The trade in 1914 amounted to £555,944 imports, and £301,333 exports, the latter consisting of wool, dried fish, mutton, ponies, and sheep.

**IDAHO. POPULATION.** The population of the State in 1910 was 325,594, and on July 1, 1917, it was estimated to be 445,176.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. Bu.	Value
Corn ..... 1917	22,000	682,000	\$1,057,000
1916	21,000	735,000	735,000
Wheat ... 1917	685,000	13,830,000	25,171,000
1916	684,000	15,071,000	22,004,000
Oats ..... 1917	275,000	10,450,000	8,046,000
1916	310,000	13,330,000	7,198,000
Potatoes . 1917	39,000	6,084,000	4,808,000
1916	27,000	4,050,000	5,144,000
Hay .... 1917	725,000	a 2,175,000	34,800,000
1916	700,000	1,750,000	21,175,000

a Tons.

**MINERAL PRODUCTION.** The output of gold, silver, copper, lead, and zinc in the State in 1916 was \$48,767,783, an increase of 46 per cent compared with the production in 1915. The gold production decreased \$63,921, or more

than 5 per cent. Silver increased nearly 5 per cent in quantity. Copper increased from 6,978,713 pounds in 1915 to 8,478,281 pounds in 1916. The great increase in the total value of the metal output amounted to 15,438,853, which was due to the increased price of metals. The production of lead was 375,081,781 pounds, an increase of 8 per cent. The production of zinc was 86,505,219 pounds, valued at \$11,591,699.

The value of the mined output of gold, silver, copper, lead, and zinc in the State in 1917, according to the estimates of the United States Geological Survey, was about \$54,000,000, an increase of more than \$5,000,000 from \$48,767,783 in 1916. There were decreases in quantity in all the fine metals except lead, in which there was a slight increase. The mined production of gold decreased from \$1,115,810 in 1916 to \$715,000 in 1917. The decrease was principally due to the fact that the large dredge at Idaho City was idle. The mined output of silver decreased from 12,300,873 ounces in 1916 to approximately 11,773,000 ounces in 1917. As the price of silver was much above that of 1916, the value of the output increased from \$8,093,974 to \$9,536,000. The production of copper decreased from 8,478,281 pounds in 1916 to about 6,753,000 pounds in 1917. The decrease in value was from \$2,085,657 to \$1,971,000. The mined output of lead increased from 375,081,781 pounds in 1916 to 383,000,000 in 1917. The value increased from \$25,880,643 to \$34,595,000. The mined production of zinc decreased from 86,505,219 pounds in 1916 to approximately 80,000,000 in 1917. The value decreased from \$11,591,699 to about \$7,336,000.

**TRANSPORTATION.** The total railway mileage within the State on December 31, 1916, was 3591. There was practically no construction during 1917. The railways having the longest mileage are:—Oregon Short Line, 1973; Northern Pacific, 438; Chicago, Milwaukee, and St. Paul, 308; Spokane International Railway, 162; Oregon, Washington Railway, 159.

**FINANCE.** The report of the state treasurer for the fiscal year 1915, the latest for which statistics are available, showed a balance on hand at the beginning of the year of \$246,350. The receipts were \$3,054,903 and the disbursements amounted to \$3,172,250, leaving a balance on hand at the end of the year of \$1,132,047. The bonded debt of the State in this year amounted to \$2,237,750.

**EDUCATION.** The total school population of the State in 1916-17 was 128,066. The total number of teachers was 3636 and the total expenditure for school purposes amounted to \$3,926,788.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include a Soldiers' Home at Boise, State Penitentiary at Boise, Insane Asylums at Black Foot and Orofino, and a State Sanitarium at Nampa.

**POLITICS AND GOVERNMENT.** At the request of the secretary of state, the legislature decided not to press the anti-alien bills introduced into that body. These bills would have had the effect of preventing the Japanese from owning land in the State. This action was taken by Secretary Lansing following the protest on the part of the Japanese Ambassador. Senators Borah and Brady sent telegrams to the legislature urging the withdrawal of the bills on the

ground that it was unwise to agitate the question at the present time.

On December 10, in a decision upholding the Prohibition Law of the State, the United States Supreme Court gave an opinion in which it was held that a citizen has no constitutional right to possess liquors for his own personal use if a State wishes to forbid it.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

Provision was made for extending the benefit of the university extension department to convicts. Provision was made for the voting of citizens of the State absent in the national service. Acts were passed carrying into effect the prohibition amendment hitherto adopted by the people. It was made a felony to adopt criminal syndicalism or terrorism as a means of accomplishing industrial or political reform. Provision was also made for the imprisonment of a person who wilfully drives a metallic substance into timber intended to be manufactured into lumber.

A workman's compensation law was passed. Legislation was passed looking to the prevention of monopoly and unfair discrimination in the buying and selling of commodities, especially food products. Laws were enacted providing for the inspection and regulation of the selling of gasoline and similar products. It was made a misdemeanor to use trading stamps as an inducement to the purchasing of goods of various sorts. General provision was made for the establishment of a teachers' retirement fund.

**STATE OFFICERS.** Governor, Moses Alexander; Lieutenant Governor, Ernest L. Parker; Secretary of State, William T. Dougherty; Auditor, Clarence Van Deusen; Treasurer, John W. Eagleson; Attorney-General, T. A. Walters; Superintendent of Public Institutions, Ethel E. Redfield—all Democrats except Eagleson and Redfield.

**JUDICIARY.** Supreme Court: Chief Justice, Wm. M. Morgan; Associate Justices, Alfred Budge and John C. Rice; Clerk, I. W. Hart.

**IDAHO, UNIVERSITY OF.** A co-educational State institution of learning at Moscow, Idaho. In the fall of 1917 there were 864 students and 85 members of the faculty. Volumes in the library numbered 40,000. The university is operating under a legislative appropriation of \$760,000 and government funds (Morrill, Hatch, Adams, Smith-Lever) for the biennial period January 1, 1917, to December 31, 1918. In 1917 Dr. E. M. Hulme was made dean of the College of Letters and Science; F. A. Thomson was made dean of the School of Mines; F. G. Miller was made dean of the School of Forestry; Dr. Ernest H. Lindley, formerly professor of philosophy and psychology at Indiana University, was chosen president. The University of Idaho was founded in 1889.

**IHNE, ERNST EBERHARD VON.** A German architect, died April 23, 1917. He was born in Elberfeld in 1848. After studying at Heidelberg University and the Technical Schools of Karlsruhe and Berlin, he attended the Ecole des Beaux-Arts, Paris. He began to practice his profession in Berlin in 1878, and within ten years had gained such a high place that he was made palace architect. At his death he was chief architect to the German emperor. Since 1906 he had been a member of the no-

bility. Von Ihne designed a number of royal residences in different parts of the country, besides houses for other notable persons, and in Berlin he planned the Kaiser Friedrich Museum and several bridges.

**ILLINOIS. POPULATION.** The population of the State in 1910 was 5,638,591, and on July 1, 1917, it was estimated to be 6,234,995.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn ...	1917	11,000,000	418,000,000	\$459,800,000
	1916	10,200,000	300,000,000	252,756,000
Wheat ..	1917	1,600,000	30,400,000	61,104,000
	1916	1,525,000	16,775,000	27,679,000
Oats ....	1917	4,700,000	244,400,000	158,860,000
	1916	4,470,000	172,095,000	87,768,000
Potatoes ..	1917	150,000	13,500,000	20,520,000
	1916	125,000	7,250,000	12,978,000
Hay ....	1917	2,750,000	8,438,000	68,760,000
	1916	3,800,000	4,785,000	54,070,000
Tobacco ..	1917	700	560,000	106,000
	1916	700	525,000	52,000

a Tons. b Pounds.

**MINERAL PRODUCTION.** The petroleum marketed in 1916 from the oil fields of the State was 17,714,235 barrels, which was about 7 per cent less than the corresponding output of 1915. The average price received for this oil was \$1.65 a barrel. The total amount of the value was \$29,237,168, an increase of \$10,581,318 compared with 1915. As a consequence of its decline in output, Illinois fell to fourth place in the rank of oil producing States, in 1915, and continued to occupy this place in 1916. Third place being taken in 1915 and 1916 by Texas. During the year a total of 1461 wells were completed, compared with 757 in 1915.

There were mined during the year of 1915 silver, lead, and zinc valued at \$1,464,067, compared with a value of \$1,063,948 in 1916. There were mined 1550 short tons of lead concentrates, and 15,211 short tons of zinc concentrates. The silver produced in 1916 amounted to 5684 fine ounces.

The coal production of the State in 1916 was 66,195,336 tons, an increase of 7,365,760 tons or 12.5 per cent over the production of 1915. That the output was not even greater than this is attributed to a lack of cars, and in some localities to a scarcity of labor. The production was above the normal during the first three months of the year, but fell because of lack of markets until the middle of August, when the demand became stronger. The most notable feature of the year was the extension of the markets for Illinois coal, but this is probably only temporary.

**TRANSPORTATION.** The total railway mileage in the State on June 30, 1915, the latest for which statistics are available, was 12,392. The roads having the longest mileage were: Illinois Central, 2024 miles; Cleveland, Cincinnati, Chicago, and St. Louis, 650 miles; The Wabash, 669 miles; The Gan Dalia R. R., 303 miles; Elgin, Joliet, and Eastern, 327 miles.

**FINANCE.** The report of the State treasurer for the biennial period of October 1, 1914, to September 30, 1916, shows a balance on hand on October 1, 1914, of \$12,255,132. The receipts for the period were \$40,485,039, and the disbursements \$44,944,340, leaving a balance on

hand on September 30, 1916, of \$7,795,830. The bonded debt of the State on October 1, 1916, was \$17,500.

**EDUCATION.** The latest figures available for education in the State are for 1914. In that year the total school population was 1,650,258. The total enrollment in the schools was 1,043,227. The total number of teachers employed was 31,805, of whom 26,035 were women, and 5770 were men. The amount paid to teachers was \$21,781,221, and the average yearly salary was \$684.83. The total expenditure for school purposes during the year was \$40,287,756.

**CHARITIES AND CORRECTIONS.** The State charitable and correctional institutions are as follows: The Elgin State Hospital at Elgin, the Kankakee State Hospital at Kankakee, the Jacksonville State Hospital, the Anna State Hospital at Anna, the Watertown State Hospital at Watertown, the Peoria State Hospital at Peoria, the Chicago State Hospital, the Chester State Hospital at Chester, the Lincoln State School and Colony at Lincoln, the Dixon State School and Colony, the Illinois State School for the Deaf at Jacksonville, the Illinois School for the Blind at Jacksonville, the Illinois Industrial Home for the Blind at Chicago, the Illinois Soldiers' and Sailors' Home at Quincy, the Soldiers' Widows' Home of Illinois at Wilmington, the Illinois Soldiers' Orphans' Home at Normal, the Illinois Charitable Eye and Ear Infirmary at Chicago, the State Training School for Girls at Geneva, the St. Charles School for Boys, and the Alton State Hospital at Alton.

**POLITICS AND GOVERNMENT.** On June 8, a race riot suddenly broke out in East St. Louis between negroes and white men. The origin of the trouble was the recent immigration of many negroes from the Southern States. They came north to take advantage of the unusual opportunities afforded by war stimulated industries in the manufacturing district. The working men of St. Louis and other cities had strongly opposed the increase of the negro population, and the result was friction which ended in riot.

For three days the city of East St. Louis was in the hands of the mob, and was the scene of repeated riots between whites and blacks. Before the trouble could be quelled, 29 persons, of whom 25 were negroes, had been killed, many more injured, and over 300 houses burned. The riot began with an attempt of a negro attack upon an automobile which contained several policemen. A large number of white men, from the city's slums, then set about to destroy the negro quarters. Buildings were set on fire, and they shot the negroes who attempted to escape. Negroes were attacked on the street cars, and were beaten and killed on the streets.

The grand jury in the latter part of August returned 68 indictments against 105 persons for responsibility in the race riots. Among those arrested were several members of the police. Thirty-two persons were accused of murder, and others of other crimes. The jury in its report declared that the riots were deliberately plotted, and that the police could have prevented them, but for the negligence of public officials. It concluded with a recommendation for a State constabulary of at least 1000 members, to suppress disturbances of this nature.

Indictments were later brought against the mayor of the city, Fred Mollman, and his private secretary, Maurice Ahern. The latter was

accused of preventing photographers from securing evidence by taking pictures of the mob. The charges against the mayor were for neglect of duty in failing to enforce the law.

A terrific wind storm swept across the central part of the State on May 26, causing great destruction of property. The town of Mattoon was the chief sufferer. There were over 50 killed, and over 200 injured. The business section of the town was largely destroyed, together with many houses. The total property loss was over \$2,000,000. Charlestown also suffered great damages in the loss of life. About 30 people were killed. Many of the smaller towns and villages in the different parts of the State were wrecked. The total number of deaths exceeded 140. The wind and hail ruined the crops over a large area.

On February 13, the State Senate passed a measure providing for a referendum of statewide prohibition at the general election in 1918.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

Penalties were provided for the pollution or poisoning of the water supply of the State. The question of whether a constitutional convention should be called was to be submitted to the voters at the next general election. Amendments were made to the laws governing elections. A candidate may not, in return for support, pledge himself, on penalty of fine, imprisonment, or forfeiture of office, if successful, to support or oppose any particular measure. A non-partisan commission to revise the election laws of the State was appointed. Several amendments were made to the laws relating to property. A law was passed requiring the licensing of dogs and authorizes the killing of unlicensed dogs or dogs annoying other domestic animals. A "Blue Sky" law was enacted. The exhibition of books and pictures exciting race or religious prejudices was forbidden. Provision was made for the combination of schools and school districts in such a way as shall best serve the needs of the communities affected. See PROSTITUTION.

**STATE OFFICERS.** Governor, Frank O. Lowden; Lieutenant Governor, John G. Oglesby; Secretary of State, Louis L. Emmerson; Treasurer, Len. Small; Auditor, Andrew Russell; Adjutant-General, Frank S. Dickson; Attorney-General, Edward J. Brundage; Superintendent of Education, Francis G. Blair; Secretary of Agriculture, B. M. Davison; Superintendent of Insurance, Rufus M. Potts—all Republicans except Potts, Democrat.

**JUDICIARY.** Supreme Court: Chief Justice, Charles C. Craig; Associate Justices, James H. Cartwright, William M. Farmer, Orrin N. Carter, Frank H. Dunn, George A. Cooke, Warren W. Duncan; Clerk, Chas. W. Vail.

**ILLINOIS, UNIVERSITY OF.** A co-educational non-sectarian institution of learning at Champaign, Ill. In the fall of 1917 there were 4851 students and 1075 members of the faculty. The library contained 420,737 bound volumes and 105,000 pamphlets. The income is derived from endowment amounting in 1917 to \$649,000; from Federal funds, \$160,085 in 1917; and from State taxes, amounting in 1917 to \$2,575,129; from fees of \$255,550; and from miscellaneous revenue of \$239,073. Noteworthy benefactions in 1917 were a gift of \$90,000 from William B.

McKinley and a legacy from the will of Jesse Barker, the amount of which had not been determined at the end of the year. C. R. Richards, professor of mechanical engineering, was made dean of the College of Engineering; H. W. Ballantine was made dean of the College of Law; Ernest Nernbaum was made professor of English; Elliott Blackwelder was made professor of geology; W. W. Charters, professor of education; and A. T. Olmstead, professor of history. C. H. Johnson, professor of education, died in 1917, and Professor W. F. M. Goss, dean of the College of Engineering, and Professor W. C. Bagley, professor of education, resigned. The University of Illinois was founded in 1867. President, Edmund James James, Ph.D., LL.D.

**IMMIGRATION AND EMIGRATION.** The war in Europe had a profound effect on immigration in 1914. In the decade, 1905-14, immigration averaged 1,012,194 aliens per year. In the fiscal year 1915, which represented practically the first year of the war, the arrivals amounted to only 326,700. In 1916, this had dropped to 298,826, and in the fiscal year 1917 only 295,403 aliens entered the country, or an average, during the period of the war of 306,976 per year. The entry of the United States into the conflict was felt in the last quarter of the year when 42,106 immigrants entered the country as compared with 92,345 for the same quarter of the previous year. During 1917, 67,474 non-immigrant aliens entered the United States. These added to the number of immigrants made a total of admissions amounting to 362,877. Against this 66,277 emigrants and 80,102 non-emigrant aliens, or a total of 146,379 left the country. The actual increase through immigration was, therefore, 216,498 as compared with an increase in 1914 of 769,276.

In 1917, 16,028 or 4.2 per cent of the immigrants arriving were rejected. The new immigration law went into effect during the year, but as it was in operation during only two months of the fiscal year, no definite conclusions can be drawn from the figures for that period. Under the illiteracy test, however, in those two months, 391 aliens were rejected.

The table on the following page shows the net increase or decrease of population by the arrival and departure of aliens for the fiscal year of 1916-17 by countries.

**DIVISION OF INFORMATION.** This division has general charge of the employment service for the benefit of immigrants. By an order issued on May 1, 1917, each State was made a separate zone for the work of the division. The total number of persons applying for employment during the year was 413,649; of these, 363,189 were referred to places where their services were needed, and 283,799 were actually employed.

The division was of great service to the national government following the declaration of war, in furnishing information relating to laborers of various sorts available for service.

**IMMIGRATION.** President Wilson, for the second time, vetoed the immigration bill which limits immigration to persons able to read and write. In explanation of his action, the president declared that this test was not a test of character or of personal fitness. He declared that it would serve merely as a penalty for lack of opportunities in the country from which

the alien, who is seeking admission, came. A second reason given by him was that the immigration bill contained a provision for admitting refugees from religious persecution even if they could not pass the literacy test. He feared that the presence of such a clause in the bill would make it necessary for immigration officials to pass judgment on the laws and policies of foreign governments, and that it might lead to unnecessary friction between the United States and the government concerned.

The House of Representatives passed the bill over the president's veto by a vote of 285 to 106. The Senate, on February 5, passed the measure over the president's veto by a vote of 62 to 19.

This made the measure effective. The literacy provision excludes from the United States all aliens over 16 years of age and physically able of reading, who cannot read the English language, or some other language or dialect. Any alien, however, who is admitted, can bring in, or send for, a father, or grandfather, over fifty-five years of age, his wife, mother, grandmother, or unmarried or widowed daughter, regardless of whether such relatives can read or not.

**IMPERIAL VALLEY.** See DAMS.

**IMPORTS.** See FINANCIAL REVIEW.

**INCINERATORS.** See GARBAGE AND REFUSE DISPOSAL.

**INCOME TAX.** See TAXATION.

**INDIA, BRITISH.** British India is the territory administered by the British sovereign, as Emperor of India, through the governor-general of India in council. India includes British India and the native states that are under the suzerainty of the British Government. Capital of British India, Delhi.

**AREA AND POPULATION.** The table below shows the area of British India by provinces and the total for the native states, together with population as censused March 15, 1901, and March 10, 1911. The figures have been adjusted, as far as possible, to allow for subsequent interprovincial transfers.

Provinces	Square Miles	Population	
		1901	1911
Ajmer-Merwara ..	2,711	476,912	501,895
Andamans and Nicobars .....	8,148	24,649	26,459

Other details of population, and also statistics of religion, may be found in the YEAR BOOKS for 1915 and 1916.

**EDUCATION.** The 1911 census recorded literacy in the case of 313,415,389 persons (160,418,470 male, 152,996,919 female); of these, literate persons numbered 18,539,578 (16,938,815 male, 1,600,763 female); persons literate in English, 1,870,387 (1,518,361 male, 152,026 female).

For the year 1914-15 the number of educational institutions reported for British India (exclusive of Baluchistan) was 185,301, with 7,462,031 scholars. These figures are slightly smaller than those reported for 1913-14 (185,584 institutions, 7,531,515 scholars), but for that and previous years figures for certain native states are included. Educational institutions in 1914-15 are classified in the following table:

	Institutions for		Scholars	
	Males	Females	Males	Females
University:				
Arts colleges..	137	11	41,550	406
Professional colleges ....	45	3	8,618	119

Grand total..	165,717	19,584	6,333,668	1,128,363

**AGRICULTURE.** In British India in the year 1914-15, the reported net area sown with crops was 227,611,132 acres, as compared with 219,191,773 acres in 1913-14 and 207,683,741 acres in 1905-6. Irrigated area in 1914-15, 47,193,925 acres; in 1913-14, 46,836,019 acres. The reported area under food grains in 1913-14 was 191,573,393 acres; in 1914-15, 204,504,550 acres, of which 77,668,882 acres were under rice, 25,451,330 wheat, 21,223,398 jawar, 16,041,561 bajra, 14,364,490 gram, 7,904,783 barley, 6,187,729 maize, 4,250,788 ragi, and 31,411,589 other grains and pulse. The area under oilseeds in 1914-15 was 15,333,591 acres, including sesamum

(til), 4,478,128, rape and mustard, 4,144,374, and linseed, 2,525,432; cotton, 15,221,787; jute, 3,308,718; other fibres, 976,142; sugar cane, 2,458,865; tea, 584,379; coffee, 86,712; tobacco, 1,056,349; opium, 178,582 (654,078 in 1905-6); indigo, 145,792; fodder crops, 6,362,511.

Some of the more important yields (including crops in certain of the native states) have been reported as follows:

Crops	1914-15	1915-16	1916-17
Rice .....	27,242,000 tons	32,831,000	34,079,000
Wheat ....	10,087,000	8,652,000	10,158,000
Raw sugar. "	2,462,000	2,634,000	2,626,000
Tea ... pounds	312,976,200	371,838,700	368,527,600
Cotton ... bales	5,209,000	3,738,000	4,273,000
Jute ....	10,448,900	7,840,900	8,805,600
Linseed ... tons	397,000	476,000	520,000
Rape and mustard. "	1,219,200	1,102,100	1,181,200
Sesamum. "	551,000	482,000	498,000
Groundnut. "	947,000	1,058,000	1,147,000
Indigo .... cwt.	25,200	55,100	95,500

\* Of 400 pounds.

**COMMERCE.** During the fiscal year ending March 31, 1914, both imports and exports of merchandise were of unprecedented magnitude. The sharp decline in the following year, which continued in respect of imports in 1915-16, was in consequence of disorganized markets and steamship service due to the great war. Trade recovery is noted in the figures for 1916-17, imports of private merchandise being valued at £99,748,000 and exports of private Indian merchandise at £155,435,000; but the increase in the recorded values was due largely to advanced prices; in all the main classes of merchandise, there was an increase on account of a higher level of prices, while there was a decrease in the volume of trade. Import values for 1916-17 recalculated at the prices prevailing in 1915-16 show a decrease (on account of the decrease in volume) of about £9,661,000 from the total import value of 1916-17. In import values all principal articles showed considerable increases over 1915-16, with the exception of railway plant and rolling stock, sugar, iron and steel, and matches; cotton goods (notwithstanding a decline in gray piece goods) increased by £6,278,000. In the export trade, raw cotton increased by £6,267,000; seeds by £4,214,000, raw hides and skins by £3,077,000; leather and cowhides by £2,535,000; and jute goods by £2,451,000; while tea declined by £2,124,000. In 1915-16, manufactures constituted over 71 per cent of the total value of imports; in 1916-17, over 73 per cent. About two-thirds of the export value consists of food, tobacco, and raw materials.

For years ending March 31, the following table shows sea-borne imports and exports, in thousands of pounds sterling:

Imports	1913-14	1914-15	1915-16	1916-17

T <sup>1</sup> , includ'g others.	91,952	87,560	118,823	128,356

The foregoing commercial paragraphs relate only to the sea-borne trade. There is a land trade of some magnitude, but as registration is difficult, the statistics are of doubtful accuracy. The most important countries in the land trade are Nepal, the Shan States, and Afghanistan. Reported figures for the land trade, in thousands of pounds sterling:

	Imports		Exports	
	1913-14	1914-15	1913-14	1914-15
Merchandise .....	7,289	6,714	5,592	5,679
Treasure .....	778	914	689	651
Total .....	8,018	7,629	6,282	6,330

Total land imports and exports in 1916-17 were valued at £8,579,000 and £7,090,000 respectively.

SHIPPING. In 1915-16, the number of vessels, in the foreign trade, entered and cleared at the ports was 8634, with a tonnage of 12,152,000; in 1916-17, 10,386 vessels, with a tonnage of 11,955,000. These figures include vessels with cargo and in ballast. Of the 1916-17 tonnage, about 79 per cent was under the British flag. The chief ports are Calcutta and Bombay, which together have about 70 per cent of the foreign trade; next come Karachi, Rangoon, and Madras.

COMMUNICATIONS. The total length of railway open to traffic in British India and the native states March 31, 1916, was 35,833 miles, as compared with 35,285 miles in 1915. In 1916, state lines operated by the state had 7288 miles of track; state lines operated by companies, 18,974 miles; companies' lines subsidized by the government of India, 2194 miles; native state lines operated by native states, 2311 miles.

On March 31, 1916, the total capital outlay was £391,585,000. For the year 1915-16, net earnings were £27,826,000; net earnings of state lines operated by the state, £4,076,000; total capital expenditure on railways, about £8,436,000.

The Railway Board of India in 1917 sanctioned a survey by the Eastern Bengal Railway for a 5 foot 6 inch gage line from Birngar on the Lalga branch of the railway to Krishnagar via Santipur, with an extension to the Bhagirathi River opposite Nabadwip.

Telegraphs March 31, 1916: 10,482 offices, with 86,067 miles of line and 337,720 miles of wire. Post offices, 19,328.

FINANCE. The standard of value is gold. The monetary unit is the rupee. The rupee is the current coin and the common money of account, but the British sovereign is also a legal tender. In England Indian accounts are often officially published in pounds sterling. The pound sterling has a par value of \$4.86656 (exchange value of October 1, 1917, \$4.755); the rupee is worth one-fifteenth of the pound sterling, or 32.444 cents. The budget for the fiscal year ending March 31, 1918, showed for British India estimated gross revenue and expenditure of £98,850,900 and £98,819,300 respectively.

The table below shows the principal sources of revenue for fiscal years, in thousands of pounds sterling (revised estimate for 1916-17):

<i>Revenue</i>	<i>1913-14</i>	<i>1914-15</i>	<i>1915-16</i>	<i>1916-17</i>

\* Working expenses are treated as deduction from revenue instead of expenditure.

On March 31, 1917, the debt of British India amounted to about £285,310,000 (about £174,145,000 in England and about £111,165,000 in India), as compared with £319,877,100 in 1916.

GOVERNMENT. The King of Great Britain and Ireland is Emperor of India. In England, Indian affairs are administered by the secretary of state for India (a member of the British cabinet). In India, the executive authority resides in "the government of India," that is, the governor-general in council. The governor-general is appointed by the crown for five years. The council consists of six members (in addition to the governor-general), who are appointed by the crown, and of the commander-in-chief of the army in India. There is a legislative council which includes thirty-six official members (among whom are the members of the executive council and other members nominated by the governor-general) and thirty-two non-

official, of whom twenty-seven are elected. This council may legislate for all persons within British India and for all British subjects within the native states. There are provincial legislative councils in Bengal, Bombay, Madras, Bihar and Orissa, the United Provinces, the Punjab, the Central Provinces and Berar, Assam, and Burma. The governor-general in 1917 was Baron Chelmsford, who succeeded Baron Hardinge of Penshurst in March, 1916.

The native states are governed by their princes, ministers, or councils, but the government of India, through British residents or agents, exercises control in varying degrees, and does not permit the states to make war or peace or to maintain external relations.

HISTORY. On March 1 it was announced that the Indian government had voluntarily offered the contribution of £100,000,000. There was a heavy strain on the resources of the government on account of the war and the finance member of the Viceroy's Council, Sir William Meyer, urged that the duty on imported cotton goods be increased, while leaving the excise duty to be abolished when the circumstances permitted. At first this course was not taken on account of the objection of the British Government, but on March 1 it was announced that the Imperial Government had consented to the increase of the import duty on cotton goods from 3½ per cent to 7½ per cent. The cotton excise duty was to remain at 3½ per cent. The raising of the duty on cotton goods aroused much opposition in Manchester (see GREAT BRITAIN). In June two new Indian members were appointed to the Council of India. The appointment of native members had been introduced under the Morley administration. Measures for extending the principle of self-government in India were under discussion toward the close of August. The principles laid down by the Government were: Increasing the association of Indians in every branch of the administration; the gradual development of organs of self-government in order to introduce responsible government in India as an integral part of the British Empire; the pursuance of this policy deliberately and in successive stages; the necessity that the home Government and the government of India should be the judges of the proper time for introducing these progressive measures and that they must be guided by the coöperation of the native Indians and by the extent to which confidence could safely be placed in their sense of responsibility. It was announced that the secretary of state for India, Mr. Montagu, would visit India in order to arrange for the carrying out of the programme. There were signs of a tendency in India to make extreme demands such as a form of complete home rule to be introduced as soon as the war ended. The proposals met with some criticism on the part of the European communities. At a meeting at Bombay on October 13 under the auspices of the European Association a resolution was passed declaring that while the European community sympathized with the just claims of the native Indians it believed that the only issue at present should be the successful prosecution of the war and pointed out the danger of listening to the extremists among the natives.

On September 5 Lord Chelmsford reviewed the part that India had taken in the war. From

the first troops had been sent to France and to Egypt, they had been excellently equipped and had conducted themselves well. At present the British general in Mesopotamia, Sir Stanley Maude, controlled a large fleet of river vessels on the Rivers Tigris and Euphrates and of these 57 per cent had been supplied by India. Besides that, numbers of steamers, launches, and barges had been built or reconstructed at Indian ports and were being taken to the head of the Persian Gulf. The railway construction in Mesopotamia had gone on rapidly and the British forces now had at their disposal a considerable mileage. Toward this work India had contributed effectively, supplying the rails, sleepers, bridge material, and men required for the working of the lines. India had sent large quantities of railway material also to Egypt and East Africa and the Indian telegraph department had supplied and maintained more than 9000 miles of line. The farmers' department, by the cultivation of vegetable gardens in the Tigris and Euphrates valleys, had brought the provisioning of the armies up to a point of great efficiency. India had established a man-power board and the recruiting had enormously increased. She had recruited also some twenty labor corps in Mesopotamia and twenty-five in France, and besides that had recruited and dispatched overseas about 60,000 artisans, laborers, etc., and 30,000 menials and followers. There were 3000 officers in the Indian army officers' reserve, as compared with forty at the beginning of the war. In the spring of 1917 an Indian munitions board was founded under the direction of Sir Thomas Holland and set a good many new enterprises in motion. The Indian war loan, which was expected to raise £10,000,000 had raised more than £32,000,000. Besides that, India was financing to a large extent the exportation of wheat, hides, jute manufactures, and other important commodities.

**INDIANA. POPULATION.** The population of the State in 1910 was 2,700,876, and on July 1, 1917, it was estimated to be 2,835,492.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn ....	1917	5,651,000	208,438,000	\$254,295,000
	1916	5,137,000	174,658,000	148,713,000
Wheat ...	1917	1,805,000	33,392,000	67,786,000
	1916	1,820,000	19,440,000	32,854,000
Oats ....	1917	1,820,000	76,440,000	48,157,000
	1916	1,750,000	52,500,000	26,775,000
Potatoes .	1917	92,000	8,484,000	11,765,000
	1916	74,000	3,258,000	5,763,000
Hay ....	1917	2,148,000	3,004,000	56,175,000
	1916	2,300,000	3,312,000	36,101,000
Tobacco .	1917	14,800	14,080	3,374,000
	1916	14,800	13,764	1,789,000

a Tons. b Pounds

**MINERAL PRODUCTION.** The coal production of the State in 1916 was 20,093,528 tons compared with 17,600,152 in 1915. The greater part of this increase was in Vermillion, Vigo, and Knox counties. There were local strikes in the year, which affected labor for a period, in some of the large mines. The mines also suffered from car shortage. Shipments were made during the year to points as far east as central New York, and the quantities shipped to Ohio and Michigan

were limited only by ability of operators to get cars on which to load this coal.

The petroleum marketed in the State in 1916 amounted to 769,036 barrels, a decrease of 12 per cent from the 875,758 barrels marketed in 1915. The oil field of the State is a part of the Lima Indiana field which marketed 3,905,003 barrels in 1916 and 4,269,591 barrels in 1915. By far the larger production is obtained from that portion of the field situated in Ohio. The number of men employed in the coal mines of the State increased from 22,777 in 1915, to 23,965 in 1916.

**TRANSPORTATION.** The total railway mileage in the State on December 31, 1916, was 7766. There were constructed during the year of 1917 about 30 miles by the Indianapolis and Frankfort Co.

The railroads having the longest mileage are: Cleveland, Cincinnati, Chicago, and St. Louis, 959; Pittsburgh, Cincinnati, Chicago, and St. Louis, 751; Chicago, Indianapolis, and Louisville, 595; Lake Erie and Western, 471; Chicago and Eastern Illinois, 467.

**FINANCE.** The report of the State treasurer for the year 1914, the latest for which statistics are available shows the total receipts from all sources, including balance of \$378,271, was \$12,922,278. The expenditures for the year left a balance on hand on September 30, 1914, of \$649,964.

**EDUCATION.** The total number of school children in the State in 1916 was 774,342. The enrollment in the public schools was 564,920, with an average daily attendance of 463,920. The number of teachers employed was 19,648. The average yearly salary of teachers was \$597.51. The total amount expended for school purposes in the public schools was \$11,553,513.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Indiana Reformatory at Jeffersonville, the Indiana State School for the Deaf at Indianapolis, the Central Hospital for the Insane at Indianapolis, the Indiana State School for the Blind at Indianapolis, the Indiana State Prison at Michigan City, the Soldiers' and Sailors' Orphans Home at Knightsville, the Indiana Boys' School at Plainfield, the Indiana Women's Prison at Indianapolis, the School for the Feeble-minded at Fort Wayne, the Northern Hospital for the Insane at Logansport, Eastern Hospital for the Insane at Richmond, the Southern Hospital for the Insane at Evansville, State Soldiers' Home at Lafayette, Indiana Girls' Home at Clermont, South Western Hospital for the Insane at North Madison, Indiana Village for Epileptics at New Castle, and the Hospital for the Treatment of Tuberculosis at Rockville; also a State farm at Putnamville. These institutions are maintained by appropriations from the State general fund made biennially by the legislature.

**POLITICS AND GOVERNMENT.** The year opened politically with the assembling of the biennial session of the State legislature and the inauguration of Governor James P. Goodrich and the other newly elected Republican State officials. The principal work of the legislature was the passage of an act providing for a constitutional convention, granting women the right to vote and a State-wide bone dry prohibition law. Both the constitutional convention act and the woman suffrage measure have been held unconstitutional by the State Supreme Court and an attack

was made on the prohibition act which was undecided at the close of the year. The spring primaries for the nomination of city and county officials throughout the State passed off without the usual confusion and charges of fraud so rampant since the system was introduced. The fall elections showed Republican gains very generally throughout the State, a number of the old Democratic officials being replaced by their Republican opponents. This was particularly true of Indianapolis where the city ticket headed by Charles W. Jewett for mayor was successful over a home rule ticket and the regular Democratic nominees. John Worth Kern (q.v.), the well known Democratic politician, died in August. He had served his State in the U. S. Senate for a number of years, being defeated at the last election. He was vice-presidential nominee on the Wm. J. Bryan ticket in the campaign in 1908. During the year the Federal Grand Jury, sitting at Indianapolis, returned indictments against Mayor Joseph E. Bell, Chief of Police Samuel V. Perrott, and a number of minor officials of the city of Indianapolis and other towns in the State, charging them with election frauds during the campaign of 1914. Mr. Perrott was convicted and sentenced to four years in the Atlanta penitentiary, where he is now serving his sentence. There were also a number of convictions of the minor Indianapolis officials. The trial of Mr. Bell was pending at the close of the year.

At the special election held on June 26, Richard N. Elliott, Republican, was elected to Congress from the 6th district, defeating Finley H. Gray, Democrat.

On March 11, the State was visited by a terrific storm which resulted in several deaths and the destruction of property valued at one million dollars. The greatest damage was done in the city of New Castle, where 20 people were killed, and over 150 injured. Three hundred dwelling houses were wrecked, and communication with the outside world was cut off for several hours. In Wayne County, two children were killed, and several houses destroyed.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

The laws relating to civil and judicial procedure were amended in important detail.

Any provision of a will to the effect that any beneficiary who takes proceedings to contest the will or prevent its admission to probate shall forfeit any benefit provided therein is declared void.

The legislature passed a measure providing for the election of delegates to a constitutional convention without referring it to the people. This was afterward declared unconstitutional by the courts.

The right of women to vote was extended to all offices not specified in the State constitution. Provision was made for the voting of citizens absent from the State in the national service. Those absent for illness, business, or unavoidable causes were included in this provision.

A general prohibition law, effective April 2, 1918, was enacted.

Provision was made for the selling by weight, by numerical count, of a long list of enumerated commodities.

**STATE OFFICERS.** Governor, James P. Goodrich; Lieutenant Governor, Edgar Bush; Sec-

retary of State, Ed. Jackson; Treasurer, Uz McMurtrie; Auditor and Commissioner of Insurance, Otto Klaus; Attorney-General, Eli Stansbury; Adjutant General, Harry B. Smith; Superintendent of Education, Horace Ellis—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, John W. Spencer; Associate Justices, Moses B. Lairy, D. A. Myers, Richard K. Erwin, Lawson Harvey; Clerk, F. Fred France.

**INDIANA UNIVERSITY.** A co-educational State institution of learning at Bloomington, Ind. In the fall of 1917 there were 1652 students and 197 members of the faculty. Volumes in the library numbered 115,000. Productive funds amounted to \$864,000 and the income therefrom to \$43,946. In 1917 Professor A. L. Foley was appointed research professor in the Watermann Institution, founded by Dr. Luther D. Watermann and conducted by Indiana University. President, William Lowe Bryan, Ph.D., LL.D. Indiana University was founded in 1820.

**INDIANS.** During the year the policy was adopted by the Indian Department of treating as competent to manage their own affairs, the Indians of one-half or less Indian blood. This policy will place a very large number of Indians upon the same plane of business equality with the white people surrounding them. It will also bring the reduction of expenditures, and permit close attention each year to the diminishing number which will need further protection. A successful registration of all Indians was made under the Conscription Act, and aroused patriotic interest. This is indicated by the subscription of over \$4,500,000 in Liberty Bonds by the Indians, and the voluntary enlistment of all students and former students in some branch of the service. Under the new vocational course of study, uniform examinations in the schools were established. The enrollment of Indians in the public schools under tuition contracts was increased to about three times the number in 1916. In 2285 school districts of the Five Civilized Tribes, there were 18,185 pupils enrolled during the year. The health campaign was carried on with special effect against tuberculosis, trachoma, and infant diseases. This resulted in a remarkable improvement in the sanitation of Indian homes, and an increase of cases treated in sanatoria. Unusually good results were also obtained in suppressing intemperance. This was aided by prohibitory laws in sixteen States where Indians resided, or were contiguous thereto, and by Federal legislation controlling interstate commerce in the liquor traffic.

Important irrigation projects on lands owned by Indians were undertaken in the arid Southwest. The remarkable growth in the industrial development was shown by the fact that in 1911 they cultivated 38,025 acres, and in 1917, 678,529. In the former year they raised crops to the value of \$1,951,000, and sold products of industry valued at \$9,000,000; in 1917 crops were valued at \$5,293,719, and products of industry at \$4,583,083. The value of all live stock owned by the Indians increased from \$17,971,209 in 1911 to \$28,824,439 in 1917.

See ANTHROPOLOGY.

**INDIAN TRAINING AND INDUSTRIAL SCHOOL.** A non-sectarian co-educational institution for the education of the American Indian, at Carlisle, Pa. In the fall of 1917 there were

773 students and 61 members of the faculty. Volumes in the library numbered 4200. The school was founded in 1879. In 1917 Superintendent Oscar H. Lipps was transferred to the chief supervisorship of the Indian Service and he was succeeded by John Francis, Jr., formerly chief of education in the Indian office.

**INDO-CHINA.** The southeastern peninsula of Asia, called also **FARTHER INDIA**. The peninsula includes: Burma, which is politically a part of British India; Siam, an independent kingdom; French Indo-China (including Cochinchina, Cambodia, Annam, Laos, and Tongking, but excluding Kwangchow-Wan); the Federated Malay States; other Malay states (Johore, Kedah, Perlis, Kelantan, and Trengganu); and the Straits Settlements proper. All this territory is "Farther India," but properly, for ethnological reasons, "Indo-China" does not include the Malay States and the Straits Settlements. See **FRENCH INDO-CHINA**, and the other principal states mentioned above.

**INDUSTRIAL WORKERS OF THE WORLD.** This organization grew out of a strike in Colorado which culminated in 1905 in the union of various western labor organizations to form the I. W. W. It later split into two branches with headquarters at Chicago and Detroit. The former branch is more extreme, in that it advocates direct action, including sabotage and the general strike. Both branches favor industrial unionism in preference to trade unionism, opposition to political methods, industrial revolutions, and the immediate confiscation of productive capital. Recently the Detroit branch which has been less conspicuous in its activities adopted a new name, The Workers International Industrial Union.

The Chicago branch was very conspicuous in the first seven months of 1917, and less so thereafter. During the past three years it has grown rapidly, claiming in August over 90,000 paying members. In the year ending July 31 the headquarters handled over \$100,000. It has secured extensive hold upon the large body of more or less itinerant labor throughout the Western, Mountain, and Pacific States. This labor includes such groups as the thousands of harvest hands who follow the crops north from Oklahoma and Kansas to Minnesota and the Dakotas; the lumbermen of the North and Northwest; the iron miners of Michigan, Wisconsin, and Minnesota; the copper, lead, gold, and silver miners of Michigan, Colorado, Arizona, Montana, Utah, and California; and the coal miners of Colorado. Owing to the radical nature of their doctrines and the fact that in recent years they have been leaders in numerous spectacular strikes in which there has been more or less violence, the organization has come into very wide disrepute on both Atlantic and Pacific coasts. During 1917 at various times press dispatches, never proven true, reported that the organization was in the pay of German agents. While the organization was far from loyal and in many cases openly preached sedition and was undoubtedly guilty of treasonable action in interrupting work on farms and in mines and lumber camps, nevertheless its president, William D. Heywood, openly denounced German militarism. He announced opposition to all existing governments but sympathy with the workers of all nations. An indication of the general feeling regarding the organization was indicated

by the introduction in Congress in August of several bills designed to check its activities. These provided variously for penalizing interference with government contracts or with work on materials intended for government use, or any utterance of disloyal or seditious language. About the same time the Chamber of Commerce of Phoenix, Ariz., resolved in favor of a census of labor, an industrial drafting service, and prohibition of every form of advocacy of crime, sabotage, or violence in efforts to secure industrial reforms. The most spectacular events relating to the organization in 1917 occurred at Everett, Wash.; Bisbee, Ariz.; and Butte, Mont.

**EVERETT, WASH.** On November 5, 1916, a boatload of about 200 I. W. W.'s from Seattle had engaged in a battle with the sheriff and 150 deputies at Everett, Wash. The trouble had begun in a strike of shingle-weavers but developed into an issue of freedom of speech and assemblage. Two deputies and five I. W. W.'s were killed. Seventy-four of the labor men were arrested. After nine weeks' proceedings their trial resulted in a verdict of not guilty on May 5. The evidence seemed to indicate that the first shots were fired from the land; that after them the men on the boat rushed back away from shore, the boat being already at the wharf, nearly overturning their boat and crowding some of their number in the water; thereafter shots were fired in a fusillade from both boat and land, the latter shots coming from different directions and being directed in part at men in the water.

**BISBEE, ARIZ.** Late in June the managers of the Copper Queen Consolidated Mining Company (Phelps-Dodge Corporation), and the Calumet and Arizona Mining Company of Cochaie County, Ariz., claimed that members of the I. W. W. had fomented a strike recently begun at their mines. The sheriff of the county sought to secure the assistance of Federal troops; regular army officers made investigations on June 30 and July 2 reporting everything peaceful and troops not warranted. On July 12 the sheriff with a posse of about 2000 deputies rounded up 1186 men of the district and deported them by train to a small way-station near Columbus, N. M. After two days without food, water, or shelter the Federal government intervened and thereafter maintained the men in continually dwindling numbers until the middle of September. Of these men, 433 were married, 199 were native-born Americans, 468 were citizens and 472 were registered under the draft law. Over twenty foreign nationalities were represented. While some opinion approved the deportation because of intense hatred of the I. W. W. the majority opinion considered the action as an application of mob rule. President Wilson appointed a commission headed by the secretary of labor and including representatives of employers and labor with Professor Felix Frankfurter of the Harvard Law School as counsel to investigate. Its report in December denounced the deportation as "wholly illegal and without authority in law, either State or Federal." It found the root of the trouble in the fact that there was "no machinery for the adjustment of difficulties between the companies and the men."

**THE LITTLE CASE.** Early in the morning of August 1 a number of disguised men seized Mr. Frank Little, a member of the Executive Com-

mittee of the I. W. W., while still in bed at Butte, Mont., and hanged him. This act was a direct consequence of an extensive strike which had been carried on in that city, but the issues involved in the matter were confused because of the disloyal utterances of Little and his associates. Consequently opinion regarding the affair differed sharply. While here and there were those who denounced the action as contrary to the fundamentals of law and order, the majority opinion either approved mildly or vigorously. Even in Congress a representative declared that those who disavow their government "have no right to 'squeal' when citizens of this country hang one of them occasionally."

**HEADQUARTERS RAIDED.** On September 5 the United States Department of Justice made simultaneous raids upon the headquarters of the organization and seven other strongholds in Chicago and twenty other cities throughout the country. Wagon loads of papers were seized. Included in these raids were not only I. W. W. headquarters and homes of leaders but also the homes and headquarters of radical socialist agitators. The avowed purpose was to check an alleged country-wide conspiracy to hamper the government in every possible way in its prosecution of the war. While this action was denounced by a few liberals as tyrannical and an undue suppression of freedom of speech and press, the general opinion throughout the country distinctly approved it. Following the raid, William S. Heywood, general secretary, and 167 associates in the organization were arrested on the charge of seditious conspiracy. So far as made public the evidence showed no connection between the officials of the I. W. W. and German agents, but many utterances advocated the use of sabotage and tactics of interference with industrial and transport activities necessary to the prosecution of the war, or in their phrase "the machinery of murder."

**INJUNCTION.** For many years organized labor in this country, especially the American Federation of Labor (q.v.), has been unrelenting in its opposition to the customary uses of injunctions in labor disputes. Court decisions as to the proper scope of restraining orders have differed widely, depending apparently more on the personal views of judges than on exact definitions of law and precedent. The federation has sought the enactment of laws by legislatures, limiting the powers of courts in issuance of injunctions; it has repeatedly declared that an injunction based on the dictum that "labor is property" is tyrannical usurpation of power and should be wholly disregarded; and it has found great satisfaction in those clauses of the Clayton Act which declare that labor is not a commodity and otherwise limit the use of injunctions in trade disputes. For *Danbury Hatters Case* see TRADE UNIONS.

**LUMBER COMPANIES V. CARPENTERS.** Sometime in 1911 the Paine Lumber Company, of Oshkosh, Wis., and other lumber and construction companies of that State, Pennsylvania, Virginia, and New York, sought an injunction in the District Court of the United States at New York City against the United Brotherhood of Carpenters and Joiners of America, other unions, their officials, and publications to prevent interference in any way with the business of the complaining concerns. This suit was brought under the Sherman Anti-Trust Act of 1890 and

was supported by the American Anti-Boycott Association. It was alleged that the defendants by mutual agreement were carrying out a boycott which resulted in restraint of the interstate trade of the complainants. The court in 1913 found the allegation true, but held that an injunction in such a case could not issue to a private party but only to an officer of the Federal government. Similarly, in so far as the complainants relied on the New York laws, relief could, in the court's view, be obtained through an injunction obtained by the New York State government. A similar view was taken in 1914 by the Circuit Court of Appeals. This court held the actions of the unions not to be malicious and not to be directed against the complainants personally, so that, regardless of whether the combination was obnoxious to the common law or the anti-trust acts, no injunction could issue.

The case was first argued before the U. S. Supreme Court in May, 1915. Owing to retirement of Justice Hughes it was reargued in October, 1916; decision was rendered in June, 1917. The majority of the court held with the lower courts that violations of the anti-trust laws could not be remedied by injunctions issued to private persons; this was held to be true regardless of whether injury had been shown or not. Justice Holmes, who wrote the majority opinion, held that, although the Clayton Act established the right of private parties to an injunction in certain cases, the general purpose of that act prevented such injunction in the case at hand. Four justices dissented. In their view precedents and the opinions of lower courts were conflicting; and the Clayton Act, although it safeguards labor unions when pursuing their legitimate objects by lawful means, intended only to prevent them from being considered illegal combinations or conspiracies merely because they were organized, and was not designed to enable them to carry out policies injurious to the property rights of others. The result of this decision was to leave the meaning of the Clayton Act in relation to labor organizations and the scope of the latter's "lawful" practices still unclear.

**GRANT V. BUILDING TRADES COUNCIL.** Another important decision was that of the Minnesota Supreme Court in February in the case of the Grant Construction Company v. the St. Paul Building Trades Council. The latter had declared the former unfair and urged working men not to work for it or for any concern having subcontracts with it. The State District Court refused a restraining order to the company which then appealed to the State Supreme Court. The plaintiffs admitted that the council and its membership had not committed any unlawful act, but held that the combination of their acts resulted in unlawful "organized economic oppression." The court held that it was not aware "that it has ever been held that many lawful acts done by the same person or body of persons can constitute an unlawful whole." The opinion definitely upheld the right of labor either singly or collectively to refuse to work for any employer, even though such employer be other than the one by whom the complaining workmen are employed. See LABOR; LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION; TRADE UNIONS.

**LEGISLATION.** New laws in Minnesota and

Utah specifically legalize labor organizations and limit the issuance of injunctions in labor disputes. Both laws prohibit the issuance of injunctions to prevent termination of employment, or otherwise except to prevent irreparable injury to property. Both laws also declare that labor is not a commodity or article of commerce. The Minnesota statute does not restrain any agreement among workmen to better their conditions unless such act is illegal if done by one person. On the other hand, the act may not be used to curtail the powers of the courts or of executive officers when irreparable injury is threatened by violence or unlawful acts or acts involving "criminal syndicalism," defined as the resort to crime, sabotage, or terrorism to secure social or industrial reform. The Utah law omits this reference to syndicalism; it specifically prevents the use of injunctions to prevent persons from peacefully obtaining information or communicating it to others or persuading others to work or abstain from working. Injunction may not be used in industrial disputes to prevent action lawful in the absence of such dispute. Not the least important provision of the Utah act is the guarantee of right of trial by jury in cases of contempt of court, except where contempt is committed in the immediate presence of the court.

**INLAND WATERWAYS.** The congestion of freight on the railways of the United States and the demand for more adequate transportation service led to an increased utilization of inland waterways during the year 1917 and a special report for the last six months of that year was made to the secretary of commerce. The object of the campaign undertaken by the Department of Commerce was to demonstrate to the public that the commercial use of the navigable streams and waterways of the United States had become necessary as a war measure, and in the development of an adequate and economic system of transportation for both domestic and foreign commerce after the war; and in the second place, to show that there was a need of adequate terminal facilities to co-ordinate river and rail transportation and storage, as well as the establishment of water transportation routes, adequately financed and under competent business supervision, to restore water transportation to a sound and practical basis.

During the year, St. Paul, Minneapolis, Moline, Rock Island, Davenport, and Muscatine, on the upper Mississippi River, were building modern terminals and storage facilities; and on the Warrior River, Tuscaloosa and Demopolis; and Montgomery, Selma, and Mobile, on the Alabama River, were preparing plans for river terminals. Memphis voted \$500,000 in bonds for the construction of a terminal at that point; and Greenville, Miss., was also manifesting a definite interest in the same direction. At La Salle, Ill., plans were prepared for a river and rail terminal with two slips so that there could be developed at this point an industrial district. Peoria was planning the construction of a quay wall to reclaim a large area in front of the city, and there to construct a modern terminal. The river terminal at Kansas City which had been in existence for several years previously, was being extended and elevators were being added. The Erie Canal both at Buffalo and New York was being supplied with terminals as well

as at intermediate points along the route. Government barges had been placed in service on the upper Mississippi River by the War Department, and a water service was established between Florence, Ala., and Peoria, Ill., a fleet of barges and towboats being ordered for the increase of these facilities. With the shortage of cars in Louisiana sugar was being moved by barge from plantations to New Orleans. A navigation channel on the Great Lakes to the navigable Illinois River, thence to the Mississippi, which had been under discussion for a number of years, was renewed during the year. The facilities of the Missouri River between Kansas City and St. Louis were being used as never before, and above Kansas City local navigation was successful where the channel depth was adequate. At New Orleans, the terminal and waterfront storage system co-ordinating river, rail, and ocean transportation was being developed. See CANALS; DOCKS AND HARBORS; SHIPPING.

**INORGANIC CHEMISTRY.** See CHEMISTRY, GENERAL PROGRESS OF.

**INSECTS.** See ENTOMOLOGY.

**INSECTS AND THE PROPAGATION OF DISEASE.** New evidence of the responsibility of insects in the transmission of disease was constantly being brought forward and in many cases substantiated by modern bacteriological proof. Kraus traced an epidemic of dengue in Argentina to the swarms of mosquitoes of the *Culex fastigans* and *Stegomyia fasciata* varieties which were exceptionally prevalent during the season the epidemic occurred. No direct proof, however, was forthcoming to back his opinion, since no microorganism could be detected in the blood of patients by the microscope, and none could be cultivated from it. Pizzini, of Bergamo, Italy, implicated the body louse in the spread of cerebrospinal meningitis. He ruled out aerial contagion on the circumstance that the naso-pharyngeal secretions were always found free from meningococci, whereas the germ could be cultivated from the blood in practically all cases. The rôle of lice in the transmission of typhus fever is discussed elsewhere. See TYPHUS FEVER, WOLHYNIC FEVER and TRENCH FEVER.

**INSTITUTE OF FRANCE.** See ACADEMY, FRENCH.

**INSURANCE.** The year 1917 like its immediate predecessor was one of marked prosperity for insurance companies. Aside from the expansion of business the more conspicuous developments were the continued increase in the popularity of group insurance, whereby a corporation insures a whole or a part of its employees against sickness, injury, or death; the continued readjustment of the basis of fraternal insurance; and the entrance of the United States into the field of life and accident insurance. See also SOCIAL INSURANCE; and WORKMEN'S COMPENSATION.

**LIFE INSURANCE.** The most complete summary of life insurance statistics is contained in the *Annual Report of the Superintendent of Insurance of the State of New York*. The 58th Report (August, 1917) showed that there were doing business in that State 37 life insurance companies, including 12 New York State companies, 23 companies of other States, and 2 United States branches of German insurance companies. The gross assets of these 37 companies on December 31, 1916, were \$5,144,000,000.

These assets included stocks and bonds, \$2,378,000,000; bonds and mortgages, \$1,651,000,000; loans on policies, \$693,000,000; and cash, \$84,862,000. The liabilities of the combined companies aggregated \$4,853,000,000, including reserves of \$4,320,000,000; and dividends, \$394,970,000. The total surplus was \$152,266,000, not including special funds of \$128,144,000. The total incomes for the year were \$991,452,000, including premiums of \$736,000,000 and interest and dividends to the amount of \$221,000,000. Disbursements totaled \$720,625,000, leaving an excess of income over disbursements of over \$272,000,000; the disbursements included claims paid, \$305,000,000; lapsed, surrendered, and purchased policies, \$100,733,000; dividends to policy holders, \$119,715,000; commissions, \$65,806,000; and salaries, medical fees, and other wages, \$62,529,000. During the year there were issued 1,209,000 new policies, amounting to \$2,296,000,000 insurance. In addition over 48,000 old policies were revived and 1095 policies were increased. There were terminated during the year a total of 655,862 policies; of which 82,546 were terminated by death; 33,983 by maturity; 78 by disability; 132,759 by expiry; 158,299 by surrender, and 244,787 by lapse. The net increase in policies in force was 606,524. The aggregate number of policies in force, December 31, 1916, was 8,891,679, amounting to \$16,814,000,000. This was an increase for the year of \$1,843,373,000 in the amount of life insurance in force. These thirty-seven companies are estimated to transact about nine-tenths of the life insurance business of the country.

**FIRE AND MARINE INSURANCE.** In recent years the average estimated losses from fire in the United States and Canada has been about \$225,000,000. The disastrous fires which occasionally occur send the losses for individual years conspicuously above this average. During 1917 the total exceeded the average on account of a considerable number of destructive fires partly of incendiary origin and partly connected with accidental explosions in the manufacture and handling of munitions. Among these may be mentioned the terrific explosions on Black Tom Island in New York Harbor and of the French munitions ship in Halifax Harbor. According to the report of the New York Superintendent of Insurance there were 251 fire and fire-marine companies doing business in that State at the close of 1916, besides twenty-four companies devoted exclusively to marine insurance. The aggregate resources of the fire and fire-marine companies was \$806,939,000, including stocks and bonds amounting to \$567,303,000; uncollected premiums of \$69,702,000; and cash, \$71,747,000. These 251 companies had total liabilities of \$443,639,000 not including \$102,936,000 of paid-in capital and \$206,363,000 of net surplus. Their aggregate incomes amounted to \$473,933,000, of which \$424,272,000 was from premiums and \$29,776,000 from interest and dividends. The total disbursements were \$422,790,000, of which \$210,007,000 went for losses; \$88,533,000 for commissions; and \$34,859,000 for dividends. Twenty-six of the companies showed disbursements exceeding income. The amount of fire risks in force December 31, 1916, was \$68,663,804,000.

There were thirty-nine marine insurance companies doing business in New York State including the marine departments of fire-marine com-

panies. They showed total assets of \$6,675,000,000. The aggregate marine and inland insurance risks in force were \$2,480,824,000.

The importance of foreign fire insurance companies with branches in the United States is shown by the fact that sixty-three such companies were included in the above. In the year ending December 31, 1916, they showed total incomes of \$129,667,000; total disbursements of \$116,977,000; their total assets were \$152,322,000; and the total amount of fire risks in force with them was \$19,474,506,000, besides \$149,478,000 marine and inland insurance risks. There were in addition thirty-four foreign marine insurance companies with branches in New York State. During 1916 they collected \$38,773,000 of gross income; and at the end of that year had \$842,336,000 of insurance in force.

The entire group of fire, fire-marine, and marine insurance companies reporting to the New York State Department covered \$71,144,628,000 of insurance risks in force. During that year these companies had contracted to carry \$94,095,000,000 of risks for gross premiums of \$763,467,000, or an average premium of \$0.8114 for every \$100 of insurance. See FIRE PROTECTION.

**CASUALTY, CREDIT, FIDELITY, AND SURETY INSURANCE.** A conspicuous feature of insurance progress in recent years has been the extensive development of the great variety of insurance risks included under the above headings. Here are included not only workmen's compensation and employers' liability insurance, but insurance against all kinds of accidents, business losses, burglaries, automobile injuries, health, and various other contingencies. The superintendent of insurance of New York State reported (September, 1917) that there were seventy-one companies included in this group doing business in that State on December 31, 1916. They had total assets of \$234,038,000, an increase of 14 per cent in one year. Their total liabilities excluding \$46,900,000 of capital and \$42,125,000 of surplus were \$145,012,000. Their aggregate income from all sources was \$187,358,000 of which \$168,590,000 was from premiums. Sixty-six of the companies received \$35,381,000 more than they disbursed, but five companies disbursed \$211,000 more than they received. Total disbursements were \$152,187,000, including \$65,717,000 for claims paid, \$4,572,000 for dividends to stockholders, and \$81,898,000 for commissions and other expenses. The sources of income were as follows: accidents, \$27,658,000; health, \$7,607,000; liability, \$38,690,000; workmen's compensation, \$47,950,000; fidelity and surety, \$23,301,000; plate glass, \$4,807,000; steam boiler, \$3,445,000; burglary and theft, \$5,237,000; automobile and teams property damage, \$7,273,000; workmen's collective, \$209,000; other classes, \$2,411,000.

**TITLE AND MORTGAGE.** The aggregate assets of the ten real estate title and mortgage guarantee companies doing business in New York State were \$117,322,000 on December 31, 1916. They had a total capital of \$24,705,000, and aggregate surplus of \$30,224,000. Their incomes for the year amounted to \$11,685,000; and their disbursements to \$10,372,000.

**ASSESSMENT ASSOCIATIONS.** Recent years have seen a very marked development of associations of persons in similar trades or professions or having other ground of mutual trust and interest for the purpose of life or accident insur-

ance. Such associations are the following: Commercial Travelers' Accident; Expressmen's Mutual Benefit; Insurance Clerks' Mutual Benefit; Jewelers' Safety Fund Society; Masonic Life; New York Physicians' Mutual Aid; Postal Employees' Mutual Aid; Swedish Mutual Aid Society "Scandia"; Telegraph and Telephone Life Insurance Association. The report of the superintendent of insurance of New York State (October 29) showed that there were twenty-five such associations in that State on December 31, 1916. They had aggregate assets of \$4,149,000; total income for the year of \$2,835,000; total disbursements of \$2,610,000; and they had in force 184,525 certificates of insurance amounting to \$94,056,000.

**FRATERNAL INSURANCE.** As in all recent years one of the main problems of fraternal insurance was the readjustment of rates of assessment so as to accord with actuarial principles. Of fifty-five assessment fraternal benefit societies reporting to the New York Insurance Department, only fourteen showed a ratio of assets to liabilities of 100 per cent or more. In other words, the solvency of forty-one of them was questionable. So general, however, has become the realization that a fraternal order cannot become permanent until its rates or assessments are on a sound actual basis, that every large fraternal society has either already gone through the painful process of readjusting its rates or has begun serious consideration of the matter. Another recent development is the extension of the fraternal idea to include all members of families, thus permitting the fraternal societies to carry infant and child insurance. At the December, 1916, convention of insurance commissioners this extension was approved. This whole-family type of benefit, however, was opposed by various insurance commissioners, notably Superintendent Jesse S. Phillips, of New York State. In his report (June, 1917), he indicated that if fraternal societies are to have the privilege of carrying child insurance they should be required by law to place their entire business on a sound actuarial business.

No accurate statistical investigation of fraternal insurance in this country has been made in recent years. It is known that there are several hundred benefit societies scattered throughout the country. In New York State such societies are required to file reports with the insurance department which thus acquires information regarding all of the larger bodies. The seventy-four fraternal orders thus reporting showed total assets of \$186,675,000 on December 31, 1916. Their liabilities aggregated \$72,837,000. Their total income was \$110,342,000, of which \$100,605,000 had been received from members. The total disbursements were \$85,430,000 of which \$15,301,000 went for expenses and the remainder in payments to members. These seventy-four orders had a total of 5,264,000 certificates of insurance in force on December 31, 1916, aggregating \$6,482,282,000 insurance. Only 637,381 of these certificates aggregating \$533,000,000 insurance were in force in New York State. Some of the largest of these associations with the number of insurance certificates and the amount of insurance in force December 31, 1916, were as follows: Supreme Tribe of Ben Hur, 86,349; \$85,251,745; Independent Order of Brith Abraham, 205,817; \$102,908,500; Order of Brith Abraham, 57,460, \$28,

730,000; Independent Order of Brith Sholom, 52,457, \$25,699,200; Brotherhood of American Yeomen, 229,602, \$302,800,000; Catholic Mutual Benefit Association, 59,089, \$76,768,500; Independent Order of Foresters, 186,103, \$182,012,224; French Canadian Artisans' Society, 43,542, \$33,080,532; Knights of Columbus, 117,968, \$124,941,334; Knights of Pythias, 71,682, \$96,398,817; Ladies' Catholic Benevolent Association, 154,675, \$128,327,500; Ladies of the Maccabees, 43,110, \$31,728,250; Maccabees, 302,531, \$364,332,477; Modern Woodmen of America, 1,008,410, \$1,588,098,500; National Union, 56,722, \$103,052,367; Order of United Commercial Travelers of America, 75,051, \$375,255,000; Polish National Alliance of the United States, 117,189, \$67,008,600; Protected Home Circle, 97,897, \$83,717,250; Royal Arcanum, 177,235, \$305,665,528; Royal Neighbors of America, 318,772, \$326,773,500; Travelers' Protective Association of America, 59,329, \$296,645,000; Woman's Benefit Association of the Maccabees, 175,252, \$132,026,049; Supreme Forest of Woodmen Circle, 170,631, \$169,336,100; Workmen's Circle, 55,273, \$15,318,300; Workmen's Sick and Death Benefit Fund, 53,567, \$13,391,750.

**GOVERNMENT INSURANCE.** Immediately upon the entrance of the United States into the war, there was much discussion of the most desirable method of compensating soldiers and sailors for injuries and their families for deaths due to military and naval activities. It was almost universally agreed that the deplorable evils of the Civil War pension system should not be repeated. Consequently on July 2 the Secretary of the Treasury called together representatives of insurance companies to confer on the possibilities of an insurance scheme to cover the war risks of soldiers and sailors. About the same time the Committee on Labor of the Advisory Commission of the Council of National Defense appointed Judge Julian W. Mack, of Chicago, as chairman of the Committee on Compensation for Soldiers and Sailors and Their Dependents. These committees cooperated with the Bureau of War Risk Insurance already authorized to insure the lives of merchant seamen (see **WORKMEN'S COMPENSATION**). After much investigation and discussion a plan for government insurance was drawn up, approved by the president on August 7, and introduced in Congress on August 10, and finally passed October 6.

The plan provides that any person, male or female, in the active military or naval service of the United States may take out insurance in multiples of \$500 for any sum between \$1,000 and \$10,000. Such insurance is not compulsory. Premiums payable monthly range from 65 cents per \$1000 at age twenty-one to \$1.20 at age fifty-one. The following persons may be made the beneficiaries of such insurance: wife, husband, child, grandchild, brother, sister, step-brother, stepsister, adopted brother or sister, parent, grandparent, or a step-parent of either the insured or his wife. A man may not make his fiancée a beneficiary nor may he leave his insurance to his fiancée through his estate. Any policy may name any number of the allowed beneficiaries, but each beneficiary must be carefully named by his or her given or baptismal names. The insurance is issued on the "yearly renewal term" basis. The policies may be continued as term insurance for five years after the close of the war, when they will expire

unless advantage has been taken of the privilege of conversion of the whole or a part (in multiples of \$500), into another form of policy which the government will issue. These forms are the ordinary life, twenty-payment life, and endowment. Conversion may be made without medical reexamination, but will require the payment of a larger premium. These premiums, however, will still be lower than those provided by private corporations for the same insurance since the government will stand all administrative expenses. The amount called for in any policy will be paid in case either of death or of total or permanent disability. It is to be paid not in a lump sum but in monthly installments of \$5.75 for each \$1000 of insurance carried. These payments will be continued for twenty years, or, in case of total permanent disability, as long as the insured person survives. The law provided that all persons in the service who did not apply for insurance would be automatically covered until February 12, 1918, for a total amount of \$6000. This sum, in such cases, would be paid to the insured himself at the rate of \$25 a month for 240 months, in case of total permanent disability, or to his wife, child, or widowed mother at the same rate in case he is killed.

Thus the Bureau of War Risk Insurance which began operations on September 2, 1914, by insuring vessels and cargoes in foreign trade, had come to include workmen's compensation insurance for sailors and seamen and this new comprehensive system of insurance against death or total permanent disability for all persons in any branch of the military service of the nation. By the close of November, 1917, it was carrying a total of more than \$1,000,000,000 in war risks. See **WORKMEN'S COMPENSATION**.

**GERMAN COMPANIES.** In the latter part of 1917 considerable attention was directed to the fact that German fire and casualty insurance companies were receiving information which, if transmitted to the home government, or if utilized here by German agents, would be of service to the enemies in the United States. The following companies were affected: Hamburg-Bremen, Nord Deutsche, Aachen and Munich, Prussian National, and the Frankfurt General, the latter a casualty company and the other fire insurance companies. A hearing was held by the secretary of the treasury at Washington in November. On November 26 he rendered a decision in which he held that "the safety of the United States requires that enemy and ally-of-enemy, marine, fire, and casualty insurance companies shall not be allowed to do business as going concerns." The Prussian Life Insurance Company was exempted from this order.

**CANADA.** In addition to the care of its soldiers as described under Workmen's Compensation (q.v.) numerous localities in Canada protected the families of enlisted men by life insurance. For all cities except Toronto the policies were issued by United States companies, and in all cases the premiums were paid by the municipalities. In Toronto three quarters of the insurance was carried by the city itself. Policies were for \$1000 and gave protection until death in service or six months after discharge. In most cases the beneficiaries received their payments in monthly installments of \$30 each, the city allowing interest at 4½ per cent on unpaid balances.

1917—13

**INTERALLIED NAVAL COMMISSION.** See UNITED STATES AND THE WAR.

**INTERNAL COMBUSTION ENGINES.** During the year, a considerable number of large gas engines were under construction for steel mills. Some of these, it was stated, would exceed 4000 horsepower and would be used for blowing and for driving electric generators. One unit completed during the year was 84 by 60 in. on the air end and 46 by 60 in. on the gas end. Even larger blowing engines were under construction at the end of the year. The gas engine, however, which had been extensively employed in steel mills in the United States, was beginning to be rivaled by the steam turbine for steel mill work on account of the flexibility of the latter. In the South and Southwest adjacent to the supplies of fuel the Diesel engine was being constructed in large numbers. Capacities as large as 1000 horsepower were represented in the year's output, and the high cost of fuel led to the adoption of this form of prime mover in a number of industries. Following European examples marine types of Diesel engine were also being made and two of the largest plants in the United States were being devoted exclusively to the construction of such engines for the United States navy submarines. A new design of high-compression four-cycle heavy-oil engine was perfected during the year, and numerous improvements were made in other existing types, though the demand for smaller sizes of gas engines was somewhat restricted. The United States military forces in France employed a number of gasoline and kerosene engines for searchlights, portable lighting outfits, for driving compressors, for small repair outfits, etc., which were designed to use either gasoline or kerosene. An important development of the year was the "Liberty Motor" for aeroplanes. See **AERONAUTICS**; **AUTOMOBILES**.

**INTERNAL REVENUE.** See **LIQUORS** and **TOBACCO**.

**INTERNATIONAL COMMITTEE ON ATOMIC WEIGHTS.** See **CHEMISTRY**.

**INTERNATIONAL LANGUAGE.** The discussion continues between the advocates of Esperanto, who try to keep the fate of their artificial language aloof of the great world war, and those who insist that Esperantist propaganda has surreptitiously been taken over by the German intriguers to neutralize the progress of English and French as international languages (at the expense of German). An American has entered the field now to support, with philosophical arguments, the cause of the Chapeleur plan (see **YEAR BOOK** of last year) which has been favored by the well known French writer, Ernest Charles. At the request of the latter, Professor Mark Baldwin, formerly of Princeton and Johns Hopkins, elected membre correspondant de l'institut de France in 1911, has published a substantial article on the question, in *Le Semeur* of August-September, 1917. His argument runs as follows: Language has two "functions": to express the "useful" things of everyday life, and to express the "feelings, the emotions, the art of humanity." English answers the first purpose, French the other—"practical character of the first, refinement of the other." Now, English and German are struggling to win the fight on the ground of usefulness; but English wins—both with regard to the areas where the language is actually spoken,

and, even more, on account of its intrinsic simplicity as a language. French is without rival in art; in Mexico, e. g., where Professor Baldwin lived for several years, they read much French literature, and, moreover, they read in French translation the masterpieces of other literatures. Thus, let us solve the question of the international language by the scheme proposed by Chapelier, Bréal, Ernest Charles, i. e., let English be made compulsory in all French schools, and, vice versa, let French be made compulsory in the schools of all English-speaking countries. This will force the rest of the world to fall in line. "Our soldiers have already begun to prompt this way of consolidating the political alliances . . . four or five million Englishmen are in France, not to speak of half as many, and possibly that many Americans to come. . . ."

**INTERNATIONAL PEACE AND ARBITRATION.** The continuance with unabated violence and vigor of the European war and America's entrance into it has resulted in a more active discussion of peace and peace terms, and a national declension of interest for the time in arbitration. Nothing was done in this latter field during 1917 further than the rendering by the Central American Court of Justice of two decisions on March 9.

According to the world peace foundation the attitude of Nicaragua in both the Costa Rican and Salvadorean cases and the fact that the Central American system of conventions is decennial, has created much discussion respecting a new Central American conference, which is due to be held at almost any time, and which is expected to result in much closer relations among the five Central American republics, perhaps even to the extent of federation. It is to be expected that arbitration will be the corner stone of any such development.

During the opening months of the year, before America's entry into the war, the three militant peace organizations which were most active throughout the United States were the Woman's Peace Party, the American Union against Militarism, and the Emergency Peace Federation, all three of which had come into existence since the beginning of the war in August, 1914. They became, however, far more conspicuous in their activities for peace than the older and more conservative peace societies that had been in existence before the war.

**THE WOMAN'S PEACE PARTY**, which became the American branch of the International Committee of Women for Permanent Peace, had been organized in January, 1915. Miss Jane Adams was chairman and the national office was at 116 South Michigan Avenue, Chicago, Ill. During 1917 it maintained some 200 local branches throughout the United States, which were independent of each other and of the national board and carried on different kinds of propaganda, holding various lectures and publishing various pamphlets against war. The Woman's Peace Party of New York City, with Mrs. Margaret Lane as executive secretary, and headquarters at 70 Fifth Avenue, was one of the branches most active in opposing the entrance of the United States into the war.

**THE AMERICAN UNION AGAINST MILITARISM**, organized first in January, 1916, as "The Anti-Preparedness Committee," had its headquarters in the Munsey Building, Washington, D. C. From there it sent out bulletins to its mem-

bers throughout the country, keeping them in touch with the latest legislation at the Capital. On January 13-16, 1917, a series of important public hearings was held before the Senate Committee on Military Affairs, and later a deputation went to President Wilson to urge co-operating with other neutral nations in a policy of armed neutrality. As soon as America's entry into the war seemed imminent, the American Union Against Militarism urged a national referendum on the question, and itself held an informal postcard referendum in representative congressional districts in different parts of the country, which showed a vote of 4 to 1 against America's declaring war. The chairman of the union was Miss Lillian D. Wald and later Amos Pinchot. Miss Crystal Eastman was the executive secretary.

**THE EMERGENCY PEACE FEDERATION** was not organized until after the crisis at the beginning of February, 1917. It was in part an outgrowth of "The Neutral Conference Committee," and believed that America could best serve the world by remaining neutral and working for a just and lasting peace. During the two months before America's entry into the war, the federation rapidly became the most conspicuous organization working, as its stated object declared, "to keep America out of war and its attendant consequences." Mrs. Henry Villard was chairman, and Lella Faye Secor and Rebecca Shelly were secretaries. Its headquarters were at 70 Fifth Avenue, New York City, and branches were formed in various States. Mass meetings were held in Madison Square Garden in New York, and in the other big cities, and thousands of telegrams, letters, and pamphlets were sent throughout the country. A legislative bureau was maintained at Washington and hearings were held before the Foreign Relations Committee of the Senate and the House Committee on Foreign Affairs. Three large delegations to the capital were organized; one on Lincoln's Birthday, one on Washington's Birthday, and one on April 2, on the very eve of the declaration of war. After the declaration of war, the federation was reorganized, and took as its object: "To defend American ideals of liberty and democracy in war time and to work for an early and enduring peace." It gradually became merged in the People's Council, to whom it handed on this combined programme for "peace and democracy."

**THE PEOPLE'S COUNCIL OF AMERICA FOR DEMOCRACY AND PEACE** was evolved by gradual stages from the coordination of the three peace organizations already discussed and innumerable other forces working for peace and for democracy. The entrance of the United States into the war and at almost the same time the revolution in Russia suggested the idea of uniting the democratic forces in America, and during April and May several efforts to do so were made.

On May 2, at the Hotel Astor in New York, a meeting was called of some forty citizens representing various labor, socialist, religious, pacifist, and civic organizations. At this meeting a tentative programme was adopted (1) on the subject of peace, (2) on the preservation of democracy, and (3) on the maintenance of standards. The meeting favored a "peace in harmony with the principles outlined by the President of the United States," and the for-

mula that had been announced shortly before by the revolutionary government of Russia was so modified as to read: "no annexation of territory and no punitive indemnities." On the basis of this tentative programme a call was sent out to delegates from all over the country to a conference on democracy and peace to be held at the end of the month.

The First American Conference for Democracy and Terms of Peace was accordingly held on May 30 and 31 in New York in the Madison Square Garden Theatre and was attended by delegates from forty-three States. Six sessions were held, many addresses were given, and various resolutions were passed. The chairman announced that "any resolution in any way advising any action contrary to law will be declared out of order," and this principle was held to. Committees (1) on Terms of Peace, (2) on American Liberties, and (3) on Industrial Standards drew up resolutions developing the tentative programme of the Hotel Astor meeting. An organizing committee was also appointed by the conference in order "to organize a permanent delegated people's council." The resolutions of the conference were enthusiastically endorsed by a mass meeting of over 1500 citizens held in Madison Square Garden on the night of May 31.

A second conference on democracy and terms of peace was held in Chicago on July 7 and 8, and others were held in Philadelphia, Los Angeles, San Francisco, Salt Lake City, and Seattle, all adopting with slight modifications the same resolutions and all preparing the way for the people's council.

Meanwhile, from June 1 to September 1, the Organizing Committee of the People's Council was laying its plans for the constituent assembly at which the People's Council was finally to be constituted. A periodical, called the *Bulletin of the People's Council of America* was published. Organizers were sent out throughout the United States. Hundreds of trade unions, Socialist locals, single tax groups, workmen's councils, and 126 local people's councils became affiliated in the work. Delegates were sent to the constituent assembly from organizations representing in all over two million members.

The call that was sent out to these delegates gave the following programme of the objects of the People's Council: "Terms of Peace. 1. To demand that our government shall announce immediately in concrete terms its war aims, and shall seize every opportunity to achieve those aims through negotiation unhampered by the ambitions of other governments. 2. To strive for an early, democratic, and general peace in harmony with the principles outlined by Free Russia: a. no forcible annexations; b. no punitive indemnities; c. free development for all nationalities. 3. To urge international organization for the maintenance of world peace. American Liberties: 1. To defend our constitutional rights of free speech, free press, peaceful assemblage, and the right to petition the government. 2. To secure democratic control of foreign policy, and a popular referendum on all questions of war and peace. 3. To work for the repeal of conscription laws. Economic Policies: 1. To safeguard labor standards. 2. To meet the cost of war by the taxation of wealth. 3. To reduce the high cost of living."

The first Constituent Assembly of the Peo-

ple's Council of America for Democracy and Peace was held, in spite of many difficulties, on September 1 and 2 at the West Side Auditorium in Chicago. Addresses were made by Dr. Judah L. Magnes, of New York, by Congressman William E. Mason, of Illinois, by former Senator John D. Works of California, and by James H. Maurer, president of the Pennsylvania State Federation of Labor. Committees were appointed and developed still further the programme that had gradually been evolved. The chief new resolution was one enthusiastically endorsing the terms of peace outlined in the reply of President Wilson to the Pope which had appeared a few days earlier. Two chosen delegates representing each State and the various standing committees were given power to complete the arrangements for the permanent organization of the People's Council.

Two weeks later, on September 15 and 16, the various standing committees and these State delegates met in New York and perfected the permanent plans for the People's Council. Scott Nearing was chosen chairman, and Louis P. Lochner executive secretary. The following executive committee was elected: Morris Hillquit, New York; James H. Maurer, Pennsylvania; Jacob Panken, New York; William C. Rempfer, South Dakota; George E. Roewer, Jr., Massachusetts; Rebecca Shelly, Michigan; William Short, California; Harrier Park Thomas, Illinois. National headquarters were established at 138 West 13th Street, New York City.

The People's Council of America, as finally established, has taken as its motto: "Government of the people, by the people, for the people." Opponents of the movement say that its efforts have tended to weaken the home government and to strengthen the enemy. Defenders of the movement answer that it has tended to weaken the autocratic forces both at home and among the enemy and has strengthened the democratic forces in both countries. President Wilson has said that "peace should rest upon the rights of the peoples, not the rights of governments," and the People's Council believes that it is one of the forces working for the rights of the people throughout the world. Communication has been established with the Workmen's and Soldiers' Councils in Russia and England and the People's Council of America has become a part of the great international movement.

Among the various other subsidiary movements, some of which have been merged in the People's Council or have become inactive since its organization, are the Intercollegiate Anti-Militarist League, the No-Conscription League, the Civil Liberties League, the Bureau of Legal First Aid, the American Legal Defense League, the American Union for a Democratic Peace.

THE ATTACK ON HERBERT S. BIGELOW. About to deliver a peace address at Newport, Ky., in November, Herbert S. Bigelow, a Congregationalist minister of Cincinnati, and an active and aggressive pacifist, was seized by a band of masked men, taken into the nearby woods, and horsewhipped "in the name of the poor women and children of Belgium." In commenting on the case *The New Republic* in its issue of November 10 said: "Bigelow's case, given wide publicity, offered an opportunity to give concreteness to the president's declaration that we shall conduct our operations as belligerents with-

out passion and ourselves observe with proud punctilio the principles of right and fair play we profess to be fighting for.' . . . As a whole, the press does not seem in this instance to have drawn the line between suppression of sedition and suppression of thought. It becomes doubly important, therefore, that the line be drawn by the administration itself, so clearly and so often that force used as a cure for political unorthodoxy will seem as ineffectual as force used as a means of conversion to any nation's culture."

**THE SOCIALISTS AND PEACE MOVEMENTS.** The entrance of America into the war resulted in a split in the ranks of the Socialist party (q.v.), the pro-German element forming a peace-at-any-price faction, which was able to maintain control of the party organization, and the loyal element which felt that, notwithstanding their peace principles, it was essential to their ultimate success to support America upon her entrance into the war. The following statement by a former official of the Socialist party (Carl D. Thompson) gives a fair idea of the loyal Socialist position:

"Little by little, point by point, the President of the United States, and through him the government, is adopting our terms of peace.

"For over three years we have been urging that if there is to be any peace there should be no punitive indemnities and no forcible annexations exacted by any nation. The Russian revolution adopted that formula and announced it to the world. The Pope affirmed it. And in his reply to the Pope, the president adopted it. . . .

"Again, we Socialists have urged for a quarter of a century, and for the last three years with increased emphasis, that there must be a general disarmament by international agreement; that there could be no peace on earth so long as the world was divided into two warring camps with monstrous and unlimited armaments. This, too, the president affirms very definitely in his address to the Senate on January 22, 1917.

"We have also urged the necessity of a permanent organization, a federation of nations with a parliament, a court, and an international police force as the basis of permanent peace, and as a means of bringing it about. At one time or another the president, and through him the government has also adopted and set forth each one of these ideas. In his address before the League to Enforce Peace, May 27, 1916, and again in the government statement 'How War Came to America,' and in the president's address to the Senate January 22, 1917, these ideas are definitely affirmed.

"Even more important than these we Socialists have insisted upon the principle of the free development of nations,—that no nation should be crushed or dismembered, or its territory stolen from it; that all of them alike, the great and the small, should be free, independent, and self-governing, and being so should then be federated upon just and equitable terms. This, too, the president has affirmed. 'The dismemberment of any nation,' 'the handling of any people from sovereignty to sovereignty,' and other imperialistic plans are distinctly repudiated in the president's reply to the Pope and elsewhere.

"And, most important of all, we have insisted from the beginning that the fundamental causes of the war are economic; that the fight for foreign markets, the commercial rivalries of nations, the attempts of some to secure advantages over the others in trade were the direct causes leading to war; and that until these causes were removed there could be no peace. And, further, that even if the war were stopped and this economic war continued it would inevitably lead to other wars. This, too, the president has come to see—at least in so far as it applied to international relations. He does not yet see the deeper fact that it is the exploitation of labor WITHIN each nation that leads directly to the efforts of the capitalistic class of that nation to make economic war upon rival nations. . . . But this much at least he does see and affirms—that the economic war of nation upon nation leads to actual war. And he very definitely says that this must cease. 'No peace,' he says, 'can rest securely upon political or economic re-

strictions meant to benefit some nations and cripple or embarrass others.' . . . 'Peace on equal terms in the economic opportunities of the world.' The freedom of the seas, and free trade and economic justice between the nations must be established.

"All of which, we believe and hope, is going a long way towards peace. It is certainly going a long way on the programme urged by the Socialists in every nation.

"If the president and our government will stick to this programme, if they will insist on holding the other allied nations to it—we shall have peace. And it will be a more permanent peace than ever before established in the world."

**A LEAGUE OF NATIONS.** In the opinion of the secretary of the World Peace Foundation (Dennis P. Myers): There is no doubt but that the conception of the League of Nations dominates all peace ideas. In one form or another the old established and the new organizations are working that lode. There are various minor differences between programmes, even those most similar: the programmes of the American Institute of International Law, the American Peace Society, A League of Nations Society, League to Enforce Peace, Central Organization for a Durable Peace, the French League for a Society of Nations, the Fabians and the World Court League. There is considerable harmony in the essential ideas of all these plans, particularly respecting organized arbitration and conciliation and periodic conferences. Some of the plans are much more detailed than others. Divergence centres around the element of force. This foundation has committed itself to the provision of a sanction to the extent of enforcing trial of pacific settlement before a resort to war. Support of the programme of the League to Enforce Peace is at present the principal activity of the foundation, because the trustees believe that the element of force, being already existent, cannot be exorcized, but can be controlled and placed behind organs of order. They believe that the world will be willing to effect this as soon as opportunity offers. This attitude is characterized by its practical aims. Others, starting from the philosophical truth that force is not a permanent element, omit a sanction. Others hold that the organization of pacific settlement and conferences is not enough and provide much additional machinery. The result of all of these plans is that the world is being familiarized as never before with the problems of organizing a better world and their probable solution. The deep interest of people everywhere in these programmes is evidenced by the number of independent projects which reach such an office. Together the propaganda and the proved interest constitute a mandate which no peace negotiations will be able to disregard.

**LEAGUE TO ENFORCE PEACE.** The war time programme of the League to Enforce Peace is set forth in a letter from its secretary (William H. Short):

"First in importance is that of opposing and preventing a premature peace. From this time on, the Hohenzollerns will be continually attempting to create a sentiment in favor of an inconclusive peace that will leave them masters of Austria, Bulgaria, and Turkey, and in physical possession of as much as possible of the lands which they have overrun with their armies. If a peace is made before German militarism has been humbled, Prussianism will be victorious. . . . All the leaders of our movement are convinced that it is utterly useless to talk about the creation of a league of nations to enforce peace unless German militarism is destroyed. If this is not done, and done thoroughly, either by the Ger-

man people themselves or by the Allied force, the Central Powers will themselves compose a league of nations to enforce peace, and its work will be done ruthlessly and completely.

"The second function in the performance of which we have some degree of responsibility, is the preparation of the basis for a just peace at the end of this war, guaranteed by the combined force of the democratic nations of the world. A man may be compelled at times to thrash his neighbor, but it is quite clear that the basis for future good relations is not established by this alone. The terms and the temper of the peace established between them after the painful process is over has considerable to do with their future friendship. It is now generally acknowledged that the bad temper and bad judgment with which the reconstruction of the South was carried through by northern politicians after the Civil War, did much to prevent the successful results that should have followed the magnanimity of Grant, and the well-conceived plans of Lincoln.

"Our country has lately had opportunity to test the wisdom of the maxim, 'In time of peace prepare for war.' The reverse, though not so often quoted, is equally true, that in time of war preparation must be made for peace. . . .

"The President of the United States is urging the main contention of the League to Enforce Peace as the fundamental feature of American foreign policy. The Allied nations have pledged themselves to its support. Small neutral nations of Europe have espoused it. The Pope has declared in its favor. Even the Central Powers have been compelled, by the public sentiment of the world, and perhaps of their own people, to give it lip service.

"But the formulation of our proposals (See *YMAS Book for 1916*) does not release us from further responsibility. The original proposals were frankly put forth as a tentative and minimum programme. It will be the duty of our League to have, when the war ends, a programme ready for our peace plenipotentiaries prepared in view of the vast movement of thought and events that has taken place in this and other countries during these long and stirring years of war; and to be able to relate and harmonize that programme with the many difficult problems that will come up in the great settlement.

"A third function is that of educating the public regarding the purpose of the war, to amplify and repeat the words of the president regarding it and, even in hours of passion that may seize the country, to prevent the people from forgetting what it is we are contending for. A leading member of the Cabinet, in the days immediately preceding our entrance into the war, said that, if we went in, it would be solely for the purpose of making the right kind of peace; that it was important, therefore, that from the very beginning this fact should be held before the eyes of the country, and that he hoped the League to Enforce Peace would fulfill this important national function.

"Everybody wants peace,—not an immediate peace, not a dishonorable peace, not a peace that will mortgage the world to autocracy and militarism, but a just, a thorough-going, a final peace such as can be attained only by the destruction of Prussian militarism. Such a peace is all that non-aggressive nations ever fight for. Every person of experience knows that in a world crisis like this, the man or the organization that can best embody and interpret to the people the things that are in their own hearts, becomes the leader to whom they listen, and whom they gladly follow. . . .

"A fourth function, while not peculiarly and exclusively our own, we are privileged to share on not less than equal terms with other patriotic organizations. It is that of taking part in 'Win-the-War' activities as occasions offer. Believing, as we do, that the war must be won before the objects of our League can be accomplished, it is logical and fitting that we transmute our convictions into deeds. It is, I think, in recognition of this fact, that the Secretary of the Treasury chose the League as the channel through which to address all patriotic organizations in the country, inviting their participation in the second campaign for the sale of Liberty Bonds.

"In view then of the essential and honorable functions which our League has to perform, I am sure you will agree with me that a spokesman of the League makes a most serious error when he prefaces his remarks with an apology for the word 'peace' in our title, or by making it apparent in any other way that he feels under the necessity of justifying his presence and his message. If he fulfills one of the logical and peculiar functions of the League, his message will be the complete justifica-

tion of his presence on any platform and of the organization which he represents. He will justly feel that it would be an impertinence and a cause for offense, to organize a meeting at this time to talk merely about peace, whether under the auspices of our League or of any other organization; that it would be poor tactics to ask people at any meeting to listen to an address on the League that did not relate it closely to the great struggle that is now on, or to adopt a resolution which declared that the most important question now before the country was the obtaining of a permanent peace. If our League has not something to do in the winning of this war, that no other agency can do so well, I for one should ask for a leave of absence, in order to engage in some work that has to do directly with the defeat of Germany."

An important publication of the league was *A Reference Book for Speakers*, of which there were three parts: "Part I. The Things Against Which We Are Fighting;" "Part II. The World for Which We Are Fighting;" "Part III. Keeping the World Safe."

**THE MENACE OF A PREMATURE PEACE.** In an address at Montreal, William H. Taft, the president of the league, had this to say:

"Whatever the detailed stipulations of the League to Enforce Peace may be, its operation and success must depend on the obligations of the treaty stipulations. Unless their binding effect is recognized by the nations as a sacred principle, the stipulations of the League will be 'writ in water.' The revelations and disclosures of this war will satisfy the members of the League that as long as the present military caste controls the German military and foreign policy, the league is impracticable, and would not be worth the parchment on which its obligations would be recorded.

"Those who favor permanent world peace therefore must oppose with might and main the proposals for peace at this juncture in the war. Men who look forward to a League of the World to Enforce Peace in the future can have no patience with a compromise that leaves the promoting cause of the present awful war unaffected and unremoved.

"This war is now being fought by the Allies as a League to Enforce Peace. Unless the Allies compel peace by victory, they do not enforce it. They do not make the military autocrats of the world into nations fit for a World League, unless they convince them by a lesson of defeat."

**THE CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE.** The declaration of the Board of Trustees of the Endowment adopted at its annual meeting on April 19 is regarded as one of the most important utterances of any peace organization in this country since the outbreak of the European war and the participation of the United States in that war. This resolution reads as follows:

"Resolved, That the Trustees of the Carnegie Endowment for International Peace, assembled for their annual meeting, declare hereby their belief that the most effectual means of promoting durable international peace is to prosecute the war against the Imperial German Government to final victory for democracy, in accordance with the policy declared by the President of the United States."

At a meeting of the Executive Committee of the Endowment, held November 1, the following declaration, supplementary to the above, and intended to emphasize it, was also adopted:

"In view of recent events, emphasized by the widespread intrigue of the German government to deceive and mislead the peace-loving people of the world, the executive committee of the Peace Endowment unanimously reaffirms this declaration and pledges the Carnegie Foundation for International Peace to the loyal support of those courses of action that will assure early, complete, and final victory for the arms of the Allied forces. The path to durable international peace on which the liberty-loving nations of the world would so gladly enter, is now blocked by the blind reliance of Germany upon the invincibility of German military power and upon its effectiveness as an instrument of in-

ternational policy. This reliance must be broken before any other effective steps can be taken to secure international peace. It can only be broken by defeat.

"The executive committee of the Carnegie Endowment calls upon all lovers of peace to assist in every possible way in the effective prosecution of the war which has peace and not conquest for its aim."

A comprehensive understanding of the wide field of study covered by the Endowment's activities is obtained from the list of its publications, of which no less than sixty-nine titles are listed in its *Year Book*. These publications vary from small pamphlets to large volumes. Many of them are distributed gratuitously; those which appeal to a limited class of specialists and experts are sold at a price; but in order that everybody may have access to them, the Endowment has established a chain of depository libraries, widely distributed in the principal cities and in educational institutions and public libraries of the United States and other countries, where they are freely accessible. A list of these free depository libraries, numbering 626, are published in the *Year Book*.

At the April meeting of the trustees, \$500,000 was voted to aid in the restoration of the devastated homes in France, Belgium, Serbia, or Russia. The personnel and equipment of the Endowment headquarters in Washington were tendered the Department of State for any service during the war, which tender was duly accepted.

THE AMERICAN PEACE SOCIETY in its monthly organ, *The Advocate of Peace* (A. D. Call, editor), put out the following pledge which it asked all peace organizations to adopt and support:

"I pledge my support to my government in its search for freedom and democracy! Whatever your hope for peace, this is your thought to-day. In this pledge the American Peace Society is with you, heart and soul. In these trying days this Society has also pledged its support to the government."

In its December issue, *The Advocate of Peace* outlined the attitude of the society still further in these words:

"We must believe in law. Without law there is chaos. Law is the instrument by which the majority, individually weak and right-minded, control the few individually aggressive and criminal. Where there is no law, might and cunning prevail. Laws are rules of conduct which we are all morally bound to obey. If we will to live within the United States we by that act tacitly agree to obey the laws of the United States.

"If we gave 'aid and comfort' to Germany in these times, we disobey the most fundamental law of our land. When our chosen leaders are, in accordance with the law, bending every effort to bring the German government to terms, for any of us to harass these our representatives in authority is to stir up the dust, baffle the issues, prolong the horror, give encouragement to Germany, do violence to law, and toy with treason.

"We state these elementary principles here, not because we are interested in principles merely, but because many radical persons, commonly called 'pacifists,' ignore these principles to the embarrassing detriment of the very thing they and we believe in and would advance. The so-called *People's Council* is made up largely of just such deluded persons. What has been known for a time as the *American Union against Militarism* has, we are informed, changed its name to '*American Union for a Democratic Peace*,' and its members are now evidently applying essentially the same obscurantist and disturbing methods as the *People's Council*. These perfectly sincere 'radicals' are raising the dust, getting nowhere, bringing upon themselves the contempt of healthy-minded men, and by their stupid proceedings rendering a serious injury to the

cause of international peace. For any body of intelligent persons to organize themselves and to say as a body at this time, 'We are utterly opposed to the extension of militarism in this country,' would be laughable were it not so counter to the law as it is, treasonable in substance and tragic. The job of the hour has nothing to do with 'annexations,' 'indemnities,' 'economic reprisals,' unofficial 'German peace proposals.' To blur our thinking with such matters at this time is to distort our perspective, to give comfort to our enemies, and to prolong the war. The supreme duty of every man, woman, and child in America to-day is, avoiding panics and hatreds of persons, to remember the ghastly offenses of a might-worshipping aggressor, and to bend every possible effort to win and to end this war.

"When they ask us of this Society, as frequently they do, how we can 'support war with one hand and peace with the other,' we reply by pointing to our well-nigh hundred years of consistent effort in behalf of a reign of law. We cannot now turn against the only law we have left. We must and will support the only machinery we have for the maintenance of that law, namely, the United States government. If some member of the *People's Council* pathetically asks us, as one recently did, 'Who, then, is to represent the people?' our reply must be that we can recognize but one 'representative of the people' to-day, and that is not the *People's Council*, but the government duly elected and sworn to do precisely that thing. . . .

"The President of the United States signed a resolution which had been passed by both houses of the Congress, which officially declared the state of war which had been thrust upon this country. This momentous act altered completely the bases upon which we fashioned our daily behavior prior to that action. It seems difficult for many to grasp this fact, but it is a fact which must be grasped. With the situation as it is, there can be no governed world of the kind that rational men would have. Judicial processes are at the time internationally impossible. The methods of peaceable settlement must wait, because there in the way of these things stands the Imperial German government. To go back now would be disastrous. The only way to the attainment of our aims is forward. Law, justice, common sense, the world peace we purpose to establish, all call now for a perfect unity of opinion and purpose, a call which should and must be heard by us all, whether we are members of this or that 'group' or of no group at all. The clarion, unmistakable call to us all is, that we must now end this war by winning it."

THE AMERICAN SCHOOL PEACE LEAGUE has adopted the following programme for the war: To maintain a civic and moral stability among the youth of the country; to inspire anew a love of American institutions and American ideals; to foster civic service appropriate to youth, consciously entered upon for the nation's welfare; to promote an interchange of good-will regardless of race or nationality; to teach the value of arbitration, conciliation, and judicial settlement; to hold to the ideal of the ultimate triumph of democracy.

This organization has offered two sets of prizes to be known as the Seabury Prizes, for the best essays on one of the following subjects: (1) The Teaching of Democracy as a Factor in a League of Nations. Open to seniors in normal schools. (2) How Should the World Be Organized so as to Prevent Wars in the Future? Open to seniors in secondary schools. Three prizes of seventy-five, fifty, and twenty-five dollars will be given for the best essays in both sets. The contest closes on March 1, 1918.

THE WORLD PEACE FOUNDATION (*supra*) which is devoting its principal efforts to the support of the program of the League to Enforce Peace has discontinued its pamphlet publications and will hereafter issue in the same physical form a bi-monthly under the title *A League of Nations*, the first issue of which appeared October 1.

VARIOUS ORGANIZATIONS. The Lake Mohonk

Conference on International Arbitration was omitted this year. The Pan-American Division of International Conciliation continued its pamphlet publications, but in diminished numbers and size. The World's Court League has continued the publication of its monthly organ, *The World's Court*. The New York Peace Society began in November a series of bulletins of information and suggestion.

**THE CENTRAL ORGANIZATION FOR A DURABLE PEACE** has as officers of its American branch, Hamilton Holt, chairman; Frederick Lynch, secretary, and Mrs. Fannie Fern Andrews, Boston, international corresponding secretary. Its "minimum programme" is:

1. No annexation or transfer of territory shall be made contrary to the interests and wishes of the population concerned. Where possible their consent shall be obtained by plebiscite or otherwise.

2. The states shall guarantee to the various nationalities, included in their boundaries, equality before the law, religious liberty, and the free use of their native languages.

3. The states shall agree to introduce in their colonies, protectorates, and spheres of influence, liberty of commerce, or at least equal treatment for all nations.

4. The work of the Hague Conference with a view to the peaceful organization of the Society of Nations shall be developed.

The Hague Conference shall be given a permanent organization and meet at regular intervals.

5. The states shall agree to submit all their disputes to peaceful settlement. For this purpose there shall be created, in addition to the existent Hague Court of Arbitration, (a) a permanent Court of International Justice, (b) a permanent International Council of Investigation and Conciliation.

6. The states shall bind themselves to take concerted action, diplomatic, economic, or military, in case any state should resort to military measures instead of submitting the dispute to judicial decision or to the mediation of the Council of Investigation and Conciliation.

7. The states shall agree to reduce their armaments.

8. In order to facilitate the reduction of naval armaments, the right of capture shall be abolished and the freedom of the seas assured.

9. Foreign policy shall be under the effective control of the parliaments of the respective nations.

Secret treaties shall be void.

**AMERICAN FEDERATION OF LABOR.** At its Buffalo meeting, the federation adopted the following declarations as the basis upon which peace must be negotiated:

1. The combination of the free peoples of the world in a common covenant for genuine and practical coöperation to secure justice and therefore peace in relations between nations.

2. Governments derive their just power from the consent of the governed.

3. No political or economic restrictions meant to benefit some nations and to cripple or embarrass others.

4. No indemnities or reprisals based upon vindictive purposes or deliberate desires to injure, but to right manifest wrongs.

5. Recognition of the rights of small nations and of the principle, "No people must be forced under sovereignty under which it does not wish to live."

6. No territorial changes or adjustment of power except in furtherance of the welfare of the peoples affected and in furtherance of world peace.

In addition to these basic principles which are based upon declarations of our President of these United States, there should be incorporated in the treaty that shall constitute the guide of nations in the new period and conditions into which we enter at the close of the war, the following declarations, fundamental to the best interests of all nations and of vital importance to wage-earners:

1. No article or commodity shall be shipped or delivered in international commerce, in the produc-

tion of which children under the age of sixteen have been employed or permitted to work.

2. It shall be declared that the basis work-day in industry and commerce shall not exceed eight hours.

3. Involuntary servitude shall not exist, except as a punishment for crime, whereof the party shall have been duly convicted.

4. Establishment of trial by jury.

**THE SOUTHERN COMMERCIAL CONGRESS.** Following is the text of a resolution adopted by the Southern Commercial Congress, representing sixteen Southern States, at the ninth annual convention held in New York City, October 15-17:

The Southern Commercial Congress insists that the outstanding fact that we are in the most stupendous war of all time is the controlling fact which precludes all argument as to the cause and reasons and admits of no contention as to why and how.

United purpose and action are essential, and we call upon all people for not only loyalty but patriotic effort. Our companions and associates as well as ourselves wish it, determined that all free States and people shall enjoy the right of self-development, that the principles of aggression shall not be recognized as civilization's highest law; that it shall not be the test of a nation's fitness, that it can mobilize the most terrible force, and use it in the most savage way; that it shall not be established that might may conquer and control right. We have no doubt as to how these questions will be settled or as to the result of the conflict.

The Southern Commercial Congress stands for winning the war. It points with the deepest satisfaction to the united, the courageous, the determined support that is given to that end by the sixteen States represented in the Congress. They stand in alert and resolute loyalty behind the great leader of the nation, the commander-in-chief of its army and navy, the President of the United States.

When the war is won and Germany made "powerless or free" the Southern Commercial Congress devotedly trusts, as does the Nation, that a peace may be secured that will be just and righteous and that it will be so safeguarded by a "League of honor among democratic nations" or by some other plan that it shall become the permanent bulwark and hope of civilization.

**UNIVERSAL MILITARY SERVICE.** In his annual report to Congress, the Secretary of War (Newton D. Baker) disapproved universal military service, saying in part:

"The department has not sought and does not now seek legislation on the subject, chiefly for the reason that the formation of a permanent military policy will inevitably be effected by the arrangement consequent upon the termination of the present war. Civilized men must hope that the future has in store a relief from the burden of armament and the destruction and waste of war.

"However vain that hope may appear in the midst of the most devastating and destructive war in the history of the race, it persists, perhaps because we are encouraged by the analogous substitution of courts for force in the settlement of private controversies; perhaps because all the perfections of nature teach us that they are the product of processes which have eliminated waste and substituted constructive for destructive principles.

"When a permanent military policy therefore comes to be adopted it will doubtless be conceived in a spirit which will be adequate to preserve against any possible attack those vital principles of liberty upon which democratic institutions are based, and yet be so restrained as in no event to foster the growth of mere militarist ambitions or to excite the apprehension of nations with whom it is our first desire to live in harmonious and just accord."

**INTERMED GERMAN SHIPS.** See SHIP-BUILDING; SHIPPING; UNITED STATES AND THE WAR.

**INTERSTATE COMMERCE COMMISSION.** See RAILWAYS.

**IOCAMFEN.** A liquid containing about 7.25 per cent free iodine, and obtained by the interaction of camphor seventy parts, phenol twenty parts, and iodine ten parts. The drug is said to have the antiseptic and germicidal properties of iodine as well as the analgesic and stimulating characteristics of camphor and phenol. It is used externally as a surgical dressing in wounds, joint injuries, infective processes, etc., being applied directly to the involved surfaces. It is a dark, reddish-brown, viscid liquid, having an odor of camphor, insoluble in water, but readily soluble in alcohol, ether, benzene, and liquid petrolatum.

**IOWA. POPULATION.** The population of the State in 1910 was 2,224,771. There is a slight increase in the population from year to year.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. Bu.	Value
Corn	1917	11,100,000	410,700,000	\$443,556,000
	1916	10,050,000	366,825,000	293,460,000
Wheat	1917	420,000	8,350,000	16,616,000
	1916	560,000	9,150,000	14,274,000
Oats	1917	5,250,000	246,750,000	155,452,000
	1916	5,100,000	188,700,000	90,576,000
Potatoes	1917	138,000	13,110,000	17,174,000
	1916	115,000	4,830,000	8,452,000
Hay	1917	3,160,000	3,887,000	65,302,000
	1916	3,700,000	5,920,000	53,280,000

a Tons.

**MINERAL PRODUCTION.** The coal production of the State in 1916 amounted to 7,260,800

short tons, valued at \$13,530,383, which represents a decrease of 353,343 tons in quantity, and \$47,225 in value. The number of men employed in the coal mines of the State decreased from 15,549 in 1915 to 14,443 in 1916.

**RAILWAYS.** The total mileage of single track road, on December 31, 1916, was 9934. The total mileage of all tracks was 13,812. The total mileage of single track operated was 10,382, and the total mileage of all tracks operated was 14,305.

**FINANCE.** On June 1, 1915, the latest year for which statistics are available, there was a balance on hand of \$856,045. The receipts for the year were \$8,946,045, and the disbursements \$8,648,265, leaving a balance on hand on June 30, 1916, of \$717,825. The State has no bonded debt since 1892.

**EDUCATION.** The total number of pupils of school age on June 30, 1916, was 678,846. The total enrollment was 525,579, with the average daily attendance of 398,143. The number of female teachers were 34,372 and the number of male, 2858.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Soldiers' Home at Marshalltown; Soldiers' Orphans Home at Davenport; Clarinda State Hospital, Mount Pleasant State Hospital, Independence State Hospital, Cherokee State Hospital, all for the insane; the School for Defectives, Institution for Feeble-minded Children, State Sanatorium for Treatment of Tuberculosis, Industrial School for Boys, Industrial School for Girls, State Hospital and Colony for Epileptics, State Hospital for Inebriates, State Penitentiary, the Reformatory, and Women's Reformatory.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

A moratorium was provided for men in the military and naval service. This provided for the tolling of the statute of limitations as applied to the bringing of actions by men in the service and for the continuance of action against them.

A constitutional amendment granting woman suffrage was referred to the next legislature.

Provision was made for the voting of citizens absent from the State in the national service.

Laws were passed requiring the licensing of dogs and authorizing the killing of unlicensed dogs or dogs annoying other domestic animals.

The drawing of checks with fraudulent intent when the drawer has not sufficient funds to make payment is made a criminal act.

**STATE OFFICERS.** Governor, William L. Harding; Lieutenant Governor, E. R. Moore; Secretary of State, W. S. Allen; Auditor, Frank S. Shaw; Treasurer, W. C. Brown; Attorney-General, H. M. Havner; Superintendent of Public Instruction, A. M. Deyoe; Adjutant-General, Guy E. Logan; Commissioner of Insurance, Emory H. English—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Frank R. Gaynor; Judges, Byron W. Preston, Silas M. Weaver, Scott M. Ladd, Benj. I. Saling, Horace E. Deemer, William D. Evans; Clerk, Burgess W. Garrett.

**IOWA, STATE UNIVERSITY OF.** A co-educational State institution of learning at Iowa City, Iowa. In the fall of 1917 there were 2515 students in all departments and 352 members of the faculty. Volumes in the library numbered 190,-

000. Leaves of absence were granted for war service to six members of the faculty. William Fletcher Russell was appointed dean of the College of Education; and Bird Thomas Baldwin was made professor of educational psychology and director of the Iowa Child Welfare Research Station, which was established at the university in 1917 for the scientific study of normal children of pre-school age. In 1917 there was completed a new building for the College of Dentistry which cost about \$175,000; and a children's hospital, costing about \$125,000 was begun. The university acquired by purchase a tract of land, 25 acres in extent, west of the Iowa River as an addition to the campus. Productive funds in 1916-17 amounted to \$364,301. The total income from all sources was \$1,347,803. The State University of Iowa was founded in 1847. President, Walter Albert Jessup, Ph.D.

**IRELAND.** An island west of Great Britain, being a constituent part of the United Kingdom. The area is 32,586 square miles; land area, 31,828 square miles. Population (1911 census), 4,390,219. See GREAT BRITAIN; also AGRICULTURE.

**IRON AND STEEL.** After two extraordinary years of industrial activity, the iron and steel industry of the United States in 1917 was operating under entirely new conditions demanded by the participation of the United States in the great European war. The production of pig iron in 1917 was estimated by the *Iron Age* at about 38,700,000 tons, against 39,435,000 tons in 1916. Lake Superior ore production was 63,960,956 tons in 1916 and 63,964,000 in 1917. The steel-ingot production in 1917 was estimated at about 42,400,000 tons, being the greatest on record, as compared with the previous record output for 1916 of 41,401,000 tons. This increase in steel ingots and the decrease in pig iron production represented the use of accumulated stocks of steel making pig iron and the larger use of scrap in the making of open hearth steel. While the coal production was greater in 1917 by some 50,000,000 of tons, nevertheless it was entirely inadequate for the iron and steel industry, and frequently blast furnaces were compelled to wait days at a time for coke, while steel works were without coal for the gas producers. On January 1, 1917, there were 311 furnaces in blast, a number that grew to 357 on September 1, 1917, but at the same time there was a decrease in the rate of pig iron production throughout the year.

The first war year for the United States steel industry was one of especial significance in that owners, manufacturers, and workmen united in the one patriotic impulse to aid the government and its Allies, to the sacrifice of commercial needs or individual profits. For this reason the year 1917 compared favorably with the previous year when American steel plants were working for maximum output to supply the demands of the world. The most significant feature of 1917 was the regulation of prices and production by the government. From the beginning of the year foreign and domestic purchasers were in competition and prices rose proportionately to undue levels. As a result the price for pig iron fluctuated during the year, reaching a high point of about \$55 per ton in July and August. This condition, however, was changed by the adoption of the price fixed by the government. Preferential prices had been made to the government

in April, and May, while the market generally was much higher, and there was an active demand for pig iron and other materials and products. In the latter part of April, it was found impossible to give the same prices to the Allies as to the United States, and matters continued unsettled until on July 12, President Wilson made an appeal to manufacturers in all lines of industry for a one-price-for-all policy, namely one price to the government, Allies, and the public. At this time, a committee of the American Iron and Steel Institute was conferring at Washington with the secretaries of war and navy, the chairman of the United States Shipping Board, and the chairman of the Committee on Raw Materials of the Advisory Commission of the Council of National Defense. The steel men promised to stimulate production and speed deliveries, while the matter of prices for iron and steel was to be left to the Federal Trade Commission which then had under way an inquiry into production costs. This unsettled condition affected the market and prices, while the Federal Trade Commission costs inquiry progressed but slowly, as it became far more complicated than had been anticipated by the various officials and economists concerned in the effort. For this reason, the War Industries Board entered into a conference with the Steel Manufacturers' Commission, and an agreement was reached in September so that on September 24 President Wilson was able to announce the following prices: Mesaba non-Bessemer iron ore, \$5.05; Connellsville coke, \$6; pig iron, \$33; steel bars, 2.90c.; Pittsburgh structural shapes, 3c.; and plates 3.25c.

The price for pig iron was uniform at the furnace, whether northern or southern, for No. 2 foundry basic iron, and this, as well as other prices, was a marked reduction from the rates that had prevailed in the open market. This agreement involved the application of the same prices to all purchasers whether by the government and its allies or by private consumers, thus carrying out the president's wishes. But there was comparatively little sold at the government figures, as the capacity of the mills was engaged under previous contracts which then had considerable time to run. The prices announced in the agreement were to continue to January 1, but on December 28, President Wilson announced that these prices would continue to March 31, 1918, although the investigation by the Federal Trade Commission of iron and steel costs had shown substantial advance over the original figures of costs.

With the government's programme for naval and merchant shipbuilding and munitions developed during the year, there was a great demand for increased output. In April, the government's requirements were estimated as not over 5 per cent of the steel output of the United States, but this figure was radically revised when the estimated shipbuilding in a year in American yards was increased from 1,500,000 to 6,000,000 tons, requiring about 600,000 tons of steel plates and shapes. At the end of the year it was reported that the United States government and its Allies, including manufacturers working on government contracts, would require at least 10,000,000 tons of steel. For shells alone contracts had been entered into for 1,500,000 tons of steel on which deliveries were to be completed by June 15, 1918.

Iron and steel were extensively exported during the first months of the year, although the unrestricted submarine warfare was a deterrent influence, and there was a shrinkage in tonnage in February. In the second half of the year, the government's export embargo effective July 15, also had its effect, but for ten months ended October, the exports were 5,098,000 tons, as against 4,968,000 tons in the corresponding months of 1916. The value of all iron and steel exports including machinery for the first ten months of 1917 was \$1,025,623,000, as compared with \$701,052,000 for corresponding months of 1916, and \$294,322,000 in 1915.

Rails and railway equipment were a considerable factor in the exports of 1917, Russia, France, Italy, and Spain, taking considerable amounts. The rail exports were estimated at about 500,000 tons, while the United States government ordered 150,000 tons of rails for France. There were ordered 24,700 cars and 2000 locomotives, while the domestic orders for cars were about 50,000 and for locomotives 2150, there being also export orders for both cars and locomotives, in addition to various foreign countries.

The iron and steel industry in 1917 was marked by but few strikes, none of which seriously interfered with production. Machine shops, foundries, boiler works, and shipyards, however, suffered by strikes for higher wages and union recognition (see STRIKES), although the officers of the unions for the most part were most loyal in their support of the government and had agreed that no efforts to unionize open shops would be made during the war. The United States Steel Corporation made two 10 per cent advances in wages, and by the second of these, effective October 1, wages at steel plants were 161 per cent of the rate prevailing January 1, 1916. This was the fifth 10 per cent advance in the two years. The example of the United States Steel Corporation was followed by other purchasers. During the year Senator Pomerene introduced a bill providing for government control of iron and steel production, but this was a measure for future consideration rather than one directly affecting the industry during 1917.

An important feature of the iron and steel industry in 1917 was the demand for steel plates, especially for shipbuilding. In addition to American yards, Japan was an important customer and the government embargo threatened seriously the shipbuilding industry, as 400,000 tons of plates were still to be rolled for Japan after August. With the development of the idea of the fabricated ship (see SHIPBUILDING) the structural mills became very active, and their product also was required for various munition plants, aeroplane depots, and hangars. Rails, however, were not in active demand and were not included in the price fixing scheme for steel products.

**IRON ORE.** The iron ore, exclusive of that containing 5 per cent or more of manganese, mined in the United States in 1916, amounted to 75,167,672 gross tons, as compared with 55,526,490 gross tons mined in 1915, an increase of 19,641,182 gross tons, or 35 per cent. Beneficiated ore, instead of crude ore mined, is included, if the ore is treated in any way. The quantity of iron ore shipped from the mines in the United States in 1916 amounted to 77,870,553 gross tons, valued at \$181,902,277, as

compared with 55,493,100 gross tons, valued at \$101,288,984 in 1915. This represents an increase in quantity of 22,377,453 gross tons, or 40 per cent, and in value of \$80,613,293, or 80 per cent. The average price of ore per ton for the whole country in 1916 was \$2.34, as compared with \$1.83 in 1915. These quantities of ore, both mined and shipped, include the iron ore used for fluxing other metallic ores at smelters in the Western States, but the shipments do not include the iron ore sold for the manufacture of paint. The quantity of iron ore sold for the manufacture of paint in 1916 amounted to 16,968 gross tons, valued at \$45,256, or \$2.67 per ton. In Arkansas one producer shipped five tons of loadstone, averaging 70.5 per cent of metallic iron, which was sold at a high price to manufacturing druggists. The ore reported as sold for fluxing other than in the manufacture of pig iron amounted to 88,601 gross tons, valued at \$288,089, in 1916, as compared with 17,213 gross tons, valued at \$27,456, in 1915. The domestic iron ore actually sold for the manufacture of pig iron amounted in 1916 to 77,781,952 gross tons, valued at \$181,614,188, as compared with 55,475,887 gross tons, valued at \$101,261,528, in 1915.

Iron ore was mined in twenty-four States in 1916, as compared with twenty-three States in 1915, Idaho having dropped out and Iowa and West Virginia having been added as producers in 1916. Of these States, Nevada and Utah produced ores for fluxing only; part of the production of Colorado and New Mexico was for smelter flux and part for pig iron and ferroalloys. Michigan and Minnesota report some ore used in open-hearth steel furnaces to "reduce carbon," and North Carolina reports magnetite ore used in puddling furnaces at Knoxville, Tenn. The remaining States produced iron ore for blast-furnace use only, except small quantities for paint from Michigan, New York, and Wisconsin. The rank of the three States producing the largest quantity of iron ore—Minnesota, Michigan, Alabama—remained unchanged in 1916.

The Minnesota iron ranges produced more iron ore than all the rest of the States together, having furnished nearly 60 per cent of the total of the United States in 1916, as well as in 1915. The Lake Superior district, comprising all the mines in Minnesota and Michigan and those in northern Wisconsin, mined nearly 85 per cent of the total production, as compared with 45,944,254 gross tons, or 85 per cent, in 1915.

Hematite has always been predominant as an ore of iron, and in 1916 it constituted more than 94 per cent of the iron ore mined in the United States. Brown ore and magnetite are far below it in importance, having together furnished in 1916 less than 6 per cent of the total production of iron ore. The production of iron carbonate is insignificant in comparison with that of the other ores; in 1916 it constituted only about 0.002 per cent of the total.

In 1916 there were 405 iron ore mines active, compared with 340 in 1915, and 222 mines in 1916 produced more than 50,000 gross tons of iron ore each, compared with 184 mines in 1915. Of these 222 mines, twelve produced more than 1,000,000 tons of iron ore each in 1916, five more than in 1915. First place in 1916 was held by the Hull-Rust mine, at Hibbing, Minn.;

second place by the Red Mountain group, near Bessemer, Ala.; third place by the Fayal, at Eveleth, Minn.; and fourth by the Mahoning, at Hibbing, Minn. The production of these mines in 1916 was, respectively, 7,658,201 tons, 2,899,588 tons, 2,252,008 tons, and 2,215,788 tons, compared with 2,307,195 tons, 2,138,015 tons, 871,364 tons, and 2,311,940 tons, respectively, in 1915. The increase in production of the Fayal is noteworthy—more than 158 per cent. The Mahoning was the largest producer in 1915. Eight of the twelve mines producing more than 1,000,000 tons in 1916 are in Minnesota. The largest producer in Michigan in 1916 was the Norrie group, which reported having mined 1,566,566 gross tons of hematite, a considerable increase over the production in 1915, which was 897,484 tons.

The iron ore mined in the United States in 1917 amounted to about 75,324,200 tons. The shipments from the mines are estimated at 75,647,000 gross tons, valued at \$236,178,000, a decrease of about 3 per cent in quantity, but an increase of 30 per cent in value over 1916. About 85 per cent of the ore mined during the year came as usual from the Lake Superior district. From the mines in the South there were shipped about 8,000,000 tons, the bulk of which came from the Birmingham district in Alabama, and the remainder from the mines in Georgia, Tennessee, North Carolina, and Virginia. New Jersey, New York, and Pennsylvania increased their production slightly as compared with 1916. The following table shows the ore mined in 1916-17 in the chief iron-producing States.

District	Ore mined (gross tons)	
	1916 (Actual)	1917 (Estimated)
Lake Superior:		
Michigan .....	18,071,016	17,709,000
Minnesota .....	44,585,422	45,053,000
Wisconsin .....	1,304,518	1,202,000
Total .....	63,960,956	63,964,000
Southeastern States:		
Alabama .....	6,747,901	6,707,000
Georgia .....	256,940	318,000
North Carolina.....	520,140	616,000
Tennessee .....	440,492	471,000
Virginia .....	440,492	471,000
Total .....	7,965,482	8,112,000
Northeastern States:		
New Jersey .....	493,004	501,000
New York .....	1,342,507	1,365,000
Pennsylvania .....	559,431	574,000
Total .....	2,394,942	2,440,000
Western States:		
Colorado .....	717,660	666,000
New Mexico .....	717,660	666,000
Wyoming .....	717,660	666,000
Other States .....	128,632	142,000
Grand total .....	75,167,672	75,324,000

**Imports and Exports.** The quantity of iron ore imported into the United States in 1916 was 1,325,736 gross tons, valued at \$4,566,514, of \$3.44 a ton. This represents a decrease in quantity of 15,545 tons, or 1.2 per cent, and an increase in value of \$384,869 or 9.2 per cent, as compared with the imports during 1915, which were 1,341,281 gross tons, valued at \$4,181,645, or \$3.12 a ton. As to the source of the imports in 1916, Cuba produced approximately 54 per

cent of the ore, Sweden 16 per cent, Spain 12 per cent, Canada 10 per cent, Chile 5 per cent, and minor quantities came from French Africa and the United Kingdom. Supplies from Germany and Belgium were wholly interrupted in 1915 and 1916 by war, and almost wholly from the United Kingdom, and it is probable that the imports from Newfoundland, which diminished greatly in 1914 and ceased altogether in 1915 and 1916, have been diverted to England and in part used at home. Supplies from Canada, however, increased in volume in 1916, largely from the Canadian ranges in the Lake Superior region.

The quantity of iron ore exported from the United States in 1916 amounted to 1,183,952 gross tons, valued at \$3,702,496, or \$3.13 a ton, as compared with 707,641 gross tons, valued at \$2,181,629, or \$3.08 a ton, in 1915. This represents an increase in quantity of 476,311 tons, or 67 per cent, and in value of \$1,520,867, or 70 per cent. The greater part of the ore was exported to Canada, it is understood, for the manufacture of iron and steel at plants in Ontario. Nearly as much ore was exported to Canada in 1916 as was imported into the United States from all sources.

**PIG IRON.** The production in 1916 of all kinds of pig iron, including such ferroalloys as spiegel-eisen, ferromanganese, ferrosilicon, and ferrophosphorus, produced in blast furnaces, as well as some that were electrically produced, was 30,434,797 gross tons, compared with 29,916,213 tons produced in 1915, an increase of 518,584 tons or 32 per cent. The following table gives the total production in gross tons of pig iron in 1915 and 1916, by States, according to their rank each year:

PIG IRON, INCLUDING SOME FERROALLOYS,  
MANUFACTURED IN THE UNITED STATES

<sup>a</sup> Bureau of Statistics of the American Iron and Steel Institute.

<sup>b</sup> Ferrosilicon produced in electric furnace for first time in 1916.

According to reports by the manufacturers, the shipments of pig iron, exclusive of ferroalloys, in 1916, amounted to 39,126,324 gross tons, valued f. o. b. at the furnaces at \$663,478,118, as compared with 30,384,486 tons, valued at \$401,409,604 in 1915, an increase in quantity of 8,741,838 tons, or 29 per cent, and in value

of \$262,068,514, or 65 per cent. The average price per ton in 1916 was \$16.96, and in 1915 \$13.21, an increase in 1916 of \$3.75 a ton or 28 per cent. These values represent the approximate price per ton f. o. b. at the furnaces; this approximate price eliminates freight costs, selling commissions, and other items, which are included in the market prices of certain grades of pig iron as published in the trade journals.

The pig iron shipped includes the metal produced from foreign as well as from domestic ore. The quantity and value of pig iron derived from ore imported from Africa, Canada, Chile, Cuba, Nova Scotia, Spain, and Sweden, although it constitutes a very small percentage of the total production, is considerable, as the shipments derived from foreign ore in 1916 are calculated to amount to 764,850 gross tons, valued at \$15,996,756, as compared with 945,022 tons valued at \$13,011,950, in 1915. In the manufacture in 1916 of 727,550 gross tons of pig iron, 1,295,518 gross tons of foreign iron ore were reported to have been used, thus indicating an average pig-iron yield of 56.16 per cent, as compared with the quantity of imported ore. Domestic ore including 4,036,022 tons of cinder, scale, scrap, etc., and amounting to 74,805,256 gross tons, was reported in 1916 as used in the manufacture of 37,974,413 tons of pig iron, thus indicating a yield of 50.76 per cent in pig iron from the domestic materials.

**IRRIGATION.** The year 1917 witnessed little activity in new irrigation development anywhere in the world. This condition can be attributed principally to the war which involves most of the nations which engage in such work in normal times. The great demand for increased food production, however, caused some revival in such work. The progress of the year in different parts of the world is summarized below.

**UNITED STATES.** The great effort made by the Federal government and the several States to increase food production has stimulated to some extent the reclamation of agricultural lands by irrigation. Speaking generally, this resulted in a fuller utilization of the works already built rather than the construction of new works, although there was some new construction. There are large unused areas in both private and government irrigation projects, and Federal and State officials urged the use of these lands as an emergency measure, rather than new construction. In accordance with these suggestions the United States Reclamation Service gave specially liberal terms for water users in 1917 and farmed some of its own lands; and in his annual report the secretary of the Interior asks for a considerable appropriation to be used in 1918 in farming public lands, mostly under irrigation. Along the same line, the State of California enacted a law permitting mutual water

a 1915: Colorado, Connecticut, Indiana, Maryland, Massachusetts, Minnesota, Missouri, New Jersey, and West Virginia; 1916: California, Colorado, Connecticut, Indiana, Maryland, Massachusetts, Minnesota, Missouri, New Jersey, and West Virginia.

The number of blast furnaces in operation on December 31, 1916, were 333. Of these, 127 were in Pennsylvania. The imports of pig iron in 1915 amounted to 89,836 gross tons, compared with 135,349 in 1916, a decrease of 51 per cent. The largest amount came from the United Kingdom. There were exported in 1916 607,236 gross tons, an increase of 170 per cent over the exports of 1915. The largest quantity was sent to Italy.

**STEEL.** The production of steel in the United States in 1916 amounted to 11,059,039 tons of ingots and castings of open hearth steel. The production of steel by the electric process amounted to 168,918 gross tons. The manufactured iron and steel imports into the United States in 1916 amounted to 187,010 gross tons, valued at \$6,837,603. There were exported 5,493,898 gross tons, valued at \$338,589,607, compared with 3,308,097 gross tons, valued at \$137,347,782, in 1915.

See **CHEMISTRY, INDUSTRIAL.**

companies and irrigation districts to supply water to lands outside their projects without becoming public utilities, i. e., without obligating themselves to continue such service. There was much discussion of farming by public agencies, but aside from that mentioned little was done.

The legislatures of most of the western States met in 1917 and considerable legislation relating to irrigation was enacted. The United States Reclamation Service adopted the policy of urging the organization of irrigation districts to take over their projects and replace existing water users' associations, and to this end drafted amendments to State irrigation district laws providing for such action and secured their adoption in Arizona, California, Colorado, Idaho, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, and Washington. A law making Federal lands within the boundaries of irrigation districts organized under State laws subject to district

taxes was passed by Congress as a supplement to the State district laws. Other irrigation district legislation included an amendment to the California law giving the State water commission supervision over the expenditures of irrigation districts whose bonds had been approved by the State; an amendment to the Idaho law authorizing districts to sell State lands within districts for delinquent taxes; a new district law in Oregon that provided for field examinations of proposed irrigation districts by the State engineer, an examination of the general feasibility of the districts by a commission composed of the attorney-general, the State engineer, and the superintendent of banks, and the approval of district bonds by this commission up to half the value of the property covered; and a new district law in Utah that authorized the governor to propose the organization of districts upon the suggestion of the State engineer, and for the making of surveys for such districts by the State engineer.

Other important legislation included an amendment to the Texas law permitting the State board of water engineers to adjudicate water rights; a revision of the procedure for the adjudication of water rights by the State water commission of California; and the enactment of a new law providing for public control of irrigation in Washington. The enactment of this law by the State of Washington was the culmination of years of effort to this end. The law created the office of State hydraulic engineer, provided for the adjudication of existing rights to water, the acquisition of rights under public supervision, and the distribution of water by public officials. Utah in 1917 created an irrigation commission which was to draft irrigation laws for presentation to the legislature in 1919.

Rights to water from interstate streams received considerable attention from legislatures and courts. California enacted a law prohibiting the State water commission from granting rights for water to be used in another State unless the other State permits the diversion of water therein for use in California, and Colorado made it unlawful to divert water in that State for use in another State. A suit regarding the use of water from the North Platte River in Colorado and Wyoming, which had been pending for several years, was argued before the Supreme Court of the United States, but the court ordered a reargument.

The annual report of the United States Reclamation Service for the year ended June 30, 1917, showed total estimated receipts from the sale of public lands credited to the Reclamation Fund amounting to \$93,190,082.85. To this should be added a special appropriation of \$1,000,000 for the Rio Grande project and a \$20,000,000 bond loan fund, making a total fund of \$114,190,082.85. The gross revenue earned to June 30, 1917, was \$7,252,315.51, and the gross expenditures for construction were \$123,037,579.02. The total area included in the reclamation projects is 3,182,695 acres, to 1,797,811 acres of which the service was ready to supply water in 1917. The area covered by water right applications and rental agreements—that is, the area for which the land owners had entered into agreements of some kind to pay for water—was 1,375,939 acres, and the acreage to which water was supplied in 1917 was about 1,200,000

acres, an increase of about 300,000 acres over the acreage supplied in 1916. This was the largest increase shown in any single year since the organization of the service, and was due, to some extent, to the emergency calls for increased crop production. The figures given show that the service was prepared to supply water to about 600,000 acres more than was irrigated in 1917.

Operations under the Carey Act (Act of August 18, 1894, granting desert lands to the States on condition that the States provide for its reclamation) were small during the year 1917, as in several years previous. During the year ended June 30, 1917, the areas applied for under this law aggregated but 6,116.32 acres, and the area patented to settlers was 42,063.55 acres. The total area segregated to the States under this law from the date of its passage to June 30, 1917, was 3,711,614.56 acres, and the area patented was 803,518.85 acres.

Among the larger enterprises not under Federal laws were the Kings River project in California, which contemplated the storage of the flow of Kings River, the supplying of water to existing canals as well as to new ones, the development of electric power, and pumping from wells for irrigation as well as drainage, the whole area affected being about 1,000,000 acres; an all-American canal taking water from the Colorado River at the Laguna dam of the United States Reclamation Service and supplying water to about 150,000 acres adjoining the Imperial Irrigation District in California; and the Horse Heaven Irrigation District in Washington, which includes about 300,000 acres. A noteworthy development which does not involve a large area but marks the rise of a new industry, is the development of rice growing in the interior valleys of California, the area irrigated having reached about 80,000 acres in 1917. See DAMS; DRAINAGE.

**OTHER COUNTRIES.** Irrigation development in western Canada in 1917 consisted in the fuller utilization of works already built. No new projects of any magnitude had been begun. The unsettled conditions in Mexico prevented the carrying out of large schemes for irrigation development in that country. In Central and South America there was more activity. A dry season in Honduras caused consideration of irrigation and it was estimated that 700,000 acres could be brought under irrigation at a reasonable cost. The Colombian government provided for experiments in irrigation and for the putting down of artesian wells. The government of Peru authorized its president to arrange for the completion of irrigation works already begun and also for new projects. Chile was planning and executing several large projects that would provide for the reclamation of some 300,000 acres.

In the Eastern Hemisphere there was little expansion. The Egyptian and Indian governments were operating their works previously built but were making little or no extensions. An exception to this was the work on the Blue Nile above Khartum, where a large area of cotton soil was being reclaimed. It was estimated that from 300,000 to 500,000 acres could be reclaimed in this section without injury to the water supply of lower Egypt. The government of Siam was proceeding with its projects begun in 1916, and the States of Australia

were going on with their projects in a limited way. Everywhere, however, the world war was delaying or hindering entirely large reclamation works.

**ISOSTASY.** See GEOLOGY.

**ISTRIA.** A crownland and titular margravate of Austria. It consists chiefly of a peninsula extending from Trieste and Carniola into the Adriatic Sea. Its area is 1914 square miles, or somewhat less than that of Delaware. The population according to the census of December 31, 1910, was 403,566, as compared with 345,050 in 1900. In 1910 the number of Austrian subjects was 386,463; of these, Croatian was the vernacular of 168,184 (43.52 per cent); Italian, 147,417 (38.15 per cent); German, 12,735 (3.30 per cent). Of the population in 1910, Catholics numbered 400,170 (99.16 per cent); Orthodox, 1050; Evangelicals, 1493; Jews, 677. About 61 per cent of the inhabitants were dependent on agriculture. The capital is the seaport Capodistria; its population in 1910 was about 9000, that of the commune about 12,000. Istria has a unicarmel diet of 47 members and is represented in the Austrian Reichsrat by six members.

Pola, the great Austrian naval base, is situated near the extremity of the Istrian peninsula, 85 miles by rail southwest of Trieste and almost due east of Venice, 75 miles across the Adriatic. It had 58,562 inhabitants at the 1910 census, commune about 71,000. The following is taken from a bulletin of the National Geographic Society, issued in September, 1917:

"Pola's sole important activity before the war was connected with the repairing, provisioning, and harboring of the Austrian naval forces. The town is virtually without industrial establishments or manufactures. The practically land-locked harbor is divided, the upper or northern half being the commercial roadstead, and the lower half (below the chain bridge which connects Scoglio Olivi, or Olive Island, with the mainland) being the Porto Militare, with the extensive marine arsenal on the southeastern shore. The city itself clusters around a castle-crowned hill which was once the site of the Roman capitol. The castle is a memento of the days of Venetian prowess. Before the war Pola was annually visited by many American and English tourists, not on account of its strongly fortified harbor but because of the interesting and well-preserved monuments which have survived since the days of Roman occupation.

"The most impressive ruin in Pola is the vast amphitheatre, erected at the beginning of the Christian era in honor of the Emperors Septimius Severus and Caracalla. This is believed to be the only Roman amphitheatre whose outer walls have withstood the ravages of time and of man. The interior, however, is badly dismantled and the foundation walls at one end, centuries ago, were extensively quarried by the Venetians who desired the white Istrian limestone for the erection of their own palaces. More than 20,000 spectators used to watch the naval and gladiatorial combats in this arena. On the upper tier are still to be seen the stone sockets which supported the awnings used in sunny weather. The temple of Augustus, erected in 19 B. C. is another monument of antiquity which is remarkably well preserved.

"About the middle of the 12th century Pola became a Venetian city. In the destructive wars which resulted from the rivalry between Venice and Genoa to control the commerce of the world two centuries later this port across the Adriatic suffered often and grievously. It was completely destroyed in 1379, and for nearly four and a half centuries it lay dormant. It passed to Austria at the end of the Napoleonic wars, however, and its modern growth dates from 1848, when it was selected as an Austrian naval base."

**ITALIAN LITERATURE.** Among the names which have annually appeared in these YEAR BOOK reviews is that of Virgilio Brocchi, whose first volume, *Le aquile*, goes back to 1906 and the second, *La Gironda*, to 1909. Since 1911, Brocchi's activity has been more pronounced. We have had in rapid succession, *L'Isola sonante*, which won the prize in the Rovetta novelistic competition in 1911, two volumes of tales, *I sentieri della vita* and *La coda del diavolo*, and three novels, *Il labirinto*, *Le ombre del vespero*, and *Il fascino*. The year 1917 shows two new works of this prolific romancier: *La bottega degli scandali* and *Miti*. We may say that Brocchi's "specialty" is the psychology of the Italian priest, a field which he exploits with the mystic idealism of Fogazzaro in mind, on the one hand, and the radicalism of Zola, on the other. There was a vigorous conception behind the early *Isola sonante* (The Village of Church Bells): the characters of two priests set in contrast through their reactions, first, to a celibacy uncongenial to both their temperaments, and second, to the vicissitudes of the bitter industrial and social strife that presented itself in Italy before the great war in such peculiar combinations of interest and feeling. In this work, for all of its many noteworthy virtues, the author was clearly not fully conscious either of the exact artistic scope of his subject or of his own special gifts. His spirit was not wholly subjugated to the deep, rich sentimentality of Fogazzaro; nor did it possess a comprehensive vision of Zola's humanitarianism. Between these two motives, each full of artistic possibility, the author's mind flitted with a sort of bantering neutrality. There was never the ring of a moving conviction. This vagueness of outlook on life had its reflections also in the author's technique: everything appeared to him in the same proportion. He was equally interested in all his characters. There was, in consequence, a constant shifting of interest with a general incompleteness of finish. In short, we had here delineated an effort in the "grand style"—the portrayal of a complete character in an environment of some magnitude, the effort failing of full realization because the author had a much clearer intuition of the environment as a whole than he had of any specific character. *La bottega degli scandali* amounts almost to a reworking of this earlier theme, reduced to more modest but more exact and natural proportions. Here we have frankly the study of an environment, rural and clerical, but shot through with socialistic propaganda. On it the tiny characters project themselves in sharp and unpretentious outlines; abandoning the aspiration to the higher pinnacles of feeling, Brocchi works gracefully and incisively in this field of satiric humor. He seems distinctly to have found himself, and is

now in full control of a fertile imagination the productions of which were always worth reading.

Italy has in general made little use of the war-cries of democratic humanitarianism that have been raised in America and to a certain extent in England. The Italian war-spirit in Italy has been fed on the phraseology and on the memories of middle nineteenth century nationalism. One notes accordingly few attempts at forecast of the new civic consciousness which, it is felt more or less vaguely, the war will produce. We may cite in point *Il titano* of Dario Niccodemi. Here the dishonest profiteer is contrasted with a "Titan" of the old plutocratic morality. The former manipulator of millions gives his entire family to the war, and returns, himself wounded, to find ruin and disgrace in possession of the remnants of his household. He is now obsessed and exalted by the "deep, imperious, invincible, necessity of being better" in a world that is to be "more just, more generous, more merciful." Paying his legal debts and his debts of honor to the last penny, he exemplifies that conviction by surrendering his vast dreams of capitalistic reconstruction to take an obscure position as cashier in the ministry. Giacosa would have said as much thirty years ago. Niccodemi's plays grow yearly more numerous but not more deep. He is still working the Ibsenque formula through various combinations of the Latin marriage problem. Another manifestation of the maternal instinct is treated in *La nemica*. It is unimportant that the hero be a legitimized heir. The virtual step-mother hates him as the usurper of her own son's property and standing, and also out of a suppressed jealousy at his unquestionable superiority, morally and intellectually, over her own offspring. The boy's mystic affection for the woman he regards as his real mother is finally rewarded by her spiritual adoption of him, when war brings death to her own son. These two new plays bring Niccodemi's productions to seven: *L'agrette*, *Il rifugio*, *I. Pescicani*, *L'Ombra*, and *Scampolo* are the others. These works show Niccodemi as a "feminist" of the Braccio type. His heroines are super-women, who display abnormal volition in living up to the ideals of Latin morality. They never dream, nor does Niccodemi ever dream, of subjecting to criticism those ideals themselves. We have here a series of heroic automatons moving in a world, naïve, superficial, and corrupt. The author's technical brilliancy can hardly overcome this fundamental poverty of vision. Of the lot, *Il rifugio*, because the most complex, remains still the best.

Ada Negri, justly celebrated as the author of five volumes of exquisite verse (*Fatalità*, *Tempeste*, *Maternità*, *Dal profondo*, *Esilio*), now publishes a collection of tales, *Le solitarie*, which she describes as "fading perspectives of the lives of women, left alone to fight the battle of life, deserted in spite of family, in spite of love, solitary through faults of their own, of mankind, or of fortune." They are in fact complete biographies of humble types—one suspects even as in *Anima bianca* (The Spotless Soul) a not infrequent autobiographical touch. Distinctive in all of Ada Negri's work is the note of social protest which transforms to some extent the pathos prevalent in most contemporary Italian literature—precisely to what extent is an interesting and difficult question; for if

Ada Negri is rebellious against the cruelties of society, she is equally rebellious and equally helpless before the cruelties of Nature.

Of quite unusual excellence are the new tales of Francesco Pastonchi, *Le trasfigurazioni*, many of which (e. g., *Sono venuti*, *Le scarpe nuove*) are original in conception, rapid in movement, and of the most varied tones. The strongest effects spring from the happy unconsciousness of child-life thrown out upon the horror of the war background. Nothing meanwhile disturbs the serenity of Pastonchi's contemplative aestheticism. As he gave pictures of life before the war, so he gives now pictures of life during the war, mechanically beating the path of the traditional Italian ideology. "First of all," says his crutch-maker, "they are Christians and are resigned, and to live in this world, everybody, everybody must be resigned." Whereas a more self-conscious criticism of life appears in *Il domani*, *lunedì* of Luigi Pirandello, eighteen tales illustrating more or less organically the identity of reality and illusion: "Look at them, measure them, spy on them, it is useless. One never knows which of the two is mad, which one is in the clutch of a fancy, which possesses reality itself." We arrive through this pessimistic agnosticism at the aphorisms of Epictetus: life is what we think it is; sorrows and joys alike are such only as far as we choose so to regard them. The temper of these tales is, however, rather destructive than positive. There is, especially in *Il signore della Nave* and *All' uscita* (As They Leave the Tomb), something of the sarcastic manner of Leopardi's prose. It is to be remembered that Pirandello, born in 1867, is in his full maturity. These new things are perfect specimens of his best style, that has won him recognition as the Maupassant of Italy. *Il maleficio occulto* of Luciano Zuccoli is a revised edition of an immensely clever detective story published in 1903. Zuccoli's world is stiffly aristocratic. Its subtler conventions, preconceptions, prejudices, he portrays with a touch light but sure. His best figures are elegant men of the world whose psychology he likes to set off against the preoccupations and manners of less favored social classes. In this latter respect he has done nothing better than *Farfui*, though some of his novelettes contain very interesting portraits of adolescent girls. Of the "twenty-four brains" dissected by Giovanni Papini in *24 cervelli*, Walt Whitman is one: "I must confess," says Papini, "that I, a Tuscan and a Latin, first grasped the meaning of poetry, not in Virgil or Dante, much less in Petrarch or Tasso, but in the childish enumerations, the long, passionate invocations of the kindly scythesman who gathered the *Leaves of Grass*."

In the general field of publications, writings on political and social science show an increasing predominance. Commemorative writings also are numerous, noteworthy here those dedicated to Giacomo Venezian, Renato Serra, Scipio Slapater (critic of Ibsen and poet) and Riccardo Pitteri (of Trieste), all writers killed in action. In poetry the legends are growing around the martyrs executed by Austria: Nazario, Sauro, and Battisti, of course, but no less, Fabio Filzi, Francesco Rismondo, and Damiano Chiesa.

Other Works: Verse, Giuseppe Liparini, *Le foglie dell'alloro*; A. D. Sindonal, *Costellazioni*; Vito D. Palumbo, *Le Leuchesi*; Mario

Montesi, *Voci dell'anima*; Eugenio Alberti, *Rimpianto amaro*; Spartaco Muratti, *Per Riccardo Pitteri, per la mia casa, per Nazario Sauro*. Theatre: L. Pirandello, *Liola*; Angelo Ragghianti, *L'anno mille*.

**ITALIAN SOMALILAND.** An Italian colony and protectorate in eastern Africa, bordering the coast of the Indian Ocean from the (British) Somaliland Protectorate southward to the Juba River. Estimated area, 357,000 square kilometres (about 137,800 square miles). Estimated population, 300,000. In 1915-16 imports were valued at 6,828,463 lire, and exports at 3,429,965. For 1916-17 the estimated revenue was 7,454,000 (local, 1,300,000, state contribution, 4,629,000, extraordinary, 1,525,000); estimated expenditure, 7,360,800 lire (including 1,787,000 extraordinary). The dependency is administered by a governor, resident at Mogadiscio.

**ITALY.** A kingdom in the south of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about sixty-six minor islands. It is situated between lat. 36° 38' 30"—46° 40' 30" N. and long. 6° 30'—18° 30' E. The coast-line of the mainland is estimated at 1999 miles; of Sicily, Sardinia, and Elba at 1389 miles; of the minor islands at 557 miles; in all, 3945 miles; having several large bays and gulfs. The chief rivers are the Po, the Adige, the Tiber, and the Arno. The principal towns are Rome, the capital (570,960), Naples (697,917), Milan (663,059), Turin, Palermo, Genoa, Florence, Bologna, Venice, Catania, Leghorn, Ferrara, Padua; while there are over twenty other towns with more than 50,000 inhabitants.

**AREA, POPULATION, ETC.** According to the calculations of the Military Geographical Institute, the total area and the population as taken at the census of June 10, 1911, compared with the estimate of January 1, 1915, were: Area, 286,682 sq. km. (110,688 sq. mi.); pop., 1911, 34,671,337; 1915, 36,120,118. The details are given in the preceding YEAR BOOK.

The territory in the hands of the Germans at the end of the year included all northeastern Italy to the line of the Piave River. The official proclamation issued to the inhabitants of the conquered territory provided for obligatory labor on the part of all men, women, and children over fifteen, seven days a week, from 4 A. M. to 8 P. M.; laggards to be driven to work and after harvest to suffer bread-and-water imprisonment; children to be beaten to make them work when necessary; recalcitrant workmen to be flogged. Venice had been evacuated by the greater part of its population, and the inhabitants who, in January, 1915, numbered over 168,000, had been reduced to 20,000; its palaces and museums had been stripped of their works of art, and the bronze horses of St. Mark had again started on their travels.

**RELIGION AND EDUCATION.** The Roman Catholic is the nominal state religion, and the religion of the majority of the people; but the gov-

ernment has passed many acts so framed as to make the civil government supreme, and to secure complete freedom for all creeds. The officials of the church are appointed by the Pope, but the royal assent is necessary in the case either of a bishop or an archbishop. Elementary education is compulsory between the ages of six and nine (or six and twelve in some communes where facilities exist) in all parts of the country, but the law is not rigorously enforced. Religious instruction must be given to those children whose parents desire it. Secondary and higher instruction is also provided by the state, and there are twenty-one universities.

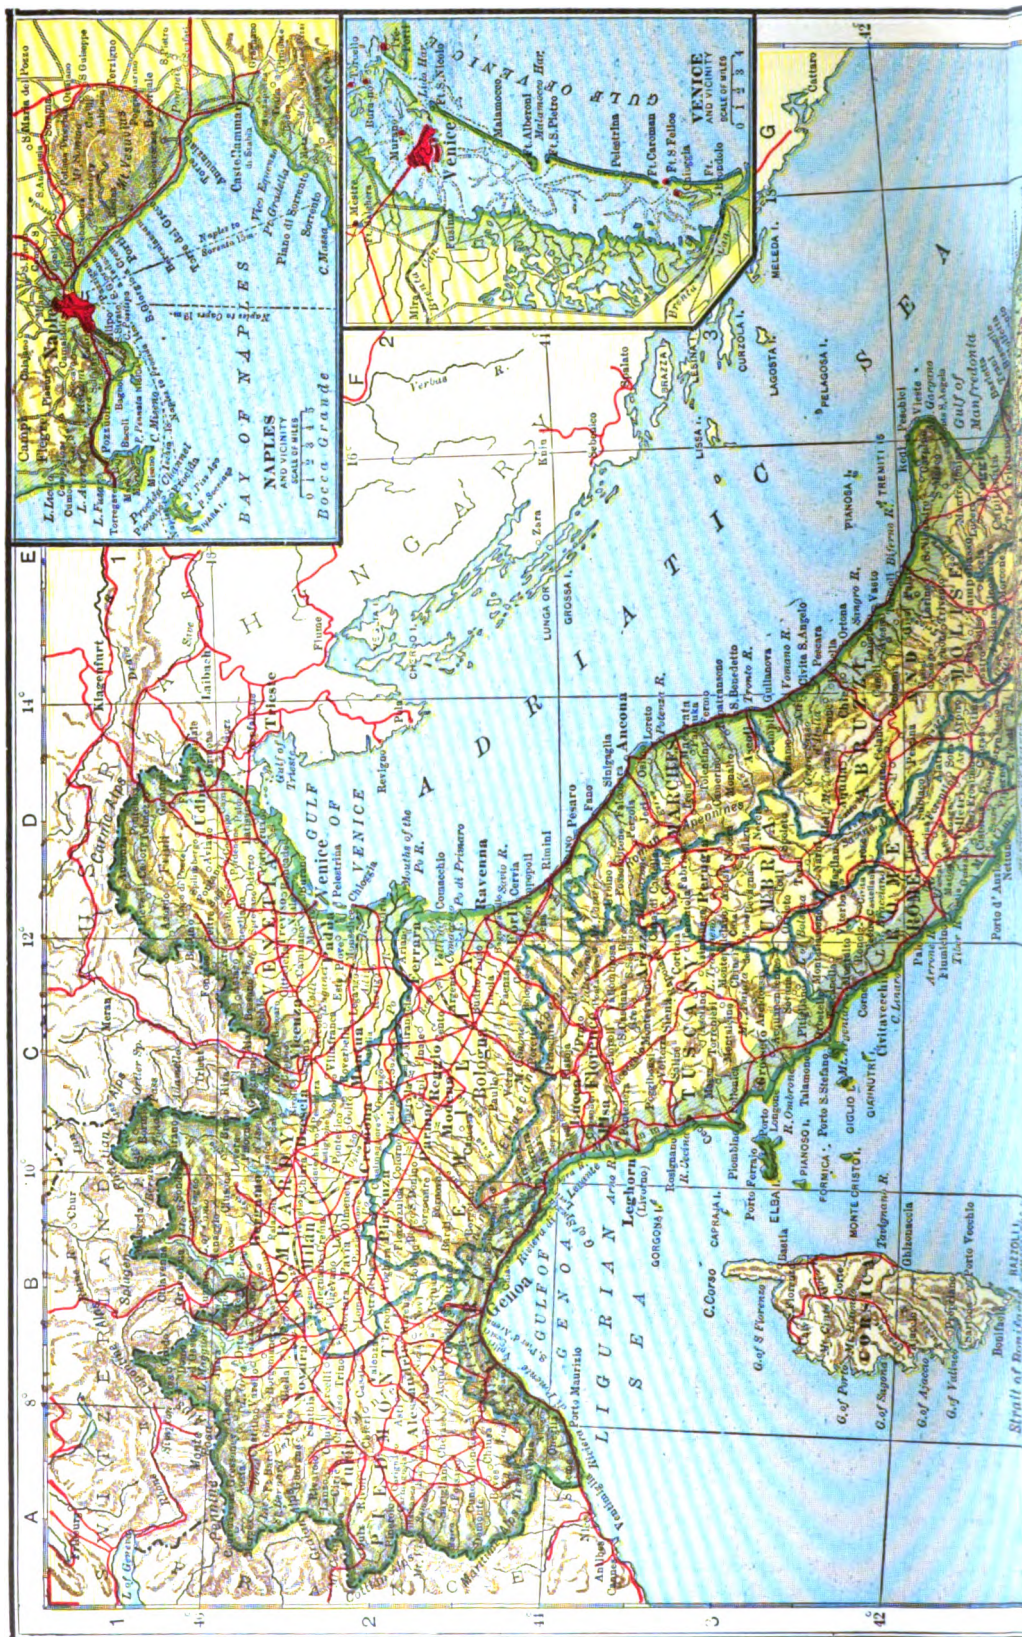

**ECONOMIC CONDITIONS.** In order to facilitate the operation of loans intended to encourage production of cereals, vegetables, and root crops, a decree of the lieutenant general of the kingdom, published in the *Gazzetta ufficiale* on June 30, 1917, enacts that loans of an aggregate maximum of twenty million lire may be granted to agricultural credit associations. The interest to be paid by these associations is fixed at the rate of three per cent. Decrees of the ministers of agriculture and of finance acting in concert will determine in each case the amount of the loans to be allotted to individual agricultural associations. Extracts from the report of the commercial representative of the National City Bank of Milan are pertinent:

"The attention of Italy is now turned to the United States for assistance in the vital question of coal supply. The coal situation here is very grave, despite drastic measures in eliminating all unnecessary fuel-consuming industries, reduction of train schedules, and the practical abolition of the open market for coal. Important industrial establishments are burning lignite, peat, and wood at prices which seem fabulous in comparison with those of a year ago.

"The Minister of Agriculture has published a decree tending to increase the production of cereals. Briefly, the following are the principal points: The minimum price of wheat is increased to 45 lire per 100 kilos (220 lbs.). Farmers may obligate themselves to cultivate wheat, or other cereals, vegetables, and potatoes, with the right to sell to the state all excess production over the average at a price not to exceed 10 per cent over the established minimum. The government will give facilities of credit, labor, and machinery to such farmers. On the other hand, the government has the right to oblige farmers to increase the amount of cultivated land at their disposal and to determine the kind of crop. Further concessions are made to tenant farmers regarding the right to postpone payment of rent in case of unfavorable crops. A factor which has retarded agricultural progress in Italy is the system of taxation upon production, which penalizes exceptional industry and intensive farming. However, these conditions are now appreciated through stress of necessity and past evils must be remedied. The most hopeful feature in Italian agricultural life is the gradual welding of the different agrarian associations, centralization of direction, distribution of resources, and a healthy spirit of co-operation for the common good. There is a scarcity of agricultural machinery and implements and even more so of labor, but the government is now practicing a system of sending militarized farm hands and prisoners of war to perform the heavy work. Grain stocks are to

be collected and distributed through the provincial grain associations in accordance with general rules laid down by the government, but subject to modifications ordered by the prefects of the different provinces having regard to the varied needs of the districts. The existing stocks must be declared by holders, whether producers, merchants, or associations; and certain premiums are provided for prompt and accurate returns, and penalties for delay or sequestration. Reports from Rome state that the present stocks are amply sufficient to supply the country until the next harvest."

A table of prices (yearly average) for staple products in lire per quintal is of interest in view of present high prices the world over:

	1912	1913	1914	1915	1916
Soft wheat . . . . .	30.71	28.68	28.75	40.43	38.49
Hard wheat . . . . .	34.11	32.48	33.50	44.67	42.09
Rye . . . . .			21.67	33.63	35.31
Barley . . . . .			21.10	26.84	28.55
Oats . . . . .	25.43	22.48	21.92	30.07	30.35
Corn . . . . .	21.92	18.16	18.10	29.47	28.80
Rice . . . . .	38.01	41.28	36.56	39.50	42.53
Rough rice . . . . .	24.70	24.62	22.68	24.10	26.31
Beans (Fave) . . . . .			24.53	29.24	30.97
Haricots					
(Fagioli) . . . . .			31.17	41.54	53.03
Potatoes . . . . .	10.63	10.64	10.21	13.84	14.96
Hemp . . . . .			96.04	127.25	296.13
Hay . . . . .	8.95	8.46	9.48	9.38	12.20
Straw . . . . .			4.86	5.54	6.41
Ordinary wine* . . . . .	36.23	30.08	23.12	35.56	78.11
Olive oil . . . . .	148.20	146.90	151.61	167.50	204.28

\* Per hectolitre.

In the dairy industry the shortage of labor and the prohibition and restriction of exports have had their effect; but the former has been substituted by women and the latter has been compensated by increased home consumption. The total exports of dairy products in 1915 was 91,044,540 lire, and in 1916, 49,459,080 lire, the decrease being practically all due to lessened cheese exports. The exports of Parmesan cheese dropped from twenty millions to eight and five-tenths millions, Emmenthal from ten millions to almost nothing, while the Roman sheep cheese (pecorino) increased from seventeen to twenty millions; butter decreased from ten to half a million and condensed milk from six to two and five-tenths millions. The imports of dairy produce are unimportant, being about four millions in 1915 and one million in 1916. As the production in the two years mentioned was about equal, the quantities formerly devoted to the export trade were consumed at home, mostly by the army; thus, although this industry did not actually bring foreign credits into the country to pay for exports, the consumption of the products at home saved the necessity for importation of other foodstuffs.

The shortage of fodder was naturally reflected in the live stock industry, the principal effect being that insufficiently nourished cattle were brought to market in excessive quantities. This was a very serious situation as the effects would be felt later in a decrease in quantity of the animal wealth of the country.

Ministerial decrees were published in the *Gazzetta ufficiale* at Rome, fixing maximum prices for gas coke, and modifying maximum prices previously established for cereals of Italian production. From December 1, 1917, to and including January 31, 1918, the following maximum prices per ton were fixed for sales at the

works of gas coke, cash or on delivery. In large lumps, 280 lire; screened powder, 293.50 lire; nut coke, 152 lire; in bulk, not screened, 255 lire. The communes were to establish for the same period of time for their territory and for each quality of coke mentioned an extra price for the sale and consignment of goods outside the producing works. Where, without just motive, a producer or dealer, or any other seller, refused to sell gas coke at the established maximum prices, increased when such might be the case by the communal extra prices, the prefect, or in case of urgency the mayor, might sequester and have sold the goods for account and at expense of the owner, for whom should be reserved the quantity necessary for his own use.

Maximum prices per quintal of 220.46 pounds for cereals of Italian production of the harvest of 1918 were established as follows: Soft and semi-hard wheat, 60 lire; hard wheat, 70 lire; corn, 45 lire; oats, 45 lire; barley, 50 lire; rye, 50 lire.

An effort was being made to obtain imports of coal from the United States. Italy's coal supply was so short that during the summer more than a thousand square miles of her forests were said to have been cut down for use as firewood and in the preparation of charcoal. Over half a million tons of lignite were mined, both wood and lignite being used at present industrially and also on slow train and switch engines. As the government controlled the distribution of coal, no commercial prices were quoted, though the average wholesale price of cheap grades was from \$15 to \$20 a ton. The needs of the railroads, ammunition factories, and war industries were placed at 800,000 tons. Practically no coal was required for domestic purposes, since heating had been suppressed except in public buildings. Cooking was done with gas or charcoal, the latter a native product; but the prices of charcoal averaged \$50 a ton retail, due partly to scarcity and partly to speculation. Signor Giretti, the member for Torre Pellice, at a meeting of all classes and religious beliefs—the constituency has a large Waldensian population—dwelt on the economic situation. "We," said Signor Giretti, insisting upon the necessity for Italy's close union with her Allies, "notwithstanding the war, are existing and working exclusively owing to unlimited supplies from Great Britain and the United States. We need to double our imports of wheat; we drew seven million tons of coal from England in 1916, and 200,000 Italian cotton operatives depend on the imports of raw cotton which come almost exclusively from the United States, British India, and Egypt."

The labor question immediately after the war will be acute. The prices of commodities will not decrease to normal for some time, and this factor will have a tendency to force all available members of laboring families into the labor market.

Signor Silvio Crespi, an eminent business man of northern Italy, was appointed under secretary of state and food commissioner. It was expected that the new commissioner would be attached to the Ministry of Industry, Commerce, and Labor.

All soldiers who return from the front after the war will be entitled to the payment of \$200, provided this sum is invested in the purchase

of land, agricultural implements, or cattle, or used as capital to start or resume business. Co-operation in connection with agricultural work will also be encouraged by affording the means for the purchase of land on the part of soldiers who are agricultural laborers or farm hands. The new scheme of free life insurance for all soldiers in Italy will be extended to officers. As pensions are inadequate and their payment is inevitably delayed, both these drawbacks are in part remedied by the present scheme, as payment of the life insurance policy for \$100 is effected as soon as the death of the policy holder is officially announced.

**CROP RETURNS.** The changeable weather during May was favorable for crops. The rains were specially propitious for wheat in the southern provinces. The area under rice in 1917 was 145,000 hectares, as compared with 142,700 in 1916 and 145,300 for the five years' average, 1911 to 1915, or respectively 101.8 per cent and 99.8 per cent of the two last-mentioned areas. The condition of the crop on June 1, 1917, was good, as it was also at the same time the year before.

In the table below are given the area in hectares sown to principal crops and the yield in metric quintals:

	Hectares		Quintals	
	1916	1917	1916	1917
Wheat	4,272,000	4,726,300	38,102,000	48,044,000
Rye	113,000	115,500	1,133,000	1,357,000
Barley	190,000	241,000	1,616,000	2,201,000
Oats	447,900	446,300	4,919,000	3,785,000
Corn	1,568,000	1,585,500	22,000,000	20,714,000
Rice	140,200	142,700	5,122,000	5,203,000
Flax	18,000	18,000	75,000	92,000
Potatoes	320,000	295,100	15,000,000	14,772,000
Beets	50,000	49,800	.....	13,488,000
Vines†	4,350,000	4,349,000	72,882,000	38,960,000
Tobacco	7,000	7,000	.....	90,000

\* Production of seed; fibre production was 25,000 qrs. in 1917.

† Production in hectolitres of wine for 1916, in quintals of grapes for 1917.

Allowing 200,000 tons of grapes as the amount consumed as fruit, and calculating 180 gallons of wine per ton for the remainder, the wine production of Italy for 1917 should amount to practically 1,273,295,250 gallons, as compared with 1,117,764,000 gallons, the average quantity of wine obtained during the years 1909-16.

The following table shows the production of grapes in the different districts of Italy during 1917, compared with the average annual yield for the years 1909 to 1916:

	1917	1909-16
Piedmont	917,000	853,500
Liguria	82,300	104,700
Lombardy	366,700	318,200
Venetia	533,500	481,600
Emilia	859,400	811,600
Tuscany	755,800	535,200
The Marches	399,200	302,800
Umbria	219,500	154,300
Rome	506,500	314,400
Abruzzi e Molise	278,600	247,200
Campania	892,100	691,900
Apulia	510,000	651,000
Basilicata	59,100	60,700
Calabria	100,500	119,900
Sicily	724,400	666,600
Sardinia	72,900	96,200
Total	7,288,200	6,400,800

**COMMERCE.** Imports for consumption and exports of domestic produce—merchandise and coin and bullion—are given below for three years (values in lire). Figures for 1915 and 1916 are derived from an unofficial source and are subject to revision.

	1915	1915	1916
Imps. mdse.	3,637,771,000	4,947,682,253	5,507,424,700
Imps. C. & B.*	21,014,000	17,517,350	.....
Total	3,658,785,000	4,965,199,603	5,507,424,700
Exps. mdse.	2,503,914,000	2,556,234,629	2,313,334,300
Exps. C. & B.*	80,287,000	3,286,515	.....
Total	2,584,201,000	2,559,521,144	2,313,334,300

\* Includes all precious metals.

The trade, exclusive of coin and bullion, for the first nine months of 1917 had a value of 7,774,422,703 lire, compared with 8,794,220,161 lire for the corresponding period of 1916, and 5,246,050,751 lire in the same period of 1915. These totals were made up in 1917 of imports 6,455,794,947, exports 2,338,425,214; 1915, 3,280,371,325 and 1,965,679,426. (The normal value of the lire is 19.3 cents, but it is now fluctuating.) The figures for 1917 are provisional.

In thousands of lire are given in the table below some details of the special trade for the year 1915:

Imports	1000 lire	Exports	1000 lire
Cereals	514,721	Raw silk	335,637
Coal & coke	289,005	Cotton mfrs.	191,066
Raw cotton	492,201	Silk mfrs.	155,163
Machinery	61,268	Fruits	85,379
Timber	24,752	Wines	42,013
Raw silk	72,459	Cheese	66,385
Wool & Mfrs.	208,470	Hemp (raw)	29,430
Coffee	57,939	Hides	15,967
Instruments	48,073	Sulphur	31,774
Hides	172,749	Pulp of wheat	24,494
Iron mfrs.	56,132	Yarn, etc.	94,317
Silk mfrs.	17,814	Automobiles	27,551
Fish	51,504	Fresh vegetables	11,318
Tobacco	29,626	Hats	19,045
Oil seed	38,277	Rubber mfrs.	62,518
Copper, etc.	84,755	Tomato conserve	27,001
Rubber mfrs.	55,912	Marble, etc.	18,832
Petroleum, etc.	35,950	Olive oil	52,934

The more important countries of origin and destination follow, with values in thousands of lire:

<i>Imports</i>		<i>Country</i>	<i>Exports</i>	
<i>1915</i>	<i>1916</i>		<i>1915</i>	<i>1916</i>
849,404	1,078,919	U. K.	391,064	374,001
1,749,204	2,202,400	U. S.	283,359	235,335
240,107	458,415	France	437,710	543,567
.....	.....	Russia	184,124	.....

\* With Ceylon.

**SHIPPING.** Italian shipping interests have hitherto been controlled to a large extent by foreign capital, which was detrimental to their

full development, Italian mercantile tonnage being the lowest of any large nation, in proportion to population and foreign trade, with the exception of the United States. This problem will be one of the first to confront Italy after the war. Her shipping is at present suffering, in common with that of all other nations, by the heavy submarine losses. The national metal industries are strained to their limit by the demands for war supplies and the difficulty of obtaining raw material, and this condition reacts seriously upon the shipbuilding industry. Purchase of vessels is practically impossible with present prohibitive prices. Yet both construction and purchase will be imperative, and it is probable that the government will grant subsidies.

The merchant marine was reported January 1, 1915, to include 9 steamers over 5000 tons, aggregating 47,016 tons; 54 (3001-5000 tons), aggregating 194,827; 133 (2001-3000), 315,359; 171 (1001-2000), 252,988; 120 (501-1000), 84,122; 126 (101-500), 33,052; 336 (1-100), 5792—a total of 949 steamers aggregating 933,156 tons. Sailing vessels over 2000 tons, 4, aggregating 8545 tons; 91 (1001-2000 tons), aggregating 126,274 tons; 64 (501-1000), 47,084; 367 (101-500), 71,868; 4247 (1-100), 95,188—a total of 4773 sailing vessels aggregating 348,959 tons. Total steam and sailing, 5722, aggregating 1,282,115 tons.

The destruction of merchant vessels from the beginning of the war to the end of February, 1917, resulted in the loss of 121, aggregating 225,114 gross tons.

**RAILWAYS.** Italy during the year as regards its railways suffered from an extraordinary fuel shortage. Eight hundred thousand tons of coal per annum are required for railroads, munitions, factories, and war industries, and more than 500,000 tons of lignite in addition was mined for use industrially. Wood and lignite were used on slow trains and switch locomotives, but these fuels could not be employed with the passenger traffic, which during 1917 was particularly heavy on account of the movement of troops. On the Italian State Railways, commencing with November 25, it was decided to cancel 173 trains.

**FINANCE.** On "war profits" of traders and manufacturers, exceeding 8 per cent and up to 10 per cent of invested capital, Italy levied a tax of 20 per cent, the rate being graduated upward, until on profits exceeding 20 per cent a levy of 60 per cent was made. "Indirect war profits" ranged from 10 to 40 per cent on sums in excess of ordinary income.

A decree published January 20, 1917, authorized the issue of a fourth national 5 per cent loan, free of taxation present and future, and unconvertible until the end of 1931. The issue price would be 90, and subscriptions would be received from February 5 to February 25. Payments might also be made in gold and government securities of foreign countries. Italians resident abroad might purchase the script at the issue price up to February 25 in Europe and Mediterranean countries, and up to April 30 in other foreign countries. Official announcement was made at Rome, February 26, that the subscriptions thus far received for the new war loan amounted to 2,200,000,000 lire, about \$440,000,000. Of this 1,470,000,000 lire was new money.

Several Italian banks, acting in concert and headed by the Bank of Italy, had loaned \$50,000,000 to the Russian government, according to a Milan dispatch to *Le Temps*, Paris, January 22. The proceeds of the loan were to be applied to making payments for war supplies purchased in Italy, principally aviation materials and chemicals.

The London *Times* stated, March 12, that arrangements had been made to open a credit in Great Britain for Italy on a basis similar to that adopted for Russian credits. Three of the principal clearing banks and a number of Scottish banks had arranged to accept three months' bills. These acceptances, which will be renewable as they fall due, will be secured by the deposit of Italian treasury bills.

In coöperation with the Bank of Naples, the foreign exchange department of the Equitable Trust Co. was receiving subscriptions in the United States to the consolidated 5 per cent tax-free perpetual internal Italian government loan offered in Italy on February 5 at 90. The loan was dated January 1, 1917, and the interest coupons were payable January and July. There was no limit to the amount of the issue and it was not convertible before 1931. Subscriptions were being taken at the trust company in lire at the issue price of 90, based on the day's rates of exchange. At this price and at the current New York rate of Italian exchange, the bonds were selling on the basis of about 11½ cents to lira, against a normal rate of 19.3 cents. Principal and interest of the bonds were payable in Italian currency, so that the price of the bonds might be expected to fluctuate on this market with the fluctuations in the rate of Italian exchange. The proceeds from the sale of the bonds were to be deposited in New York and used to make payment on account of purchases by the Italian government.

To quote from Homer Edmiston's remarks on the situation in 1917: "In spite of the enormous sums absorbed by the war loans, the banks have an abundance of cash on hand, largely on account of the lack of commercial paper for discount, and this condition is due in turn to the demand, begun of course by foreign houses, for payments in advance or against documents. There is, in consequence, an active dealing in the short-term treasury notes, which the banks are ready to discount freely for their customers.

"The only serious difficulty that Italian trade now feels, apart from the dislocation of commerce and industry that are inseparable from war, is due to the very unfavorable rates for foreign exchange, and to the ruinous cost of marine transportation. Freight from New York has been quoted for this month at four dollars per hundredweight, and on the day on which I write (February 14) dollar exchange has reached the unprecedented height of 7.305."

Revenue and expenditure are given in lire in the table below for three financial years (the figures for 1915-16 are subject to revision):

	1913-14	1914-15	1915-16
Revenue ..	3,160,230,044	2,843,544,073	3,007,027,827
Expend. ..	3,129,228,156	2,863,213,485	2,960,545,028

The budget for 1916-17 is detailed below:

Revenue	1000 lire	Expenditure	1000 lire
Real property ..	14,411	Treasury .....	944,403
Railways .....	12,760	Finance .....	347,321
Land tax .....	90,490	Justice .....	57,846
Income tax .....	376,000	Foreign affairs ..	14,408
House tax .....	184,000	Instruction .....	195,363
Succession duties .....	60,000	Interior .....	111,049
Registration ..	105,400	Public works .....	64,881
Stamps .....	125,765	Posts & Tels. ....	139,695
Railway traffic ..	49,775	War .....	347,862
Excise .....	272,080	Marine .....	259,733
Customs .....	334,000	Agriculture, etc. ....	24,156
Octroils .....	51,340	Colonies .....	58,842
Tobacco .....	420,030		
Salt .....	110,000	Total	
Lotteries .....	100,000	Ordinary ..	2,563,619
Quinine .....	2,700		
Posts .....	145,500	Treasury .....	457,793
Tels. & tels. ....	58,300	Finance .....	3,035
Repayments .....	108,283	Justice .....	106
Virements .....	113,607	Foreign affairs .....	2
Total		Interior .....	10,095
Ordinary ..	2,980,822	Instruction .....	15,708
Various receipts ....	10,397	Public works .....	124,723
Railway construction ..	30,000	Post & Tels. ....	14,069
Movement of capital .....	4,114	War .....	51,151
Compensations, etc. ..	34,298	Marine .....	9,622
Loans .....	480,961	Agriculture, etc. ....	7,520
Total		Colonies .....	77,502
Extraord. ..	568,502	Total	
Grand Total 3,549,325		Extraord. ..	771,325
		Grand Total 3,334,943	

Capital of the debt, July 1, 1915, 15,927,718, 517 lire; interest, 572,101,926.

GOVERNMENT. Italy is governed by Victor Emmanuel III, the third constitutional king. The first was Victor Emmanuel II, king of Sardinia, of the house of Savoy-Carignano, who was declared king of Italy March 17, 1861, by the first Italian parliament, which assembled in February, 1861, though it was not until 1870 that the province of Rome was occupied by the Italian army and annexed to the kingdom. The second was King Humbert I, who on July 29, 1900, was assassinated at Monza by the anarchist, Bresci.

Victor Emmanuel III was born November 11, 1869, and in October, 1896, was married to Princess Hélène of Montenegro. The heir to the throne is Humbert (Umberto Nicola Tommaso Giovanni Maria) Prince of Piedmont, born September 15, 1904. Other children are Yolanda Margherita, born June 1, 1901; Mafalda, born November 19, 1902, and Giovanna, born November 13, 1907.

The Italian cabinet at the end of the year was constituted as follows: President of Ministers and Minister of the Interior, Vittorio Emanuele Orlando; Minister of Foreign Affairs, Baron Sidney Sonnino; of Colonies, Gaspare Colosimo; Justice and Worship, Ettore Sacchi; Finance, Filippo Meda; Treasury, Prof. Francesco Nitti; War, Lieutenant-General Vittorio Alfieri; Navy, Vice-Admiral Alberto del Buono; Arms and Munitions, Lieutenant-General Alfredo Dall'Olio; Civil Aid and War Pensions, Leonida Bissolati Bergamaschi; Public Instruction, Agostino Berenini; Public Works, Luigi Dari; Agriculture, Giambattista Miliani; Industry, Commerce, and Labor, Augusto Ciufo; Posts and Telegraphs, Luigi Fera; Transportation, Riccardo Bianchi. See FINANCIAL REVIEW; and ARCHEOLOGY.

THE BOSELLI MINISTRY. The coalition cabinet which had been formed in June, 1916, under Signor Boselli, began with some vigorous measures and the strong support of parliament. The Socialists, having attempted to force a discussion of all questions of food supply and foreign and military policy, the prime minister insisted on its being deferred six months. It was made a point of confidence and the government won by 237 to 31. The Chamber again voted confidence by nearly as large a majority on March 18. The opposition gained ground, however. It came chiefly from the extreme Socialists and pacifists in parliament and from the discontented labor classes outside. The opposition attacked the ministry both on pacifist grounds and on behalf of the labor classes. In June internal disagreements caused a cabinet crisis. Three of the members objected to the choice of persons who took part in the Italian mission to the United States and they protested vigorously against the course of the foreign minister, Sonnino, in proclaiming Albania a protectorate without having secured the formal approval of the whole cabinet. These members, however, had never been in sympathy with their colleagues; one being a Republican and the other two Reformed Socialists. When the cabinet was reconstructed they were dropped out. The changes as announced on June 17 were as follows: General G. Giardino, Minister of War; Rear-Admiral A. Triangi, Minister of Marine; General Dall'Olio, Minister of Munitions; Signor Arlotta, Minister without portfolio, and Signor Bianchi, Minister of Marine Transport.

On June 30 the Chamber, after ten days' secret session, opened its public sessions with the declaration that it had come to an understanding with the government. On July 10 the leaders of the Socialist Reformist party, in a meeting at Rome, formally separated themselves from the parliamentary group of the party. The budget was explained to the Chamber on July 11. The censorship which occasioned much criticism was the subject of much discussion between a committee of six journalists and the prime minister, Boselli, and the minister of the interior, Orlando, in a conference on July 16.

ITALY'S PART IN THE WAR. On the occasion of the Italian mission to the United States (see UNITED STATES AND THE WAR) there was much discussion of Italy's part in the war from the beginning. It was pointed out that Germany did not insist that Italy should enter the war on her side. It would have been enough for Germany if Italy had kept the French government in uncertainty, since if that had lasted even a few days France would have been obliged to defend her Alpine frontier and thus weaken the forces with which she had to meet the German invasion. The promptness of the Italian government saved France from this catastrophe. The Marquis de San Giuliano, on July 30, 1914, informed the government at Paris that Italy would not side with the Central Powers. Then on August 2, after a cabinet council, which decided upon Italian neutrality, the news was immediately telegraphed to Paris, and the Italian representative repeated it to M. Viviani that same night at one o'clock. This release of the troops on the Alpine frontier enabled

the French to reinforce the army opposing the Germans and may have been a decisive factor in determining the issue of the Battle of the Marne.

**THE GOVERNMENT'S FOREIGN POLICY.** The Italian Chamber resumed its sessions early in July. The policy of the government was outlined by the prime minister, Signor Boselli, in an address of which the following points may be noted: After paying a tribute to the Italian troops and congratulating the country on the recent military successes he mentioned certain modifications in the ministry and declared that both the war and navy departments were intensifying their efforts and that the latter was making special endeavors to meet the submarine danger. He was followed by the minister of foreign affairs, Baron Sonnino, who discussed the questions of the Russian revolution and of Rumania, Poland, and Albania. As to Russia, he declared that the only safe course for her consisted in complete accord with the Allies and in firm prosecution of the war. Rumania he believed was preparing to avenge herself for the defeat she had sustained. The chief terms of peace to be insisted upon were the restoration of the unfortunate nations whose territory had been occupied and devastated such as Belgium, Serbia, and Montenegro. Italy, he said, was in complete agreement with her Allies in regarding the unification of an independent Poland as one of the objects of the war. As to Albania, he said that the recent proclamation of the Italian minister in Albania showed anew the special interest on the part of Italy in the fate of that country. The destiny of Albania was of vital importance to Italy in its relation to the whole question of the control of the Adriatic. Italy has recommended the independence of Albania in conformity with the spirit of the Allies as illustrated by the new Russian liberalism and by the words of the United States government. Toward Albania Italy has no other aim than the prevention of interference on the part of other powers. Italy guarantees Albania complete right of disposing of her own internal political life. After the war it will rest with the Powers assembled to determine the treaty of peace to fix the exact frontiers of the Albanian state. After the conclusion of peace, the Albanians themselves will decide freely upon their internal, political, administrative, economic, and civil administration.

**THE FALL OF THE BOSELLI MINISTRY.** After the great Italian defeat there seemed to be an endeavor on the part of certain political groups to find a scapegoat. They attacked with special severity Gen. Cadorna and demanded his dismissal. The Socialists and others insisted on the severest punishment of those who by their faults and deficiencies had made it possible for the enemies to invade the country. The foreign minister, Baron Sonnino, was also singled out for attack. The attacks on the government led to its downfall on October 25, and a new ministry, under Signor Orlando, succeeded on October 31 (for personnel see above under *Government*). During a debate in October the Reformist Socialist Minister, Signor Bissolati, greatly angered the official Socialists by saying, when the government was criticized for its measures in putting down the riots in Turin, that if he had to defend the army from stabs in the back he himself would fire upon the So-

cialists. Later in the discussion Signor Orlando in answer to some sharp words from the extreme Left declared that he, too, would take the course that Signor Bissolati had mentioned.

At the accession of the new Orlando Ministry the Prime Minister sent dispatches to the French and British prime ministers and to President Wilson to the effect that Italy was still firm in her faith in her Allies and would carry the war through with them to victory, in spite of the severe trial that she was now undergoing from the German invasion. See **WAR OF THE NATIONS**; and **PROSTITUTION**.

**IVORY COAST.** One of the colonies composing the government-general of French West Africa. It lies between Liberia and the British colony of the Gold Coast. The capital is Bingerville, with 78 Europeans and 780 native inhabitants. Other centres are: Grand-Bassam, 164 Europeans and 2832 native inhabitants; Abidjan, 110 and 613; Lahou, 78, and 3050; Tiassalé, 17 and 1548; Aboisso, 38 and 1241; Assinie, 38 and 1135. The principal products for export are mahogany and other woods, palm kernels and oil, rubber, manioc, and ground nuts. See **FRENCH WEST AFRICA**.

**JACKSONVILLE.** See **MUNICIPAL GOVERNMENT**.

**JAEGER, GUSTAV.** A German zoölogist and hygienist, died in Stuttgart, May 16, 1917. He was born in 1832 at Bürg in Württemberg and was educated at Tübingen and as a physician at Vienna, where he became docent of zoölogy in 1858. He was also director of the Vienna zoo till 1866. Jaeger continued as a teacher in various places up to 1884, when he settled in Stuttgart as a physician. By this time he had become known as a disciple of Darwin through such writings as *Die Darwinsche Theorie und ihre Stellung zu Moral und Religion* and *In Sachen Darwins*, and as a writer on general zoölogical subjects. To him is credited an early promulgation of a theory to explain heredity similar to the germplasm theory later developed by Weismann. But Jaeger is best known as the advocate of a new doctrine regarding clothing, discussed in *Die Normalkleidung als Gesundheitsschutz* (1880), a book later called *Mein System*. He disapproved all fabrics containing vegetable fibre and advised use of all-wool garments, especially as underclothing. In 1887 appeared *Die Uniform im Licht der Gesundheitslehre*. In later years Jaeger was also known, and generously ridiculed, for advancing a theory of "affinities"—namely, that odors emanating from two souls were responsible for the attraction of lovers to each other.

**JAMAICA.** The largest of the British West Indies; a crown colony, with dependencies as follows: Turks and Caicos Islands, Cayman Islands, Morant Cays, and Pedro Cays. Area of Jamaica, 4207 square miles. Population estimated March 31, 1916, 894,735. Kingston (57,379 inhabitants) is the capital and has a fine harbor. Available for cultivation, 2,612,480 acres; returned as under crops in 1915-16, 987,679 acres; tilled lands, 278,262 acres; guinea grass, 172,122; commons, 535,295. Area under sugar cane, 33,830 acres; under coffee, 18,383, under bananas, 89,477. Imports (1915), £2,327,458; exports, £2,228,664. Railway, 197 miles. Revenue (1915-16), £1,132,049; expenditure, £1,105,942.

**JAMESON.** Sir LEANDER STARR. A British

physician, soldier, and administrator, popularly known as "Dr. Jim," and leader of the famous Jameson raid on the Transvaal in 1895, died November 26, 1917, in London, England. A son of R. W. Jameson, writer to the *Signet*, he was born in Edinburgh in 1853, graduated from London University in 1875, took his medical degree two years later, and in 1878 was compelled by ill health to seek a change of climate in Cape Colony, South Africa. He settled at the mining town of Kimberley, where he practiced his profession. He became an associate and friend of Cecil Rhodes, who also had gone to South Africa on account of ill health. Rhodes procured his appointment as administrator of Rhodesia in 1891, under the British South Africa Company, of which Jameson afterward became president. In 1893 Jameson organized an expedition against the Matabele; but affairs in the Transvaal soon claimed his attention. The Uitlander or foreign element in that republic was discontented, and in sympathy with that discontent, Rhodes placed a body of troops under Jameson's command on the border of the Transvaal. The chief seat of disaffection was Johannesburg, and on receipt of a letter from that city Jameson, taking the initiative, crossed the Transvaal border with 600 men on December 29, 1895. On January 1 he attacked Krugersdorp, but was unable to take the town, and on the following day he fought an action against the Boers at Doornkoop, where he was forced to surrender after losing seventeen killed and forty-seven wounded. The raid excited the interest of the civilized world and was almost universally condemned. Jameson and his officers were taken to Pretoria and sentenced to be shot; but President Kruger turned them over to the British Government, and they were taken to London and tried. Jameson was sentenced in May, 1896, to ten months' imprisonment but was released in December on account of ill health. He fought against the Boers in 1899-1900, was elected a member of the legislative assembly of Cape Colony in the latter year, was premier of the colony in 1904-08, and in 1910-12 was a member of the first Parliament of the Union of South Africa which met at Cape Town. In 1907 he was made an imperial privy councillor, and in 1911 he was created a baronet. The last few years of his life were passed in England.

**JAMESTOWN NAVAL BASE.** See NAVAL PROGRESS.

**JANEWAY, THEODORE CALDWELL.** Dr. Janeway, formerly Bard professor of medicine at Columbia University and after 1914 professor of medicine at Johns Hopkins University, died on December 27, 1917. He was the son of the late Dr. Edward Janeway, one of the most eminent physicians of his time, and was born in New York City in 1872. In 1892 he was graduated from Yale and was appointed instructor in bacteriology in Columbia in 1895, and later was an instructor and lecturer in the New York University and Bellevue College. He was instrumental in organizing under a single head the professional service at the Presbyterian Hospital. Dr. Janeway was a member of the board of scientific directors of the Rockefeller Institute for Medical Research, the Association of American Physicians, the Editorial Board of the Archives of Internal Medicine, the Society of Experimental Biology and Medicine, the American

Society of Advanced Clinical Investigation, and the American Medical Association. He made valuable contributions to medical literature, his name being particularly identified with the clinical study of blood pressure. Since the United States entered the war Dr. Janeway had been engaged in special research work for the government. He was a major in the medical officers' reserve on duty in Washington.

**JAPAN.** An empire of the Far East. The capital is Tokyo.

**AREA AND POPULATION.** The empire consists of Japan proper, Korea, Formosa, Karafuto, Kwantung (a lease hold in southern Manchuria), and the Pescadores. The total area is stated at 280,099 square miles. This area is nearly equivalent to the combined extent of the States of Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Alabama. The total population, as calculated for the end of 1916, is about 77,240,000. This article deals with Japan proper; for other portions of the empire, see KOREA, FORMOSA, KARAFUTO, KWANTUNG.

Japan proper consists of four large and many small islands. The total area is 24,794.36 square miles (382,415 square kilometres, or 147,657 square miles), which is a little larger than the State of Montana. The large islands are: Honshiu (called also Hondo and Mainland), 86,305 square miles, an area slightly larger than the combined extent of Pennsylvania and Ohio; Kiushiu, 13,768 square miles; Shikoku, 6,856 square miles; Hokkaido (called also Yezo), 30,144 square miles. The total legal population was estimated for December 31, 1916, at 55,965,292, as compared with 55,083,949 at the end of 1915 and 51,753,934 at the end of 1911. The average increase per thousand inhabitants was 14.48 in the period 1907-11 and 15.76 in 1912-16.

The following table shows the area by divisions. The first seven divisions comprise Honshiu with attached islands; the next three divisions consist of the other three large islands together with their attached islands; and the last division, Okinawa, is the Riukiu islands. The population figures are calculated for the end of 1913; they are probably excessive, the total being larger than the total for the end of 1915, as given above. The discrepancy is due principally to duplicated registrations of persons removing from one part of the country to another. But the figures serve to show the relative population of the several parts of Japan.

Divisions	Sq. km.	Legal pop. 1913	Pop. per sq. km.
Tohoku	65,507.0	5,739,722	88
Kwantu	32,047.1	10,512,239	328
Hokuriku	25,208.8	4,178,700	166
Tosan	27,510.1	3,276,535	119
Tokai	22,749.6	5,267,478	232
Kinki	22,842.0	7,264,075	318
Chugoku	30,719.4	5,272,060	172
Total	226,579.0	41,505,809	183
Hokkaido	94,011.6	1,817,705	19
Shikoku	18,210.0	3,293,418	181
Kiushiu	41,184.4	7,979,928	194
Okinawa	2,420.1	534,415	221
Grand total	382,415.0	55,181,279	144

The reported number of Japanese residing abroad June 30, 1915, is 367,123, of whom

119,668 were in China, 99,104 in the United States, 93,877 in Hawaii, 12,053 in Canada, 6261 in the Straits Settlements, 5979 in Peru, 5752 in the Philippines, 5282 in Australia, 2737 in Mexico, and 2460 in Brazil. Foreigners resident in Japan December 31, 1915, numbered 18,395, of whom 12,071 were Chinese, 2356 British, 1644 Americans, 706 Germans, 414 French, and 205 Portuguese. Ainos, the indigenes of Hokkaido, numbered, on December 31, 18,670 in 1915, as compared with 18,347 in 1914 and 17,632 in 1905.

The movement of the population is shown in the following table:

		1907	1911	1915	Average 1905-15
Marriages .....	No.	433,527	434,588	431,992	411,821
	Rate	8.88	8.40	8.22	8.38
Divorces .....	No.	61,193	58,802	59,418	61,836
	Rate	1.25	1.13	1.13	1.25
Living births.....	No.	1,621,973	1,768,639	1,756,553	1,604,129
	Rate	33.2	34.1	33.4	32.5
Stillbirths .....	No.	158,814	155,319	147,545	153,612
	Rate *	8.92	8.09	7.75	8.78
Deaths .....	No.	1,024,286	1,053,460	1,048,378	1,027,762
	Rate	21.0	20.4	20.0	20.8

\* Per hundred births.

As reported for December 31, 1916, the legal population of Tokyo was 2,224,796; Osaka, 1,460,218; Kyoto, 539,153; Kobe, 498,317; Nagoya, 489,272; Yokohama, 428,663. Other cities, with legal population at the end of 1913: Hiroshima, 167,130; Nagasaki, 161,174; Kanazawa, 129,804; Kuré, 128,342; Sendai, 104,141; Hakodate, 99,795; Fukuoka, 97,303; Sapporo, 96,924; Saseho, 94,914; Otaru, 92,864; Okayama, 86,961; Yokosuka, 85,473; Wakayama, 77,683; Kagoshima, 75,907; Shimonoseki, 72,117; Moji, 71,977; Tokushima, 70,292; Kumamoto, 68,167.

EDUCATION. Japan's educational system is well organized and efficient. Much emphasis is laid on industrial and technical instruction. Primary instruction is compulsory between the ages of six and fourteen. The following statistics of public educational institutions relate to the school year 1914-15: infant schools, 605, with 1609 women in charge and 48,813 children; primary schools, 25,558, with 159,754 teachers (115,106 male, 44,648 female) and 7,263,733 pupils (3,887,854 male, 3,375,879 female); secondary schools for boys, 319, with 6453 teachers (male) and 136,778 students; superior schools for girls, 346, with 4389 teachers (1888 male, 2501 female) and 90,009 students; lycéums for boys, 8, with 366 teachers (male) and 6215 students; normal schools, 90, with 1661 teachers and 27,739 students (18,894 male, 8845 female); superior normal schools, 4, with 227 teachers and 1781 students (1088 male, 693 female). There are many special, technical, and professional schools, with a very large attendance. The four imperial universities in 1914-15 had a teaching staff of 865, with 9611 students: the Imperial University of Tokyo, 408 teachers and 5,223 students; the Imperial University of the Northeast (Tohoku), 188 teachers and 1905 students; the Imperial University of Kyoto, 183 teachers and 1865 students; the Imperial University of Kiushiu, 86 teachers and 618 students.

Libraries open to the public in 1914-15 numbered 708, with 3,689,667 volumes, of which 3,445,236 were Japanese and Chinese and 244,431 European. At the end of 1914 there were 2719 newspapers and periodicals.

There is no state religion or government support of religion, and complete freedom of worship prevails. The principal religious forms are Shintoism and Buddhism. At the end of 1914, Christian churches and chapels numbered 1389, with 2316 preachers (1547 Japanese, 769 foreigners), as compared with 1219 churches and chapels and 1966 preachers (1286 Japanese, 680 foreign) at the end of 1909. At the end of 1914, the Episcopalian clergy numbered 423; Methodist, 409; Presbyterian, 388; Orthodox, 225; Roman Catholic, 203; Congregational, 174.

AGRICULTURE. Nearly one-fifth of the taxable

land of Japan is planted to rice, which is by far the most important crop. The table below shows the area in cho under important crops and the production in thousands of koku and thousands of kwan (1 cho = 2.4501 acres; 1 koku = 5.119 bushels U. S.; 1 kwan = 8.26733 pounds, or 3.75 kilograms):

	Area		Production	
	1915	1916	1915	1916
	Oho	Oho	1,000 Koku	1,000 Koku
Rice .....	3,056,567	3,072,129	55,925	58,443

			1,000 Kwan	1,000 Kwan
Potatoes .....	83,818	91,628	234,503	254,759
Sweet potatoes .....	305,014	307,366	981,108	1,055,634
Hemp .....	11,017	11,608	2,525	2,474
Leaf indigo .....	4,513	6,556	2,180	3,510
Sugar cane .....	22,601	23,692	266,955	263,866

In 1915 the production of silk cocoons amounted to 4,647,428 koku, and in 1916 to 5,708,463 koku; raw and waste silk, 5,460,296 and 6,084,406 kwan.

Live stock at the end of 1914 and 1915 respectively: cattle, 1,387,233 and 1,387,922; horses, 1,579,454 and 1,579,517; sheep, 2771 and 2768; goats, 95,323 and 97,396; swine, 332,465 and 333,276. Slaughter during 1915: cattle

(and calves), 277,980; horses, 59,969; sheep and goats, 9362; swine, 278,465.

**MINING.** Mine employees numbered 290,084 on June 30, 1915, as compared with 270,580 in 1913 and 233,827 in 1909. Employees in metalliferous mines in 1914, 86,359; in coal mines, 193,142; in other mines, 10,583. The following table shows the quantity and the value in yen of the mineral products:

	Quantity		Value	
	1914	1915	1914	1915
Gold .....	1,916,763	2,211,931	9,398	10,805
Silver .....	40,252,208	42,469,615	5,870	5,288
Copper .....	117,439,081	125,692,732	39,067	53,732
Lead .....	7,803,654	7,940,593	827	976
Pig iron .....	19,746,550	17,327,499	2,742	2,497
Steel .....	4,102,628	4,469,547	865	1,165
Iron pyrites .....	30,873,548	18,008,921	601	380
Antimony .....	54,966	13,913,471	5	8,205
Coal .....	22,293,419	20,490,747	80,350	65,069
Sulphur .....			2,003	1,902
Petroleum .....	2,307,435	2,568,359	9,481	9,873
Others .....			3,396	15,976
<b>Total.....</b>			<b>154,057</b>	<b>175,959</b>

\* 1 momme = 3.75 grams.

† 1 kin = 0.6 kilogram.

‡ 1 kwan = 3.75 kilograms.

§ 1 koku = 1.80391 hectolitres, or 47.65589 gallons.

The production of salt, not included above, amounted to 1,018,176,873 kin, valued at 11,904,123 yen, in 1914-15, and 995,268,132 kin, valued at 11,246,562 yen, in 1915-16.

**MANUFACTURES.** Factories employing over ten persons at the end of 1915 numbered 16,809, of which 10,688 were operated by motor power. Employees numbered 910,799 (350,976 male, 559,823 female). Textile factories numbered 8406, with 561,631 operatives; machine and iron factories, 1426, with 105,267 operatives; chemical factories, 1833, with 97,965 operatives; food and drink factories, 2377, with 51,251 operatives; miscellaneous factories, 2585, with 85,210 operatives; special factories (gas and electric works and metal refineries), 177, with 9475 operatives. In 1915, the average number of spindles in cotton spinning was 2,787,720; production of yarn, 85,288,449 kwan; as compared with 82,342,487 kwan in 1914 and 56,396,939 kwan in 1910. The following values, in thousands of yen, represent production in 1914 and 1915 respectively: cotton fabrics, 150,386 and 182,384; silk fabrics, 102,482 and 121,687; fabrics of silk and cotton mixed, 25,543 and 27,407; woolen fabrics and mixtures, 40,527 and 40,284; hemp fabrics, 4705 and 4867; miscellaneous woven fabrics, 2822 and 3409; total of woven fabrics, 326,465 and 380,128; Japanese paper, 18,563 and 22,396; European paper, 25,097 and 29,710; matches, 15,546 and 22,771; porcelain and earthenware, 15,657 and 17,532; floor mats and matting, 7487 and 8097; lacquered ware, 8738 and 9778; knittings, 13,733 and 30,749; oil, 16,625 and 20,476; leather, 9144 and 19,688; sake, 4040 and 4244; peppermint, 3575 and 4700; indigo, 1933 and 3021; crude camphor and camphor oil, 1194 and 1762; colle, or vegetable isinglass, 1833 and 2479; straw-plaits, wood-chip, and hemp-braids, 9443 in 1915.

**ECONOMIC CONDITIONS.** Japan felt little effect of the great war for three years, and had unprecedented prosperity because of increased exportation and especially the development of new industries and shipping. But the entrance

of the United States into the war brought a change, and in the autumn of 1917 it was expected that Japan would have financial and industrial difficulties like the other belligerent nations. Japan suffered particularly from the embargo on the export of iron, steel, and gold from the United States. Shipbuilding and other steel-using industries which suddenly developed after the war began could not continue their

work when the supply of iron and steel from the United States stopped. At the end of 1917 many works were at a standstill and market quotations of shipbuilding shares had declined. Even more detrimental to Japanese prosperity than the embargo on iron and steel was the American embargo on the export of gold. The balance of trade between Japan and the United States was about \$67,872,000 in 1916 in favor of Japan, and the prevention of the import of gold from the United States, to serve as payment for the balance of trade, affected unfavorably Japan's industry and trade in general. The great spinning industry in particular was affected, and then the depression spread to other industries. Prices began to go up and wages down, and large failures became common; so that at the end of 1917 Japan's three-year period of prosperity seemed to have little promise of continuation.

**COMMERCE.** The total volume of Japan's foreign trade in 1916 broke all previous records in both imports and exports. As a result of the utter disorder in the world's market's caused by the great war, imports and exports at first declined, but later Japanese commercial conditions improved. Despite various obstacles, such as scarcity of tonnage, extraordinary advance of freight rates, and the ban on imports enforced by the warring governments, Japanese exports continued to advance till they surpassed previous records in both 1915 and 1916. The table below shows imports and exports of merchandise, in yen:

	Foreign produce	Japanese produce	Total
<b>Imports:</b>			
1906.....	417,828,343	955,765	418,784,108
1911.....	512,942,109	863,586	513,805,705

Total .....	532,450	756,428	708,307	1,127,468

SHIPPING. There were entered from foreign countries in 1916 9562 steamers, of 20,363,518 tons, as compared with 8767 steamers, of 19,578,544 tons in 1915. The largest steam tonnage entered was in 1913, being 9888 vessels, of 24,658,874 tons. The number of sailing vessels entered from foreign countries in 1916 was 401, of 53,019 tons, as compared with 308, of 56,238 tons in 1915. Steam tonnage entered in 1915 and 1916 respectively was as follows: Japanese, 13,348,558 and 13,709,836; British, 3,881,922 and 4,417,631; Russian, 748,286 and 887,712; French, 225,704 and 322,116; American, 959,105 and 316,355; Norwegian, 29,246 and 205,049; Danish, 56,753 and 118,305; Swedish, 132,497 and 98,383; Chinese, 630 and 23,806; other, 195,843 and 264,325; total, 19,578,544 and 20,363,518.

The Japanese merchant marine was as follows, on December 31: in 1914, 3636 steamers, of 1,623,091 tons gross, and 14,552 sail, of 609,160 tons gross; in 1915, 3487 steamers, of 1,621,205 tons, and 17,498 sail, of 671,273 tons; in 1916, 3759 steamers, of 1,716,104 tons, and 20,301 sail, of 741,094 tons. The average capacity of steamers at the end of 1916 was 457 tons, and of sail 37 tons. The figures here given exclude sail under 5 tons. Sail of 20 tons and over numbered 9314 at the end of 1916; on the same date steamers of 20 tons and over numbered 2159, of 1,696,631 tons. Japanese shipping in the foreign trade receives government subsidy. At the end of 1916 there were 224 private shipyards and 61 private dry docks in Japan.

COMMUNICATIONS. The extension of Japanese railways in recent years is shown below, the figures representing mileage open to traffic on March 31:

	1911	1913	1914	1915	1916
State .....	4,870	5,217	5,473	5,686	5,757
Private ....	485	768	1,121	1,445	1,744
Total ....	5,355	5,985	6,594	7,131	7,501

The figures above for private railway include those for light railways. Cost of construction up to March 31, 1916: state railway, 775,643,032 yen; private railway, 106,674,904 yen; total, 882,317,936 yen. In 1914-15, the total receipts and expenditure of the state railways were 112,169,616 and 97,927,049 yen respectively; in 1915-16, 120,212,355 and 95,989,137.

The railway systems of Japan are nationally owned and operated, the jurisdiction of the imperial government railways in the hands of the Imperial Railways Board created in 1908, being under the direction of the minister president of state. The purchase of railways by the state was begun soon after 1891, and in 1906 under subsequent legislation, a beginning was made of the purchase of seventeen private railway lines, so that by October, 1907, 2827 miles were acquired at a cost of \$240,000,000. The nationalization of the railways then proceeded, and was marked by a phenomenal expansion of traffic, and an increase both in actual mileage and double track.

The railway systems of the empire are divided into five divisions, three for the main island and one each for the island of Kiushiu and Hokkaido. The annual surplus available for new extensions and improvements from earnings for six years up to 1917, averaged little more than \$8,000,000 annually, but between \$15,000,000 and \$30,000,000 have been expended each year upon construction and improvement. The railways are operated on the narrow gauge of 3 ft. 6 in., which however, has been found undesirable, and several gauge committees, the last of which was formed in April, 1916, were appointed to deal with this question. The rails are mostly 60 pound or lighter, but renewals on the main lines were being made with 75 pound rails of American Society of Civil Engineers section. On most of the lines, single track predominates, but the Tokaido and other heavy trunk lines are double track with a few sections of four track.

The mileage of track in operation on December 31, 1915 were:

Single track .....	5,000 miles
Double track .....	734 miles
Through tracks .....	1 mile
Four tracks .....	16 miles
Six tracks .....	4 miles
Total main line.....	5,755 miles
Yard and side tracks.....	2,277 miles
Total all tracks.....	8,840 miles

There were 1537 stations including all block stations.

On some of the mountain railways, electricity was employed and electrification had also been adopted for suburban service in and around Tokyo; a suburban service between Tokyo and Yokohama, a distance of 18 miles, had been operated since 1915, and plans were being made in 1917 to use electric locomotives to handle through trains on the Tokyo-Kobe line,

within the city limits of Tokyo. The Japanese railways have block systems. The traffic returns for the year ending March 31, 1916, were as follows:

Item	Year under review	Increase against preceding year
Passengers carried.....	165,780,903	5,394,681
Tons of freight hauled.....	35,231,896	338,787
Earnings from pas. traffic....	\$30,117,000	\$2,076,000
Earnings from freight traffic..	\$30,446,000	\$3,442,000
Total.....	\$60,563,000	\$6,118,000

The Japanese systems maintained ferry service between Japan proper and Korea, and the main island and the island of Shikoku and Hokkaido. Thirty-six steamers are in this service, and about 2,000,000 passengers and 800,000 tons of freight are handled annually. During 1917, a car ferry service was inaugurated as a connecting link between the main island and Kiushiu.

In 1917 the Imperial Japanese Diet authorized the expenditure of \$4,980,000 for the extension of the Boryo and Giran railway lines in Taiwan. Of this sum \$996,000 was to be expended annually for a period of five years, the railways to be completed by the end of the fiscal year 1921. Operations were to be begun before the close of the year and the construction contemplated was the extension of the Boryo Line from Ako to Boryo, and the extension of the Giran Line from Hatto to Suwo. The Giran extension, chiefly through mountainous country, was expected to aid the development of coal mining in Zuiho and Chosokei districts, where previously there had been great difficulty in getting the coal out.

Telegraphs March 31, 1916: officers, 5112; length of line, 10,536 ri (25,711 miles); length of wire, 47,556 ri (116,051 miles). Post offices on the same date, 7358.

FINANCE. The standard of value is gold. The monetary unit is the yen; its par value is 49.846 cents. For the fiscal year ending March 31, 1918, the budget balanced at 714,534,127 yen. The table below shows revenue and expenditure (ordinary and extraordinary) for fiscal years, in thousands of yen. The figures for the fiscal years 1914 and 1915 represent the settled accounts, those for the fiscal year 1916 the actual account on October 31, 1916, and those for the fiscal years 1917 and 1918 the budget estimates.

	1914	1915	1916	1917	1918
Revenue:					
Ord. ....	575,428	536,343	539,000	531,793	557,380
Extr. ....	140,547	198,306	169,616	69,145	157,154
Total....	721,979	734,648	708,616	600,938	714,534
Expenditure:					
Ord. ....	415,636	399,225	386,516	397,756	437,261
Extr. ....	157,998	249,195	196,753	204,507	277,273
Total....	573,634	648,420	583,270	602,263	714,534

As a sum of 1,324,575 yen was to be left unused of the total expenditure for the fiscal year 1917 in consequence of the disbursement of the special war expenditure, the net estimated expenditure amounted to 600,938,397 yen, thus balancing the revenue. As a matter of fact, however, it appeared in 1917 that the actual revenue for the fiscal year would greatly

exceed the estimate. The estimated expenditure relating to the great war from its outbreak to the end of the fiscal year 1918 aggregated 329,000,000 yen.

The principal sources of ordinary revenue, as shown in the settled accounts of the fiscal year 1915 and in the budget for the fiscal year 1918, are as follows, in thousands of yen: public undertakings and state property, 135,830 and 176,347; tax on liquors, 95,782 and 89,875; land tax, 73,602 and 72,816; income tax, 37,157 and 36,881; customs duties, 44,229 and 31,654; stamps, 28,775 and 30,790; sugar excise, 23,385 and 25,174; business tax, 28,594 and 22,257; total ordinary revenue, including items not here mentioned, 536,343 and 557,380.

In the following table are shown by departments of government the budget estimates of expenditure for the fiscal year 1918, in thousands of yen:

	<i>Ordinary</i>	<i>Extraord.</i>	<i>Total</i>
Imperial Household .....	4,500	.....	4,500
Foreign Affairs .....	4,583	2,171	6,754

<b>Total.....</b>	<b>437,261</b>	<b>277,273</b>	<b>714,534</b>

The public debt outstanding March 31, 1917, was 2,467,701,938 yen, as compared with 2,489,234,428 yen in 1916 and 2,650,355,615 yen in 1911. In 1917, the foreign debt amounted to 1,370,207,560 yen, and the internal debt to 1,097,494,378 yen. Outstanding public debts, March 31, 1917, classified according to the objects for which they were incurred in thousands of yen: reorganization of public institutions, 97,669 (old public loan 1078; feudal pensions capitalized, 96,591); economic undertakings, 770,507 (railway construction, 728,106; harbor, drainage, road, steel works, mining, telephone, etc., 42,401); military affairs, 1,382,563 (expansion of armaments, 81,109; war, 1,301,454); financial adjustment, 124,428 (redemption of paper money, 10,642; conversion, 124,428; tobacco and salt monopoly, 13,329); exploitation of new territory, 92,535 (Formosa, 81,535; Korea, 61,000); total 2,467,702. See FINANCIAL REVIEW; PRICES.

**GOVERNMENT.** The legislative power is exercised by a parliament, or imperial diet, of two chambers, the House of Peers and the House of Representatives. The peers number 369, part of them having a seat in the parliament for seven years and part of them for life. There are 379 representatives, elected by popular vote for four years. The executive authority is vested in the emperor, who acts through a cabinet of ministers appointed by and responsible to himself. The emperor in 1917 was Yoshihito, who was born at Kyoto August 31, 1879, and succeeded his father, Mutsuhito, July 30, 1912. His apparent, Prince Hirohito, born April 29, 1901. The cabinet in 1917 (formed October 9, 1916) was as follows: Premier, Count S. Terauchi; Minister of Home Affairs, Baron S. Goto; Foreign Affairs, Viscount I. Motono; Marine, Vice-Admiral, T. Kato; War, Lieut.-Gen. K. Oshima; Communications, Baron K. Den;

Agriculture and Commerce, R. Nakashoji; Justice, I. Matsumuro; Education, R. Okada; Finance, K. Shoda.

**HISTORY.** In January the opposition in parliament began a vigorous attack on the administration of Count Terauchi on the ground that the cabinet was formed in a manner contrary to the spirit of the constitution. The appointment of the prime minister in October, 1916, was criticized by Japanese political leaders as not supported by public opinion; it was supposed to be representative of the radical militarist element. Speeches criticizing him were delivered on January 23. On January 24 the enemies of the government introduced a resolution of lack of confidence and followed this up with sharp speeches attacking the arguments that the prime minister had advanced. The prime minister's contention was that the nation could be governed by a cabinet which did not have a majority in parliament. A sensational event occurred on January 25 when an attempt was made to assassinate the former minister of justice who in the course of an address at a mass meeting was denouncing the prime minister. Thereupon the house was dissolved and thus the chance for a vote of lack of confidence was lost. When the word was brought that the parliament was dissolved the members departed with loud protests.

In replying to the criticisms of January 23, the foreign minister, Count Motono, defended Japan's foreign policy. He assured the Allies of Japan's continued support. Friendship with the United States was also dwelt upon, and the minister expressed the imperial government's satisfaction at the increase of good will between the two countries. As to China, he declared that Japan had always united with the other Powers for the financing of internal reforms in China. He admitted, however, that China always showed a distrust of Japan. This he attributed to a tendency on the part of the Japanese to meddle in the internal quarrels of China, and he declared that the present Cabinet absolutely rejects this policy. He pointed out, however, the special interest of Japan in certain regions of China, notably Southern Manchuria and Eastern Inner Mongolia where she had made immense sacrifices and was entitled in consequence to the protection of rights and interests that had been guaranteed by treaties and agreements. At the same time Japan had no intention of overlooking the fact that the other Powers also had great interests in China.

Elections were held on April 20. The result of them was a victory for Count Terauchi and the military party, but the opposition declared that this success would not endure. It insisted that the alliance between Count Terauchi and the Seiyu-kai party was only for the time being.

The Cheng-Chiatung affair reported in the last YEAR BOOK which arose from a clash between the Chinese and Japanese troops in August, 1916, was the cause of prolonged negotiations between the two governments. A settlement was finally announced on January 23. According to this the military governor of Mukden was to apologize; the commander of the division which had been involved was to be reprimanded; and the officers directly concerned were to be punished. Compensation was to be given to the Japanese merchant who had been assaulted, and through-out Southern Manchuria a notice was to be

posted to the effect that in dealing with the Japanese, whether civilians or troops, proper courtesy should be shown. Upon the fulfillment of these terms the Japanese troops were to be withdrawn from Cheng-Chiatung. Certain points, however, remained unsettled. In the first place, Japan's request for the appointment of Japanese instructors in the chief military school of China, and of military advisers at the military headquarters in Manchuria met the response that China could not at present agree to it; and the claim of Japan to the recognition of Japanese police-stations in Southern Manchuria and Eastern Inner Mongolia was refused; and the Chinese government declared its opposition to the course for which Japan argued in the matter of setting up additional police-stations in those places as they were required.

**JEWS AND JUDAISM.** Due to the war no census has been taken in the belligerent countries for several years, and consequently accurate figures of the number of Jews throughout the world are still unavailable. The figures quoted are based on returns from censuses taken, during the years preceding the war, mostly on those taken during the years 1913-14, and some go back to returns of the 1910-11 census. However, the Jewish Year Book, the available authentic source for Jewish statistics, gives in its last issue (1917-18) corrected statistical tables. They are: Total number of Jews in the world, 13,980,715, distributed among the continents as follows: Europe, 9,986,477; America, 3,094,309; Asia, 499,679; Africa, 380,805; Australia, 19,415. The European countries leading in Jewish population are: Russia (according to its former boundaries) with its 6,946,096, followed by Austria-Hungary with 2,258,262, Germany with 615,021, Rumania with 239,967, Great Britain with 257,000, The Netherlands 106,309, France with 100,000, Greece 88,300, and Turkey with 80,000. In American over 95 per cent of the total Jewish population are distributed in the three leading countries: United States with a Jewish population of 3,012,141, followed by Argentine with 110,000, and Canada with 75,681. In Asia, Turkey, 177,600, and Palestine 100,000, are the important centres of Jewish population. Morocco 110,000 and Tunis 108,000, hold the first places in the number of Jews in the continent of Africa. While these tables are greatly improved over those given last year, yet one can hardly claim them exact. There seems to be a grave discrepancy between the totals given for Europe and America, and the sums obtained by adding the numbers given for the various countries in the respective continents. The number of Jews in the Russian Empire was given in last year's issue as 6,060,415, while in this issue the number 6,946,096 is given, an increase of more than 800,000, which ought consequently to swell considerably the total for Europe, but, contrary to expectations, the total number of Jews in Europe is given about 2000 less than last year. The total for America is given as 3,094,309, while the detailed estimates for U. S. 3,012,141, Argentina 110,000, and Canada 75,000, aggregate considerably more than the total. In view of these facts, we may safely place the number of Jews throughout the world between 14,000,000 and 15,000,000.

**GENERAL EVENTS.** The outstanding feature in Jewish history in 1917 is the Russian revolution and its consequent effect, the emancipation of the 5,000,000 Jews within the present boundaries of the empire. The abolition of all restrictions, and the granting by the revolutionary government of full liberty and equality, has stirred up a new life in the down-trodden Russian Jewry. The participation of the Jews in all the social and political activities of the new democracy has been considerably great, beyond all proportion to their percentage of the population, but the real effect of the emancipation is to be seen in the inner life of the Russian Jewry. All social and cultural activities were carried on on a large scale, numerous conferences of various parties and organizations were held during the year, where plans of reorganizing Jewish life on national lines were discussed. Especially notable was the conference of representatives of all parties held at the end of July, at Petrograd, which decided to call, at the end of December, a congress representing all the Jews of Russia. In spite of the abolition of all educational restrictions, separate educational activity among the Jews has increased; a number of secondary schools and several colleges, notable among which is the Polytechnic Institute at Ekaterinoslaw, were opened. The purpose of these schools is to supply, in addition to general and technical education, also a certain amount of Jewish education, as well as to furnish the proper Jewish atmosphere for the students. Plans were also perfected and large sums collected for the establishment of a people's university and a temple of equality, at Kiev and Petrograd respectively, in commemoration of the Jewish emancipation. The economic situation, however, was not changed for the better but, on the contrary, due to the duration of the war and the chaotic conditions existing in Russia, poverty and misery have exceedingly increased. The number of those needing relief reaches in the hundreds of thousands, and is daily augmenting. The situation can hardly be controlled by the Russian Jews themselves without foreign help. Estimates formed by the relief officers in Petrograd show that at least twelve million roubles are necessary for the feeding of the refugees, and that Russian Jewry is able to raise only one-sixth of the amount.

Still worse is the economic situation of the Jews of Poland and Lithuania under German rule. The civil and political freedom granted them by the Imperial Council during the year has not alleviated their situation. Their rights exist only on the paper; the hatred of the Polish populace has not abated, and the economic boycott which was recently revived is working havoc on their economic situation. To aggravate matters, there were added the rigorous repressions of the German military rule, and the general economic ruin and devastation caused by the war, and, as a result, the Polish and Lithuanian Jewry has undergone great suffering, starvation, and its immediate consequences, epidemic diseases rage in every Jewish community. Yet the vitality of the Polish Jewry has asserted itself considerably, for all activity was carried on during the year. Numerous organizations were formed, notable among which is the Zeire Yehuda, a league of young laborers, for the purpose of counteracting the socialistic

influence, and to promote the spread of Jewish knowledge among the members. Otherwise the Jewish situation remains statu quo. The echo of the Russian revolution was, however, heard even in Rumania, where the government announced its intention to grant full rights to the Jews. It is not known, though, to have realized its intentions.

**RELIEF AND CONGRESS MOVEMENT.** The cry of anguish from the stricken Jews abroad which grew louder and louder as the war continued, has stirred the Jews of this country to more intensive relief activity during this year. Early in the year, the sum of \$10,000,000 was set up at a conference of relief workers, as the goal to be reached by them. The week of January 27, commemorating the proclamation issued by President Wilson in 1916, was set aside as a week of mercy, during which an energetic drive for funds was made. To stimulate activity in collecting money, Julius Rosenwald announced, on March 12, his offer of \$100,000 for every million raised by the people. But as the year wore on, activity slackened and at the end of November, only half of the sum was raised. It was then that Jacob H. Schiff stepped in and initiated, with the help of the most leading Jews of the country, a two weeks' (December 3-15) drive for \$5,000,000, \$1,000,000 of which was to go to the Jewish Army Welfare Board, and it was crowned with complete success. On December 16, he announced that not only was the desired sum raised, but also a considerable amount above it.

The congress movement reached its culmination, when the executive committee decided early in April that an election of delegates should be held on June 10, and the congress itself on September 2. An election board to take charge of the matter was appointed, and the country divided into districts, and the number of delegates apportioned. Nominating conventions were held on the tenth of May, and election a month later. About 350,000 Jews all over the country participated in the election, political feeling ran high, and party lines were greatly differentiated; the bulk of the participants consisted of orthodox and nationally inclined laborers, the reform Jews and the extreme radicals having withdrawn from the congress committee. The congress, however, was not held on the scheduled date. Due to war conditions, it was deemed advisable to defer its session until after the war. The congress movement had spread also to other countries. Conferences preparatory to holding congress were held by the Jews in Italy, Greece, and Russia (see previous section).

**LABOR AND LEGISLATION.** The year in the Jewish labor world passed rather quietly. It was not marked by any great strikes, such as the cloakmaker's strike of last year. Labor gave vent to its activity in the political field, rallying behind the candidacy of Morris Hillquit, for Mayor of the City of New York. The clothing industry, the centre of Jewish labor, had, however, its usual quota of disturbances in the form of minor and local strikes in the unimportant branches of the industry, which were adjusted by various methods.

The important feature in legislation affecting Jews was the final passing by Congress, over the president's veto, of the literacy test for immigrants, striking out the previously inserted

clause exempting Russian Jews from the test on account of their educational disabilities. To the minor legislative events may be counted the passing by the Colorado Legislature of a bill, prohibiting discriminating advertising by hotels, and the defeat of a bill introduced in the Legislature of Arizona, providing for reading of the Bible in public schools.

**PERSECUTION AND DISABILITIES.** The year, in spite of its bright political events, was not at all clear from dark spots in the form of persecutions. Russia, the traditional home of persecution, led in this respect. Pogroms on the Jews were still being perpetrated in many provincial towns. The black hundred and the reactionaries, though shorn of their power, had, recently, due to the chaotic conditions reigning in Russia, succeeded in inciting the populace in many cities and towns against the Jews. Specially distressing reports came of late from the province of Podolia, southwestern Russia, where pogroms occurred almost daily. The government, however, endeavored to repress the movement. Palestine was this year, on account of the English invasion, the scene of extreme Jewish suffering. The Jews were expelled from Jaffa and Jerusalem, and their houses sacked. A similar fate was also suffered by Tel-Aviv, the beautiful Jewish town, near Jaffa. No serious disabilities were enacted in any country against the Jews, but the social disability of the boycott is aggravating the Jewish situation in Poland.

**LITERARY AND MINOR EVENTS.** Literary activity during the year was at a standstill in this country; no new additions to the Jewish-English, Yiddish, or even the Hebrew press are to be noted. The most important book issued this year is the new translation of the Old Testament, issued by the Jewish Publication Society. On the other hand, a strong literary revival was marked this year in Russia. The emancipation has stimulated great literary activity in Hebrew and Yiddish. A new Hebrew daily under the name of *Haam* (the people) was established, and the Hebrew scientific monthly, *Hashiloah*, reappeared again. Sums aggregating to two million rubles were raised for the purpose of establishing a company, by the name of Sephoténu (our language), to issue books, magazines, and dictionaries. The lovers of Hebrew and Yiddish literature throughout the world mourned the loss of Dr. J. L. Katznelbogen, a noted Hebrew essayist, and Shalom Jacob Abramowitch, known to the Jewish world under the pen name of Mendele Mocher Sephorim, a distinguished Hebrew satirist, and a still more distinguished Yiddish writer. He was known as the grandfather of Jewish and Hebrew literature. Jewish and Semitic science sustained the loss of Prof. Joseph Halevi, of Paris, Hebraist and Orientalist, and that of Baer Ratner, of Wilna, a great Talmudist and historian.

An important event for Judaism in this country was the establishment of the Mizrahi Teachers' Institute by the Mizrahi organization, the orthodox branch of the Zionists at New York, for the training of modern Hebrew teachers. Of minor events there can be recorded the seventy-fifth anniversary of the Congregation Rodeph Shalom of New York, and that of B'nai Jehshurun of Cincinnati, Ohio, and the twenty-fifth anniversary of the American Jewish Historical Society.

**ZIONISM AND NATIONALISM.** An event of momentous importance is the history of the Zionist movement during the year, was the declaration of the English Government in favor of establishing a Jewish home in Palestine. This event followed immediately by the capture of Jerusalem foreshadows the speedy realization of the Zionist ideal. A conference of important Zionist workers was called by the provisional committee at Baltimore, on December 16, where it was decided to raise a million dollar fund for the purpose of sending a commission of scientists and noted Zionist leaders to investigate the conditions of the land. The year on the whole was marked with intense Zionist and national activity throughout the world, especially in Russia, where the Zionists held a conference of representatives for the first time in years. Three important conventions, that of the Miz-rachi, the orthodox branch, the order Sons of Zion, and the Federation of American Zionists, were held in the United States during the months of May, June, and July, respectively, and all three were attended by hundreds of delegates. Zionist activity was also carried on in all other countries, neutral and belligerent, and Jewish nationalism had become the order of the day in Jewish life.

**JOFFRE, JOSEPH J. C.** See UNITED STATES AND THE WAR.

**JOHNS HOPKINS UNIVERSITY.** A non-sectarian educational institution which admits men and women to some of its courses and to others men only, situated at Baltimore, Md. It is known principally for its graduate study. In the fall of 1917 there were 2178 students and 330 members of the faculty. Volumes in the library numbered 200,000. William H. Welch, professor of pathology since the professorship was established, resigned in 1917. William George MacCallum, professor of pathology at Columbia University, succeeded him. Elmer V. McCollum, of the University of Wisconsin, was made professor of chemistry. Murray P. Brush was made dean of the college faculty, and Edward W. Berry, formerly associate professor, was made full professor of paleontology. William Bullock Clark, professor of geology, died; Professor Edward C. Armstrong, professor of the French language, left to become professor of French at Princeton; James E. Shaw, associate professor of Italian, left to become professor of Italian in the University of Toronto. Maj. George R. Gould, U. S. A. (retired), was made collegiate professor of military science and tactics. The General Education Board added \$100,000 to the William H. Welch Endowment for Clinical Research in order to make possible more work in the department of pediatrics, and gave also \$250,000 to strengthen the work in the laboratory departments of the Medical School. The total of the university's net assets, including equipment, etc., was reported by the treasurer to be \$10,785,067, of which \$3,670,665 is represented by plant, equipment, and unrestricted bequests, etc. The total income from operations for the year ending September 30, 1917, was \$709,315. The university was founded in 1876. President, Frank J. Goodnow, LL.D.

**JOHNSON, JOHN GROVER.** A leading American lawyer and art collector, died in Philadelphia April 14, 1917. The son of a blacksmith, he was born at Germantown, Pa., in

1841, and at seventeen graduated from the Central High School of Philadelphia. Afterward he studied law in the office of Benjamin and Murray Rush and in that of Power, Wallace, and Judson, and practiced in Philadelphia from 1863 till his death. Mr. Johnson came to be recognized as one of the foremost men in his profession not only in the United States, but on either side of the Atlantic. Baron Palles, Lord Chief Justice of Ireland, called him the "greatest lawyer in the English-speaking world." His high place was not realized by the public because Mr. Johnson consistently refused offices that would have brought him into notice. Twice he declined appointment to the bench of the United States Supreme Court, when tendered by Presidents Garfield and Cleveland, and President McKinley urged him to be attorney-general in his cabinet. He gained his reputation almost entirely as a corporation lawyer, and his advice was often sought by the late J. Pierpont Morgan and other big financiers and capitalists. Before the United States Supreme Court he defended the Sugar Trust, the American Tobacco Company, the Standard Oil Company, and the Northern Securities Merger, and as counsel for other large interests he appeared in both State and Federal courts. Mr. Johnson apparently had no interest in public movements, club life, or even organizations of his professional brethren, and he is said to have refused to join the American Bar Association. Mr. Johnson's one great recreation was in surrounding himself with pictures, of which he had one of the finest collections in the United States. He did not need to rely on buyers, for he had early made himself an expert, and went abroad nearly every year to make his own selections. He gathered valuable examples of the old and modern masters, and of many little known painters whose work received his critical approval, the whole forming a chronological record from the early fourteenth century. His most important picture, almost priceless, was Correggio's "Holy Family." Mr. Johnson was essentially a lover of pictures for their own sake, although he knew their monetary worth, too; instead of relegating them to a gallery, he used them, some 1800 in all, to cover not only the walls but the doors throughout his home. He had wished the city of Philadelphia to acquire the famous Elkins and Widener collections and to build a great gallery for them and the Wiltach collection, to which he would add his own. This plan was not followed, but at his death Mr. Johnson left his house and the collection, valued at more than \$5,000,000, to the city. His gift was one of the largest of the sort ever made to the public. In 1910 he published an elaborate three-volume catalogue of the collection. Consult New York *Evening Post*, April 19, 1917.

**JOHORE.** A native state located at the southern extremity of the Malay Peninsula and under British control. Estimated area 900,000 square miles; population (1911), 180,412, about half Malays and one-third Chinese. Johore Bharu, the capital, has about 20,000 inhabitants. Imports and exports (1915) 9,163,665 and 28,917,800 Straits Settlements dollars. Revenue and expenditure 1915, 5,790,393 and 3,645,421 dollars; public debt, 6,750,000 (for railway construction). A railway, constructed by the Federated Malay States Railways, connects

Kuala Gemas on the Negri Sembilan border with Johore Bharu (120¼ miles).

**JUGOSLAVS**, or **YUGOSLAVS**. A term denoting the southern Slavic nations; from *jug* (*yug*), the word for "south" in most Slavic languages, and *Slav*. Properly speaking, the Yugoslavs are the Slovenes, Serbocroatians (embracing the Montenegrins), and Bulgarians. The latter, however, owing chiefly to their peculiar political orientation, are not commonly included in the designation of Yugoslavs.

**JUPITER**, **SATELLITES OF**. See **ASTRONOMY**.

**JUVENILE COURT**. Within the past decade special courts for the hearing of cases of prosecution of children for the violation of law and ordinances have been established in all principal American cities and in various countries abroad. More recently the process of extending them to counties so as to bring their advantages within reach of rural communities has met with marked favor. These children's courts provide for private hearings by the judge alone in place of trial by jury and newspaper publicity; they afford a chance to apply the newer theories of penology, especially individualized treatment. In connection with them has developed the probation system (see **PENOLOGY**), and in the last two or three years psychopathic clinics for the study of mental abnormality and expert medical service for the study of physiological and functional disturbances. Finally these courts are bringing into existence special schools for the instruction and training of delinquent boys and girls. There was evident in 1917 an increasing emphasis on the desirability of connecting juvenile courts with courts of domestic relation and other agencies dealing with broken and disorganized family life on the ground that problems of juvenile delinquency are intimately connected with the character of home life and the broader questions of poverty and degeneracy. See **CHARITIES** and **PENOLOGY**.

The New York City Children's Court first organized as a separate court in 1916 and issued its first report in the fall of 1917. In this the presiding justice, Franklin C. Hoyt, showed that, in spite of a decrease in the number of arrests, there was an increase in the number of hearings, indicating more careful attention to individual conditions. The probation bureau established with the court had fifty-five salaried officers; in consequence of their activities, a number of commitments to institutions had been reduced from 6882 in 1912 to 2893 in 1916. It was estimated that this saved the city an annual maintenance charge of over \$238,000. There were arraigned in 1916 over 12,400 children, of whom 84 per cent were up for the first time, 11.4 per cent for the second time, 3.1 per cent for the third time and 1.5 for the fourth time or oftener.

Characteristic of the scientific work now frequently done in connection with juvenile courts was the report of Mabel B. Ellis on child labor and juvenile delinquency published in the November *Child Labor Bulletin*. She studied 1792 children of ages 7 to 16 who had been convicted of offense against State or city laws. Although only 10 per cent of the children of Manhattan of these ages are employed, 40 per cent of the offenders were workers. This larger proportion of workers among offenders was especially true for the more serious crimes. Employment was found to be more likely to result in delinquency

than age, lack of schooling, nationality, or home condition. More effective enforcement of school attendance laws, vocational education, and guidance were recommended.

**KAISER-WILHELMSLAND**. The northeastern part of the island of New Guinea, constituting the major portion of the protectorate of German New Guinea. On the west (at long. 141° E.) it is bounded by Dutch New Guinea, and on the southwest and south by Papua (British). The number of inhabitants is not definitely known, but may be estimated at about 400,000. The country, over which Germany declared a protectorate in 1884, has been under Australian military administration since October, 1914.

**KAMERUN**. A German protectorate of west central Africa, lying between Nigeria (British) and French Equatorial Africa and extending north to Lake Chad and east, at one point, to the Ubangi River. The coast line is broken by the comparatively small Spanish colony of Río Munig y Cabo San Juan (Spanish Guinea). The estimated area is 305,019 square miles, which is nearly as large as the combined area of Montana and the Dakotas. The colored population has been estimated at 3,651,000. On January 1, 1913, whites numbered 1871, of whom 1643 German. The German administrative headquarters was Buëa. The protectorate was established by Germany in 1884. According to the Franco-German treaty of November 4, 1911, the area of the protectorate was increased by about 100,000 square miles. On August 25, 1914, a British force advanced across the border, and the conquest of the protectorate was completed by French and British troops on February 18, 1916. The portion of French Equatorial Africa which was annexed to Kamerun under the treaty of November 4, 1911, is administered by the governor-general of French Equatorial Africa as commissioner-general; the rest of the protectorate is administered by the government of Nigeria.

Imports and exports in 1913 were valued at 34,616,000 and 29,151,000 marks respectively, about two-thirds of the trade being with Germany. Leading imports include machinery and other manufactures of iron and steel, cotton piece goods, rice, provisions, and fish. The larger exports in 1913 were: rubber, 12,122,000 marks; palm kernels, 6,226,000; cacao, 5,718,000; palm oil, 1,961,000.

Railway in operation at the end of 1913, 193 miles; under construction, 83 miles. The budget for 1915-16 balanced at 32,490,409 marks, estimated local receipts being 14,094,091 marks, imperial contribution 3,166,318, and loan 15,230,000.

**KANSAS. POPULATION**. The population of the State in 1910 was 1,690,949, and on July 1, 1917, it was estimated to be 1,851,870.

**AGRICULTURE**. The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn ...	1917	9,156,000	128,184,000	\$160,280,000
	1916	6,950,000	69,500,000	62,550,000
Wheat ...	1917	8,757,000	45,984,000	90,950,000
	1916	8,170,000	97,980,000	160,687,000
Oats ...	1917	2,284,000	70,804,000	45,315,000
	1916	1,550,000	86,425,000	20,084,000

		<i>Acres</i>	<i>Prod. Bu.</i>	<i>Value</i>
Potatoes	1917	78,000	4,448,000	6,758,000
	1916	70,000	4,970,000	8,200,000
Hay	1917	1,478,000	2,217,000	38,802,000
	1916	1,680,000	2,604,000	19,790,000

<sup>a</sup> Tons.

**MINERAL PRODUCTION.** The lead and zinc mined in the State in 1916 was valued at \$3,563,488. There were produced 2217 short tons of lead concentrates, and 24,277 short tons of zinc concentrates. The total crude ore in which the lead and zinc were produced amounted to 774,400 short tons. The petroleum production of the State in 1915 was 2,823,487 barrels compared with a production of 8,738,077 barrels, valued at \$10,339,968 in 1916. This is an increase of 209 per cent in quantity and 507 per cent in value. The production of coal in 1916 was 6,881,455 net tons, valued at \$12,252,723, an increase of less than 1 per cent in quantity but of 9 per cent in value over 1915. The production of natural gas in 1916 was valued at \$4,855,389 compared with \$4,037,011 in 1915.

**TRANSPORTATION.** The total number of miles operated in the State on June 30, 1916, was 9557. The roads having the longest mileage were: The Atchison, Topeka, and Santa Fe, 2815; Missouri and Pacific, 2384; Chicago, Rock Island, and Pacific, 1167. Union Pacific, 216.

There was no railroad construction of importance during the year.

**FINANCE.** According to the report of the State treasurer for the fiscal year of 1917 the total receipts were \$12,347,683; expenditures \$12,299,176. At the beginning of the year the balance in the treasury was \$1,686,215 and at the end of the year \$1,734,722. The State has no bonded debt.

**EDUCATION.** The total school population in the State in 1915, the latest date for which statistics are available, was 507,605. The total enrollment was 394,823, with an average daily attendance of 308,016. The teachers, male and female, numbered 15,015. The average monthly salary of teachers, male, \$85.70; female, \$68.20.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Topeka State Hospital, the Osawatimie State Hospital, the State Hospital for Epileptics, the Home for the Feeble-minded, the State Orphans' Home, the Larnard State Hospital, and the Tubercular Sanatorium.

**LEGISLATURE.** Among the more important measures passed by the legislative session of 1917 are those noted below. The laws relating to the administration of State government were amended. A city manager plan of government was adopted. A constitutional amendment was proposed to take away the right of suffrage now granted to aliens who have declared their intention of becoming citizens. A scheme of double election boards; one to receive the ballots and another to count them, was adopted. A general prohibition law was enacted. A law relating to labor disputes was amended. A "vagrant" is defined as "any person who shall threaten violence or personal injury to fellow workmen or employers of labor." The use of safeguards, approved by the council of labor, is required for the protection of employees. The eight hour day for men is extended to miners. The child labor law was amended in some de-

tails. A commission was appointed for investigating the conservation and utilization of water resources and of controlling waters in floods. An act was passed making it unlawful for any railroad or common carrier to receive live stock for shipment unless the shipper is identified by at least two responsible persons, or is known to the railroad agency. The State board of health is authorized to make rules for quarantining in certain infectious diseases. On July 1, the administration of over a score of State institutions passed to a board of three men appointed by the governor.

**STATE OFFICERS.** Governor, Arthur Capper; Lieutenant-Governor, W. Y. Morgan; Secretary of State, J. T. Botkin; Treasurer, Walter L. Payne; Auditor, Fred W. Knapp; Attorney-General, S. M. Brewster; Superintendent of Instruction, W. D. Ross; Commissioner of Insurance, C. J. Wilson—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Wm. A. Johnston; Associate Justices, Rousseau A. Burch, Henry F. Mason, Silas Porter, Judson S. West, John Marshall, and John S. Dawson; Clerk, D. A. Valentine.

**KANSAS, UNIVERSITY OF.** A co-educational State institution of learning at Lawrence, Kans. In the fall of 1917 there were 2813 students and 219 members of the faculty; about 20 additional members of the faculty were absent on leave for government service. Volumes in the library numbered 112,000. A bequest of \$30,000 from the late J. L. Porter of Paola, Kans., was received in 1917. Total income for the year, principally from State appropriations, was \$692,500. The legislature also appropriated \$112,500 for new buildings and \$35,000 for repairs and improvements. The university was founded in 1866. President, Frank Strong, Ph.D., LL.D.

**KARAFUTO.** A Japanese dependency, being that part of the island of Sakhalin which lies south of latitude 50° N. The area is stated at 2208.9 square ri (34,069 square kilometres, or 13,154 square miles). This area is nearly equal to the combined extent of Massachusetts and Connecticut. The population as calculated for the end of 1916 was 95,194 (53,773 males, 41,421 females), as compared with 73,795 and 57,206 at the end of 1915 and 1914 respectively. The 1914 population consisted of 2078 indigenes, 54,984 Japanese, and 144 foreigners. The Japanese government encourages migration to Karafuto.

It is reported that in the principal localities there are more than 438,000 cho (1,073,000 acres) of land suitable for cultivation and pasturage. At the end of 1916, 8088 cho (19,821 acres) were under cultivation. The chief products at present are wheat, buckwheat, barley, oats, peas, rape, potatoes, hay, and vegetables. Karafuto, unlike other parts of the Japanese empire, is heavily forested. The total forest area is stated at 3,352,712 cho (8,216,223 acres): of this, 2,104,462 cho (5,157,237 acres) are under conifers and 473,750 cho (1,150,981 acres) under broad-leaved forest; the remainder consists of mixed conifer and broad-leaved forest (361,898 cho) and thinly stocked and blank areas (412,602 cho). Most abundant among the conifers are fir (todo-matsu), spruce (ezomatsu), and larch (Karafuto-rakuyosho). Important among the broad-leaved trees are white birch and elm. The government has begun the

exploitation of these forests. The fir and spruce are suitable for building and industrial purposes and also for the manufacture of wood pulp. About 40,000 tons of pulp are produced annually, and it is expected that new manufacturing in the near future will increase the output to 100,000 tons. Broad-leaved trees are utilized in the production of charcoal, wood tar, calcium, acetate, and betulin oil. The principal mining product of Karafuto is coal, next to which come alluvial gold, petroleum, and iron pyrites. An important industry at present is herring fishing. In 1913, imports were valued at 5,202,605 yen, and exports at 4,371,970 yen; in 1914, 4,756,603 and 4,604,365.

Revenue and expenditure in the fiscal year 1914-15 were 2,265,224 and 2,073,933 yen respectively. For 1916-17, the budget balanced at 2,218,559 yen; for 1917-18, estimated revenue, 2,692,728 yen and estimated expenditure, 2,437,452 yen.

**KATTE, WALTER.** An American civil engineer, died in New York City, March 4, 1917. He was born in 1830 in London, England, was educated there at King's College School and in an engineer's office, and came to the United States in 1849, soon afterward entering railway service. The years 1857-58 he spent as resident engineer of State canals in Pennsylvania. During 1861-62 he was in the service of the United States Military Railroad and Telegraph Department as constructing engineer (with rank of colonel) of military bridges and railroads in Maryland, the District of Columbia, and Virginia. Between 1865 and 1875 he was engineer, secretary, and general western agent for the Keystone Bridge Company of Pittsburgh, and he spent four years supervising the construction of the Eads steel arch bridge across the Mississippi at St. Louis. As first chief engineer of the New York Elevated Railroad, Col. Katte helped build the Second Avenue and Ninth Avenue lines in 1877-80. During the next six years he had charge of the construction of the West Shore road, and from 1886 till his retirement in 1899 he was chief engineer of the New York Central and subsidiary lines. Of the Western Society of Engineers, which he helped to found, he was made an honorary member, and he was prominent in London engineering circles. His son, Edwin B. Katte, became noted as an electrical engineer and traction expert.

**KENTUCKY. POPULATION.** The population of the State in 1910 was 2,289,905, and on July 1, 1917, it was estimated to be 2,394,093.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. Bu.	Value
Corn ... 1917	3,900,000	122,850,000	\$148,648,000
1916	3,400,000	95,200,000	82,824,000
Wheat .. 1917	750,000	9,000,000	19,080,000
1916	890,000	8,010,000	13,297,000
Oats .... 1917	310,000	8,060,000	6,126,000
1916	300,000	6,300,000	3,780,000
Potatoes . 1917	70,000	6,720,000	9,408,000
1916	49,000	4,116,000	5,845,000
Hay ..... 1917	975,000	a 1,268,000	25,740,000
1916	1,080,000	1,512,000	19,051,000
Tobacco . 1917	474,000 b	426,600,000	96,838,000
1916	484,000	435,600,000	55,321,000

a Tons. b Pounds.

1917-14

**MINERAL PRODUCTION.** The coal production of the State in 1916 was 25,393,997 tons, valued at \$30,193,047, an increase compared with 1915 of 4,032,323 tons, or 19 per cent in quantity, and of \$8,699,039, or 40.5 per cent in value. The chief increase was in the eastern part of the State, and was largely in the by-product and gas coals, but it was shared by the domestic and steam coals also. The production of lead and zinc in 1916 was valued at \$314,842 compared with \$213,066 in 1915. The shipments of galena concentrates amounted to 227 tons, valued at \$18,868, compared with 370 tons valued at \$17,103 in 1916. There were also shipped in 1916, 3048 tons of zinc concentrates, valued at \$132,282, compared with 2172 tons in 1915 valued at \$106,079. The output of petroleum in 1916 was 1,202,569 barrels valued at \$2,188,295, compared with 437,274 barrels in 1915, valued at \$418,357, increase of 175 per cent in quantity and 423 per cent in value.

**RAILWAYS.** The total railway mileage in the State in 1916 was 4027.

**FINANCE.** The report of the State treasurer shows a balance in the treasury on July 1, 1916, of \$1,070,214. The receipts of the year amounted to \$9,251,168, and the disbursements, \$9,121,154, leaving a balance in the treasury on June 30, 1917, of \$1,200,229.

**EDUCATION.** The total school population in 1917 was 740,576. The enrollment in the public schools was 555,568, with the average daily attendance of 344,112. There were 4621 male teachers and 8852 female teachers. The average monthly salary of teachers in the rural schools was \$42.42.

The total expenditure for school purposes during the year was \$142,484.

**CHARITIES AND CORRECTIONS.** The State Board of Control administers the charities and corrections. These include the Eastern State Hospital at Lexington, Central State Hospital at Lakeland, Western State Hospital at Hopkinsville, and the Feeble-minded Institute at Frankfort.

**POLITICS AND GOVERNMENT.** Early in January, a mob attempted to lynch a negro accused of murder, near the village of Murray. Their efforts were frustrated by Judge Bush, and by State Attorney Smith, who called out a large force of deputy-sheriffs. The mob, in revenge, attempted to blow up the hotel at which the judge and attorney were staying. As soon as Governor Stanley had been informed of the trouble, he chartered a special train, and reached Murray on January 11. After appealing to the people, to support the laws of the State, he succeeded in quieting the mob.

On November 5, the United States Supreme Court handed down a decision declaring a race segregation ordinance, passed by the Louisville city government in 1914, unconstitutional. This ordinance forbade persons of either the white or black race from moving into resident blocks in which the majority of the inhabitants were of the opposite color. The court admitted the law providing for race segregation in public conveyances had been upheld, provided that equal facilities were given to both races; but denied that the case in question was a parallel one. Other cities in the South have passed similar laws and this decision has the effect of nullifying these also. At the election of November 6, 1917, there was no candidate in oppo-

sition to Charles Morris, Democrat, for Attorney-General. In Louisville, George W. Smith, R., was elected mayor over Charles H. Cronan, D.

**STATE OFFICERS.** Governor, Augustus O. Stanley; Lieutenant-Governor, James D. Black; Secretary of State, James P. Lewis; Treasurer, Sherman Goodpaster; Auditor, Robert L. Greene; Attorney-General, Charles Morris; Superintendent of Education, V. O. Gilbert; Commissioner of Agriculture, M. S. Cohen—all Democrats except Lewis, Republican.

**JUDICIARY.** Court of Appeals: Chief Justice, Warner E. Settle; Associate Justices, Shackelford Miller, F. D. Simpson, John D. Carroll, Ernest Clarke, Gus Thomas, Rollin Hurt; Commissioner of Appeals, W. R. Clay; Clerk, R. W. Keenan.

**STATE LEGISLATURE.** Joint ballot: Dema., 86; Reps., 53. Constitutional amendment won by 19,778 votes.

**KENTUCKY, UNIVERSITY OF.** A co-educational State institution of learning at Lexington, Ky. In the fall of 1917 there were 734 students and 78 members of the faculty; 110 students were in government service in 1917 and 8 members of the faculty. Volumes in the library numbered 33,869. The university was founded in 1866. In 1917 Frank L. McVey was elected president to succeed Henry Stites Barker, and Thomas P. Cooper was elected dean of agriculture and director of the experiment station.

**KERENSKY, ALEXANDER.** Former premier and dictator of Russia. He was also president for a short time of the Russian Republic set up by the revolution. His rise to power was very rapid. Before the overthrow of the czar he was scarcely known outside of a small group of the Labor party in Petrograd. Kerenksky was born at Simbirsk, where his father was the principal of a high school. He was educated in that town and at Tashkent, later being graduated from the University of Petrograd in law. After his graduation he became assistant to the commissioner of oaths at Petrograd and later held the office himself. As a lawyer he specialized in political prosecutions, taking the cases of persons who had been imprisoned for violation of the autocratic rules of the Russian government. His pleas attracted attention to him, and as a result of this local fame he was elected to the Fourth Duma. He became a leader of that body chiefly on account of his ability as an orator. He was in close touch with the revolutionary workmen, who in March began to feel the hunger caused by the inefficiency of the Russian transportation system. For an account of his activities during the course of the Russian Revolution, see *RUSSIA, History, and WAR OF THE NATIONS, Military Operations*.

**KERN, JOHN WORTH.** An American statesman and lawyer, born at Alto, Ind., on December 20, 1849; died on August 17, 1917. His parents moved to Iowa when he was a small child and they lived the usual life of a pioneer. He attended the local schools of Kokomo, Ind., and was graduated from the law school of the University of Michigan in 1869. He was admitted to the bar in the same year, and almost immediately began an active participation in Democratic politics, although the county in which he lived was a Republican

stronghold. He was a candidate for the State Legislature before he was twenty-one years old. Later he became city attorney for Kokomo for six terms. In 1884 he was elected reporter of the Supreme Court of Indiana and served four years. For more than twenty-five years he took part in every State and national campaign in Indiana and his services as a speaker were in great demand. In 1892 he became a member of the State Senate, where he served for years and where he became the leader of his party.

In 1900 he was chosen Democratic candidate for governor, but was defeated by Col. W. T. Durbin. In 1904 he was again defeated for the governorship. In 1905 he received the vote of his party for United States senator. In 1908 he received the Democratic nomination for the vice-presidency, in which year he ran with William Jennings Bryan. His friendship with Bryan began in 1896, when, after opposing free silver, Mr. Kern accepted the decision of the Democratic convention. From that time he was a Bryan man in all the fights in his party. In 1909 he was a candidate for the United States senatorship, but the Democrats nominated B. F. Shively on a secret ballot. In 1911, his party having gained control of the legislature, he was nominated and elected to the United States Senate and served until 1917. The unsuccessful Republican nominee was Beveridge. In the Democratic national convention of 1912 he represented Indiana as a delegate and at first supported Marshall, but finally came out for President Wilson. In 1913, when the Democrats got control of the Senate he became floor leader and filled the position with a great deal of ability.

**KIAOCHOW.** A German protectorate on the east coast of the Chinese province of Shantung. The area, exclusive of the bay, is 213 square miles. The population, as stated by the German authorities before the great war, was about 195,000, including about 187,000 Chinese and (January 1, 1913) 4470 whites, of whom 4256 German. In 1915, Japanese residents, exclusive of the military, numbered about 9300. The port and chief town is Tsingtao. Kiaochow was seized by Germany in November, 1897; leased by Germany from China for 99 years from March 6, 1898, and declared a German protectorate April 27, 1898. On August 27, 1914, Japan began the blockade of Tsingtao, which surrendered to Japanese and British forces on November 7 following. Kiaochow has since been administered by the Japanese.

Imports and exports (including hinterland trade passing through Tsingtao) were valued at 121,254,000 and 79,640,000 marks respectively in the year ended September 30, 1913.

In the over-sea trade, imports and exports in 1915 were valued at \$2,620,242 and \$1,998,092 respectively; in 1916, \$11,808,815 and \$13,547,355. In 1916, imports from Japan amounted to about 78 per cent of the total, and exports thereto to about 95 per cent.

The principal imports include cotton, cotton piece goods, cotton yarn, metals, paper, sugar, and matches. The larger exports in 1913 were: straw braid, 17,590,000 marks; peanuts, 11,382,000; Shantung pongees, 8,009,000; yellow silk, 7,507,000; peanut oil, 7,187,000; raw cotton, 5,612,000. The Shantung Railway, with 270 miles of track, extends from Tsingtao to Tai-

nan, capital of Shantung, with a branch from Changting to Poshan.

**KITCHIN, CLAUDE.** See UNITED STATES, Congress.

**KNEISEL QUARTET.** See MUSIC, Chamber-Music.

**KOCHER, THEODORE.** Dr. Theodore Kocher, a famous Swiss surgeon, who won the Nobel Prize for Medicine in 1909, died at Berne on August 1, 1917. He studied medicine at Berne and surgery at Berlin, Paris, and London. He became connected with the university at Berne after 1866, and in 1872 became director and professor of the surgical clinic. Dr. Kocher was the first surgeon, it is said, to operate successfully for goitre. He had hundreds of patients from all parts of the world, among them American tourists who visited Berne before the war. Dr. Kocher's treatment for goitre consisted in withdrawing from functional activity part of the thyroid gland in the neck. This was accomplished by removing the lobes of the gland or by tying off its blood supply. In 800 cases of exophthalmic goitre treated it was reported that 70 per cent had been cured. His later work included transplanting the thyroid gland, study of cancer of the thyroid, and curability of cancer of the stomach; he also described tumors of the hypophysis (pineal gland) and the prevention of cretinism. At the outbreak of the European War Dr. Kocher presented the European armies with a preparation which he called "coagulum," the results of his own study. It was to be carried by the soldier to stop the flow of blood when wounded. He wrote: *Die antiseptische Wundbehandlung; Vorlesungen über chirurgische Infektionskrankheiten*, with Tavel; *Encyklopädie der Chirurgie*, with Quervain. His *Chirurgische Operationslehre*, which is to be had in English as *Textbook of Operative Surgery*, is considered one of the most authoritative books on the subject.

**KOREA, or CHOSEN.** A Japanese dependency in eastern Asia, occupying the peninsula between the Yellow Sea and the Sea of Japan. Formerly it was an independent monarchy. The Japanese established a protectorate over Korea March 2, 1906, and annexed the country August 29, 1910. The capital is Seoul.

**AREA AND POPULATION.** As officially stated, the area is 14,123 square ri (217,826 square kilometres, or 84,103 square miles). This area is about equivalent to the combined extent of Pennsylvania, Delaware, Maryland, and West Virginia. The population, as calculated for December 31, was 16,913,224 in 1916 (8,768,846 males, 8,144,378 females), as compared with 16,414,232 in 1915 and 15,929,962 in 1914. The population as calculated for the end of 1914 consisted of 15,620,720 Koreans, 291,217 Japanese, and 18,025 foreigners (16,380 males, 1666 females). Most of the foreign residents are Chinese. Seoul has about 300,000 inhabitants.

**EDUCATION.** Study of the Chinese classics and of the Confucian system of ethics, which formerly was an essential in the education of the upper classes, is being superseded under Japanese influence by more utilitarian instruction. Aside from ancestor worship, which is observed punctiliously, religion has small hold on the mass of the people, although the country has numerous Buddhist monasteries. Christian missions have made noteworthy progress; there are over 250 Protestant (British and American) and

60 Roman Catholic missionaries. Schools in 1915: Japanese: primary, 285 schools, with 952 teachers and 28,179 pupils; other schools, 19, with 195 teachers and 2581 pupils;—native: 404 public schools, with 1820 teachers and 53,019 pupils; other schools for natives, 1230, with 3095 teachers and 56,436 pupils. There are several technical and industrial schools. All schools, including those of the missions, are under control of the Department of Education.

**PRODUCTION.** Korea is almost wholly an agricultural country, but farming methods are primitive and transportation facilities inadequate. The fields are usually cultivated on a small scale and are owned by the richer classes. The staple product is rice, followed by wheat, millet, barley, soy beans, peas, and red beans. Other products are cotton, tobacco, hemp, and ginseng. The reported area under rice in 1914 was 1,079,341 cho (1 cho = 2.45062 acres); wheat, 729,921; millet, 473,082; various peas, 425,455. Production in 1914 included: rice, 12,159,167 koku (1 koku = 5.119 bushels U. S.); wheat, 6,450,080; millet, 3,212,467; various peas, 2,462,613; cotton, 5,779,765 kwan (1 kwan = 8.26733 pounds, or 3.75 kilograms); hemp, 6,122,520 kwan; tobacco, 872,340 kwan. Sericulture, in consequence of official encouragement, is extending. Live stock as reported for the end of 1914: cattle, 1,338,401; horses, 52,545; goats, 11,610; swine, 757,803. Value of fisheries products in 1915, 13,200,442 yen, as compared with 12,061,685 in 1914 and 7,871,910 in 1910. The mineral output was valued at 8,110,412 yen in 1913 and 8,398,458 yen in 1914;—gold output in 1914, 6,064,318 yen; silver, 18,712; coal, 739,791. Gold mining has been carried on mainly by Europeans and Americans, but the mining of gold and other minerals has been begun by Japanese. The principal industrial products of Korea are textile fabrics, paper, pottery, metal wares, tobacco manufactures, brewed drinks, and leather. These goods for the most part are the output of subsidiary house industries and are insufficient to meet the domestic demand.

**COMMERCE.** Imports and exports of merchandise were valued at 74,456,805 yen and 56,801,934 yen in 1916, as compared with 59,199,357 and 49,492,325 in 1915. In thousands of yen, imports and exports of merchandise and of coin and bullion have been as follows:

	1912	1913	1914	1915	1916
<i>Mdse.:</i>					
Imports ..	67,115	71,580	63,231	59,199	74,457
Exports ..	20,988	30,879	34,389	49,492	56,802
<i>Coin and bullion:</i>					
Imports ..	1,478	202	304	813	1,636
Exports ..	10,124	10,844	10,825	11,764	16,121

Leading imports in 1915 and 1916, in thousands of yen: sheeting, shirtings, and Japanese cotton piece goods, 10,292 and 12,768; cotton yarn, 2403 and 2976; kerosene, 1702 and 2337; machinery, 1223 and 2026; paper, 1504 and 1971; coal and coke, 1810 and 1947; sugar, 1541 and 1899; grass cloths, 1185 and 1663; timber and planks, 1437 and 1328; wheat flour, 684 and 865.

Leading exports in 1915 and 1916, in thousands of yen: rice, 24,517 and 19,357; beans, 5328 and 6357; cattle hides, 3539 and 3574; raw and ginned cotton, 1158 and 1260; fish, 897 and 1349; red ginseng, 1235 and 1273; gold

ore, 930 and 1044; iron ore, 502 and 569; live stock, 338 and 436; barley and wheat, 146 and 429.

Imports and exports of merchandise by countries, in thousands of yen:

	Imports		Exports	
	1915	1916	1915	1916
Japan .....	41,535	52,459	40,901	42,964
China .....	8,022	9,565	5,599	8,062

**COMMUNICATION.** The Korean railways are owned and controlled by the state. The first railway in Korea, the Seoul-Inchyon line, was opened in 1900, and the lines from Seoul to Fusan and Wiju were completed in 1904 and 1906 respectively. The length open to traffic in 1910, the year of the annexation, was 640 miles; this had increased to 1066 miles in 1917. The bridge over the Yalu River at Antung (Manchuria) was completed in 1911. The Seoul-Antung line (which connects with the Manchurian railway system) and the Seoul-Fusan line form a trunk line 558 miles long traversing the length of the peninsula. Branch lines connect with important coast towns. The railways are of standard gauge. The trunk line forms part of the shortest route between Europe and the Far East.

In 1917, there were 610 telegraph offices, with 4866 miles of line and 14,144 miles of wire, as compared with 7736 miles in 1910. Post offices in 1910, 438; in 1917, 526.

**FINANCE.** The monetary unit is the Japanese yen; its par value is 49.846 cents. Revenue and expenditure in the fiscal year 1915 amounted to 62,047,661 yen and 55,099,835 yen respectively (ordinary 35,692,238 and 32,277,750). The budget for the fiscal year 1917 balanced at 59,848,998 yen. For the fiscal year 1918, the estimated revenue was 62,589,309 yen (ordinary 44,518,346) and the estimated expenditure, 62,562,277 yen (ordinary 38,982,032). The larger estimated ordinary receipts for the fiscal year 1918 were: receipts from railways, 10,807,266 yen; land tax, 9,916,011; customs duties, 4,371,990; receipts from ports, telegraphs, and telephones, 3,909,113; receipts from Pyeng-yang mining station, 1,705,220; liquor tax, 1,135,763. Total receipts from taxes were estimated at 18,088,790 yen, and from government enterprise and state property at 21,684,977 yen. Extraordinary estimated revenue consisted of 13,070,963 yen proceeds of loans and 5,000,000 yen national treasury grant. The finances of Korea had long been in a confused state when, as a result of the agreement with Japan in 1904, a financial adviser, recommended by the Japanese government, entered upon his duties and opened the way for financial adjustment. Upon the conclusion of a new agreement with Japan in 1907, the resident-general was appointed to act as the representative of the Japanese government and assumed the duty of guiding and protecting the country. The work of administrative reform made rapid progress, and, especially in respect of finance and economy, the various systems which had given rise to evil practices and prevented the growth of industry were replaced.

In August, 1910, the Japanese and Korean governments concluded the treaty of annexation with the object of promoting the welfare of the nation and consolidating the basis of peace in the Orient. The Japanese government appointed a governor-general of the country, which then assumed the name of Chosen, to take general control of all administrative affairs.

**KORNILOFF, L. G.** A former general in the Russian army. He was born on June 30, 1870, in a village of western Siberia, of Cossack parents. By unusual energy and self-denial he was able to enter the Cadet Corps at the age of thirteen, and obtained a commission in 1892. He went to Turkestan, returned to the Staff College in 1895, and, after graduating with the highest honors, returned to Turkestan. During 1896-1902 he carried out a number of perilous missions in Afghanistan and Persia. Commanding a brigade in the Russo-Japanese War, he was conspicuous for military talent and joined the Russian General Staff at the end of the war. In 1907-11 he was military attaché at Peking, after which he was put in command of the Trans-Amur frontier force. At the beginning of the great war he was in command of the Forty-Eighth division. His remarkable ability and energy in the Russian campaign in Galicia made his name known throughout the world. In August, 1917, he was made commander-in-chief of the Russian army, but accepted the position only on the condition of being allowed to restore the fighting efficiency of the army by stern discipline. It was over this question that he later broke with Kerensky at the Moscow Conference. The general maintained that the morale and discipline of the army could only be restored by the reestablishment of the extreme penalties for cowardice and treason at the front. For an account of his abortive attempt to overthrow the Kerensky government and his subsequent career in Russia see *RUSSIA, History*.

**KREISLER, FRITZ.** See *MUSIC, Artists, Instrumentalists*; also section *Chamber Music*.

**KUNWALD, ERNST.** See *MUSIC, Orchestras*.

**KURDISTAN.** A region lying southeast of Armenia, partly in Persia, but mostly in Turkey. Kurdistan has no definite boundaries, but its area is estimated at about 74,000 square miles and its population at about 3,000,000. Roughly, four-fifths of the inhabitants are Kurds, Mohammedan nomads who often pillage and massacre the Armenian Christians. Turkish Kurdistan is included in the division known as Armenia and Kurdistan.

**KUSTENLAND.** See *COASTLAND*.

**KWANGCHOW-WAN.** A territory on the coast of the Chinese province of Kwantung, leased by China to France for 99 years from April 11, 1898; in 1899 two islands in the bay were included in the lease. It forms a division of French Indo-China. The area is stated at 1000 square kilometres. The population in 1911 was about 158,881. The budget for 1917 balanced at 429,700 piasters.

**KWANTUNG, or KWANTO.** A Japanese leasehold in the southern part of the Liaotung Peninsula, Manchuria. According to the *Financial and Economic Annual of Japan*, a government publication, the area, including adjacent islands, is about 219 square ri (1804 square miles). The same authority states that the population actually domiciled in Kwantung was 555,104 at the end of 1916 (313,487 males,

241,617 females), including 502,369 Chinese and 52,640 Japanese. The total area under cultivation at the end of 1916 was 90,064 cho (220,714 acres); the principal crops include corn, millet, rice and other cereals, beans, and various vegetables. Marine salt is produced, in 1916 483,339 koku (2,474,222 bushels U. S.). The most promising manufactures are bean oil, bean cake, cement, brick, lime, and glass. In accordance with an agreement concluded in June, 1907, between China and Japan, Kwantung has formed, since July 1 of that year, a district under the Chinese Maritime Customs, with a custom house at Dairen (formerly Dalny). In 1914, imports and exports were valued at 48,939,830 yen and 58,538,013 respectively; in 1916, 76,519,416 yen and 84,138,928 yen. In 1916, imports from and exports to Japan were 40,867,250 and 42,513,898 yen respectively; China, 26,925,586 and 23,303,958. There are about 80 miles of railway in operation, connecting Ryojun (formerly Port Arthur) and Dairen with the Manchurian systems. For the fiscal year 1917-18, the budget balanced at 4,702,796 yen; in addition, the budget of the local expense account balanced at 2,944,416 yen. The leasehold, which the Japanese call "the leased territory of Kwanto" and also "Kwanto Province," is administered by a governor-general, resident at Ryojun.

**LABOR.** During 1917 there was no cessation of the improvement of the wages and hours of labor in the United States which had marked the other years of the war. While the money income of labor was therefore substantially greater than ever before its material condition probably was not improved because the advances of the prices of foods and fundamental necessities were proportionately greater than advances in wages (see PRICES). In other industrial countries a similar condition prevailed. Abroad as at home there was a relative scarcity of labor; unemployment (q.v.) was reduced to the inevitable minimum due to sickness, delays in materials, and the shifting of labor; wages were advancing, but advances were more than offset by the rising cost of living. In the United States the agitations of the extreme radicals were somewhat more conspicuous than before the war (see INDUSTRIAL WORKERS OF THE WORLD). Strikes and lockouts (q.v.) were numerous but none was spectacular; yet considerable advance was made by public opinion with reference to plans of arbitration and conciliation (q.v.). The agitation for social insurance (q.v.) was extensive but gathered little momentum owing to the pressure of war interests. The same was true of the movement for the establishment of a legal minimum wage (q.v.) and pensions for mothers (q.v.). See also LABOR LEGISLATION, AMERICAN ASSOCIATION FOR; OCCUPATIONAL DISEASES; OLD AGE PENSIONS; TRADE UNIONS; UNEMPLOYMENT; WORKMEN'S COMPENSATION. Matter of interest in connection with labor problems will also be found under CHILD LABOR; LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION; PRICES; and WOMEN IN INDUSTRY.

**UNITED STATES.** An indication of the tendencies of the labor situation in the United States is given by data prepared by the Bureau of Labor Statistics comparing the number employed and the amount of pay roll in various fundamental industries from January,

1915, to August, 1917. From these tables it appeared that the increase in the number on the pay rolls in January, 1917, as compared with January, 1915, was 23 per cent for boots and shoes; 17 per cent for cotton finishing; 22 per cent for wool manufacturing; 23 per cent for hosiery and underwear; 9 per cent for silk; and 64 per cent for iron and steel. From January to August, 1917, there was some decrease in the numbers on the pay rolls for all of these industries except iron and steel. The increase in per capita earnings from January, 1915, to August, 1917, was 39 per cent for boots and shoes; 35 per cent for cotton manufacturing; 45 per cent for woolen manufacturing; 35 per cent for hosiery and underwear; 28 per cent for silk; and 64 per cent for iron and steel. The year 1917 was particularly notable for extensive increases in wages. The movement toward the eight-hour day was unchecked by the pressure of war work. In its *Monthly Review* (September) the bureau stated that during the first six months of 1917 the hours of labor had been reduced to eight per day for over 537,000 employees in a limited number of establishments. These did not include the 400,000 railway men affected by the Adamson Law. Most of them were in Pennsylvania, New York, Connecticut, Ohio, Illinois, and Massachusetts. See for other phases of labor developments in the United States the cross references given above.

**FRANCE.** Various aspects of the industrial changes in France since the war began are indicated by a report issued in April indicating the number of establishments in various lines in operation and the number of their employees. The report was based on an investigation of 44,860 establishments which, under normal conditions, had employed 1,512,000 persons. It was found that of the total number of establishments only 52 per cent were in operation in August, 1914; 68 per cent in January, 1915; 84 per cent in January, 1916, and 89 per cent in January, 1917. On the latter date the percentages for number of establishments ranged from 55 for precious stones to 95 for food preparation and commerce; 97 for storage and transportation, and 98 for leather and hides. As regards number of employees only 35 per cent of the normal number were at work in August, 1914; 56 per cent in January, 1915; 82 per cent in January, 1916; and 98 per cent in January, 1917. When it is understood that on an average 24 per cent of employees were withdrawn by mobilization it is seen that by January, 1917, great numbers of additional employees had been drawn into industry, amounting to 22 per cent of the total. Whereas in January, 1917, rubber, paper, cardboard, printing and binding, textiles, clothing, millinery, etc., precious stones, building trades, porcelain, pottery and glass, and commerce had fewer employees than the normal, the following showed an increase above normal by the percentages indicated: food preparation, 10; chemical, 44; leather and hides, 16; wood working, 7; metal-lurgy, 90; storage and transportation, 23. These additional employees were secured largely by recruiting laborers from Indo-China, other colonies, Algeria, North Africa, China, Italy, Greece, and Portugal. These laborers were imported either under a contract between the state and the laborer, or under contracts between the state and an agent agreeing to secure a group

of colonial recruits. It was estimated that on December 1, 1916, colonial and foreign laborers recruited numbered 191,700. Of these 61 per cent were colonials from Algeria, Tunis, Morocco, and Indo-China, while the remainder were Greeks, Italians, Portuguese, Spaniards, Serbians, and others.

Another indication was the decline in the number of unemployed persons granted benefits from the national unemployment fund. Late in 1914 and early in 1915 their number averaged 183,560 fortnightly. The number dropped continuously to 33,811 for each fortnight from January 2 to November 6, 1917.

GREAT BRITAIN. British industry was marked by a dearth of labor rather than by a problem of unemployment. While the number unemployed was in total apparently considerable this was almost entirely an incidental accompaniment of inevitable industrial changes. Thus the total number on the registers of the 382 British employment exchanges on June 8, 1917, was 127,969. During the next five weeks there were registered a total of 306,863 persons; but there remained on the registers on July 13 only 112,587 persons. In August, 1917, the *Labor Gazette* reported shortages of labor in the following trades: pig iron, iron and steel, cotton, woolen and worsted, jute, linen, silk, carpet, lace, bleaching, dyeing and finishing, tailoring, shirt and collar, other clothing, brick and cement, book binding, paper, glass and food preparation. In addition, overtime was reported in the following trades: engineering, shipbuilding, leather, saw milling and machining, cement, printing and book binding, paper, pottery, and food preparation. In no trade was there more than 10 per cent of unemployment on June 1, 1917, with the exception of diamond workers, 17 per cent, harbor laborers, 47.8 per cent, and seamen, 28.7 per cent.

Progress of the war early showed that the thoroughgoing coöperation of labor was essential to military success. The traditional opposition of labor and capital resulting in frequent interruption in industry and in the adoption by labor of policies designed to reduce output and spread employment seriously handicapped the nation in its titanic struggle for existence. Consequently, in 1915, a truce was brought about between employers and organized labor, and the Munitions War Act established the principle of compulsory arbitration in all industries relating to military needs and gave the Ministry of Munitions extensive authority of regulating the employment of labor. Gradually waste was eliminated and order and efficiency increased. Industries not essential to war purposes ceased to exist. Employers seeking to entice labor from other industries were made liable to heavy penalty; as were also employers found to be using their labor in uneconomic ways, such as holding labor for future contracts or employing skilled men in positions suitable for unskilled men. The limitation of profits to the level of the two years preceding the war was accompanied by the fixing of wages at existing rates with only such modifications as were made necessary by the increase in the cost of living. Such increases may be authorized by the Committee on Production of the Munitions Ministry, which holds hearings three times a year, collects all available statistical and other information, and awards increases of wages in the nature of war bonuses.

Such increases are paid ultimately by the Government. Strikes and lockouts have been illegal; arbitration has been compulsory; and persons inciting to strikes or interfering with the new arrangements are liable to imprisonment for life. In view of the agreement of trade unions to suspend numerous practices for securing advantages for organized labor the Government pledged itself to restore pre-war conditions when the war ceases. This latter agreement occasioned considerable discussion in 1917 because numerous writers believed that, instead of re-establishing such conditions as existed before the war, the entire status of labor should be put on a new and higher basis than previously existed. Serious strikes were unknown in 1917, but there were occasional slight interruptions owing to misunderstanding over questions of the shifting of labor and the substitution of women workers. There were no strikes for higher wages because of the new readjustment of wage rates. Moreover, the Committee on Health of Munition Workers gave such extensive attention to hours and sanitary conditions not only for women and children but for all workers that there was throughout the year a steady improvement in health and productivity.

Much attention has been paid since the middle of 1915 to the problem of the most efficient length of the working day. It was early discovered that not only were women and children being worked too long from the standpoint of maximum production, but that in a great many cases adult men also were having their gross productivity reduced by long hours, much overtime, and the lack of Sunday holidays. A report of the Health of Munitions Workers' Committee, issued in 1917 and dealing with this problem, showed for example that a group of women working 66.2 hours per week increased their output per hour by 34 per cent when the hours per week were reduced to 54.8; and their weekly output was increased by 11 per cent. When the hours of these women were further reduced to 45.6 per week, the hourly production was increased to 58 per cent over the original (66.2 hour week) production while their total weekly product was still 9 per cent more than for the longer week. A group of men improved their hourly output 37 per cent and their total weekly output 21 per cent when working 51 hours as compared with 58 hours per week. In other ways it was shown that reduction of hours showed advantages, as, in improvement of quality, reduction of accidents, reduction of waste, and reduction of loss of time through sickness.

Under an order of the Local Government Board, issued in August, agricultural executive committees previously brought into existence in connection with the campaign to increase domestic food production were authorized under certain circumstances to exempt men from military service and retain them in work on the soil.

**LABOR, AMERICAN FEDERATION OF.** Founded in 1881, this organization has become the largest and most important body of organized labor in the world. At its annual meeting at Buffalo in November it reported a total paid membership of 2,371,434, an increase of nearly 300,000, in one year. It comprised about 22,000 local unions grouped under about 110 national and international (United States and Canada) unions. The federation comprises five major departments, building, metal, mining, union labor, and railroads. It maintained in the field nearly 1800 organizers.

The importance of the federation as the representative of labor was repeatedly emphasized during the year. President Gompers was an important member of committees of the Council of National Defense; its first vice-president, Mr. James Duncan, was a member of the United States Commission to the Russian People; numerous of its officers were influential in settling disputes in industry and otherwise aiding in preserving industrial efficiency.

The Buffalo convention voted to hold the annual meetings hereafter in June instead of November. The 1918 meeting will be held at St. Paul, Minn. The dominant note of the 1917 convention was loyalty to the government in war time. This was in harmony with the policy which President Gompers and the executive council had carried out by entering into close co-operation with the Council of National Defense and the executive departments of the government. Partly to enlist the enthusiastic support of the organization President Wilson made a special trip and address to the convention. In consequence, many of the internal disputes were forgotten. In the convention of the Building Trades' Department preceding that of the federation it was voted to exclude disputes over jurisdictional matters during the war. In case of such a dispute the presidents of the two international unions involved should be notified and endeavor to reach an agreement; if they failed the matter was to be referred to the Building Trades' Department. Similarly the coal miners agreed to cooperate with the Fuel Administrator, Harry A. Garfield, who had shortly before secured an agreement whereby the wages of miners might be increased, but whereby a penalty for either strike or lockout might be enforced. This agreement was made with the United Mine

Workers. Another indication of the loyalty of the membership was the endorsement of the American Alliance for Labor and Democracy organized by President Gompers to offset the activities of the Peoples' Council. Every single act of the president and executive council in connection with the war was unanimously approved without discussion. A resolution favoring the conscription of aliens in this country was overwhelmingly approved.

Other resolutions favored the extension of the Adamson Law to all railway employees; urged a Federal eight-hour law for women and children; attacked Postmaster General Burleson for his "autocratic" attitude toward the unions of postal employees; refused a national charter for stenographers and office workers; endorsed woman suffrage and approved the Federal suffrage amendment; demanded for women the same pay as men when doing the same work; accused the postmaster-general of suppressing papers devoted to the interests of labor, contrary to the constitution. A special organizer to work among southern negroes was authorized.

A most important feature of the year's activities was the report of a special committee on co-operation. This endorsed the well-known Rochdale plan of co-operation and proposed that a "qualified trade unionist cooperator be appointed to serve one year as lecturer and adviser on the practical work of Rochdale co-operation." Every local union was requested to contribute one dollar for this cause. An unexpected event was the election of Daniel J. Tobin, president of the Teamsters' Union, as treasurer of the organization, to succeed John B. Lennon, who had held that position for twenty-eight years. All other previous officers were reelected.

The most important expression of opinion by the convention related to terms of peace. The executive council declared that "adequate and direct representatives of the wage earners among the plenipotentiaries must be sent to the peace congress"; and offered "the following declarations as the basis on which peace must be negotiated: 1. The combination of the free peoples of the world in a common covenant for genuine and practical co-operation to secure justice and therefore peace in relations between nations. 2. Governments derive their just power from the consent of the governed. 3. No political or economic restrictions meant to benefit some nations and to cripple or embarrass others. 4. No indemnities or reprisals based upon vindictive purposes or deliberate desire to injure, but to right manifest wrongs. 5. Recognition of the rights of small nations and of the principle 'no people must be forced under sovereignty under which it does not wish to live.' 6. No territorial changes or adjustment of power except in furtherance of the welfare of the peoples affected and in furtherance of world peace. In addition to these basic principles, which are based upon declarations of our President of these United States, there should be incorporated in the treaty that shall constitute the guide of nations in the new period and conditions into which we enter at the close of the war the following declarations, fundamental to the best interests of all nations and of vital importance to wage-earners: 1. No article or commodity shall be shipped or delivered in international commerce in the production of which

children under the age of sixteen have been employed or permitted to work. 2. It shall be declared that the basic workday in industry and commerce shall not exceed eight hours. 3. Involuntary servitude shall not exist except as a punishment for crime whereof the party shall have been duly convicted. 4. Establishment of trial by jury." These resolutions were approved by the convention.

**INTERNATIONAL RELATIONS.** Recent years have seen a growing tendency on the part of the federation to cultivate the relations of European, South American, and Japanese organized labor. In accordance with a vote of the 1916 convention, the executive committee issued a manifesto on February 9 creating the Pan-American Federation of Labor Conference Committee. It was given an office in the Federation Building in Washington. Its purpose was to prepare the way for a conference of organized labor of Canada, United States, Mexico, and South American Republics in the near future. The manifesto called attention to the following items as the essential features of the organized labor programme in all countries: higher wages; shorter work days; more safe and sanitary conditions; better homes, and surroundings; prohibition of child labor; and laws to secure the rights of association, free assemblage, free speech, free press, and the right to strike. In similar tone there was an exchange of felicities between the federation and organized labor in Japan. The federation also sought in various ways to strengthen the loyalty of organized labor in France and England, and to preserve the fighting capacity of Russian labor.

**LABOR EXCHANGES.** See UNEMPLOYMENT.

**LABORI, FERNAND GUSTAVE GASTON.** A French criminal lawyer, died in Paris, March 14, 1917. He was born in Rheims in 1860, and at twenty-four was admitted to the bar in Paris. Almost from that time he began to attract attention by his eloquent pleas in criminal trials. He was able to sway not only the public, but judge and jury as well, and he participated in many a sensational court scene. He served as counsel for the defense in most of the political trials held during his period at the bar. But he was famous chiefly because of his important relation to the Dreyfus case. Labori was retained as counsel by Emile Zola, after the novelist had written (1898) the open letter *J'accuse*, which eventually secured a new trial for Dreyfus in 1899, and then he took up the cause before the Rennes court-martial. His brilliant conduct of the case, and especially his cross examinations, made him a leading figure, hated as much as Dreyfus by the anti-Semites and army officers. During the trial he was shot in the back by an assassin, an act that roused high resentment on both sides of the Atlantic and even brought a message of sympathy from the American Bar Association. Maître Labori returned to the trial, with the bullet still in his body, and accomplished a modification of the original sentence, but he did not cease his efforts till Dreyfus was thoroughly cleared of the charge of selling military secrets to a foreign power. He was afterward prominent in political life, till 1909, serving as deputy. In 1911 he received the highest honor in his profession in France, election to the presidency of the Paris Society of Barristers. In 1913 he visited the United States. In the next year

he successfully defended Madame Caillaux, who, after her husband, the Minister of Finance, had been attacked in the *Figaro* by Gaston Calmette, the editor, murdered Calmette.

**LABOR LEGISLATION.** During 1917 labor laws were enacted by regular legislative sessions in forty-four States, special sessions in twelve States, and two sessions of Congress. Probably the most important legislation dealt with insurance and compensation. Especially is this true of the remarkably liberal provisions of the Federal government for soldiers and sailors, as described under **INSURANCE**, **SOCIAL INSURANCE**; and **WORKMEN'S COMPENSATION**. Other important enactments not stated below will be found under **CHILD LABOR**; **INJUNCTION**; **LABOR**; **MINIMUM WAGE**; **OLD AGE PENSIONS**; **UNEMPLOYMENT**; and **WOMEN IN INDUSTRY**. A complete summary was published in *The American Labor Legislation Review* for September from which the following facts are taken.

**WAGES.** Laws requiring payment of wages twice monthly were enacted in Tennessee applying to all private employments; in New Mexico applying to railroads, mines, and factories; in Nebraska, North Dakota, and West Virginia applying to railroads; and in California and Wisconsin applying to certain public employees. Hereafter wages must be paid in cash or negotiable paper in Illinois, Kansas, Minnesota, New Mexico, and Tennessee. In Maine and Utah assignment of wages hereafter requires the consent of the wife; in Arizona and Florida a wife may collect wages due a deceased husband. In nine States mechanics' lien laws were revised, namely, Arkansas, Delaware, Massachusetts, Montana, North Dakota, Texas, Washington, West Virginia, and Wisconsin. California, Connecticut, and Ohio passed laws requiring contractors engaged on public works to give bond for the payment of labor. Colorado made cheating a person of wages a swindle punishable by fine, or imprisonment, or both. Tennessee prohibited misrepresentation of wages. New Hampshire required a workman in lumbering to return labor for wages paid. California and Ohio forbade persons hiring workmen for another person or firm receiving any consideration, pay, or tip from persons hired, while Michigan and Ohio require hearings for railroad employees before discharge or disciplining. California forbids employers requiring employees to purchase goods from specified persons or places, requires employers to pay costs of necessary bonds or photographs, and public service corporations to furnish letters on discharge.

**TRADE DISPUTES.** California forbade the use of the home defense guard, created for the war, in industrial disputes. Idaho, Minnesota, and Utah defined "criminal syndicalism" and made it punishable. The Idaho law defines this as the doctrine advocating crime, sabotage, violence, or unlawful methods of terrorism for the purpose of accomplishing industrial reform. Advocacy of this doctrine in any way is made severely punishable; as is also knowingly to permit the use of a building for such propaganda. The Minnesota law was quite similar (see **INJUNCTION** for Utah law). New Hampshire prohibited strikes or lockouts in munitions or military supplies factories during the war. Utah directed its new industrial commission to promote voluntary arbitration.

**HOURS.** Montana and Nevada established an

eight-hour day for women in many employments; Nevada permits fifty-six hours per week and exempts harvesting, curing, canning or drying fruits or vegetables, and nursing. Thirteen other States extended their restrictions on hours of women and minors, and Wyoming somewhat reduced her previous limitations. Alaska established a universal eight-hour day for all workers, and Kansas for men in lead and zinc mines. California and Montana extended the scope of their eight-hour laws for public works; Oregon exempted from the eight-hour law labor in municipally owned and operated plants in cities of over 1000. Congress established an eight-hour day for public work in Porto Rico, and authorized the president to suspend the eight-hour day on work done under contract for the government, as a war measure. See section in article LABOR.

**UNEMPLOYMENT.** North Carolina and Oregon authorized investigations of unemployment, and Connecticut of public employment offices. Arizona, Arkansas, Georgia, New Hampshire, North Carolina, South Dakota, and Utah established public employment agencies. Such agencies were extended by Colorado, Illinois (for discharged inmates of prisons and reformatories), Minnesota, New York (requiring separate departments for juveniles in cities of first and second class), and United States (\$250,000 to extend employment activities of Department of Labor for war emergencies). Private employment agencies were regulated by Arkansas, Georgia, Michigan, Nebraska, Oklahoma, Tennessee, and Utah. In general, these laws required the licensing and regulation of fees of such agencies.

Vagrancy laws were enacted in Kansas and Minnesota. These defined vagrants and fixed penalties for vagrancy. Of like purpose were the law of Maryland requiring all able-bodied men, eighteen to fifty, not usefully employed in war time to register and to work in some public or private employment, and that of West Virginia requiring every able-bodied man, sixteen to sixty, to be regularly employed in some useful occupation until six months after peace, or suffer the penalties of vagrancy. In West Virginia the possession of money and property shall be a defense against the applicability of this law.

**SAFETY AND HEALTH.** Laws amending child labor restrictions were enacted in Arkansas, California, Delaware, Illinois, Kansas, Maine, Michigan, New York, Oklahoma, Porto Rico (by Congress), South Carolina, Tennessee, Texas, Utah, Vermont, and Wisconsin. In general, these extended the scope or raised age limits. Michigan created a commission to investigate; California, Texas, and Delaware exempted farming from child labor restrictions. South Carolina raised the age limit from fourteen to sixteen, as did Delaware, Utah, and Vermont. Texas extensively modified its child labor law, fixing a general age limit of fifteen, with seventeen for distilleries, breweries, and certain messenger services.

Many States showed a tendency toward standardization of safety regulations and the granting of discretionary regulatory power to a board or administrative officer. This was clearly done in New Hampshire, Utah, Idaho, and Wyoming. In West Virginia the commissioner of labor was authorized to make safety rules for sand and clay mines, quarries, and cement works. Mon-

tana provided in detail for safety of electrical workers; Washington for coal miners; and Pennsylvania for workers in compressed air.

**THE OREGON TEN-HOUR LAW.** In 1913 Oregon passed a law generally applicable to factory labor limiting such labor to ten hours per day or sixty per week and fixing high wages as penalty for overtime employment. This law was brought before the Oregon courts by F. O. Bunting, who employed a workman in regular factory labor and subsequently sought avoidance of penalty on the ground that the law was unconstitutional. He claimed that the act was not a health regulation but a wage law and resulted in taking property without due process. He did not deny that the State may enact laws for the regulation of health. The State Supreme Court upheld the law on the ground that it was designed to protect the health, well-being, and general welfare of the public and not designed to regulate wages. The United States Supreme Court confirmed this opinion. It held that the fixing of a wage penalty for overtime employment did not make the act a wage law; that a State legislature may at its discretion establish new policies provided these do not exceed constitutional limitations; and that the judgment of the legislature and of the State courts must be given due weight in determining the usefulness or necessity of such legislation.

The importance of this decision is greatly increased by the fact that the United States Supreme Court in the case of *Lochner v. New York* in 1907 had declared by a vote of five to four that a statute fixing a ten-hour day and sixty-hour week for employment in bakeries was unconstitutional. In the *Lochner* opinion the majority had held the New York statute an interference with freedom of contract, while the minority opinion had confirmed the view of the New York court that the law was a proper health regulation. Thus in the case of *Bunting v. Oregon* the Supreme Court in 1917 adopted the view of the minority in 1907; but no reference was made to the *Lochner* case, which is thus superseded.

**FEDERAL EIGHT-HOUR LAW.** In connection with the pressure of war business there was a tendency to break down established restrictions on the length of the working day and to introduce an excessive amount of overtime. A striking instance of this was the suspension of the Federal eight-hour law. On March 24 President Wilson under authority of the Naval Appropriation Act of March 4 suspended the provisions of the act of June, 1912, which limited the hours of daily service of mechanics and laborers on work under contracts to which the United States is a party relating to ordnance and other military supplies, building contracts at arsenals, and contracts for fortifications. On April 28 under authority of the same act the eight-hour law was further suspended in so far as it related to contracts made by the War Department either for the construction of military buildings or on any public work connected with national defense, whether the labor involved was employed directly by government contractors or by agents of the government.

**ADMINISTRATION.** The centralization of labor law administration under a single head was effected in Illinois, Montana, Utah, and Vermont. A commissionership of labor and statistics was created in Wyoming, and a department of agri-

culture and labor in Porto Rico. The classification of mine inspectors was required in New Jersey and Pennsylvania. The inspection of mines by a special inspector was begun in Arkansas and extended in Kansas, Nevada, Ohio, Pennsylvania, Tennessee, and West Virginia. In New Hampshire the regulations of the commissioner of labor and in Utah those of the industrial commission are made subject to review as to validity and reasonableness, in the former State by the commissioner and in the latter by the commission first and then by the courts. The Pennsylvania industrial board is authorized after hearings to modify the law regulating the hours and conditions of women's work, except as to factories; but the maximum number of hours may not be increased. Wyoming created the office of commissioner of labor statistics.

**MEXICO.** The Mexican constitution promulgated February 5 contained many interesting labor provisions. A universal eight-hour day and seven-hour night were established, with a limit of six hours per day for children twelve to sixteen. It was provided that the minimum legal wage should be that considered sufficient, according to conditions in different sections, to satisfy the normal needs of the workman's life, education and recreation, considering him as the head of a family. Equal pay for both sexes and all nationalities was established. Workers in commercial, agricultural, mining, and manufacturing were given the right to share in profits. Minimum wages and the rates of profit-sharing are to be fixed by special commissions for each municipality under direction of a Central Board of Conciliation, to be set up in each state. Overtime is limited to three hours on any one day and to three consecutive days, and must be paid for at double regular wages; no woman and no boy under sixteen may work overtime. Employers are required "to furnish their workmen comfortable and sanitary dwelling places for which they may charge rents not exceeding one-half of 1 per cent per month of the assessed value of the properties." Employers must provide schools and dispensaries, public markets, and other community buildings in labor centres. Both Federal and state governments are committed to the furtherance of old age pensions, sickness, life, unemployment, and other similar insurance plans; and also to the formation of cooperative associations.

The new constitution of the state of Vera Cruz-Llave adopted late in the year contained many provisions similar to the foregoing.

**LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.** This is a branch of the International Association for Labor Legislation and has itself established branches in the important industrial States. It holds annual conferences on leading problems of industry; maintains headquarters at 131 East Twenty-third Street, New York City, with John B. Andrews as secretary, and publishes quarterly the *American Legislation Review*. In 1917 it exerted itself vigorously to check the tendency toward a reduction of industrial safeguards because of the pressure of war business. It declared that war time made more rather than less necessary the protection of labor against accidents, diseases, industrial poisoning, and excessive fatigue. It outlined minimum requirements necessary to promote industrial efficiency, including safety, sanitation, prop-

er hours, wages, protection of children and women, social insurance, development of the labor market, and careful administration. It held that special attention should be given to the three-shift system in continuous industries, with one day's rest in seven in all industries. It favored equal pay for men and women doing the same work, with periodic revision in view of rising prices; and the representation of employers, employees and the public on joint councils to cooperate with State and Federal labor departments. Its principal propaganda in the last two years has been in favor of health insurance (see **SOCIAL INSURANCE**); it has, however, carried on special investigations into the diseases of occupation (see **OCCUPATIONAL DISEASES**); it has a Committee on Continuous Industries with Professor John R. Commons as chairman; and it has pushed labor legislation for improving the administration of labor laws and checking the evils of unemployment. Its paid membership, December 31, 1916, was 3062.

**LABEADOR.** A peninsula in British America, between Hudson Bay and the Atlantic Ocean; also a strip along the northeast coast of the peninsula which forms a dependency of Newfoundland. Excepting this strip the peninsula is within the Canadian province of Quebec.

**LABUAN.** A small island off the northwest coast of Borneo administratively attached to Singapore, Straits Settlement (q.v.).

**LAACHINE CANAL.** See **CANALS**.

**LAFAYETTE COLLEGE.** An institution for the education of men, under the auspices of the Presbyterian church, at Easton, Pa. In the fall of 1917 there were 443 students and 45 members of the faculty; in 1917 4 members of the faculty were in government service and 230 students left to enter the military service. Volumes in the library numbered 44,000. A. H. Fuller, dean of engineering at the University of Washington, was appointed professor of civil engineering; H. M. Robinson was appointed college pastor and professor of English Bible; Donald B. Prentice was appointed director of the division of mechanical engineering; and Theodore A. Buenger appointed professor of Latin. Productive funds in 1917 amounted to \$770,960 and the income therefrom to \$33,417. The gifts for the year amounted to \$260,000, not including a bequest of \$250,000 from A. N. Seip. Lafayette College was founded in 1826. President, John H. MacCracken, LL.D.

**LAGUNA DAM.** See **DAMS**.

**LAKE BONNEVILLE.** See **GEOLOGY**.

**LAKE WASHINGTON CANAL.** See **CANALS**.

**LAMPTON, WILLIAM JAMES.** An American journalist and verse writer, died in New York City, May 30, 1917. He was born in Lawrence County, Ohio, in 1859, and was educated at Ohio Wesleyan University and Marietta College, the latter of which gave him an honorary A.M. in 1891. His first newspaper experience was gained as editor of a small Republican sheet in Kentucky in 1877-78, after which he was successively reporter for the Cincinnati *Times*, paragrapher for the Steubenville *Herald*, a member of the staff of the Louisville *Courier-Journal*, the *Merchant Traveler* of Cincinnati (editor), the Washington *Critic* and *Evening Star*, and the Detroit *Free Press*. On the *Star* he originated the famous "Shooting Stars" department. Aft-

erward he wrote for leading New York papers, the *Times*, *Tribune*, *Sun*, and *World*, verse relating to current events, usually in the tone of good-humored satire. Col. Lampton (in 1910 he was appointed colonel and aide on the staff of Governor Willson, of Kentucky), made no pretense to high poetical ability, but was rather a humorist to be numbered with Bill Nye, Artemus Ward, and Eugene Field. His friendly human feeling, combined with keen perception of foibles, personal, social, and political, enabled him always to hit the mark without doing wanton injury. Perhaps he is best known for his *The American Eagle Speaks*, written when the United States was discussing diplomatically with Italy the murder by the Mafia of Chief of Police Hennessey of New Orleans. It was done in the style that came to be called the "yawp," and the New York *Sun* by 1897 was claiming Lampton as the founder of a new school of verse. The author himself in 1915 said this genre was essentially what is now known as free verse. Among collections of his verse, stories, etc., are *Yaups and Other Things*, *Confessions of a Husband*, *The Trolley Car and the Lady*, *Mrs. Brown's Opinions*, *Jedge Waagem's Pocket-book of Politics*, and *Tame Animals I Have Known*. He is said to have been a distant cousin of Mark Twain.

**LANDOUZY, LOUIS JOSEPH THÉOPHILE.** A French physician, whose death in Paris was announced on May 11, 1917. He was born at Rheims in 1845. In 1867 he went to Paris to finish his studies there. In 1879 he was appointed hospital physician, and a year later assistant professor in the Faculty of Medicine. He accepted the chair of therapeutics in 1893. In 1901 he became professor of clinical medicine and from that year till his death was also dean of the Faculty of Medicine. His early researches were in the field of neurology, but in later life he became especially interested in tuberculosis. His contributions to the study of this disease and his pioneer work in social prophylaxis brought him, a few months before his death, the gold "epidemics" medal. Special welfare work in behalf of tuberculous soldiers was organized by him after the great war broke out. He was long identified with the Laennec Hospital. Landouzy is credited with the discovery of the frequency of tuberculosis in infants and the tuberculous nature of acute pleurisy. He was one of the early champions of the movement for disease prevention through education of the public. He was one of the founders and editors of the *Revue de Médecine*, and a director of the *Presse Médicale*. Some of his important work was done with Dejerine (q.v.). In 1894 he was elected to the Academy of Medicine and in 1913 to the French Institute (Academy of Sciences).

**LANE, HARRY.** An American legislator, died in San Francisco, Cal., May 23, 1917. He was born in Portland, Ore., in 1855, graduated at Willamette University in 1876, and practiced as a physician in his native city until 1887, when he became superintendent of the State Hospital for the Insane. Elected mayor of Portland in 1905, he served through a second term and declined a third. As a Democrat, he was elected to the United States Senate in 1912, for the term ending in 1919. Senator Lane was known in Washington for attacks on the firm of J. P. Morgan and Company and for some-

what sensational statements of various sorts, but he gained nation-wide attention, when, a few months before his death, he allied himself with the Senators who stood out against the declaration of a state of war between the United States and Germany, and who were characterized by President Wilson as a "little group of wilful men." His constituents were many of them so angered that a recall was threatened, but this was found to be unconstitutional.

**LAWN TENNIS.** See TENNIS.

**LEAD.** The high price of lead in 1916 stimulated activity in lead prospecting and lead mining. Further activity was stimulated by the extraordinarily high price of lead in June, 1917, and by the gradual increase in the price of silver, which led to the reopening of silver-lead mines that had been abandoned years ago on account of the low price of silver. During the first half of 1917 the lead industry was therefore very prosperous, although there was a general increase in the cost of both labor and supplies. The great decline in price that set in just before the middle of 1917 continued until the end of the year when the price was lower than at the beginning of the year, but the decline was accompanied by no corresponding decrease in the cost of production, so that the producers complained that lead was selling below its actual cost.

The lead content of ore mined in the United States in 1917 was about 640,000 tons as compared with 622,967 tons in 1916, a gain of 17,000 tons. The Joplin district gained 8000 tons, California over 5000 tons, Idaho 4000 tons, and Washington and Montana 2000 tons each. Tennessee, which made an annual output of only a few tons in previous years, reported a production of nearly 3000 tons. Arizona and Utah lost about 4000 tons each and Colorado about 2000 tons as compared with 1916. The lead district of southeast Missouri remains the largest producer of lead, the output for 1917 being practically the same as in 1916.

The Bunker Hill Smelter at Kellogg, Idaho, was completed and put in operation during the year. The Empire Smelting and Refining Co. rebuilt the old smelter at Deming, N. Mex., and treated ores from April until October, when the plant was destroyed by fire. The Ontario Smelting and Refining Co. is building a soft-lead smelter in the northeastern part of Oklahoma, a few miles southwest of Baxter Springs, Kans. It will be equipped with four Newman automatic hearths, a lead stack, and a bag house.

The production of refined lead, desilverized and soft, from domestic and foreign ores in 1917 is estimated at 599,000 tons, worth at the average New York price about \$110,000,000, compared with 571,134 tons, worth \$78,816,000, in 1916. The figures for 1917 do not include an estimated output of 20,000 tons of antimonial lead, worth about \$4,800,000, compared with 24,038 tons in 1916. The production of desilverized lead of domestic origin, exclusive of desilverized soft-lead, is estimated at 297,000 tons against 316,469 in 1916; and that of desilverized lead of foreign origin at 59,000 tons compared with 18,906 in 1916. The production of soft lead from Mississippi Valley ores is esti-

mated at 243,000 tons, compared with 235,759 tons in 1916. The total production of desilverized lead and soft lead from domestic ores was thus about 540,000 tons, valued at \$99,000,000, compared with 552,228 tons, valued at \$76,207,000 in 1916, a loss of about 12,000 tons. The loss of nearly 20,000 tons in domestic desilverized lead was partly offset by a gain of 7000 in domestic soft lead and much more than made up by a gain of 40,000 tons in desilverized lead of foreign origin. The final figures for the production of soft lead will show an increase of a few thousand tons over those here given, for the smelters and refiners of argentiferous lead undoubtedly treated some soft lead ore from the Mississippi Valley which in preliminary estimates is not distinguished from silver-lead ore.

**IMPORTS AND EXPORTS.** The imports of lead are estimated at 20,000 short tons of lead in ore, valued at \$2,200,000; 37,000 tons of lead in base bullion, valued at \$5,100,000; and 4400 tons of refined and old lead, valued at approximately \$8,000,000, compared with 35,330 tons in 1916. Of the imports in 1917 about 48,000 tons came from Mexico, against 25,919 tons in 1916.

The exports of lead of foreign origin smelted or refined in the United States showed considerable increase. They are estimated at 17,000 tons, worth \$3,000,000, against 9880 tons, in 1916. These figures do not include the lead in foreign lead manufactures exported with benefit of drawback, which amounted to 3227 tons in the first half of 1917. For the last four years notable quantities of domestic lead have been exported to Europe, and the total for 1917 is estimated at 48,000 short tons, valued at \$3,300,000, compared with 100,565 tons, valued at \$13,508,203 in 1916.

**LEAGUE OF NATIONS.** See **INTERNATIONAL PEACE AND ARBITRATION.**

**LEAGUE TO ENFORCE PEACE.** See **INTERNATIONAL PEACE AND ARBITRATION.**

**LEATHER.** The leather industry in the United States in 1917 was marked by large exportations of leather and leather products, but a less active domestic trade. Shoe manufacturers in the previous years had bought a large amount of leather and were apparently satisfied as regards the needs of their plants. On the other hand, the United States came into the market as an active buyer for leather needed for war purposes, especially sole, harness, and strap leathers, and the entire output of many plants was being taken by the government. Prices were high during the year, but no great

increases were contemplated in the immediate future.

With the demand for leather, the industry in various distant countries received a considerable impetus from the war. In British South Africa, manufacturers were endeavoring to increase their output and raise the standard of their products, and not only were they shipping sole leather to Great Britain, but also upper leather of high grade. The Government was dipping cattle in order to reduce the damage wrought by the cattle tick, and otherwise was encouraging the industry.

In Brazil, the production of skins available for export was practically being absorbed entirely by the United States, and this industry had grown from \$500,000 in 1913 to more than \$10,000,000 in 1916, the total export of hides from Brazil in the latter year being \$17,156,668. While Brazil produced a considerable amount of hides, yet the country had but comparatively few tanneries, and the better grades of leather were imported from abroad.

In China, the year 1916 was a profitable one for Chinese dealers in hides and skins, and high prices were realized. Fifty-five per cent of the total export cowhides, amounting to \$40,000,000, went to the United States, 25 per cent to Japan, and 12 per cent to Italy. China exported some 10,000,000 goat skins, 95 per cent of which went to the United States, while there was a considerable increase in the horse, ass, and mule hides shipped as well as in the amount of wool.

In the leather market, an interesting topic of discussion during the year was the future of the German industry. A great amount of the higher grade leathers had been produced in Germany, and with this supply cut off, consumers in other countries were compelled to make various arrangements. In some cases, permanent sources of supply were developed together with the requisite tanning materials and facilities of manufacture, so that the reëtrance of Germany into this market after the war would be a distinctly improbable event without discriminating tariffs or commercial restrictions.

An attempt was being made to secure a uniformity in the reports of leather analysis and to standardize the American product. The United States army specifications issued October 16, 1917, stated the following requirements:

"Moisture not to exceed 14 per cent, ash not to exceed 2 per cent, oil and grease not to exceed 5 per cent, nor less than 2 per cent, free acid not to exceed 1 per cent, water solubles not

Debt			261,450	261,250

\* Not including government grants.

**LEGISLATION IN 1917.** This article summarizes briefly the more important measures passed by the 64th and 65th Congresses and of the State Legislatures, in such part of these sessions as cover 1917. The work of the State Legislatures is treated more fully in the several State articles in the sections entitled *Legislation*.

The measures passed by Congress during 1917 related chiefly to the war with Germany, and these measures are, for the most part, treated much more fully in the several State articles covering aspects of the war such as United States and Germany, Food Control, Shipping, Army and Navy, and the like.

In addition to these acts relating to the war, others were passed, which, under different conditions, would have attracted much wider attention. Among these was an act passed by the 65th Congress increasing the members of the Interstate Commerce Commission from seven to nine, and giving it authority to divide itself into divisions, and to assign any matter within its jurisdiction to any division for consideration and final action with the same powers as those possessed by the commission itself. It passed an amendment to this act providing that until January 1, 1920, no increased rate shall be filed except after approval by the commission, with or without hearing. See **RAILROADS**.

The 64th Congress provided a civil govern-

ment for Porto Rico and granted citizenship to all citizens of the island, and all natives who were temporarily absent therefrom April 11, 1899, and have since returned and are not citizens of any foreign country (see **PORTO RICO**). The same Congress also provided a temporary government under an officer of the army or navy for the West Indian Islands, known as the Virgin Islands, purchased from Denmark. The immigration bill, passed by Congress and vetoed by President Wilson, only to be repassed over his veto, is considered in the article **IMMIGRATION AND EMIGRATION**.

**WAR LEGISLATION.** The chief attention of the 64th and 65th Congresses in 1917 was devoted to the passage of war measures. They included the formal declaration of war approved April 6, 1917; revenue bills authorizing the issuance of bonds; several important measures relating to the purchase of ships and war materials; measures providing for the enlargement of military and naval establishments and for aviation; acts providing for the control and administration of food products; a measure providing for punishment for espionage and measures relating to war risk insurance.

**STATE LEGISLATION.** Under this heading are treated the more important phases of legislative enactment in the different States during 1917.

**Organization and Administration of Justice.** The California legislature passed a constitutional amendment providing for the organization of the courts throughout the State. The effect of the adoption of the amendment would be to give the legislature unlimited power to provide in its discretion for the administration of the judicial business of the State. The legislature of North Dakota passed an amendment to the State constitution providing that the opinion of four out of five judges of the Supreme Court should be necessary to declare a law unconstitutional. The West Virginia legislature passed several measures providing for the better protection of judges against personal violence.

The legislature of Oregon enacted a measure creating in the court of justice of the peace a small claims department with jurisdiction over amounts not exceeding \$20. The Minnesota and Colorado legislatures also passed measures toward the establishment of the so-called "poor man's courts."

Many of the State legislatures including those of New York, Wisconsin, New Jersey, Maine, North Dakota, and North Carolina passed measures providing for greater restrictions upon marriage, known popularly as eugenics laws.

Nearly all the State legislatures passed measures relating closely to the state of war with Germany. In New York a measure was passed providing for the registration of aliens, another making provision for the census of man power and war resources. A similar census was also authorized in Massachusetts. Legislation to protect the food supply was passed in a number of the States: Maine, Wisconsin, Massachusetts, Connecticut, New Jersey, Pennsylvania, Maryland and New Hampshire.

A State council of defense to cooperate with the national council was provided for in California, Maryland, New York, and Pennsylvania. Provisions for seizing buildings, railways, and other equipment or supplies useful for military purposes were made in Maine and Massachusetts.

Similar power, limited to personal property, was provided in Wisconsin.

One of the most interesting of the acts relating to the war was that known as the "lazy man's law," enacted in Maryland. By this measure all able-bodied men between the ages of eighteen and fifty, not usefully employed, may be required to register and to work in some public or private employment.

Acts dealing with espionage and sedition were passed by the legislatures of Vermont, New York, Minnesota, and Iowa.

Nearly all the legislatures passed measures providing for reorganization of the State militia, to make it conform to the requirements of the national defense and draft acts. In several cases, provision was made, giving to the governor power to enroll all able-bodied men between eighteen and forty-five and to draft them into service. The Oregon law makes failure to respond to the governor's draft desertion, punishable by a military tribunal. The North Carolina acts provided that whites and blacks shall not be compelled to serve in the same organization, and blacks shall be under the command of white officers.

In several of the States provisions were made that public officers and employees shall not lose their places or be prejudiced in their rights to promotion because of absence in military service. Measures of this nature were passed by New York, Pennsylvania, Massachusetts, Maine, Vermont, and other States.

*Crime and Its Punishment.* Several interesting provisions were made by the State legislatures for the reformation and instruction of inmates of State institutions, and for the improvement of their mental and physical conditions. Several of the States made provisions for farms to be conducted in connection with these penal institutions. The legislature of Idaho provided for extending the benefits of university extension departments to convicts. In Maine custodians are required to give psychopathic examinations to prisoners and when necessary to transfer them to State institutions for further examination. Measures relating to this general subject were passed by the legislatures of North Carolina, Illinois, North Dakota, Oregon, Rhode Island, Tennessee, New Jersey, California, and New York.

*State Constitutions.* Several of the State legislatures provided for the calling of constitutional conventions to revise the State constitutions. These included Idaho, Illinois, Tennessee, Nebraska, and North Carolina. New Hampshire and Indiana provided for the election of delegates to a convention without submitting the question to the voters. The Indiana act was declared unconstitutional.

*State Governments.* Measures looking toward the more economical administration of State government were passed by many State legislatures, including Oregon, North Carolina, Vermont, Delaware, West Virginia, New Jersey, Minnesota, New York, Utah, Kansas, South Dakota, Tennessee, New Mexico, Nebraska, Maine, and Michigan. See ELECTORAL REFORM.

For legislation relating to other special subjects see articles on LIQUOR REGULATION, LABOR LEGISLATION, CHILD LABOR, WORKMEN'S COMPENSATION, TAXATION, INSURANCE, RAILWAYS, EDUCATION IN THE UNITED STATES, BANKS AND BANKING.

**LEHIGH UNIVERSITY.** A non-sectarian institution for the education of men at South Bethlehem, Pa. In the fall of 1917 there were 651 students and 79 members of the faculty. Volumes in the library numbered 142,353. Productive funds in 1917 amounted to \$2,250,000 and the income to \$106,272. The university was founded in 1866. President, Henry S. Drinker, E.M., LL.D.

**LEIPZIGER, HENRY M.** A prominent educator in New York City, who died on December 1, 1917. He was born in England on December 29, 1854, but came to the United States at an early age. He graduated from the College of the City of New York in 1873 and received the degree of Ph.D. from Columbia University in 1888. He was very much interested in the Jewish immigrants who came to America and devoted a great deal of time to the problem of assimilating them into the social and industrial life of their new home. In 1884 he organized the Hebrew Technical Institute, which was one of the first manual training schools in America. For seventeen years he was chairman of the library committee of the Aguilar Free Library, which later was incorporated with the New York Public Library. During that time he founded the public lecture system of which he became chairman in 1890. This was his greatest field of endeavor.

**LELAND STANFORD JUNIOR UNIVERSITY.** A non-sectarian co-educational institution of learning located at Palo Alto, Cal. (the post office is Stanford University, Cal.). In the fall of 1917 there were 1500 members of the student body and 225 instructors; many of the latter engaged in war service. Volumes in the library numbered 244,273. Productive funds in 1917 amounted to \$24,424,432 and the income to \$1,042,529. During the year the Thomas Welton Stanford Art Gallery was completed. The Stanford Naval Base Hospital Unit, composed largely of members of the faculty of the medical school and of nurses associated with the Stanford Hospital, entered active service in France. The four quarter system was inaugurated in the fall of 1917. Leland Stanford Junior University was founded in 1891 by Leland Stanford and his wife in memory of their son. President, Ray Lyman Wilbur, M.D.

**LENINE, NIKOLAI.** One of the leaders of the Bolshevik movement in Russia. Lenine's real name is Vladimir Ilyitch Ulyanoff and he was born at Simbirsk, on the Volga, about 1870. He was of noble birth. He became prominent shortly after 1890 as the leader of the radical Social Democrats, who insist on the literal application of the Marxian theories, rather than the more nationalistic view of the Social Revolution party, headed by Kerensky (q.v.). He was elected to the Second Duma shortly after the revolution of 1905, but was later exiled when the reaction set in. At the beginning of the present war he was in Cracow, and was interned as an enemy alien, but was released and allowed to go to Switzerland, where a group of Russian revolutionists had collected. After the revolution the provisional government made an agreement with the German government, by which the Russians in Switzerland were allowed to return to Russia in return for the release of some German civilian prisoners. He reached Petrograd just after the pacifists had caused the resignation of Miliukoff, and at once began to

preach immediate peace and general confiscation. He published a newspaper, the *Pravda*, bitterly attacking both Germany and France. The government feared to arrest him because of its effect on the pacifistic element. He gained in power, but was compelled to go into hiding after the abortive attempt to overthrow the government in July. For his subsequent career see *RUSSIA, History*. Lenin was also an author on socialistic subjects, his most important work being, *The Development of Capitalism in Russia*.

See *WAR OF THE NATIONS, The Diplomacy of the War*; also *RUSSIA, History*.

**LEPROSY.** Chaulmoogra oil has long been known as the most reliable drug for the treatment of leprosy, the only difficulty being that it is so repulsive when taken by mouth that patients cannot take it for long periods of time. Heiser reported in 1914 excellent results in a series of cases treated at the Leper Colony at Culion, Philippine Islands, with chaulmoogra oil given hypodermically with camphorated olive oil and resorcin. Heiser's formula was, chaulmoogra oil 60 c.c., camphorated olive oil, 60 c.c., and resorcin 4 gm.; this mixture being injected, after being sterilized, under the skin of the arm or leg.

Bercovitz reported another series of fourteen cases treated in Hoi How, Hainan, China, with Heiser's formula. Weekly doses of 1 c.c. were given for the first three weeks and the amount was gradually raised until it reached 3 c.c. There was a slight reaction after the first injection, but not subsequently. The mixture was promptly absorbed. Patients were also given sodium bicarbonate baths three times a week and pills of arsenic and iron during alternating weeks. The cases reported were under treatment nine months. Marked improvement began in about a month. Malaise and lack of energy were less marked, the appetite was increased, and the general systemic condition improved. The tubercular forms of leprosy were found to respond to treatment earlier than the anesthetic forms, and anesthetic areas in both types of the disease became hypersensitive and in some of the patients there was a return of the tactile sensation. Large ulcers healed and were replaced by clean, white scars. Microscopically it was shown that the lepra nodules underwent fibrosis.

Coghill also reports, from the Yaba Leper Asylum, similar favorable results with Heiser's formula. Here the mixture was given intramuscularly and the dose rapidly increased until 6 to 8 c.c. were being administered. There was rapid healing of even large and deep ulcers of many years' duration. Absorption of the nodules and a return of sensation were also noted by Coghill.

The bill providing for a national hospital for lepers finally passed the Senate. It was previously passed by the House on May 15, 1916, but came before the Senate again on January 25, 1917, and was made a law. The bill provides for an addition to the pay of any medical officers detailed for service in the leper hospital of one-half of their regular pay. The need of a national leper hospital has long been felt, since the number of lepers in one State is too small to justify the establishment of a State institution, and the popular dread of leprosy has often led to cruel and inhuman treatment of the

victims of this disease in the absence of proper provision for their care.

The Island of Sardinia has provided a pavilion in the public hospital at Cagliari for lepers in the contagious stage, and compulsory notification of leprosy is enforced, together with careful surveying of the conditions in the homes of lepers and the removal of children from a family where there is a leper.

O. E. Denney, chief of the Culion Leper Colony, Philippine Islands, has made an exhaustive study of the disease as occurring in this region. During the ten years since the beginning of segregation of lepers in the islands, 10,425 lepers were admitted to the colony. The records show an average duration of the disease to be 7.332 years. The longest authentic duration was forty-eight years. Among the lepers in the colony, 357 babies were born. Of these, 166 have died; 24 being stillborn, 59 dying before reaching the age of one month, 40 before the age of three months, and the others dying in less than three years. There were 357 babies released after they had been shown to be non-leprous. Of the 154 children remaining in Culion, 16 are lepers. The distribution of leprosy among the different tribes is of interest. Among the Visayans there were 5338 cases admitted, or 0.17 per cent of the population; among the Tagalogs 1997, or 0.14 per cent; among the Ilocanos 1547, or 0.19 per cent; the Bicolanos contributed 1184, or 0.21 per cent of the population; the Pampangos 171, or 0.06 per cent; the Pangasinans 100, or 0.01 per cent, and the members of small tribes and foreigners 88.

**LESUEUR, W. D.** A prominent Canadian writer who died in September, 1917. He was born in 1840 and was educated at the University of Toronto and Queen's University, Kingston. In 1856 he entered the Canadian Civil Service in the Postal Department and was the secretary from 1888 until 1902, when he retired. He was a prolific writer on historical and other intellectual subjects and his works rank high among Canadian authors. He was honorary secretary of the Royal Society of Canada from 1908 to 1911 and then its president. Among his books are: *Life on the Frontier* in "The Makers of Canada Series"; *A Defense of Modern Thought*; *Evolution and the Positive Aspects of Modern Thought*; and *The Development of Responsible Government in Canada*.

**LEVY (JOSEPH) LEONARD.** An American Jewish clergyman, a leader of the radical movement in his church, died in Pittsburgh, Pa., April 26, 1917. He was born in London, England, in 1865, graduated with honors at London University in 1884, and made further studies at the University of Bristol, in which city he was pastor from 1885 to 1889. Then he came to the United States and settled in Sacramento, Cal. From 1893 to 1901 he served the Keneseth Israel congregation in Philadelphia and thereafter till his death that of Rodeph Shalom in Pittsburgh. In advocacy of liberal Hebrew views he lectured all over the United States and also in England, Scotland, and France. His writings include: *A Book of Prayer, A Graduated Textbook of Religion, Nineteenth Century Prophets, Founders of the Faiths, Old Arrows from New Quivers*, and sixteen volumes of sermons. Dr. Levy was prominent in bettering social conditions in Pittsburgh, and he was trus-

tee of various educational and philanthropic institutions. The University of Pittsburgh conferred on him the degree of D.D. He was vice-president of the Eastern Council of Reform Rabbis.

**LIBERIA.** An independent negro republic of western Africa, occupying that part of the coast of North Guinea which is between the rivers Cavally and Mano, a distance of about 350 miles, with an area variously estimated at between 35,000 and 41,000 square miles, and extending to the interior to latitude 8° 50', a distance of 250 miles from the seaboard. It was founded by the American Colonization Society in 1820, and has been recognized by the United States and the European powers since 1847 as an independent state. The population numbers between 1,500,000 and 2,000,000, including about 12,000 Americo-Liberians. The principal exports are coffee, cacao, palm-kernels, palm-oil, ivory, piassaba, rubber, and camwood. The chief imports, cottons, haberdashery, salt, rice, provisions, arms and ammunition, tobacco, hardware, glass and earthenware, rum, gin, timber, and beads.

There are thirteen ports of entry along the 350 miles of coast: Robertsport, Monrovia, Marshall, Grand Bassa, RiverCess, Greenville, Nanna Kroo, Harper, Half Cavalla, Jenne, Webo, GrandCess, and Garraway. The executive power is vested in a president elected for four years, assisted by a ministry. There are two houses of legislature, the Senate, with eight members elected for four years, and the House of Representatives with fourteen members elected for two years. The president, Daniel Edward Howard, was reelected for the period 1916-20.

Liberia was nearing starvation, as a result of the effects upon the country of the European war, according to official dispatches received in Washington, February 14. The trade of the republic had been conducted almost entirely by German residents, who controlled both exports and imports, but since the war their operations had been first restricted, and later altogether stopped by British war measures. The Liberian government was seeking an American auditor, having decided upon governmental reforms, and being confronted with the necessity of economizing. The country already had an American receiver-general of customs, H. F. Whorley, selected by President Wilson for the post from the Insular Bureau of the War Department. The Liberian government was seeking American officers to command its frontier forces, its borders being subject to continual raids by uncivilized tribes; and it also desired to employ a road building expert. Liberia broke off relations with Germany on May 8. This was regarded as important because many cables had their points of landing in Liberia and it had been used by Germany as a base against the British.

**LIBERTY LOANS.** See FINANCIAL REVIEW; UNITED STATES AND THE WAR.

**LIBERTY MOTOR.** See AERONAUTICS.

**LIBERTY TRUCK.** See AUTOMOBILES.

**LIBRARY ASSOCIATION, AMERICAN.** The thirty-ninth annual meeting of the association was held at Louisville, Ky., June 21-27, 1917. Walter L. Brown, the president, presided, and read a paper entitled "The Changing Public." Other papers read were: "Democracy in World Politics," by Shailer Matthews; "Books in Camp,

Trench, and Hospital," by Theodore Wealey Koch; "Books for the Russian Prisoners of War in Germany," by C. T. H. Wright; "Cooperation in War Work between the Young Men's Christian Association and the American Library Association," by William Moore; "The Corporation School Movement: Training Men during Business Hours," by J. W. Dietz; "Chinese Books and Libraries," by Walter T. Swingle; "The County Free Library as Operated at Riverside," by Joseph F. Daniels; "A Programme for Library Advertisement," by Carl Hunt; "The Gist of the American Library Association Library Publicity Survey," by Willis H. Kerr; "Library Commission Publicity," by Elizabeth C. Earl; "A Publicity Expert for Libraries," by C. H. Compton; "Standardization of Libraries and Certification of Librarians," by P. L. Windsor; "Agricultural Extension Work and the Opportunity It Offers to Agricultural College Librarians," by George A. Deveneau; "Secondary Education in Library Work," by Jessie Welles; "Preparedness to Meet New Educational Demands," by Sarah C. N. Bogle; "The Library School of the Future," by A. S. Root; "The Association of American Library Schools," by P. L. Windsor; "The Reading of the Adolescent Girl," by Louise M. Dunn; "The Book Shop for Boys and Girls," by Annie C. Moore; "The Colored Branches of the Louisville Public Library," by Bernice W. Bell; "How to Raise the Standard of Literary Appreciation in High Schools," by Marion L. Horton; "Organizing a New High School Library," by Clara E. Howard; "Problems Met in Reorganizing a High School Library," by Mary H. Pocoley; "The Hows and Whys of Admission Slips," by A. M. Hardy; "Classification Making," by A. L. Voge; "Principles of Classification," by C. W. Andrews; "Classification Making," by Charles A. Flagg; "Classification," by J. C. Bay; "The Problem and Theory of Library Classification," by Henry F. Bliss; "Some Cataloguers Reference Books of Recent Years," by L. R. Blanchard; "The Organization of a Cataloging Department," by Minnie E. Sears; "Studies of Departmental Libraries at the University of Chicago," by J. C. M. Hanson; "A Plan for a Census of Research Resources," by C. W. Andrews; "The Return of Cooperative Indexing," by E. C. Richardson; "Library Legislation," by E. L. Craig; "Should Libraries be Under the General Civil Service of the State or Have a Separate Civil Service Organization?," by W. D. Johnston; "The State as a Unit for Library Extension," by Minnie W. Leatherman; "The County as a Unit for Library Extension," by Harriet C. Long; "The Library District as a Unit for Library Extension," by John Lowe; "The Township as a Unit for Library Extension," by Mayme C. Snipes; "A Flexible Book Collection," by Jessie Welles; "The University Press in Relation to the Library World," by G. P. Winship.

The officers of the association are: President, Walter L. Brown, Buffalo Public Library; first vice-president, Harrison W. Craver, Library of the Engineering Society, New York; second vice-president, George H. Locke, Toronto Public Library; treasurer, Carl B. Roden, Chicago Public Library; secretary, George B. Utley, 78 East Washington Street, Chicago.

The American Library Association conferences

are divided into a system of sections as follows: College and Reference; Trustees; Catalogue; Library Work with Children; Professional Training; Agricultural Library Section; School Library Section.

Four national organizations are affiliated with the American Library Association: National Association of State Libraries; League of Library Commissions; American Association of Law Libraries; and Special Libraries Association. The publishing board of the association publishes the *A. L. A. Booklist* (edited by May Massee), and the *Official Bulletin*, and also in 1917, put out *Recent French Literature*, compiled by Sarah Graham Bowerman; *Mending and Repair of Books*, by Margaret W. Brown, revised by Gertrude Stiles; *League of Library Commissions Handbook, 1916*, compiled by Henry M. Sanborn; *Manual for Institution Libraries*, compiled by Carrie E. Scott. The following publications have been reprinted: *Books for Boys and Girls*, by Caroline M. Hewins; *Government Documents in Small Libraries*, by J. I. Wyer, Jr.; *Making Maps Available*, by Beatrice Windsor.

**LIBRARY OF CONGRESS.** On June 30, 1917, the end of the fiscal year, the library contained 2,537,922 books, a gain over the preceding year of 85,948; 158,480 maps and charts, a gain of 4280; 795,749 volumes and pieces of music, a gain of 25,501; and 397,945 prints, a gain of 5040. War continued to keep down the number of accessions and there was a decrease from 88,101 to 85,948 in the number of additions, somewhat below the average annual number increase over the period of the preceding 18 years. Gifts aggregating 12,100 volumes from thousands of unofficial sources were received. Among the most important was a collection of Whistleriana, presented by Mr. and Mrs. Joseph Pennell, the authorized biographers of James McNeill Whistler. Another was a copy of *Letters of Thomas Burnet to George Duckett, 1712-1722*, edited by David Nichol Smith, presented by the Marquess of Crewe. There were acquired also several desirable specimens of fifteenth century printing; four rare Savonarola tracts of special interest on account of their fine Florentine woodcuts; an excellent copy of the first Protestant Bible in the French language; and important works relating to naval architecture. The most important accessions in the Division of Manuscripts includes the papers of Charles Thompson, secretary of the Continental Congress during the whole period of its existence; some of the papers and correspondence of Robert Morris, which have been added to the Morris collection; forty-three additional documents of James Madison; and many books containing trade or commercial information of earlier United States history; papers of importance in the social history of America; papers of Andrew Jackson Donelson, nephew and private secretary to Andrew Jackson while he was president. The accessions in the Division of Documents include important periodicals from Japan and China, among the latter some important railroad documents.

**LIBRARY PROGRESS. WAR WORK OF THE AMERICAN LIBRARY ASSOCIATION.** Shortly after the declaration of war the President's Commission on Training Camp Activities called on the American Library Association to take charge of the organization of all attempts at furnishing

books and magazines to soldiers in the army and navy. That association at once created a preliminary committee on planning the proposed organization, which reported at the Louisville Conference in June through Dr. Herbert Putnam, Librarian of Congress, its chairman, a scheme for an A. L. A. War Council. This body began work at Louisville and continued until December, when there was effected a change from a large group of persons in many cities to a small directing body at Washington with the Librarian of Congress at its head, under the name War Service of the American Library Association. The council perfected plans for camp libraries and carried through an ambitious campaign for funds for their building and maintenance. The last week in September was set aside as "war library week" and a united effort on the part of librarians and interested citizens all over the country resulted in raising a sum which before the end of the year reached over one and one-half million dollars. The largest single contribution was from the Carnegie Corporation, which gave \$320,000 for the erection of library buildings in each of the 32 cantonments.

Books and magazines were solicited by practically every library in the United States, sent to various designated distribution centres, and thence to the several camps as these were ready to receive them. Librarians were appointed for the camps, generally far in advance of the completion of the buildings. They were drawn from the younger men of experience in library work. The response to the call for books was very generous and as a rule showed discrimination in the selection. About 300,000 volumes were donated before the end of December, 1917, although, as many camps had not completed their library buildings, a great number were held at the distribution centres. Large sums were also used in direct purchase of books to supplement those given. Before the camp libraries were built, the Y. M. C. A. was used to provide books for the soldiers, and will be used as distributing stations in the future.

Provision has also been made for supplying books to the navy, the coast-patrol, and to the American soldiers in France. This last phase of the work will naturally grow to larger proportions in 1918.

**LIBRARY BUILDINGS.** Despite high prices of materials and labor a considerable number of important buildings were completed in 1917. Chief of these were the large public library structures for the cities of San Francisco, Indianapolis, St. Paul, and Montreal. Each of these buildings is notable, and together they constitute an important group illustrating the progress of design in libraries. Amherst College and Notre Dame University also completed new buildings for their libraries.

**LIBRARY LEGISLATION.** No unusual library legislation was passed by any of the State legislatures in 1917. Certain States (Michigan, Texas, North Dakota) passed laws enabling an extension of county library systems. A similar bill passed the Ohio legislature, but was vetoed by the governor.

**LIBRARY LITERATURE.** Important additions to the rather small stock of professional manuals were the new editions of the *League of Library Commissions Handbook*, issued by Henry N. Sanborn, secretary of the league, through the

A. L. A. Publishing Board in Chicago, and a *Manual for Institution Libraries* by Carrie E. Scott, from the same body. The American Library Institute issued its *Papers and Proceedings* for 1916, also through the A. L. A. Publishing Board. These combine the substance of the papers at its meeting at Atlantic City in the spring of 1916. A monograph on the *British Museum Library* by G. B. Rawlings (White Plains, H. W. Wilson Co.) is a popular history and description of the largest of the world's libraries. F. A. Ebert's, *The Training of the Librarian*, translated by Selma Nachman from the 1820 German edition, appeared in the "Librarian's Series," edited by J. C. Dana and H. W. Kent (Newark, The Elm Tree Press). Mr. Dana also brought out two additional parts of his *Modern American Library Economy*: (1) *How to Use a Library*, and (2) *The Picture Collection*, new edition (Newark, The Elm Tree Press). A. E. Bostwick published a new edition of his *The American Public Library* (N. Y., Appleton), which bids fair to remain the standard general treatise on this topic. The most ambitious bibliographical publication coming from an American library appears to be the *Catalogue of the Petrarch Collection* of the Cornell University Library, by Miss Mary Fowler, issued by the Oxford University Press. Perhaps of more immediate value was the third edition of Kroeger's *Guide to the Study and Use of Reference Books*, edited by Isadora G. Mudge, revised throughout and much enlarged, issued by the A. L. A. Publishing Board (Chicago).

**NECROLOGY.** 1917 took a heavy toll of librarians of distinction. Henry E. Legler, the able head of the Chicago Public Library; Wm. I. Fletcher, a veteran of the profession, a charter member of the American Library Association, and long librarian of Amherst College; Henry M. Utley of Detroit, likewise a veteran and for many years the leading figure among Michigan librarians; James L. Gillis, State Librarian of California, a leader among State librarians; Anderson H. Hopkins, formerly head of the Pittsburgh library; and George W. Harris, librarian emeritus of Cornell, are the most prominent of a long list.

**LIBYA.** An Italian possession on the Mediterranean coast of Africa, composed of Tripoli and Cyrenaica. It lies between Tunis and Algeria on the west and Egypt on the east. As a result of the Turco-Italian War, Tripoli, hitherto a vilayet of the Ottoman Empire, was proclaimed at Rome, November 5, 1911, together with Cyrenaica, a province of the kingdom of Italy. The area, with Cyrenaica (or Bengazi, or Barca), is estimated at 405,800 square miles, and the population at about 1,000,000, mostly Berbers, but with numerous Jewish colonies. The city of Tripoli, with 75,000 inhabitants, is the capital of Tripoli; Bengazi, with 30,000, of Bengazi; both Mediterranean ports.

The total commerce of the country is reported for 1915 as follows: £2,004,730 imports, £212,073 exports (esparto, hides and skins, ostrich feathers, sponges, live animals, wool, cereals, etc.). The revenue has been derived from taxation on the wealth of the individual, and from tithes; and amounted in 1916-17 to £135,288,640, balanced by the expenditure. Large state subventions are necessary.

**LIFE INSURANCE.** See **INSURANCE.**

**LIGHTHOUSES.** The number of aids to

navigation maintained by the United States Lighthouse Service on June 30, 1917, is shown in the accompanying table:

Class	Total 1916	June 30, 1917
<b>Lighted Aids:</b>		
Lights (other than minor lights) . . . . .	1,708	1,708
Minor lights . . . . .	2,920	2,970
Light-vessel stations . . . . .	53	53
Gas buoys . . . . .	512	545
Float lights . . . . .	132	144
<b>Total . . . . .</b>	<b>5,325</b>	<b>5,420</b>
<b>Unlighted Aids:</b>		
Fog signals . . . . .	532	537
Submarine signals . . . . .	52	51
Whistling buoys, unlighted . . . . .	83	81
Bell buoys, unlighted . . . . .	238	241
Other buoys . . . . .	6,657	6,846
Day beacons . . . . .	2,061	2,047
<b>Total . . . . .</b>	<b>9,623</b>	<b>9,803</b>
<b>Grand total . . . . .</b>	<b>14,948</b>	<b>15,223</b>

During the fiscal year ended June 30, 1917 there was a net increase of 275, the total number of aids to navigation maintained by the Lighthouse Service including five fog signals, 33 lighted buoys, 189 unlighted buoys, and 62 minor lights, including 12 float lights. At 39 stations fixed lights were changed to flashing or occulting, and for 17 lights, including 1 light vessel, the illuminant was changed to incandescent oil vapor, while at 26 lights, including 4 light vessels, the change was made to acetylene, and at 13 lights to electric incandescent lamps, and at 1 light to oil gas.

As shown in the table there were on June 30, 1917, maintained by the Lighthouse Service 15,223 aids to navigation. Among the more important installations of the fiscal year was the new third-order light station with a flashing white oil-vapor light and a first-class air siren at Cape St. Elias, Kayak Island, Alaska; a new light vessel, No. 101, off Cape Charles, Va., in place of the old vessel, No. 49, and a new light vessel, No. 102, took the place of No. 43 at Southwest pass entrance to the Mississippi River. On the Brunswick Light Vessel, No. 84, off the coast of Georgia, the illuminating apparatus was changed from two fixed white to one flashing white light, and a similar change was made on Handkerchief Light Vessel No. 3, Nantucket Sound, Mass. Fog signals were established at numerous points on the Great Lakes and on the Pacific Coast, while a number of important lighted buoys were placed on all coasts. On September 25, 1916, a bronze tablet was unveiled at Boston Light Station commemorating the two hundredth anniversary of its establishment, and the beginning of lighthouse work in America.

The important extension of the work of the Lighthouse Service in Alaska continued, and at the close of the fiscal year 1917, there were 416 aids to navigation including 162 lights, 7 gas buoys, or an increase of 122 lighted aids since June 30, 1910. In 1916, there were but 388 aids of all classes. The light and fog-signal station at Cape St. Elias, referred to in the *YEAR BOOK* for 1916, was completed and lighted for the first time on September 6, 1916. A new lighthouse tender *Cedar* was completed and in the summer of 1917 was assigned to duty in Alaska. The act of June 12, 1917, made a further appropriation of \$60,000 for lighthouse work in Alaska. Special construction was in-

volved in the case of concrete piers for four lights in the lower part of the Detroit River Channel, which was subject to heavy ice pressure. These piers were either built in timber cribs, or were formed by concrete caissons sunk in place on sites that had been dredged clean, and then covered with four-inch stone. The concrete caissons were built in the dry and were floated into place. The work also required the construction of six concrete piers in the cofferdam section of the channel.

An interesting volume on *Lighthouses and Lightships of the United States* by George Barclay Putnam, commissioner of lighthouses, was published during the year.

**LILIUOKALANI, LYDIA KAMEKEHA.** "Queen Lil," as she was popularly called, died on November 11, 1917. She was born on September 2, 1838, and was for a time Queen of the Hawaiian Islands. She succeeded her brother to the throne in 1891, but was deposed in 1893 because of her attempt to annul the liberal constitution and because she favored all sorts of reactionary laws. She married an American, John O. Loomis, a native of Boston. An attempt to regain the throne was frustrated in 1894. The deposed Queen was voted a pension of \$4000 a year by the newly established Hawaiian Legislature, and she was permitted to receive the income from a sugar plantation of 6000 acres. For fifteen years after her deposition she made vain efforts to have her kingdom restored to her and to have 1,000,000 acres of crown land, taken over by the government, declared her own personal property. She was unsuccessful in this also. In 1908 she made a claim on the United States government for \$450,000, but the Court of Claims decided against her. She was granted a pension by Congress of about \$40,000. For some time she made her residence in San Francisco and stated that she was very much pleased with the rapid progress her former subjects were making under American rule. The queen was well known as the author of more than 100 Hawaiian songs, and the book, *Hawaii's Story*, which is a history of the islands.

**LINCOLN SCHOOL.** See EDUCATION IN THE UNITED STATES; and COLUMBIA UNIVERSITY.

**LINGUISTICS.** See ANTHROPOLOGY.

**LIQUOR REGULATION.** The Supreme Court, on January 8, handed down a decision confirming the constitutionality of the Webb-Kenyon Law forbidding the shipment of liquors into any State where prohibition prevails. By the same decision, the West Virginia law prohibiting the importation of intoxicants, for personal use, into the State, was upheld. This action on the part of the Supreme Court decided a contest which had gone on for years, over the right of Congress or of any State to prevent the importation of intoxicating liquors into prohibition territory. By this decision, prohibitionists are able to make anti-liquor laws completely effective. On January 9, the Senate passed the so-called Sheppard Bill providing for prohibition in the District of Columbia, by a vote of 55 to 32. An attempt was made to add an amendment to the bill which would have required a vote of the people of the District of Columbia before it became a law, but this amendment was defeated. The bill later passed the House and was signed by the president. On February 2, the new Oregon law, absolutely prohibiting the importation of li-

quor for drinking purposes, was approved by the governor. On the same day, a similar bill was signed by the Governor of Tennessee. The legislature of Arkansas adopted a prohibition law which prevents shipments of liquor into the State, and also prevents its shipment from one part of the State to another, and its storage in any part of the State. These laws are designed to take advantage of the decision of the Supreme Court referred to above, upholding the constitutionality of the Webb-Kenyon Law. A State wide prohibition bill which had already passed the lower house, passed the Indiana Senate on February 2, by a vote of 38 to 11. The bill then went back to the house for the consideration of amendments adopted in the Senate. The Utah legislature passed a measure providing for the appointment of a commissioner to see that the prohibition law was enforced. Governor Kendrick, of Wyoming, early in February, signed a bill submitting the constitutional amendment for the State prohibition to the voters of the State in 1918.

The New York legislature of 1917 passed several important measures relating to liquor traffic. Stringent regulations were enacted against the existence of saloons near military cantonments. The excise commissioner is given the power to suspend, during the war, liquor tax certificates, and to prohibit, or limit the sale of liquor in the neighborhood of troops, camps, or barracks, munition factories or places producing munition material. The excise rates for liquor selling were substantially increased. A city local option law was enacted which applied to all the cities of the State with the exception of New York. This measure constituted each city as local option territory, and provided on proper petition of voters for a referendum in New York City at a special election on the third Tuesday in April, on the question of local option territory. A failure to carry this in the affirmative bars a second referendum for five years. In other cities, on a petition of voters, a special election is to be held on the third Tuesday of April to decide where and how liquor should be sold. These elections are to be held not oftener than once in three years, with the exception of New York City.

By enactment of Congress, the manufacture of whisky and all liquors with the exception of beer and wine was prohibited (see CONGRESS). on November 1, as a result of the measure noted above, the selling of liquor ceased in the District of Columbia. On December 10, the United States Supreme Court upheld the Idaho prohibition law giving an opinion in which it was held that a citizen has no constitutional right to possess liquors for his personal use, if a State wishes to forbid it. It was held that the State "has power absolutely to prohibit the manufacture, gift, purchase, sale, or transportation of intoxicating liquors within its borders without violating the constitution. Further it clearly follows from our previous decisions upholding prohibition legislation, that the right to hold intoxicating liquors for personal use is not one of those fundamental privileges of a citizen of the United States, which no State may abridge."

On December 11, President Wilson issued a proclamation reducing the alcoholic content of beer, effective after January 21, 1918, to 2½ per cent by weight. He also prohibited the use in

the manufacture of malt liquors of more than 70 per cent of the average amount of foods, fruits, food materials, and feeds, used in such manufacture during the one year period, ending on that date. The House of Representatives on December 17, by a vote of 282 to 128 passed a resolution to be submitted to the States within seven years, an amendment to the Federal Constitution providing for national prohibition. A similar resolution was adopted by the Senate in the preceding August, but on December 18, the Senate concurred by a rising vote with the House resolution.

**LIQUORS. UNITED STATES.** In the early part of the year 1917 the proposed amendment to the Constitution of the United States, prohibiting the manufacture and sale of intoxicating liquors failed to receive legislative approval. However it was reintroduced during the week of December 17 and was passed by both houses. Following the War Declaration a crusade was started for National Prohibition for the period of the war, with the result that no spirits for beverage use could be legally manufactured after September 8, 1917, and that no cereal, molasses, or other food of value for human consumption could be used in the production of even non-beverage alcohol. All persons buying in wholesale quantities (non-beverage alcohol) must obtain a permit from the Commissioner of Internal Revenue. Up to the end of 1917 the law had worked admirably. There was on hand a two-year stock of whiskey, with no more being produced, and the importation of beverage spirits prohibited. The price of beverage spirits increased 100 per cent. By the efforts of President Wilson the prohibition of beers and wines was prevented.

Congress voted (without a referendum) the District of Columbia *dry*, effective November 1, 1917. This law went into effect quietly and with very good results. Oregon, Tennessee, and Indiana were added to the *dry* States. Over 50 per cent of the States are now *dry*, although the majority of the people live in the *wet* States.

It was generally believed that beverage spirits never again would be legally manufactured. The distillers were disheartened with the constant fight and were taking this opportunity to sell their stocks at a profit, thus recouping to some extent the loss on the equipment. While some distilleries had been remodeled into manufacturing establishments for other products other plants were dismantled.

In the War Revenue Act of 1917 an additional tax (to the \$1.10) of \$2.10 was placed on each proof gallon of beverage spirits, and an additional \$1.10 on each proof gallon of non-beverage spirits. The revenue tax was applied to all beverages whether withdrawn from bond or in wholesale or retail establishments, and was therefore called a *floor* tax. The additional tax on beer was \$1.50 per barrel, on wines 4 cents, 10 cents, and 25 cents per gallon, depending on the percentage of alcohol contained; grape brandy for the fortification of sweet wine, 20 cents per gallon.

Next to an amendment to the Constitution, the so-called Reed Amendment to the Bankhead Bill, which went into effect July 1, 1917, struck probably the most effective blow against the liquor interests, as it prohibited the shipping of liquor into any State holding the manufac-

ture of alcoholic beverages to be unlawful, and further prohibited sending into any such State, through the mails, any publication or printed matter containing liquor advertisements.

**CANADA.** On May 1, 1918, the city of Quebec was to become *dry* by reason of a vote cast October 4, 1917. Adjacent areas however were not effected. By an Order in Council, after December 1, 1917, until abnormal conditions due to the war cease, no grain of any kind, and no substance that could be used for food was to be used in Canada for the distillation of potable liquors. Canada also prohibited the importation of any spirituous beverage and the manufacture of any intoxicating beverage exceeding 2½ per cent of alcohol.

**GREAT BRITAIN.** In February the Food Controller reduced the amount of beer allowed to be brewed to 70 per cent of the output of the preceding year, and corresponding restrictions were placed on the release of wines and spirits from bond. In October a maximum price was fixed for draft beer depending on gravity.

**OTHER EUROPEAN COUNTRIES.** All countries directly affected by the war placed restrictions of some kind on the manufacture and sale of alcoholic beverages. It was noticeable however that many of the smaller countries not so affected were obtaining some of the business of the larger nations. Barbados for example produced twice as much rum in 1916 as in 1915, due to the large export demand to Great Britain. Drinking in Sweden became an expensive luxury; one had to buy a meal in order to obtain his drink, which proved an unfortunate requirement from the standpoint of food conservation. In Holland the retail price of beer was double that of 1913, and the production of gin was prohibited. This was a serious blow to Schiedam, made famous by its Schiedam Schnapps. There are located here five hundred distilleries producing gin, and the entire business of the place depends on the distilleries and their connections, such as cooperage, bottle making houses, etc.

**WINES.** The world's wine production for 1916 in hectolitres (26.4 gallons) was as follows:

Countries	Hecto-litres	Countries	Hecto-litres
Algeria .....	8,731,000	Italy .....	38,700,000
Argentina .....	4,500,000	Portugal .....	5,449,000
Australia ....	250,000	Russia .....	1,500,000
Austria .....	250,000	Spain .....	23,272,000
Brazil .....	800,000	Switzerland ..	434,000
Chile .....	2,300,000	Tunis .....	400,000
France and Corsica ...	36,069,000	United States.	1,578,000

Reports from France for 1917 indicated the yield of wine to be far less than normal. In addition to troubles arising from the war, the vines had been seriously injured by disease. Active steps were taken by the government to increase the cider output as much as possible, in order to offset conditions caused by the scarcity of wine. The prices of wine were expected to go still higher.

From all reports Italy's vintage for 1917 would be a bumper one. The production was estimated to be 1,056,710,000 gallons. New railroad cars, built in America, were being hastily assembled to handle the tremendous crop of grapes. The poorer classes had been accustomed heretofore to drinking a "second" wine, made largely from grape pressings by ferment-

ing with added sugar. This product will be scarce on account of the difficulty of obtaining sugar, and hence these classes will be forced to drink the purer wine now so plentiful.

In Algeria one-third of the vintage was requisitioned for military purposes; each wine producer must turn one-third of his grapes into good table wine for the army. The crop was less than in 1916, and prices therefore higher; to add to producers' troubles a decided shortage existed in barrels and bottles.

In California the vintage was supposed to be about normal, but the outlook was uncertain. The wine maker did not know definitely whether he would be allowed to make wine, or the grape grower whether he could sell his grapes to the winemaker. Many growers decided to dry their grapes rather than attempt to sell them to the winemakers. The demand for California wine has been good, particularly export; in one month of 1917 90 per cent more wine was exported than in the corresponding month of the previous year. The Eastern growers labored under the same difficulty as the Western. Many were going out of business, preferring to invest their capital in some business more stable than that of manufacturing intoxicating liquors.

**FERMENTED LIQUORS.** The following table shows the production of fermented liquors, per capita consumption, etc., in the United States for the two years 1916 and 1917:

Year	Bbls. Beer	Per capita gallons	No. of breweries	Retail dealers
1916 ...	58,632,624	17.59	1,313	12,716
1917 ...	60,817,879	....	1,247	11,151

The production shows a decided increase, notwithstanding the increase of prohibition, although it will be noted that the number of breweries and retail dealers has decreased.

The year 1917 found the brewing operations in Bohemia, Austria, very much reduced. While the hop yield was satisfactory for all reasonable demands, all the barley has been taken over by the government. In 1914, 532 breweries produced 228,000,000 gallons of beer; in 1916 but 504 breweries were in operation with a total production of but 79,000,000 gallons. It is estimated that since this report was made at least 200 more breweries have suspended operation. The price in 1914 was about one crown per United States gallon, in the fall of 1916 the price was about three and a half crowns per gallon. In Germany about the same conditions existed as in Austria, and in many towns the amount one might drink was limited. The extreme shortage in the supply of beer was a serious one for the military authorities, for the German soldier demanded his daily allowance of beer,—at least as much as he dared demand anything.

**NON-ALCOHOLIC BEVERAGES.** The manufacture of so-called non-alcoholic beverages, made to resemble beer but containing less than 0.5 per cent of alcohol, has steadily increased. It was said that over \$300,000 more was spent in 1917 than in 1916 in advertising this class of beverages; and the effort to obtain business was not confined to dry States. At the end of 1917 no authentic data were available on the production of these beverages, but as an Internal Revenue tax of one cent per gallon had been

placed on all carbonated beverages, some statistics would be available in the future. See **FOOD CONTROL.**

**LITERATURE.** See articles on French, German, Italian, Scandinavian and Spanish Literatures; also **LITERATURE, ENGLISH AND AMERICAN.**

**LITERATURE, ENGLISH AND AMERICAN.** The output of 1917 has given no uncertain answer to the question propounded in 1914 as to the effect of war upon literature. The tendency throughout the whole English-speaking world has been to increase the number of books, to weed out the trivial—except in the case of adventure and detective stories particularly in demand for relaxation—and to enlarge the consumption of non-fiction discussions of the war and the profounder problems of life which it has emphasized, and to augment markedly the interest in poetry. While but a small part of the printed matter of the year can hope for permanency, it has struck a high note of seriousness. And it is becoming increasingly evident that in the complexity and fluidity of modern life genuine contemporary importance must partly take the place of permanence in the standards used to measure literary excellence.

The table on the following page, reprinted by courtesy of the *Publisher's Weekly*, presents the situation effectively.

**FICTION.** (Here, and throughout this article, English and American literature is treated as the whole which it in reality is.) The average quality of the year's fiction has been good, but the contributions of marked significance have been few. Two posthumous and unfinished novels by Henry James were published in 1917: *The Ivory Tower*, an international story in his most involved style, and *The Sense of the Past*, an international story involving James Russell Lowell's residence in London. Henry James's own notes forecast the ending, and the whole story is phrased in his simplest and most penetrating English. Joseph Conrad published only a long short-story, *The Shadow Line*, in which the illimitable Unknown continues to dominate the lives of men. John Galsworthy did much less than his best in *Beyond*, a study of the tragedy of ill-considered and illicit love. Eden Phillpotts was less tragic than usual in *The Banks of Colne*, another study of British industry, and chose a delightful theme for his skill in *The Girl and the Faun*, an allegory of eternal youth and human frailty. Hugh Walpole did veracious work in *The Green Mirror*, a gentle satire on an English family and its daughter's love affair. The irrepressible H. G. Wells continued on his reconstruction of human society by readjusting religion in *The Soul of a Bishop*, wherein he creates no characters but does much talking denunciatory of creeds and religious authority, an application in semi-fiction form of Mr. Wells's previous conclusions in *God, The Invisible King*. An excellent piece of work is St. John Ervine's *Changing Winds*, a faithful and delightful study of somewhat callow young Englishmen called to manhood by the war. Ernest Poole more than justified expectation by his second novel, *His Family*, a study of changing and diversifying ideals realistically set against the background of modern New York, and representative of the best in American realism. More grim was Joseph Hergesheimer's

\* These figures include pamphlets of which 2051 were published in 1917; 1941 in 1916.

*Three Black Pennys* a powerful delineation of hereditary flaws outcropping through three generations. Mary Webb laid in Wales an effective tragedy of passion, *Gone to Earth*. Hugh de Selincourt's *A Soldier of Life* was a brilliant war story of disintegration and subsequent regeneration. Maurice Hewlett's Icelandic story, *Thorgils*, was told with a convincing simplicity of style. J. D. Beresford effectively described the growth of sympathy in *Housemates* and satirized intellectual self-sufficiency in *The Wonder*. *Mendel* by Gilbert Cannan pictured a struggle for self-expression, and his *Stucco House* staged an industrial conflict. E. F. Benson's *Michael* was a tale of war, love, and divided friends, *The Tortoise* a tale of life dominated by the trivial, *The Freaks of Mayfair* a series of satires. *The Wave* by Algernon Blackwood staged another reincarnation, while J. C. Snaith's *The Coming* attempted to modernize the Carpenter of Galilee. Archibald Marshall in *Upsidonia* indulged in a *Utopia*, in *Abington Abbey* he followed the best traditions of Trollope. Elizabeth Pennell's *The Lovers* was a delicate picture of married lovers; Forrest Reid's *Spring Song* was the story of a sensitive child. Edith Wharton wrote a realistic but unpleasant New England story in *Summer*; while Winston Churchill's *Dwelling Place of Light* was distinctly unconvincing. Fryniwyd Tennyson Jesse staged a rather notable drama against the background of Cornwall in *Secret Bread*; Mrs. Humphry Ward tells a quiet story of war's readjustments in *Missing*; and Alfred T. Sheppard writes a story of weak souls in *The Quest of the Ledger Dunstan*.

Of importance also are: Katherine Fullerton Gerould's satire, *A Change of Air*; Mary Fisher's *The Treloars*; Hetty Hemenway's *Four Days*; Gertrude Hall's *Aurora the Magnificent*; Sheila Kaye-Smith's *The Challenge to Sirius*; Marie Adelaide Lowndes's *Lilla*; Stephen McKenna's *Sonia*; Alice Brown's *Bromley Neighborhood*; Phyllis Bottoms's *The Second Fiddle*; William J. Locke's *The Red Planet*; and the anonymous *Helen of the Four Gates*, a story of malice that

is in its handling somewhat reminiscent of Thomas Hardy. Alice Cholmondeley in *Christine*, a series of interesting letters, and Mrs. Alfred Sidgwick—too solemnly—in *Salt of the Earth*, attack German presumption and domestic tyranny. Realistic studies of youth and broken conventions—fewer than usual—are represented by Emerson Hough's *The Broken Gate*; Robert Hitchens's *In the Wilderness*; Basil King's *The Lifted Veil*; St. John Lucas's *April Folly*; Vincent O'Sullivan's *The Good Girl*; Grant Richards's *Bitter-sweet*; Perley Poore Sheehan's *Those Who Walk in Darkness*; and Francis Bellamy's *The Balance*. Abraham Cahan's *The Rise of David Levinsky*, E. G. Stern's *My Mother and I*, Sidney L. Nyburg's *The Chosen People*, and Edna Ferber's *Fanny Herself*, all deal with the problems of the Jew in America. Caradoc Evans writes of the Welsh peasant in *My People*; Paul Kester of the Negro in *His Own Country*; and Sholom Aab of the Russian in *Mottke The Vagabond*. Studies of marriage are: Edward Burke's *My Wife*; May Edginton's *Married Life*; the anonymous *Empty House*; Henry Kitchell Webster's *The Thoroughbred*; Rupert Hughes's *We Can't Have Everything*; Edith Barnard Delano's *To-Morrow Morning*; Frances Rumsey's *Mr. Cushing and Mlle. du Chastel*; Mrs. Victor Rickard's *The Frantic Boast*; and Sinclair Lewis's slight, but pleasant story, *The Innocents*.

Among the lighter romances of youth and love and stories noteworthy for humor, whimsy, and fantasy, F. T. Wawn contributed *The Joyful Years*; Margaret Widdemer the *Vivacious Wish-ing Ring Man*; Horace Annesley Vachell, *Fishing*, an English comedy; Allan Updegraff a first novel of promise, *Second Youth*; Alice Hegan Rice, *Calvary Alley*; Meredith Nicholson provided *The Madness of May* and *A Reversible Santa Claus*. Stuart Maclean writes delicate sentiment into *Alexis*; Julia H. Coffin tells a fable in *The Vendor of Dreams*; Christopher Morley contributes a romance, *Parnassus on Wheels*; Helen Martin introduces *Those Fitznabergers*; and Joseph C. Lincoln engages in *Re-*

FOUR LITERARY FIGURES PROMINENT IN 1917

trating *Obadiah*. There are also W. W. Jacobs's *The Castaways*; W. E. B. Henderson's satiric romance, *Behind the Thicket*; John Fox's *In Happy Valley*; Temple Bailey's two light romances, *Mistress Anne* and *The Glory of Youth*; James Branch Cabell's delicate parable, *The Cream of the Jest*.

Other books worth mentioning are: Gertrude Capen Whitney's *The House of Landell*; Theodore Watts-Dunton's leisurely *Vespere Towers*; Edith Wherry's study of Chinese character in *The Wanderer on a Thousand Hills*; George Stevenson's quietly humorous story of English country life in *A Little World Apart*; Countess Barcynska's *If Wishes Were Horses*; Louis Dodge's well articulated tragedy, *Children of the Desert*; Robert Cutler's *Louisburg Square*, a fine piece of sympathetic realism; E. Phillips Oppenheim's *The Hillman*; Stacy Aumonier's *Just Outside*; Mary E. Wilkins Freeman and Florence Morse Kingsley's disappointing *An Alabaster Bow*; W. J. Dawson's quiet narrative, *Robert Shenstone*; Eugenia Brooks Frothingham's study of love in *Way of the Wind*; Basil King's *The High Heart*; Florence Morse Kingsley's *Neighbors*; Mrs. Frances Hodgson Burnett's *The White People*; Arthur Stanwood Pier's *Jerry*; Henry Handel Richardson's meandering *Fortunes of Richard Mahoney*; Gordon Hall Gerould's kindly *Peter Sanders, Retired*; Sir William Blake Richmond's satire of an elderly man upon the world's conventions in *The Silver Chain*; Boyd Cable's vigorous war story, *Grapes of Wrath*; and "Sapper's" terrible realism in *No Man's Land*. Industrial conditions were responsible for Upton Sinclair's *King Coal*; for Sherwood Anderson's *Marching Men*; and for Mary Austin's *The Ford*. Feminism inspired that curious hybrid, *The Sturdy Oak*, a story of politics, kidnapping, and final conversion to suffrage, written in turn by fourteen American authors; and also Marjorie Benton Cooke's *Cinderella Jane*; Kathleen Norris's *Mattie the Unconquered and Undertow*; Zona Gale's *A Daughter of the Morning*; Mary Johnston's *The Wanderers*; Clarence Dane's attack upon the abnormality resulting from segregation, in *The Regiment of Women*; Mary Hallock Foote's *Edith Bonham*; and Stella Benson's clever, if bitter, *This Is the End*.

The year saw published a number of stories of children and adolescent youth intended for more adult readers. Among the best of these were: Dorothy Canfield Fisher's *Understood Betsy*; Samuel Merwin's *Temperamental Henry*; E. M. Delafeld's *Zella Sees Herself*; Eleanor Gates's *Apron Strings*; Holloway Horn's *The Folly of Innocence*; Mary Roberts Rinehart's *Bab—A Sub-deb*; John Hay Beith's (Ian Hay) *Pip*; Sophie Cole's *A London Posy*; Honoré Willies's charming *Lydia of the Pines*; and Bettina Von Hutten's *Mag Pye*.

Stories of adventure, of mystery, and of the super-clever detective are legion, and the demand from the front still continues. Among the more noteworthy adventures are: Henry De Vere Stackpoole's delightful *Sea Plunder*; John Buchan's fine *Greenmantle*, as also his *Salute to Adventurers*; Sir Rider Haggard's third and last of the Quartermain adventures, *Finished*; Jessie Douglas Kerruish's *Miss Haroun al Raschid*; Jack London's posthumous *Jerry of the Islands* and *Michael, Brother of Jerry*; Talbot Mundy's *The Winds of the World*; Jackson Greg-

ory's *Wolf Breed*; Arthur Machen's *The Terror*; Mary Roberts Rinehart's *Long Live the King*; and Robert Chambers's *Barbarians* and *The Dark Star*. Of mystery and detective stories one might select: Vernon Horace Rendell's *The London Nights of Belaise*; Arthur Sherburne Hardy's *No. 13 Rue du Bon Diable*; Anna Katherine Green's *The Mystery of the Hasty Arrow*; Mrs. Wilson Woodrow's *The Hornet's Nest*; Holman Day's *Where Your Treasure Is*; George F. Bronson-Howard's *Slaves of the Lamp*; Jeffery Farnol's whimsical *The Definite Object*; William MacHarg and Edwin Balmer's *The Indian Drum*; Carolyn Well's *Faulkner's Folly*; Jannette Lee's *The Green Jacket*, and a number of others.

As for historical novels, Irving Bacheller has written the story of a fine old political type from the 40's in *The Light in the Clearing*; and Will Harben goes back to Georgia and the Civil War in *Triumph. My Story* by Frederic J. Stimson is the life of Benedict Arnold cast in autobiographical form. The Baroness Emmuska Orczy in *A Sheaf of Bluebells* tells an excellent story of the Napoleonic era. Joseph McCabe's *The Pope's Favorite* describes the pomp and crime of the Borgias; Clara E. Laughlin's *The Heart of Her Highness* concerns the daughter of Charles the Bold of Flanders; Warwick Deeping places *Martin Valliant* in the time of Richard the Hunchback; and Charles Benjamin Hudson retells effectively the story of David and Saul in *A Royal Outlaw*. Worthy of mention also are: Cyrus Townsend Brady's *When the Sun Stood Still*; J. Harold Carpenter's *The Pendulum*; Florence L. Barclay's *The White Ladies of Worcester*; E. Brandram Jones's *The Second Cecil*; Cecil Starr Johns' *With Gold and Steel*; Marjorie Bowen's *William By The Grace of God and The Third Estate*; Agnes and Egerton Castle's *Wolf Lure*; Gabrielle Feasting's *Honour Among Thieves*; George Gough's *The Yeoman Adventurer*; and Rafael Sabatini's *The Snare*.

SHORT STORIES. The year boasts its full quota of volumes of short stories, among the best being: Rudyard Kipling's *A Diversity of Creatures*, stories which bear witness to a sure hand and a maturer mind, though they miss some of the old fervor and imagination; Sir Arthur Conan Doyle's rejuvenescence of Sherlock Holmes in *His Last Bow*; Thomas Burke's vivid but sordid *Limehouse Nights*; Richard Harding Davis's effective human document, *The Deserter*; Henry De Vere Stackpoole's dashing narratives, *In Blue Waters*; A. E. W. Mason's *The Four Corners of the World*; J. B. Connolly's sea tales, *Running Free*; Algernon Blackwood's stories of the subliminal and the exotic, *Day and Night Stories*; Phyllis Bottome's *The Derelict*; Daniel Corkery's realistic *Monster Twilight*; Rupert Hughes's *In a Little Town*; and Samuel Hopkins Adams's *Our Square* and *The People In It*. Jack London's *The Human Drift* includes also sketches, essays, and a curtain raiser. There are also Rex Beach's *Laughing Bill Hyde*; Katherine H. Brown's *The Wages of Honor*; Wallace Irvin's *Pilgrims Into Folly*; Irvin Cobb's *Those Times and These*. The war appears in Alden Brooks's *The Fighting Men*; in David H. Lawrence's grim *Prussian Officer*; and in Harold Ashton's *The Tale of a Tank*. Edward J. H. O'Brien's anthology, *The Best Short Stories of 1916*, included contributions selected from sixty-nine magazines; and Frederick Stuart Greene in *The Grim Thirteen* collected from various au-

thors stories refused magazine publication ostensibly for their grimness.

**POETRY.** The most notable volumes of poetic criticism for the year are: Amy Lowell's interpretation of the imagists and the objective school, *Tendencies in Modern American Verse*; and Sir Henry Newbolt's *A New Study of English Poetry* in which he undertakes a comprehensive discussion of the qualities and purpose of verse. H. Houston Peckham also contributes *Present Day American Poetry*, a collection of essays. *The New Poetry*, an anthology edited by Harriet Munroe and Alice Corbin Henderson, includes excellently selected examples of the verse of nearly a hundred poets. The small special collection, *Some Imagist Poets: 1917*, appears for the last time this year. William Stanley Braithwaite publishes his annual, *Anthology of Magazine Verse for 1917*, and also his discursive *The Poetic Year for 1916*.

Among the outstanding books of verse for the year are: Sara Teasdale's exquisite lyrics, *Love Songs*; Ralph Hodgson's *Poems*, which for simplicity and mysticism rival Blake, and his *The Last Blackbird*, which out-Blake's Blake; Wilfred Wilson Gibson's *Liveliness*, *Dramatic Reveries*, and his *Collected Poems*, significant for dramatic sense and sympathetic insight; James Elroy Flecker's posthumous *Collected Poems*, notable for rich music and delicate workmanship; William Henry Davies's *Collected Poems*, reminiscent often of the Caroline lyrics; Edward Arlington Robinson's *Merlin*; Charles Algernon Swinburne's *Posthumous Poems*; Arthur Symon's fastidious verse in *Poems*, in *Tragedies*, and in *Knave of Hearts*; Sir William Watson's *The Man Who Saw*, and *Retrospection and Other Poems*; George E. Woodberry's *Ideal Passion*; Richard Burton's *Poems of Earth's Meaning*; Thomas Hardy's *Moments of Vision*. There were also: Winifred W. Letts's *Hallowe'en and Poems of the War*, re-issued with a few additions as *The Spires of Oxford*, so called from the exquisite title poem; John Masefield's *Lolington Downs*, less good than his best; a definitive edition of Charles W. Stoddard's *Poems*; Eden Phillpotts's *Plain Song*; Vachel Lindsey's *The Chinese Nightingale*; Edgar Lee Masters's *The Great Valley*; Sarah N. Cleghorn's restrained *Portraits and Protests*; and Robert Nichols's *Ardours and Endurances*, poems of imagination and feeling.

Worthy of mention also, out of the upwards of a thousand volumes published in England and America for the year, were Launcelot A. Crammer-Bryng's translations from the Chinese, *A Feast of Lanterns*; Theodosia Garrison's *Dreamers*; Richard Butler Glaenzer's *Beggar and King*; Christopher Morley's *Songs for a Little House*; Francis Ledwidge's *Songs of Peace*; Alice Meynell's *A Father of Women*; Ezra Pound's perverse *Lustra*; R. E. Vernède's *War Poems and Other Verses*; Alice Brown's *The Road to Castaly*; Bruce Malaher's *The Wizard's Loom*; Louis Untermeyer's *These Times*; Cale Young Rice's *Trails Sunward*; Arthur Davison Ficke's *An April Elegy*; James Oppenheim's *Book of Self*; Edith Wyatt's *The Wind in the Corn*. There were also: *Grenstone Poems* by Witter Bynner; *Sicords for Life* by Irene Ruthford McLeod; *The Vision Splendid* by John Oxenham; *Stars and Fishes* by George Rostrevor; *The Bubble and Other Poems* by Willoughby Weaving; *The Jig of Forslin* by Conrad

Aiken; *The Volunteer and Other Poems* by Herbert Asquith; *The Shadowed Hour* by John Erskine; *The City of Fear* by Gilbert Frankau; *London Lamps* by Thomas Burke; and *The Red Flower* by Henry Van Dyke.

Homely and humorous verse was represented by: William Aspenwall Bradley's *Old Christmas and Other Kentucky Tales in Verse*; Edgar A. Guest's *Just Folks*; Orrick G. Johns's *Asphalt and Other Poems*; Joyce Kilmer's *Main Street*; Franklin P. Adams's amusing *Weights and Measures*; John Collins Squire's clever parodies, *Tricks of the Trade*; Alice Duer Miller's gay suffrage arguments in *Women Are People*; beside John Hay's *Complete Poetical Works*.

Anthologies were many in 1917. Among those dealing with war were: *A Treasury of War Poetry* edited with excellent judgment by George Herbert Clarke; *Fifes and Drums*, American war verse; *A Book of Verse of the Great War*, edited by W. R. Wheeler; *The Muse in Arms*, edited by E. B. Osborn; *Rookie Rhymes*, by men of the first and second Plattsburg camps; and *Canadian Poets and Poetry*, edited by John W. Garvin. Among other anthologies were: *The Answering Voice*, one hundred love lyrics by women, chosen by Sara Teasdale; *A Book of Yale Review Verse*; an *English Anthology of New Poetry for 1917*; *The Oxford Book of English Mystical Verse*; *Camp Fire Verse*; *The Poets of the Future—A College Anthology for 1916-17*; *Some Minor Poems of the Middle Ages*; and the fifth volume of Ward's *The English Poets*, extending from Browning to Dowson.

**DRAMA.** The year 1917 saw the publication of a number of discussions of the contemporary drama and not a few collections of plays—for the most part in one act—representing both phases of the new movement—realistic studies of life on the one side and expressions of highly poetic imagination on the other. Discussion was represented by Thomas H. Dickenson's illuminating *Contemporary Drama in England* and by the same author's sane study of *The Insurgent Theatre*; by Ernest A. Boyd's careful *Contemporary Drama of Ireland*; by Louise Burleigh's *The Community Theatre in Theory and Practice*; by Sheldon Cheney's *The Art Theatre*; by John Talbot Smith's *The Parish Theatre*; by Percy W. Mackaye's *Community Drama*, and Constance D'Arcy Mackay's *Little Theatre in the United States*; by Aleksander Bakshy's *Path of the Modern Russian Stage*; and by William H. Scheiffele's *Brioux and Contemporary French Society*. Edward Hale Bierstadt contributes a book on *Dunsany the Dramatist*; Clayton M. Hamilton, a combination of discussion and dramatic criticism in *Problems of the Playwright*; Joseph F. Daly publishes a valuable biography of his brother, *The Life of Augustin Daly*; Alexander Woolcott has gathered together much interesting opinion and reminiscences in *Mrs. Fiske; Her Views on Actors, Acting, and the Problems of Production*. Arthur H. Quinn edited an admirable collection of *Representative American Plays*; and Montrose J. Moses published the first of a three volume *Representative Plays by American Dramatists*.

By all odds the most notable volumes of plays for the year were Lord Dunsany's *Plays of Gods and Men*, exquisitely phrased, yet tensely dramatic; and Arthur Symon's *Tristan and Isolde*, a four act play in verse that is rich with

enchantment and weighted with the sense of doom. George Fitzmaurice carried on the Irish traditions in *Five Plays*; Stuart Walker contributed four fanciful *Portmanteau Plays*; Jeanette Augustus Marks showed both humor and pathos in *Three Welsh Plays*; Frank Betts produced three tense *Saga Plays*; Percival Wilde wrote *The Unseen Host and Other War Plays*; and Percy W. Mackaye published his fantasy, *Sinbad the Sailor*, and the operatic version of his comedy, *The Canterbury Pilgrims*. Padraic Colum caught the color of oriental imagination in his *Mogu, The Wanderer*. Granville Barker published *Three Short Plays*; Eden Phillpotts, *A Farmer's Wife*; Rabindranath Tagore, *Sacrifice and Other Plays*; and the Drama League Series contributed a volume of four *Washington Square Plays*. There were also: Philip Moeller's biographical comedy, *Madame Sand*; Edward Massey's burlesque, *Plots and Playwrights*; Frederic Ridgely Torrence's *Granny Maumees*, three plays for a Negro theatre; *Six Plays of the Yiddish Theatre*; Charles Rann Kennedy's chaotic *The Ribs of the Man*; and a number of volumes of short plays. Of unusual interest is the publication of *Noh*; or, *Aaccomplishment, a Study of the Classical Stage of Japan*, by the late Ernest F. Fenollosa and Ezra Pound, including fifteen examples of the *Noh*, or class plays, and an essay upon their origin and development by Dr. Fenollosa.

**LITERARY CRITICISM, BIOGRAPHY, ESSAYS, AND GENERAL LITERATURE.** Literary History was represented in 1917 by volumes 13 and 14—the last—of the *Cambridge History of English Literature*, which concerned themselves particularly with Carlyle, Tennyson, the Brownings, Dickens, Thackeray, and with articles on various special interests, including journalism and colonial literature, and by volume 1 of the *Cambridge History of American Literature*, edited by W. P. Trent, John Erskine, Stuart P. Sherman, and Carl Van Doren, which treats of Colonial, Revolutionary, and early national literature. Shakespearean literature was augmented by *Shakespeare's England—An Account of the Life and Manners of His Age*, in two important volumes which represent the collaboration of a number of scholars; by Joseph Quincy Adams's careful study *Shakespearean Playhouses*; and by Peter Hampson Ditchfield's *The England of Shakespeare*. Charles Mills Gayley writes on *Shakespeare and the Founders of Liberty in America*; Sir Arthur Quiller-Couch contributes *Notes on Shakespeare's Workmanship*, in which he approaches W. S. as a popular playwright; and Dr. Nichol Smith publishes an anthology of *Shakespeare Criticism*, from Ben Jonson down. J. A. R. Marriott writes on *Shakespeare and the Spirit of England*; and John Mackinnon Robertson, in *Shakespeare and Chapman*, argues for Chapman's authorship of *A Lover's Complaint*. J. E. Spingarn, in *Creative Criticism*, advocates a criticism that shall strive to evaluate the artist's effectiveness in his expression of emotion and life, in place of the formal criticism that concerns itself with technical details. William C. Brownell, in *Standards*, appeals against wilful eccentricities in art. Arthur Symonds, in *Figures of Several Centuries*, has written finely critical essays on many subjects from St. Augustine down; Stuart P. Sherman, in *On Contemporary Literature*, contributes wholesome essays in criticism; Waldo Hilary Dunn, in

*English Biography*, makes a scholarly survey of the field; and Lafcadio Hearn's *Life and Literature*, just published from notes taken by his Japanese students, offers much penetrating criticism by one who was himself a master of style. Three more volumes from the "How to Know Him" series reach a high grade of excellence: William Allan Neilson's excellent interpretation of *Robert Burns*; Stuart P. Sherman's interesting *Matthew Arnold*; and Raymond M. Alden's *Alfred Tennyson*. George Saintsbury, the indefatigable, publishes volume 1 of *A History of the French Novel*, which extends to 1800; Vida D. Scudder has completed a careful survey of *The Morte D'Arthur of Sir Thomas Malory, and Its Sources*; Lizette Andrews Fisher makes a study of *The Mystic Vision in the Grail Legend and in the Divine Comedy*; W. Wagner adds *Epic and Romance of the Middle Ages*; and William Hawley Davis *English Essayists*. Lloyd R. Morris discusses the dramatic, political, and social renaissance in Ireland in *The Celtic Dawn*; Dorothy Scarborough writes a delightful book on *The Supernatural in Modern English Fiction*; James Vernon Ledoux makes an appreciative study of the poetry of *George Edward Woodberry*; Sheila Kaye-Smith writes, for the *Writers of the Day Series*, a little book on *John Galsworthy*, and Stephen Gwynn, for the same series, a *Mrs. Humphry Ward*; G. Turquet-Milnes discusses *Some Modern Belgian Writers*; Butler Wood edits *Charlotte Brontë—A Centenary Memorial*, which includes a number of articles; G. Currie Martin traces the dominant spirit in English poetry in *Poets of the Democracy*; and Alfred Lester Coester contributes a comprehensive and accurate *Literary History of Spanish America*. *The Moderns* by John Freeman includes keen critical estimates of Shaw, Wells, Hardy, Henry James, Conrad, Bridges, and others. *Six Major Prophets* by E. E. Slosson deals suggestively with Shaw, Chesterton, Wells, John Dewey, Rudolph Eucken, and F. C. S. Schiller. Nadine Jarintzov in *Russian Poets and Poems* includes a general discussion of Russian poetry and biographical and critical treatment of the older poets. Edward Moore writes *Studies in Dante*; Charles Hall Grandgent *The Ladies of Dante's Lyrics*; and Ezra Pound publishes a considerable body of criticism and social theory in *Passages from the Letters of John Butler Yeats*, being letters written to his son, W. B. Yeats. Leslie Hall follows Professor Lounsbury's lead in his discussions of *English Usage*. Elizabeth Deering Hanscom in *The Heart of the Puritan* has put together extracts from letters and journals which make a most illuminating contribution to the history of literature and of Puritanism.

**BIOGRAPHY.** Many valuable biographies and autobiographies appeared in 1917. Viscount John Morley published *Recollections*, which for richness of material and grace of style ranks first among the year's contributions. Hamlin Garland's *A Son of the Middle Border* for vividness of detail is unmistakably the best of its kind in America for the year. Two more notable volumes were Henry James's *Middle Years*, and Brander Matthews's *These Many Years*. Other autobiographical books were: William Henry Davies's *The Autobiography of a Super-Tramp*; Sir George John Younghusband's *A Soldier's Memories in Peace and War*; Mrs. Katharine Hinkson's *The Middle Years*; Alice

Stone Blackwell's book of the reminiscences of Madame Breshkovskaya, *The Little Grandmother of the Russian Revolution*; Cardinal James Gibbons's *A Retrospect of Fifty Years*; Sir Rabindranath Tagore's *My Reminiscences*; M. E. Ravage's *An American in the Making*; and Katherine Keith's *A Girl*, an unusual autobiographical study. Of particular interest is the long undiscovered *Reminiscences of a Literary Life* written by Charles MacFarlane, author and traveler, who died in 1858, but who knew in the flesh Keats, Shelley, Hartley Coleridge, and De Quincey.

The year has produced a definitive *Life of Keats* by Sir Sidney Colvin; *Shelley in England: New Facts and Letters from the Shelley-Whitton Papers* by Roger Inghen; *Letters About Shelley: Interchanged by Three Friends*, Edward Dowden, Richard Garnett, and William Michael Rossetti; *The Life of Algernon Charles Swinburne*, an appreciation rather than a criticism, by Edmund Gosse; *Algernon Charles Swinburne*, a collection of personal letters and recollections, by his cousin Mrs. Disney Leith; *Letters and Recollections of Algernon Charles Swinburne* by Thomas Hake and A. Compton Rickett; *Sylvander and Clarinda: The Love Letters of Robert Burns and Agnes McLehose*, edited by Amelia J. Barr; *The Early Life of Robert Southey* by William Haller; and *François Villon: His Life and Times* by Henry De Vere Stackpoole. Albert Bigelow Paine edits a characteristically delightful collection of *Mark Twain's Letters*, covering the period from his eighteenth year to his death; F. B. Sanborn contributes *The Life of Henry Thoreau*; Edward Waldo Emerson, *Henry Thoreau, as Remembered by a Young Friend*; and there is the *Life and Letters* of Christopher Pearse Cranch, with memories of Brook Farm, Emerson, Lowell, Curtis, the Brownings, and the Storys. The year boasts also *The Life and Letters of Edward Everett Hale*, edited by his son; *The Life and Letters of Robert Collyer*, by John Haynes Holmes; the *Letters of John Holmes to James Russell Lowell and Others*; the *Correspondence of John Henry Newman with Keble and Others*; *The Life and Letters of the Rev. Stopford A. Brooke*, by L. P. Jacks; the *Life and Letters of Maggie Benson* by Arthur C. Benson; and *Selections from the Correspondence of the First Lord Acton*; two excellent biographies are *Herbert Spencer* by Hugh Elliot, and *The Life of John Fiske* by John Spencer Clark. Theon G. Strong has done valuable work in his *Joseph H. Choate*; Stephen Gwynn and Gertrude M. Tuckwell have made an important contribution to English political history in their *Life of the Rt. Hon. Sir Charles W. Dilke, Bart.*; and George Earle Buckle completes the fifth and last volume of *The Life of Benjamin Disraeli*. Gilbert A. Tracy publishes the *Uncollected Letters of Abraham Lincoln*; Alonzo Rothschild covers Lincoln's life until his election to Congress in his admirable *Honest Abe*. There are also lives of Penn, Franklin, General Grant, Stonewall Jackson, Lord Kitchener, Lloyd George, President Wilson, Lord Lister, Henry Ford, James J. Hill, Leonard Wood, Martin Luther, Hugo Grotius, Count Tolstoi, Bishop Wilberforce, Li Hung-Chang, Col. Mosby, Alan Seeger, Richard Strauss, and others. Calvin Thomas has done work of permanent value in his *Goethe*; Francis Hobart Herrick has written a scholarly *Audubon, The Natu-*

*ralist*; Margaret Pease has contributed a valuable book in *Jean Jaurès, Socialist and Humanitarian*; and Winifred Stephens has drawn a very human picture of *Madame Adam*. Charles Belmont Davis has published *The Adventures and Letters of Richard Harding Davis*; and Coulson Kernahan, in *In Good Company*, has produced some interpretive biographical sketches of Watts-Dunton, Swinburne, Oscar Wilde, Lord Roberts, and others.

**ESSAYS.** The year's output of Essays is best represented by: Arnold Bennett's *Books and Persons*, a collection of periodical criticism; E. V. Lucas's clever *A Boswell of Baghdad and Other Essays*; Michael Monahan's *New Adventures*; David Grayson's *Great Possessions*; Margaret Sherwood's *Familiar Ways*; Edith Wyatt's *Great Companions*, being essays in literary criticism; Augustine Birrell's *Self-Selected Essays*, largely biographical; Austin Dobson's *A Bookman's Budget*; G. K. Chesterton's *Utopia of Unweavers*, wherein he takes an angry fling at wealth, and his somewhat startling *Short History of England*; Logan Pearsall Smith's *Triria*; Hilaire Belloc's *The Present Position and Power of the Press*; Arthur Grant's *On the Wings of the Morning*; Dixon Scott's often penetrating criticism in *Men of Letters*; and Mark Twain's *What Is Man and Other Essays*. Distinctly worthy of mention also are: *Random Reflections of a Grandmother* by Esther Mary Sturgis; *Days of Discovery* by Bertram Smith; *A Naturalist of Souls* by Gamaliel Bradford; Stephen Paget's *I Sometimes Think*; Stephen Leacock's *Frenzied Fiction*; James G. Huneker's *Unicorns*; *The Birds of Shakespeare* by Sir Archibald Geike; *An Apology for Old Maids* by Henry Dwight Sedgwick; *Days Out and Other Papers* by Elizabeth Woodbridge; *The Inn of Disenchantment* by Lisa Ysaye Tarlean; *The Young Idea*, a collection of essays upon tendencies in American literature; *The Foes of Our Own Household* by Theodore Roosevelt; and *A Book of Prefaces* by Henry Louis Mencken. *The War and the Spirit of Youth* contains three most suggestive essays by a Frenchman, an Englishman, and an American.

The feminist movement is represented, among other books, by Gertrude Atherton's discussion of woman's work in war times in *The Living Present*; Wilma Meikle's *Towards a Sane Feminism*; Agnes Edith Metcalfe's *Woman's Effort*, a chronicle of British women's fifty years' struggle for citizenship; Dorothy Canfield and Sarah N. Cleghorn's *Fellow Captains*, which sets forth the achievements of five representative American women; and Francis Henry Gribble's *Women in Revolt*, historical sketches of famous women. The composite suffrage novel, *The Sturdy Oak*, is mentioned elsewhere.

**EDUCATION.** Several essays in the field of education call for notice. The war has necessitated a revaluation of many theories. Among the discussions are: John Burnet's *Higher Education and the War*; Paul Shorey's *The Assault on Humanism*; J. H. Badley's *Education after the War*; Kenneth Richmond's *The Permanent Values in Education*; Randolph S. Bourne's *Education and Living*; Francis Bail Pearson's *Receries of a Schoolmaster*; H. H. Horne's *The Teacher as Artist*; Frederick P. Keppel's *The Undergraduate and His College*; and William T. Foster's pungent inquiry, *Should Students Study?*

**FINE ARTS.** The literature of Fine Arts for the year is best represented by Bernard Berenson's three books: *Essays on Sienese Painting, Venetian Painting in America, and The Study and Criticism of Italian Art*; by Ralph Adams Cram's *The Substance of Gothic*; by Kenyon Cox's *Concerning Painting*; and by Arthur Kingsley Porter's *Lombard Architecture*. Arthur Byne and Mildred Stapley wrote on *Spanish Architecture of the 16th Century*; Ralph Adams Cram, Thomas Hastings, and Claude Bragdon contribute *Six Lectures on Architecture*; James Ward completes volume II of *The History and Methods of Ancient and Modern Painting* (Cimabue to Pollaiuoli); W. A. Bradley, *French Etchers of the Second Empire*; and Katharine Metcalf Roof, *The Life and Art of William Merritt Chase*. John Thomas Smith writes a gossipy *Nollekens and His Times*, and Thomas Whitney Surette discusses the relation of *Musio and Life*.

The realistic movement goes on in philosophy, but the war is responsible for certain breaths of the idealistic spirit. Notable among the year's contributions are: Bernard Bosanquet's *Social and International Ideals*; William Durant's *Philosophy and the Social Problem*; John Neville Figgis's *The Will to Freedom*; J. S. MacKenzie's *Elements of Constructive Philosophy*; Peter Coffey's *Epistemology*; De Witt H. Parker's *Self and Nature*; and particularly significant *Creative Intelligence*, essays by John Dewey, A. W. Moore, H. C. Brown, James H. Tufts, and others. Interesting also are: Sir B. Fuller's *Man as He Is*; Rabindranath Tagore's *Personality*; John Laird's *Problems of the Self*; E. F. B. Fell's *Personal Liberty*; William Tudor Jones's *The Spiritual Ascent of Man*; Frederick Spencer's *Human Ideals*; May Sinclair's *A Defense of Idealism*; and Rhys Carpenter's *The Ethics of Euripides*. Waldo E. Forbes contributes *Cycles of Personal Belief*; Bothwell Graham, *The Philosophy of Christianity*; George A. Barrow, *The Validity of the Religious Experience*; Boris Sidis, *Philistine and Genius*; and Carl Henry Grabo, *The Amateur Philosopher*.

**RELIGION.** Religious problems and theory have claimed their share of attention for the year, with much concern for the reshaping of old forms to meet new situations. The most scholarly book of the year in the field is A. Seth Pringle-Patterson's Gifford Lectures for 1912-13, *The Idea of God—In the Light of Recent Philosophy*. Dean George Hodges discusses *Religion in a World at War*; John Neville Figgis very seriously takes up *Some Defects in English Religion*. Harry E. Foadick writes stimulatingly in *The Challenge of the Present Crisis*; R. J. Campbell in *A Spiritual Pilgrimage* confesses the failures of non-conformity in the crisis; William A. Brown adds *Is Christianity Practicable?* and John Haynes Holmes in his *Religion for To-day* argues for a religion of ethical rather than theological values. The vital problem of religious education is constructively discussed by George A. Coe in *A Social Theory of Religious Education*; by Francis Greenwood Peabody in *The Religious Education of an American Citizen*; and by Wallis S. Athearn in *Religious Education and American Democracy*. Walter Rauschenbusch expounds *A Theology for the Social Gospel*. *The Church and the Man* is a little collection of essays of a very wholesome sort by Donald Hankey. William Temple in *Mens Crea-*

*tria* shows religious experience confirmed by philosophy. Meanwhile the all-daring Mr. H. G. Wells sets out not only to reform the institutions of the church but also to re-discover and to re-state God in *God, The Invisible King*, which William Archer cleverly attacks in *God and Mr. Wells*.

The publication of the ninth volume of Hastings's *Encyclopædia of Religion and Ethics* is a scholarly achievement. The study of comparative religions received a few notable additions: George Barton's well-balanced *Religions of the World*; J. A. Montgomery's *Religions of the Past and Present*; Alexander Macchian's *Celtic Mythology and Religion*; Lewis Spence's *Myths and Legends of Babylonia and Assyria*; Rendel Harris's *The Ascent of Olympus*, a study of the origins of the cults of Dionysus, Apollo, Artemis, and Aphrodite; and Walter J. Channell's excellent *The Historical Development of Religion in China*. There were also *Origin and Growth of the Hebrew Religion* by Henry T. Fowler; and Albert M. Hyamson's *Palestine—The Rebirth of an Ancient People*, a study of Zionism. George A. Coe examines the natural basis of religion in *The Psychology of Religion*; G. Stanley Hall contributes *Jesus, the Christ, in the Light of Psychology*; Charles Foster Kent makes an extremely timely plea for brotherhood in *The Social Teachings of the Prophets and Jesus*. Paul Elmer Moore is responsible for a very thoughtful essay on the origins of Christianity which he entitles *Platonism*; Charles F. Nolloth writes *The Rise of the Christian Religion: A Study in Origins*. Other books are *The Bible's Prose Epic of Eve and Her Sons* by Eric S. Robertson; *The Golden Days of the Early English Church*, from the arrival of Theodore to the death of Bede, in three volumes, by Sir Henry Hoyle Howorth; and *The Religious History of New England* by John Winthrop Plattner and others.

**HISTORY.** In the field of History, outside of books immediately concerned with the war, the most important contributions of the year have been: Charles Downer Hazen's authoritative and illuminating *Alsace-Lorraine Under German Rule*; six essays on *Russian Realities and Problems* edited by James Duff Duff; Robert W. Seton-Watson's *The Rise of Nationality in the Balkans*; Lord Eversley's *The Turkish Empire: Its Growth and Decay*; J. A. R. Marriott's *The Eastern Question*; Herbert Adams Gibbons's *The Reconstruction of Poland and the Near East*; Leon Dominian's *The Frontiers of Language and Nationality in Europe*; Kenneth Scott Latourette's *The Development of China*; B. L. Putnam Weale's *The Fight for the Republic of China*; and John Bassett Moore's *Principles of American Diplomacy*. Of value also are: *The Origins of the Triple Alliance* by Archibald C. Coolidge; *Modern European History* by Charles Downer Hazen; Ramsey Muir's *The Expansion of Europe, the Culmination of Modern History*; Lynn Thorndike's *The History of Medieval Europe*; Harold W. V. Temperley's *History of Serbia*; T. Lothrop Stoddard's *Present Day Europe*; Hugh George Rawlinson's *Intercourse between India and the Western World from the Earliest Times to the Fall of Rome*; and the *History of the Belgian People*, volumes I and III, by Charles F. Horne and Augustus R. Keller. Poland receives attention in *The Political History of Poland* by E. H. Lewinski-Cor-

win; *A Short History of Poland* by Julia Swift Orvis; *A History of Poland from the Earliest Times to the Present Day* by F. E. Whitton; and *Poland Past and Present* by J. H. Harley. Richard Bagwell publishes the third volume of *Ireland Under the Stuarts*; Lord Ernest William Hamilton contributes *The Soul of Ulster*; and Ernest Barker *Ireland in the Last Fifty Years*. K. K. Kawakami writes *Japan in World Politics*; A. M. Pooley, *Japan at the Cross Roads*; Arnold Wright describes some *Early English Adventures in the East*; and the Panama-Pacific Historical Congress, 1915, publishes its papers under the title *The Pacific Ocean in History*. English history, domestic and foreign, comes under discussion in Arthur J. Klein's *Intolerance in the Reign of Elizabeth*; Gilbert Stone's *England from the Earliest Times to the Great Charter*; David D. Wallace's *The Government of England*; Julian Stafford Corbett's *England in the Mediterranean*; Hugh R. Egeron's *British Foreign Policy in Europe*; C. Brunsdon Fletcher's *The New Pacific*; *British Policy and German Gains*; *The Beginning of English Overseas Enterprise* by Sir Charles P. Lucas; and *A Century of British Foreign Policy* by George P. Gooch and John H. B. Masterman.

The United States and her policies are treated in: *Latin America and the United States*, a collection of addresses by Elihu Root; *American World Politics* by Walter E. Weyl; *Inter-American Acquaintances* by Charles L. Chandler; *Dramatic Moments in American Diplomacy* by Ralph W. Page; *The Mississippi Valley in British Politics* by Clarence W. Alvord; Volume IV of *A History of the United States*, which devotes itself to Federalists and Republicans, by Edward Channing; *The Danish West Indies Under Company Rule* by Waldemar C. Westergaard; *Paul Jones: His Exploits in English Seas* by Don C. Seitz; Mrs. Nelson O'Shaughnessy's *Diplomatic Days*; and John S. Bassett's careful study of *The Middle Group of American Historians*, which includes Motley, Prescott, and Bancroft.

Problems belonging rather to the field of political science are discussed in: *The English-Speaking Peoples: Their Future Relationships and Joint International Obligations* by George Louis Beer; *A League of Nations* by Henry Noel Brailsford; *Democracy After the War* by J. A. Hobson; *International Realities* by Philip Marshall Brown; *Political Frontiers and Boundary Making* by Sir Thomas Hungerford Haldich; *The Choice Before Us* by G. Lowes Dickinson; *Our Democracy: Its Origins and Its Tasks* by James H. Tufts; Ramsey Muir's *Nationalism and Internationalism*; Rabindranath Tagore's essay upon *Nationalism*; Israel Zangwill's *The Principles of Nationalities*; W. H. Mallock's *The Limits of Pure Democracy*; Thorstein B. Veblen's *An Inquiry Into the Nature of Peace and the Terms of Its Perpetuation*; Bertrand A. W. Russell's stimulating *Political Ideals* and his *Why Men Fight*. To a series of discussion of the philosophy and political reconstruction after the war Gilbert Cannan contributes *Freedom*, G. D. H. Cole, *The State and Industry*, and A. Maude Royden, *The State and Woman*. William Harbutt Dawson edits a volume of *After War Problems*. George William Russell ("A. E.") writes *National Being: Some Thoughts on an Irish Polity*, and

Theodore Roosevelt publishes a volume entitled *National Strength and International Duty*.

Of books on the war, whether personal narratives or historical descriptions, there have been hundreds. In fact three-quarters of the non-fiction publications of the year deal in some way with the war. It is impossible to do more than name a very few, which make some pretension to literary excellence or historical importance. John Buchan publishes volumes 15, 16, and 17 of *Nelson's History of the War*, including the period from Brussilov's offensive to the change of government in Great Britain; Sir Arthur Conan Doyle the second volume of *A History of the Great War*, including the British Campaign in France and Flanders in 1915; Stanley Washburn, *The Russian Offensive*, the third volume of field notes from the Russian front, covering the period from June 5 to September 1, 1916. *The Soul of the Russian Revolution* is authoritatively described by Moissaye J. Olgin, student, editor, and political convict; I. F. Marcossou discusses *The Rebirth of Russia*; and Isaac Don Levine, *The Russian Revolution*. Hugh B. C. Pollard tells vividly the tragic *Story of Ypres*; John Buchan does the same for the first phase of *The Battle of the Somme*; John Masefield describes the Somme line before the battle in *The Old First Line*; H. G. Wells describes *Italy, France, and Britain at War*; Ambassador James W. Gerard contributes *My Four Years in Germany*; Herbert Bayard Swope puts careful observation into *Inside the German Empire*; Thomas Curtin writes a valuable book, *The Land of Deepening Shadow*; and Hugh Gibson, first secretary of the legation in Brussels, adds much first hand information in his *Journal from Our Legation in Belgium*. President Wilson's messages to Congress are collected in a little volume, *Why We Are at War*; Gilbert Murray writes on *Faith, War, and Policy* in his always graceful and vigorous style; David Jayne Hill discusses *The Rebuilding of Europe*; Nicholas Murray Butler writes *A World in Ferment*; and Morris Jastrow, *The War and the Bagdad Railway*.

Of personal narratives some of the best are: Donald Hankey's two volumes of interpretations, *A Student in Arms*; Capt. Gilbert Nobb's *On the Right of the British Line*; Coningsby Dawson's letters, *Carry On*; Victor Emmanuel Chapman's *Letters from France*, accounts of experiences in the air; James R. McConnell's *Flying for France*; A. Clifton-Shelton's *On the Road from Mons*; Helen G. Mackay's *Journal of Small Things*, a book of vividness and insight; William Boyd's *With a Field Ambulance at Ypres*; Charles Wadsworth Camp's *War's Dark Frame*; Edith Geraldine Mitton's *The Cellar-House of Pervyse*; Charles H. Barber's *Besieged in Kut and After*; Arthur Bartlett Maurice's *Bottled Up in Belgium*; Mildred Aldrich's *On the Edge of the War Zone*; John Hay Beith's delightfully whimsical *All in It—K (1) Carries On*; *Private Peat* by Harold R. Peat; and Arthur Guy Empey's *Over the Top*, an account which makes no literary pretensions, but is the best selling war book of the year in the United States because of its simplicity, concreteness, and action unencumbered by reflection.

TRAVEL. In spite of restricted fields and submarines, books on travel continue to flourish. Among the best are: Archdeacon Hudson Stuck's delightful account, *Voyages on the Yukon and*

*Its Tributaries*; Harry A. Franck's *Vagabonding down the Andes*; Father John Augustine Zahm's collection of Indian legends of the Gilded King, *The Quest of Eldorado*; Reginald Farrer's vivid *On the Eaves of the World*, a story of travels on the Tibetan border; H. G. Dwight's exquisite *Persian Miniatures*; W. J. Childs's *Across Asia Minor on Foot*; and Corwell C. Fillingham's *Through Russia in Wartime*. Other books on Russia are: *Russia in 1916* by Stephen Graham; *Russia as I Know It* by Harry de Windt; *The Russians—An Interpretation* by Richardson Wright; and *White Nights and Other Russian Impressions* by Arthur B. Ruhl. T. Morris Longstreth writes *The Adirondacks*; Walter Prichard Eaton some charming essays in *Green Trails and Upland Pastures*; Rear Admiral Robert E. Peary gives interesting details in *Secrets of Arctic Travel*; and Leland Haworth tells his experiences *On the Headwaters of Peace River*. Outside of Russia, Europe is represented by a few volumes: Eugenie M. Fryer's *Hill Towns of France*, and George Wharton Edwards's *Vanished Halls and Cathedrals of France*; Sir Thomas Graham Jackson's *A Holiday in Umbria*; Agnes Ethel Conway's *A Ride Through the Balkans*; Mrs. Demetra Brown's *The Heart of the Balkans*; and Lucy M. J. Garnett's *Balkan Home-Life*. The Northwest appears in George Byron Gordon's *In the Alaskan Wilderness*, and in W. F. Bade's arrangement of John Muir's 1881 journal of an expedition through Bering Sea to the Arctic—*The Cruise of the Corwin*. Hyatt Verrill writes an informative *Book of the West Indies*, and Luther K. Zabriskie a timely *The Virgin Islands of the United States of America*. *Brazil To-day and To-morrow* is by Lillian E. Elliott; *In the Wilds of South America* is by Leo E. Miller; while W. H. Koebel adds to his already long list of surveys: *Paraguay*, and also *Central America*. Charles Burke Elliot, a member of the Philippine Commission, publishes in two volumes, *The Philippines*, a complete account of American achievement in the islands. Alfred M. Hitchcock contributes *Over Japan Way*; T. Fujimoto, *The Story of the Geisha Girl*; and Edward S. Morse, *Japan Day by Day*, a several years' journal by a careful and intelligent observer. Alice Tisdale writes *Pioneering Where the World Is Old*, ten years' experience in Manchuria; and W. H. and Fanny Bullock Workman tell a story of adventure in *Two Summers on the Ice Wilds of Eastern Karakoram*.

Of the United States there are many accounts, including: *The Top of the Continent* by Robert S. Yard; *American Adventure*, through the South, by Julian Street and Wallace Morgan; *Old Seaport Towns of the South* by Mildred Cram; *Memories of Old Salem* by Mary H. Northend; and *Chicago*, an interpretation by H. C. Chatfield-Taylor. New York City appears in *The Book of New York* by Robert Shackleton; *A Loiterer in New York* by Helen W. Henderson; and *Greenwich Village* by Anna Alice Chapin.

**LITHUANIA.** Formerly a grand duchy. The name Lithuania is not used now of any political division, but is applied to a region embraced largely in the Russian governments of Vilna, Grodno, Mogilev, Vitebsk, and Minsk. These governments have an area of 102,632 square miles. At the last Russian census, the number of Lithuanians in European Russia was 2,766,-

805; in addition, there were 310,631 in Poland. The Polish Lithuanians are almost wholly in the government of Suwalki, where in 1897 they formed over 52 per cent of the inhabitants (the area of Suwalki is 4846 square miles). In racial type the Lithuanians are more nearly Teutonic than Slavic. They are mostly Roman Catholics. Their speech is one of the most archaic and highly inflected of the living Indo-European languages.

**LITTLE LEAF.** See BOTANY, *Plant Diseases*.

**LIVE STOCK.** See STOCK RAISING.

**LIVONIA.** A government of Russia, one of the Baltic Provinces, bordering the Gulf of Riga and lying between Esthonia and Courland. Livonia passed from Poland to Sweden in 1660 and from Sweden to Russia in 1721. Area, 18,158 square miles; population, as estimated January 1, 1915, 1,778,500. About 43 per cent of the inhabitants are Letts and an almost equal number Esthonians. Many of the more influential families are of Germanic descent. About four-fifths of the inhabitants are Lutherans. It is stated that Livonia excels all other Russian governments in its public school system, nine-tenths of the children receiving regular instruction in times of peace. Arable land is largely in the hands of wealthy nobles, who hold enormous estates, which are cultivated according to the most modern methods. The chief products are rye, barley, oats, and potatoes. The capital and largest city is Riga, which before the great war had an estimated population of 569,000 and was the third seaport of the Russian Empire. It is situated about ten miles above the mouth of the Dvina and 363 miles by rail southwest of Petrograd. Its importance as a seaport is due in large measure to the fact that by means of the Dvina and canals it has water connection with the basins of the Volga, which flows into the Caspian, and the Dniester, which enters the Black Sea. Two years before the outbreak of the war its import and export trade totaled \$160,000,000. Of its population, about 47 per cent are of German descent, while about 23 per cent are Letts and about 25 per cent are Russians. The prosperous merchant class of Riga consists largely of Germans.

The town of Dorpat (Yurav, Yuriev), 156 miles by rail northeast of Riga, had, before the war, an estimated population of 44,100. Its chief claim to distinction is its university, founded by Gustavus Adolphus, suppressed by Peter the Great in 1710, and reopened at the beginning of the nineteenth century by Alexander I. German was the language of the faculty until 1895, when it was superseded by Russian except in the Lutheran theological faculty. The university has a famous astronomical observatory.

The large island of Oesel and the smaller islands of Moon and Rundo belong to Livonia. Oesel, which has an area of 1010 square miles, almost shuts off the Gulf of Riga from the main waters of the Baltic Sea. It has a population of about 65,000, mostly Esthonians. Its chief town is Arensburg, with about 5000 inhabitants.

**LOOKS.** See CANALS; DAMS.

**LOCKWOOD, BELVA ANN BENNETT.** An American suffragist, peace advocate, and lawyer, died in Washington, D. C., May 19, 1917. She was born at Royalton, N. Y., in 1830. Her first husband, U. H. McNall, died when she was twenty-three and she took up teaching for a livelihood. Her personal inability to get pay equal to that paid men led her to champion the cause of women's rights, in which she was one of the earliest and most important pioneers. At a time when higher education for women was frowned upon, she attended Genesee Wesleyan Seminary and Genesee College at Lima, N. Y., graduating in 1857. Then she resumed teaching as preceptress of the Lockport (N. Y.) Union School and later as head of the Gainesville Seminary at Oswego. Her relief work during the Civil War led to her being called to Washington to take charge of the Union League Hall. At Washington she was married in 1868 to Dr. Ezekiel Lockwood, a Baptist clergyman, who died in 1877. By this time Mrs. Lockwood had become established as a lawyer, for she had graduated in 1873 from the National University Law School and been admitted to the bar of the District of Columbia. In 1879 she secured the passage of a bill by Congress admitting women to practice before the Supreme Court of the United States, and she herself was the first to take advantage of the newly acquired right. She appeared in this court several times, and also in the Court of Claims. In one notable case she helped to win a judgment of \$5,000,000 for the Eastern Cherokees. Throughout her professional career she found time for the causes of suffrage, temperance, and world peace. Her contribution to the first of these was so great that the Equal Rights party, in 1884 and again in 1888, showed its appreciation by nominating her for president of the United States. She was the only woman ever so honored. In 1890 she went to Oxford, England, to take university extension courses. Again in 1896 she went abroad, this time as representative of the United States at the Geneva Congress of Charities and Corrections. From then on Mrs. Lockwood was as well known among European publicists as among American. She was a delegate to International Peace Congresses at Milan (1906), London (1908), and Rome (1911), to the Arbitration Convention in New York in 1907, and to the Women's Convention at Budapest, Hungary, in 1913. She was placed on the nominating committee for awarding the Nobel Peace Prize, was elected member of the Commission of the International Peace Bureau at Berne, and honorary member of the association created at Brussels in 1913 for the heads of the international societies. She also served as president of the Woman's National Press Association, and of the District of Columbia Woman Suffrage Association. She wrote and lectured on the subjects in which she was interested. Syracuse University gave her an honorary A.M. in 1871 and LL.D. in 1908.

**LOCOMOTIVES.** See RAILWAYS.

**LORETTOITE.** See MINERALOGY.

**LOS ANGELES AQUEDUCT.** See AQUEDUCTS.

**LOUISIANA.** POPULATION. The population of the State in 1910 was 1,656,388, and on July 1, 1917, it was estimated to be 1,856,954.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn ....	1917	2,347,000	42,246,000	\$61,679,000
	1916	2,184,000	44,814,000	42,125,000
Oats ....	1917	84,000	1,873,000	1,761,000
	1916	110,000	2,090,000	1,421,000
Rice ....	1917	500,000	18,250,000	34,675,000
	1916	443,000	20,392,000	18,353,000
Potatoes ..	1917	25,000	1,600,000	2,944,000
	1916	25,000	1,625,000	2,714,000
Hay ....	1917	260,000	a 416,000	5,949,000
	1916	260,000	442,000	4,862,000
Tobacco ..	1917	600	b 210,000	74,000
	1916	200	90,000	25,000
Cotton ..	1917	1,350,000	c 615,000	82,102,000
	1916	1,250,000	443,000	42,824,000

a Tons. b Pounds. c Bales of 500 lbs. gross weight.

**MINERAL PRODUCTION.** The output of petroleum in the State in 1916 decreased from the output in 1915 by 2,943,401 barrels, or 16 per cent. The value, however, increased \$3,865,121, or 36 per cent. The record for production of oil in the State was made in 1915 when the total production was 18,191,539 barrels, valued at \$10,804,653.

The production of natural gas in 1916 was valued at \$2,660,445 compared with \$2,163,934 in 1915.

**TRANSPORTATION.** The railway mileage of the State including main track and branches on June 30, 1916, was 5316. The railroads having the longest mileage were: The Texas and Pacific, 805; the Louisiana Railway and Navigation Co., 342; the Louisiana, Texas, and Steamship Co., 416; the St. Louis, Iron Mountain, and Southern R. R., 572.

**EDUCATION.** The total school population of the State according to the census of 1915 was 538,119. The enrollment in the public schools was 346,864 with the average daily attendance of 251,297. The number of female teachers was 6437 and the number of male teachers was 1515. The average monthly salary of white teachers was \$73.20. The total expenditure for school purposes was \$5,875,735.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Institute for Deaf and Dumb at Baton Rouge, the Institute for the Blind at Baton Rouge, the Soldiers' Home at New Orleans, the Insane Asylum at Jackson, the Charity Hospital at New Orleans, the Charity Hospital at Shreveport, and the State Penitentiary and Convicts' Farm.

**STATE OFFICERS.** Governor, R. G. Pleasant; Lieutenant Governor, Fernand Mouton; Secretary of State, James J. Bailey; Treasurer, Henry Hunsicker; Auditor, Paul Capdevielle; Adjutant-General, C. C. McCrory; Attorney-General, A. V. Coco; Superintendent of Education, T. H. Harris; Commissioner of Agriculture, H. D. Wilson; Commissioner of Insurance, the Secretary of State—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, F. A. Monroe; associate justices, O. O. Provosty, Paul Leche, W. B. Somerville, Chas. A. O'Neill.

**LOUISIANA STATE UNIVERSITY.** A co-educational State institution of learning at Baton Rouge, La. In the fall of 1917 there were 728 students and 91 members of the faculty; the

summer session of 1917 enrolled 615 students; on the teaching staff of the experiment station there are 23 teachers, and the university has 32 extension workers. Volumes in the library numbered 37,550. The university was founded in 1860. President, Thomas D. Boyd, LL.D.

**LOWER AUSTRIA.** A crownland of Austria. Area, 7654 square miles. Population at census of December 31, 1910, 3,531,814 (12.36 per cent of the Austrian total), as compared with 3,100,493 in 1900. Austrian subjects in 1910, 3,264,110; of these, German was the vernacular of 3,130,536 (95.91 per cent); Bohemian, Moravian, Slovak, 122,329 (3.75). Catholics numbered 3,239,573 (91.73 per cent of the population); Jews, 184,779 (5.23); Evangelicals, 92,620 (2.62). The capital is Vienna. Lower Austria has a diet of 127 members and is represented by 64 members in the Austrian Reichsrat.

**LOYOLA UNIVERSITY.** A Roman Catholic institution of learning founded in 1870 as St. Ignatius's College, and so named until 1909. It is located at Chicago, Ill. Women are admitted to the graduate departments. In the fall of 1917 there were 2044 students and 207 members of the faculty. Volumes in the library numbered 74,000. A gift of 2000 volumes on Napoleon was received in 1917. The university bought the Chicago College of Medicine and Surgery and combined it with the school of medicine, Dr. Lawrence Ryan being made dean. President, Rev. John A. Ferry, S.J.

**LUCE, STEPHEN BLEEKER.** An American naval officer, born in Albany, N. Y., March 27, 1827; died on July 29, 1917. He was appointed a midshipman in 1841 and gradually rose through the various grades until he became a rear admiral in 1855. He retired in 1889. He was a founder of the Naval War College at Newport, R. I., and was its first president. He spent forty-eight years in actual naval service, of which thirty-eight were spent at sea. He fought in the Mexican and Civil Wars. When he was rear admiral he was in command of the North Atlantic Squadron. He published *Seamanship*, and edited the *Patriotic and Naval Songster*.

**LUMBER.** See **FORESTRY**.

**LUPULIN.** See **HOPS**.

**LUTHERANS.** The Lutheran Church is the third largest denomination in the United States, where it had, in 1917, 3,639,208 baptized members (including Canadian members), 2,448,412 confirmed members or communicants, 15,266 churches, and 9788 ministers. In Canada, according to the latest available statistics, there were about 230,000 communicants, about 135 ministers, and about the same number of churches. In Canada the Lutheran church conducts services in thirteen different languages. The value of Lutheran church property in the United States and Canada in 1917 was \$119,990,293. No form of church government is held to be essential, and the services and organization are carried on under Congregational, Presbyterian, and Episcopal forms. There are five general church bodies: the General Council, founded 1867; General Synod, founded 1820; Synodical Conference, founded 1872; United Synod South, founded 1886; United Norwegians; also a number of independent synods. In 1917 the Lutheran Church had 8944 Sunday-schools, with 85,656 officers and teachers, 1,732,393 schol-

ars; and 5740 parochial schools, with 4277 teachers and 247,053 scholars.

**GENERAL COUNCIL.** The General Council in 1917 had 760,441 baptized members, 531,978 confirmed members or communicants, 2631 churches, and 1779 ministers.

**GENERAL SYNOD.** There were in 1917 474,740 baptized members, 364,072 confirmed members or communicants, 1857 churches, and 1438 ministers.

**UNITED SYNOD SOUTH.** In 1917 there were 73,510 baptized members, 53,226 confirmed members or communicants, 484 churches, and 257 ministers.

**SYNODICAL CONFERENCE.** In 1917 there were 1,244,520 baptized members, 807,017 confirmed members or communicants, 3689 churches, and 3201 ministers.

**NORWEGIAN LUTHERAN CHURCH OF AMERICA.** In 1917 there were about 485,000 baptized members, about 300,000 confirmed members or communicants, 3378 churches, and 1247 ministers.

**INDEPENDENT SYNODS.** Excluding the Norwegian Lutheran Church of America, the Independent Synods in 1917 had 600,997 baptized members, 392,119 confirmed members or communicants, 3227 churches, and 1866 ministers.

For 1917 the Lutherans had an increase of 3316 in confirmed members or communicants, as compared with 1916, and a decrease of 135,566 in baptized members, as compared with 1916. In 1917 there was an increase of 197 in the number of churches over the number of the previous year, and a decrease of 43 ministers, as compared with 1916. In 1917 the Lutherans had 14 American societies of foreign missions, with 392 missionaries, 2072 native helpers, 95,025 native Christians, 33,100 pupils in mission schools, and an income of \$564,180. These figures for foreign missions show a substantial and encouraging increase over 1916. On account of the world war no data for 1916-17 are available concerning the thirty-five European societies supported by Lutherans in the work of foreign missions. The work of foreign societies is much interrupted, many missionaries being seized and held as prisoners of war. In 1917 the Lutherans had 27 theological seminaries, 41 colleges, 58 academies, and 7 ladies' colleges and seminaries.

The results of the Quadri-Centennial Celebration of the Lutheran Reformation, which was enthusiastically observed in the United States in 1917, are reported as important in unifying various Lutheran church bodies. The Norwegian Lutherans merged into one their three separate bodies and the General Council, General Synod, and United Synod are reported to be about to form the United Lutheran Church of America. The United Synod South is facing serious problems and preparing an energetic campaign of progress. Its main difficulties relate to the revival of country congregations, increase of home and foreign missions, and especially the evangelization of the negro. See **RELIGIOUS DENOMINATIONS AND MOVEMENTS**.

**LUXBURG, COUNT VON.** See **WAR OF THE NATIONS, The Diplomacy of the War**.

**LUXEMBURG.** A grand duchy, in central Europe, bounded by Germany, Belgium, and France; it formed part of the Germanic confederation, 1815-66, and is still included in the German "Zollverein." In 1867 the treaty of London declared it a neutral territory under the

sovereignty of the King of the Netherlands, on whose decease, November 23, 1890, it passed to the Duke of Nassau. Area, 2586 square kilometres (988 square miles); population, December 1, 1910, 259,891, nearly all Roman Catholics. Luxemburg, the capital, had 20,848 inhabitants. There are 325 miles of railway; 439 miles of telegraph line; post offices, 133. Iron production in 1915, 980,384 tons. The area under principal crops in hectares and yield in metric quintals for two years are shown in the table below.

	Hectares		Quintals	
	1917	1916	1917	1916
Wheat .....	8,800	11,057	105,600	117,915
Rye .....	6,750	9,482	74,250	110,662
Barley .....	2,800	2,030	33,600	27,293
Oats .....	22,500	28,005	292,500	394,850
Potatoes .....	10,750	13,879	1,612,500	808,633

The budget for 1917-18 estimated the revenue at 43,761,428 francs; the expenditure at 48,045,794. The amount paid to Luxemburg by Germany on account of the German invasion is estimated at \$256,000. The debt amounts to 45,754,917 francs. The floating debt, for public works and railway construction, is limited to 19,335,774 francs. The reigning house of Nassau became extinct in the male line with the death of Grand Duke William, February 25, 1912. He was succeeded by his daughter, Marie Adelaide (born June 14, 1894), who attained her majority and was formally enthroned June 14, 1912. Her sister, Princess Charlotte (born January 23, 1896), is heiress presumptive.

**MABON, WILLIAM.** An American alienist, died in New York February 9, 1917. He was born at New Durham, N. J., in 1861, and studied at Bellevue Hospital Medical College, in New York City. After some years of experience as a physician in State hospitals in New Jersey and New York, he served as superintendent of the Willard and St. Lawrence State Hospitals and in 1903-04 as superintendent of Bellevue and its allied hospitals. From 1904 to 1906 he was president of the New York State Commission in Lunacy and thereafter superintendent of the Manhattan State Hospital on Ward's Island. Dr. Mabon was influential in promoting improved treatment of mental disorders and in raising the standards of State hospitals for the insane. He was called in to testify as alienist in many famous murder and other cases, notably in the Thaw case and the Eno will case. He was a member of the executive committee of the National Committee for Mental Hygiene.

**McALPIN, EDWIN A.** General McAlpin, formerly adjutant general on the staff of Governor Morton of New York State, died on April 12, 1917. He was born on June 9, 1848. He attempted to enlist in the Civil War, but was prevented by his father on account of his extreme youth. He enlisted as a private in the 7th Regiment N. Y. N. G. in 1869. In 1885 he became colonel of the 71st Regiment. In 1895 he was appointed adjutant general of the State by Governor Morton, with the rank of major general. He was the head of a large tobacco concern built up by his father and was part owner of the Hotel McAlpin in New York City. He was an active worker in the Republican party and a member of many organizations.

**MACAO.** A city on the island of Macao, at the mouth of the Canton River, China. The island, with the adjacent islets, Coloane and Taipa, is a Portuguese dependency, having an area of four square miles. Population, 74,866. Although it has lost much of its former importance since the acquisition by the British of Hongkong, it still has a large trade. The Portuguese press reports the sale of Macao to Japan early in 1917.

**MCCOOK, ANSON GEORGE.** An American soldier and politician, born at Steubenville, Ohio, on October 10, 1835; died on December 30, 1917. After having gone to the West during the gold discoveries, he returned East and enlisted as a captain in the Second Ohio Volunteers during the Civil War. In 1865 he was brevetted brigadier general of volunteers. At the close of the war he practiced law in Ohio until 1873 when he moved to New York, where he was admitted to the practice of law in the courts of that State. He founded *The Law Journal* and was president of the New York Law Publishing Company until his death. He was elected to Congress from the 8th New York District for three terms. He was secretary of the Senate of the United States from 1884 to 1893. He was city chamberlain of New York under Mayor Strong.

**MACDONALD, Sir WILLIAM CHRISTOPHER.** A Canadian capitalist and philanthropist, died in Montreal, in June, 1917. He was born in 1831 at Glenaladale, Prince Edward Island, to which island one of his ancestors had brought over the first Scottish settlers. After his early education he removed to Montreal, where he became an importer, commission merchant, and manufacturer of tobacco, and eventually director of the Bank of Montreal. He also became president of the Legislative Council of Prince Edward Island. In 1898 he was knighted. Macdonald gave generously of the large fortune he acquired, especially to McGill University and Macdonald Agricultural College (affiliated with McGill), his total benefactions to the two institutions amounting to more than \$12,500,000. He was a governor of McGill University and also of the Montreal General Hospital.

**MACEDONIA.** A region or district having no definite political boundaries but corresponding nearly to the former Turkish vilayet of Saloniki and the eastern part of the vilayet of Monastir. It extends west and south of the Rhodope Mountains, and its southeastern part borders the Aegean Sea. Anciently Macedonia was a famous kingdom. The name was revived in the nineteenth century, when the region was often the scene of racial strife, especially between the dominating Turks and the various other nationalities settled there (Greek, Bulgar, Serb, etc.). In 1913 Macedonia was partitioned among Greece, Serbia, and Bulgaria, the greater part being taken by Greece. The population is probably upwards of 1,200,000. The chief cities include Saloniki (with about 160,000 inhabitants), Monastir (60,000), Kavala (45,000), Seres (18,700), Veria (14,000), Drama (13,000), Florina (10,000). See WAR OF THE NATIONS.

**MCGILL UNIVERSITY.** An institution of learning at Montreal, Can. In the fall of 1917 there were 1085 students and 249 members of the faculty; the enrollment has been considerably reduced since the outbreak of the great war.

Volumes in the library numbered 198,200. Productive funds in 1917 amounted to \$8,957,969 and the income from all sources to \$892,689. Requests during the year included \$15,000 from Dr. James Douglas for library purposes; from Sir W. C. Macdonald: \$500,000 as an endowment fund for the medical school, \$300,000 as an endowment fund for the conservatorium of music, \$1,000,000 as an endowment fund for Macdonald College, and \$20,000 as an endowment fund to provide traveling scholarships in the faculty of law; \$10,000 from Dr. George Ross for the faculty of medicine; and \$13,193 from Miss Mary Teskey as an endowment fund for the benefit of the faculty of fine arts. The university was founded in 1821 and was reorganized in 1852. Principal and vice-chancellor, Sir William Peterson, K.C.M.G., LL.D., D.Litt.

**MACHINE GUN.** See **MILITARY PROGRESS.**

**MACKIN CANAL.** See **CANALS.**

**MACMILLAN EXPEDITION.** See **POLAR RESEARCH.**

**MACVEAGH, WAYNE.** An American lawyer, diplomat, and statesman, died in Washington, D. C., January 11, 1917. Born near Phoenixville, Chester County, Pa., April 19, 1833, he graduated from Yale in 1853 and three years later was admitted to the bar. From 1859 to 1864 he served as district attorney of Chester County, and in 1863 was a captain of infantry and cavalry when invasion of that part of Pennsylvania was threatened by the Confederates. In the same year he held the chairmanship of the Republican State Committee. His first notable public office was that of Minister to Turkey, under appointment of President Grant. This post he held in 1870-71. For the next two years he was a member of the State Constitutional Convention. President Hayes made Mr. MacVeagh chairman of the Louisiana ("MacVeagh") Commission, to settle certain disputes in that State in 1877, and under Garfield he was attorney-general in 1881. For four years (1893-97), during Cleveland's second administration, he represented the United States as Ambassador to Italy. At the Hague, in 1903, he was chief counsel for his government in the case of the Venezuela arbitration, President Roosevelt having chosen him for this distinction. Mr. MacVeagh was the trusted adviser of many administrations, and indeed is said to have sat at table more frequently than any other American with all the presidents since Franklin Pierce, except Wilson and possibly Andrew Johnson. He was a famous wit, and he and Mark Twain made a famous pair at brilliant Washington gatherings. He contributed to various periodicals articles notable for vigor, lucidity, and elevation. His last contribution to the *North American Review* (July, 1915) was entitled "The Impassable Chasm." Mr. MacVeagh was characterized by Matthew Arnold after his visit to this country as "the most interesting American." His brother, Franklin MacVeagh, also became known as a publicist and was secretary of the treasury under Taft. Consult the *North American Review*, March, 1917, "A Passionate Patriot."

**MADAGASCAR.** A great island in the Indian Ocean off the east coast of Africa, composing, with its dependencies, a French colony. Antananarivo (Tananarive) is the capital, with 72,000 inhabitants. The area of Madagascar,

with several small dependent islands, is stated at 585,533 square kilometres (226,074 square miles). The population as calculated January 1, 1914, was 3,253,581—14,918 Europeans, 12,905 Asiatics and Africans, 3,225,758 aborigines. Including Mayotte and the Comoro Islands, the population was 3,351,481. The Hova inhabit that portion of the central plateau now known as Imerina, anciently called Ankova—the country of the Hova. Fianarantsoa has about 7000 inhabitants; Tamatave, 7026; Majunga, 4600.

**PRODUCTION, COMMERCE, ETC.** Agriculture and cattle raising are the chief industries, and rice is the principal crop. The forests contain valuable timber. The mines yield gold, silver, iron, copper, lead, and zinc.

The export trade of 1915 reached an unprecedented total (£2,642,644; imports, £1,750,694). The requirements of the French army imposed intense activity upon the establishments for preserving and freezing meat, resulting in an export during 1915 of twice that of the previous year. Exports of rice have increased. Simultaneously the increased facilities for interior transit and the new decorticating factories have enabled the natives to extend the area under cultivation of rice. The suppression of German trade and the insufficiency of freight room were hindrances; nevertheless, the prosperity of the island has materially progressed.

**MAGNESIOLUDWIGITE.** See **MINERALOGY.**

**MAINE. POPULATION.** The population of the State in 1910 was 742,371, and on July 1, 1917, it was estimated to be 777,340.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn	.....1917	20,000	780,000	\$1,778,000
	.....1916	15,000	645,000	768,000
Wheat	....1917	11,000	154,000	862,000
	.....1916	5,000	135,000	252,000
Oats	.....1917	170,000	4,830,000	4,190,000
	.....1916	160,000	5,760,000	3,859,000
Potatoes	.....1917	150,000	20,250,000	26,325,000
	.....1916	125,000	25,500,000	36,210,000
Hay	.....1917	1,160,000	1,566,000	17,383,000
	.....1916	1,200,000	1,740,000	21,576,000

a Tons.

**TRANSPORTATION.** The total railway mileage of the State on June 30, 1916, the latest date for which statistics are available, was 2289. The railways having the longest mileage were: The Maine Central, 1007; The Bangor and Aroostook, 631; The Canadian Pacific, 177. There was no construction of track during the year.

**FINANCE.** The report of the State treasurer for the fiscal year 1916 shows a balance on hand on January 1, 1916, of \$1,158,938. The receipts from all sources during the year were \$6,865,855, and the disbursements \$6,551,676, leaving a balance on hand on December 31, 1916, of \$1,473,118.

**EDUCATION.** The total school population in the State in 1917 was 228,426. The enrollment in the public schools was 132,196 with an average daily attendance of 100,535. The number of male teachers was 341 and female teachers, 4627. The average monthly salary of teachers was \$47.39. The total expenditures for school purposes was \$4,228,965.

**CHARITIES AND CORRECTIONS.** The charitable

and correctional institutions of the State include the State Hospital at Augusta, the State Hospital at Bangor, the Maine School for the Feeble-Minded, the Bath Military and Naval Asylum at Bath, the Maine Industrial School for Girls at Hallowell, the State School for Boys at South Portland and the Maine State Prison at Thomaston.

**POLITICS AND GOVERNMENT.** Carl E. Milliken was inaugurated governor of Maine on the first Wednesday of 1917, the opening of the 78th legislature. The legislature was in session fourteen weeks. Four features characterize its legislation. First, it voted to submit the question of woman suffrage to popular ballot. Second, it passed many laws further to restrict the sale of intoxicating liquors. Third, it passed through the most bitter fight in the history of Maine legislation, over the rights of capital and the public, in the water powers of Maine. Fourth, it poured out, in a most liberal way, the public moneys for the support of the State and nation in the world war.

The ballot on woman suffrage was taken by the people, September 10, and the amendment overwhelmingly defeated, 38,838, no; 20,604, yes. Four other subjects of referendum were submitted at the same election. The most important was a provision to give the governor the right to remove delinquent sheriffs. It was carried 29,584 to 25,416. The other three proposed amendments concerned matters of minor interest such as laws regarding division of towns, a change in the military law, and reapportionment of representatives. Of these, only the reapportionment of representatives was carried. The vote on these was small—a total vote of only about 42,000 to 47,000 out of total voting strength in Maine of about 150,000.

In its contest over the water powers the legislature reached no definite conclusions. The House of Representatives stood in general against any legislation which would permit the transmission of hydro-electric power beyond the bounds of Maine. The Senate took an opposite view. Many bills were introduced, the chief of which became the subject of long investigation, the committee summoning experts from all over the United States and Canada. The hearings occupied the attention of the committee for weeks. Every measure looking to the granting of charters to new corporations in water powers was immediately met by the amendment that the said company should not transmit any power beyond the boundaries of the State or unite with any other company so doing. Each of these amendments to the proposed charters was forced through the House under the leadership of Mr. Baxter of Portland, whose name became associated with the policy. Most of the petitioning companies preferred to let their petitions die in the closing hours of the legislature, rather than accept charters with this provision. Thus it ended in a drawn battle.

In temperance legislation, the most important measures adopted make it imperative that the court shall impose a jail sentence in case of conviction for liquor-selling; broaden the terms of the statutes regarding injunctions against owners of buildings where liquor is sold illegally; authorize and direct seizure and confiscation of vehicles in which liquor is brought into the State, contrary to laws; and submit to the popular vote the amendment (ratified September

10, 1917) to the constitution authorizing the governor to remove summarily any sheriff who is delinquent and the same in regard to county attorneys—the latter not a constitutional matter and hence operative on signature by the governor after lapse of ninety days.

Governor Milliken also introduced for the first time in the history of Maine a budget system and the same was lived up to with a certain fidelity that augurs well for its continuance under succeeding governors.

There were eleven arrests in 1917 in Maine on charge of murder. Not one person was sentenced to life imprisonment on charge of murder committed within the twelve months. In four of the eleven cases a plea of manslaughter was accepted. There was no trial of murder which can be classed as "sensational." Seventy people took their lives by suicide in Maine in 1917.

The closest estimate of the number of men enlisted in the war, December 31, 1917, was 10,000. At time of draft, Maine stood second among the States in number of men enlisted proportionate to quota. Her quota was 7064. The First Maine Heavy Artillery was organized and filled by volunteer enlistment in nineteen days. It was originally known as "The Milliken Regiment," named for Governor Milliken. Its different units took the names of some of Maine's prominent men of the past. Reed Battery for Thomas B. Reed; Nelson Dingley Battery; Neal Dow Battery; Burleigh Battery, and others. The regiment went into Camp Greene, Charlotte, N. C., but about 200 men of the Dingley Battery of Lewiston and Auburn and a few from Bridgton and Portland were constituted into the 101st Trench Mortar Battery—the first one ever organized in the American service. This battery is now somewhere in France.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917, in addition to those noted above, were the following: Laws relating to domestic relations were amended. Feeble-minded persons are forbidden to contract marriage. Designated State officials are authorized to take possession of the food supply of the State upon the payment of just compensation. Provision was made also for the seizing of buildings, railroads, and other equipment of supplies useful for military service. Provision was made for the care of dependents of men who entered the military service. Under the act these allowances are to be paid by the municipalities, and are reimbursed by the State. A moratorium was established for men in military service. Laws relating to prisoners and the punishment of crimes were amended. Custodians are required to give physical and psychopathic examinations to prisoners, and when necessary to transfer them to State institutions for further examination. The legislature passed laws providing for non-resident fishing licenses, compelling physical connection between steam and electric railroads; for registration of teachers; for pensioning of mothers; for repeal of the peonage law; for compensation to State employees. Provision was made for the safety of travelers on highways. Warning signs are required to be erected on the crossings together with a reduction of speed on or near the crossings. Provision was made for the segregation of the feeble-minded and insane by removal from other institutions. The

banking laws were amended in important details. The health department was reorganized and a council was established to supervise the carrying out of the rules. This council, however, has no executive power.

**STATE OFFICERS.** The following State officers have been elected, appointed, or have held over from the preceding year: Governor, Carl E. Milliken; Secretary of State, Frank W. Ball, of Dover; Treasurer, Joseph W. Simpson, of York; Attorney-General, Guy H. Sturgis, of Portland; Adjutant-General, George McL. Presson, of Farmington; Auditor, Roy L. Wardwell, of Augusta; Superintendent of Public Schools, A. O. Thomas, of Augusta; Insurance Commissioner, Erastus J. Carter, of Stonington; Bank Commissioner, Frank L. Palmer, of Saco; Commissioner of Agriculture, John A. Roberts. John E. Bunker, of Bar Harbor, was appointed to the Public Utilities Commission, to succeed Charles Mullen, of Bangor, resigned. These are all Republicans except Mr. Bunker, who was appointed to fill the place of a Democrat and Mr. Carter who has held over from the previous administration which was Democratic.

**JUDICIARY.** Chief Justice Albert R. Savage, of Auburn, died suddenly June 14, 1917. Associate Justice Leslie A. Cornish, of Augusta, was appointed to succeed him. Albert E. Spear, of Gardiner, a former Associate Justice of the Supreme Court, was appointed to succeed Justice Cornish as Associate Justice. The Supreme Judicial Court is now made up of Leslie A. Cornish, Chief Justice; Associate Justices, Arno W. King, of Ellsworth, George E. Bird, of Portland, George F. Haley, of Biddeford, George M. Hanson, of Calais, Warren C. Philbrook, of Waterville, John B. Madigan, of Houlton, Albert E. Spear, of Gardiner.

**MAINE, UNIVERSITY OF.** A co-educational State institution of learning at Orono, Maine. In the fall of 1917 there were 838 students and 156 members of the faculty; at the end of the year 293 students and 35 members of the faculty were in government service. Volumes in the library numbered 59,000. Professor G. W. Thompson was appointed to the chair of English and Professor R. M. Peterson was made professor of Spanish to take the place made vacant by the death of Professor A. P. Raggio. Productive funds in 1917 amounted to \$218,300 and the income therefrom to \$9915. The university was founded in 1862. President, Robert Judson Aley, LL.D.

**MAIZE.** See CORN.

**MAKUEN, (GEORGE) HUDSON.** An American laryngologist, died at Goshen, N. Y., February 21, 1917. He was born at Goshen in 1855. After graduating at Yale in 1884, he attended Jefferson Medical College in Philadelphia, where, after finishing the course in 1889 he was instructor for three years. From 1896 to his death he held the professorship of defects in speech at the Philadelphia Polyclinic, at the same time serving as laryngologist and otologist to Chester Hospital. Dr. Makuen's monographs and his articles contributed to medical journals on diseases of the throat, nose, and ear, and on voice production, breathing, and defects of speech, brought him a national reputation among medical men. At various times he was president of the American Academy of Medicine, the American Laryngological Society, the American Laryngological, Rhinological, and Otological Soci-

ety, and chairman of a section of the American Medical Association.

**MALACCA.** One of the Straits Settlements (q.v.).

**MALARIA.** The possibility of treating malaria by means of immune serum is suggested by Sotiriades, who reports that he injected serum from one patient with malaria into another patient who had just contracted the disease. The fever disappeared for four days, when a mild attack took place, whereupon a second subcutaneous injection of serum was given, succeeded by another dose on the following day. No further relapses were observed during the twelve days the patient was under observation. The donor of the serum had had no clinical symptoms for several months, although parasites were still present in the blood.

Antimony injections have been tried by several clinicians, but the reported results are not encouraging. The intravenous route of giving quinine seems to be growing in favor, especially where prompt results are demanded. Barbary, for example, has treated 899 malarial patients at the military hospital at Nice by this method. He gives 0.5 gm. of quinine in 125 gm. of physiologic saline solution, together with 1 gm. of ethyl carbamate. The injections were given every third day at first and then at five-day intervals.

**MALAY STATES.** See **FEDERATED MALAY STATES**; **JOHORE**; **NEGRI SEMBILAN**; **PAHANG**; **PERAK**; **SELANGOR**.

**MALL, FRANKLIN PAINE.** An American anatomist, died November 17, 1917, at Baltimore, Md. He was born in 1862 at Belle Plaine, Iowa, and in 1883 graduated in medicine at the University of Michigan. He studied also at the Universities of Heidelberg and Leipzig, and at Johns Hopkins, where he was fellow (1886-88) and instructor in pathology (1888-89). In 1889-92 he was adjunct professor of vertebrate anatomy in Clark University, Worcester, Mass.; professor of anatomy in the University of Chicago in 1892-93, and in the latter year was appointed professor of anatomy at Johns Hopkins. He was president of the Association of American Anatomists in 1905-07. In 1915 he was appointed director of the Department of Embryology in the Carnegie Institution at Washington. He was coeditor of the *Handbuch der Entwicklungsgeschichte des Menschen*, the *American Journal of Anatomy*, the *Anatomical Record*, and the *Journal of Morphology*; and he wrote *Causes Underlying the Origin of Human Monsters* (1908). He was a member of many scientific societies.

**MALTA.** An island (91½ square miles) in the Mediterranean Sea, which with the islands of Gozo (25¼ square miles), Comino (1 square mile), and Filfla and Cominotto (mere islets), forms a British crown colony. The principal harbor is one of the finest in the world; it is very deep, and large vessels can anchor alongside the shore. It is an important port of call for vessels passing to and from the East and the Suez Canal, being about half-way between Gibraltar and Port Said. There is an extensive arsenal and important dockyard, Malta being the headquarters of the Mediterranean Fleet. The island is strongly fortified and garrisoned. Total civil population, 1911 census, 213,395; estimated March 31, 1916, 220,968. Valletta, the capital, had 44,143 inhabitants, including

suburbs (Floriana, Sliema, and St. Julien's); the Three Cities (Senglea, Cospicua, and Vittoriosa), 26,551; Città Vecchia (the old capital), 8896; Victoria (formerly Rabat), 5655. The natives are of Punic origin, and their speech is said to be derived from the Carthaginian and Arabic languages; about 70 per cent of its vocabulary is Semitic, but grammatical structure is derived from the Latin. Valletta is the coal-ing station and the centre of a large transit trade. There are 7½ miles of railway. Imports and exports, 1915-16, £3,452,069 and £563,518. Revenue, 1915-16, £463,002, expenditure, £410,389. Tonnage entered, 12,372,512 (British, 1,573,124).

**MAMMOTH DAM FAILURES.** See DAMS.

**MANCHURIA.** A portion of the Chinese Republic, but not of China proper, known as "the three eastern provinces." It lies east of Mongolia and the province of Chihli, and extends northward from the Yellow Sea and Korea to the Amur River, which separates it from Siberia. In November, 1917, it was announced that the Chinese government had under consideration a redefinition of the Korean boundary. Estimated area, 362,483 square miles. Estimates of population vary widely. A calculation based on the 1910 enumeration of households places the total in that year at 12,104,000. "The three eastern provinces" are: at the north, Heilungkiang, or the Amur Province, with 202,703 square miles and 1,607,000 inhabitants; Kirin, 105,019 square miles, 5,501,000 inhabitants; at the south, Shengking (Fengtien), 54,761 square miles, 5,996,000 inhabitants. Chief towns: Mukden, capital of Shengking, with an estimated population of 158,000; Kirin, capital of Kirin Province, 100,000 (this estimate probably too high); Tsitsihar, capital of Heilungkiang, 60,000; Newchwang (Yingtze), Newchwang City, Harbin, Liaoyang, Tiehling, Sansing, Antung, Kwangchengtze (Changchun). The Manchu population has practically disappeared, and the country has been colonized from the northern provinces of China proper.

Manchuria has one of the richest soils in the world, and it has grown more rapidly in wealth than any other part of the Chinese dominions. Its recent development is due largely to improved railway facilities and to the development of the soy bean industry. The soy bean is Manchuria's chief product and one of China's leading exports. The Chinese export of the soy bean in 1915 was 614,250 tons, and of bean cake 695,600 tons. Other products are millet, Kafir corn, wheat, rice, and tobacco. Reported imports for 1915 are £12,671,183, and exports £28,415,343 (including the trade of the Japanese leasehold of Kwantung, q.v.). Both Russian and Japanese interest have been exerted to develop the commercial and industrial interests of the country. Japanese influence extends from the coast northward to Kwangchengtze, the terminus of the South Manchuria Railway, which at that point joins the Russian railway. Manchuria is connected by rail with China proper and Korea and is crossed by the Trans-Siberian line. About 2200 miles of railway are in operation. Formerly Manchuria was administered by a governor-general resident at Mukden, but this office has been abolished.

Under rights conferred upon Japan in 1917 to construct five railway lines in Manchuria and Mongolia, the extension of the line to Taonanfu

was being considered in the progress of the construction of a line between Kaiyuan and Hailung Cheng. The latter line was to be 120 miles in length and would serve many important towns of eastern Manchuria.

**MANITOBA.** The easternmost of the Prairie Provinces of Canada. It is situated east of Saskatchewan and west of Hudson Bay and Ontario, and extends northward from the American boundary to lat. 60° N. Capital, Winnipeg, the third largest city of Canada (Montreal being first and Toronto second). The estimated area is 251,832 square miles, of which 19,906 water. The population at the census of June 1, 1916, was 553,860 (294,609 males, 259,251 females), as compared with 461,630 in 1911, 365,688 in 1906, and 255,211 in 1901. Population of Winnipeg in 1911, 163,000; Brandon, 15,215; St. Boniface, 11,021. That part of the province north and northeast of Lake Winnipeg is almost without inhabitants excepting hunters and fur traders.

The provincial government is administered by a lieutenant-governor, appointed for five years by the governor-general of Canada; he acts through a responsible ministry of seven members. The Legislative Assembly consists of one chamber of forty-nine members, elected by universal adult suffrage for five years. In the House of Commons of the 13th Parliament, elected December 17, 1917, Manitoba is represented by fifteen members. The lieutenant-governor in 1917 was Sir James Albert Manning Aikins, appointed August 3, 1916, in succession to Sir Douglas Colin Cameron. Premier, T. C. Norris. See CANADA.

**MANURE.** See CHEMISTRY, INDUSTRIAL; FERTILIZERS.

**MARATHONS.** See CROSS-COUNTRY RUNNING.

**MARBLE, MANTON.** An American journalist, born in Worcester, Mass., on November 16, 1834; died in England on July 24, 1917. He was educated at the University of Rochester and after his graduation engaged in journalistic work in Boston. He removed to New York, and with others founded the *New York World*, of which he was proprietor and editor from 1862 to 1876. He took a rather hostile attitude toward the Civil War, his paper being temporarily suspended in 1864, by President Lincoln, for the printing of false dispatches. While he held that war was inevitable after the firing on Fort Sumter, he opposed the carrying of the executive power beyond constitutional limits. He supported the Geneva convention and made a bitter attack on the Tweed ring. In 1885 he was appointed a special envoy to Great Britain, France, and Germany on bimetallic questions by President Cleveland. He wrote: *The Presidential Counts* and *A Secret Chapter of Political History* (1878).

**MARBOON, WILLIAM.** See UNITED STATES AND THE WAR.

**MARET, HENRY.** A French journalist and politician, died in Paris, January 7, 1917. He was born at Saucerre (Cher) in 1838 and belonged to a distinguished family. After studying at the lycée of Bourges, he went to Paris to be a government employee. He began to write for small papers and then contributed to the *Opinion nationale* and *Illustration*, and helped edit *Charivari*. Commencing in 1869 he contributed to such republican opposition journals as *Réforme*, *Presse libre*, and *Rappel*. For

the *Mot d'ordre*, just founded by Henri Rochefort, he wrote in 1871 a series of articles attacking the national assembly. He took his stand against the policies of Gambetta. Because Maret had accused those in control of negligence, he was tried and convicted of disrespect to the government, and was sentenced to five years in prison and a 500 francs fine. The prison term was commuted to four months on account of his health. At this period he collaborated on various papers—the *Avenir national*, the *Constitution*, the *Marseillaise*, and the *Corsaire*, and became editor in chief of the new *Mot d'ordre*. This post was succeeded in 1880 by that of director of the *Vérité*. From 1885 to 1897 he directed the *Radical*. Maret served for many years as a deputy, noted for his liberal views on public questions and for his independence of party. He sat in the Chamber with the extreme left. His writings include many brilliant satirical sketches, dramatic criticism, romances such as *Les compagnons de la Marjolaine* and *Promenades à travers bois*, also a verse comedy, *Le baiser de la reine*, etc.

**MARITIME PROVINCES.** The provinces of Nova Scotia, New Brunswick, and Prince Edward Island, Canada. The total area is 51,597 square miles; land area, 51,163 square miles, which is slightly smaller than the land area of Alabama. Population (1911 census), 737,955. Population per square mile: Nova Scotia, 22.98; New Brunswick, 12.61; Prince Edward Island, 42.91. See these titles and also CANADA.

**MARKETS.** See HORTICULTURE.

**MARTINIQUE.** A French colony; an island of the Lesser Antilles. Area 987 square kilometres (381 square miles); population, 185,385. Fort-de-France, the capital, has about 27,000 inhabitants.

**MARYLAND. POPULATION.** The population of the State in 1910 was 1,295,246, and on July 1, 1917, it was estimated to be 1,373,673.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. Bu.	Value
Corn .... 1917	720,000	28,080,000	\$39,312,000
1916	675,000	26,325,000	23,429,000
Wheat ... 1917	675,000	11,475,000	28,753,000
1916	650,000	10,400,000	17,734,000
Oats .... 1917	47,000	1,457,000	1,093,000
1916	46,000	1,357,000	828,000
Potatoes . 1917	60,000	6,000,000	7,140,000
1916	48,000	4,085,000	5,433,000
Hay ..... 1917	442,000 a	552,000	10,985,000
1916	465,000	688,000	9,632,000
Tobacco . 1917	28,600 b	22,594,000	4,519,000
1916	25,500	19,635,000	3,142,000

a Tons. b Pounds.

**MINERAL PRODUCTION.** The coal production in the State in 1916 was 4,460,046 net tons, valued at \$6,947,623, an increase of 279,569 tons or nearly 7 per cent over 1915.

The coal output of the State in 1915 was 4,180,177 short tons, valued at \$5,330,845. The chief increase occurred in Garrett County. The number of men employed decreased from 5664 in 1915 to 5633 in 1916.

**TRANSPORTATION.** The total railroad mileage on June 30, 1914, the latest date for which statistics are available, was 1401 miles of single track. The railways having the longest mileage were: The Baltimore and Ohio, 336; the Phila-

delphia, Baltimore, and Washington, 329; the Washington and Maryland, 272; the Baltimore, Chesapeake, and Atlantic, 88. There has been practically no construction since this date.

**FINANCE.** The total receipts for the fiscal year 1914, the latest for which statistics are available, were \$12,006,006. The disbursements amounted to \$12,999,561, leaving a balance on September 30, 1914, of \$1,840,256. The bonded debt of the State in 1914 amounted to \$18,685,880.

**EDUCATION.** The total school population of the State in the year 1914-15, the latest for which statistics are available, was 415,908. The total enrollment in the public schools in 1916-17 was 146,530. This includes the enrollment of the country schools only. The number of teachers in the country schools was 4501. The average yearly salary of teachers in country schools was \$399.76.

**CHARITIES AND CORRECTIONS.** The Board of State Aid and Charities has general control over the charitable institutions of the State. Most of the penal institutions, such as the city and county jails and the penitentiary, do not come under supervision of this board. It has charge of a number of homes and asylums for adults and children, and also has supervision over the general hospitals and insane asylums. State aid is given also to a number of reformatories for children, some of which are under religious auspices and others sectarian.

**POLITICS AND GOVERNMENT.** There were no elections in the State during the year, and no political happenings of general interest.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

It was made a felony to store food products for the purpose of increasing their prices. A State council of defense was created to cooperate with the National Council. The so-called "lazy man's law" was enacted. By this measure all able-bodied men between the ages of 18 and 50, not usefully employed, may be required to register and to work in some public or private employment. Failure to register is made a misdemeanor and failure to do the work assigned is punishable by fine or imprisonment. The act does not apply to persons temporarily unemployed by reason of a strike or other labor troubles. Punishment was provided for the pollution or poisoning of the water supply of the State and also for injury to roads, bridges and public utilities, and other public property. A general moratorium was provided for at the discretion of the governor.

**STATE OFFICERS.** Governor, Emerson C. Harrington; Secretary of State, Thomas W. Simmons; Auditor, J. Enos Ray; Comptroller, Hugh A. McMullen; Treasurer, John M. Dennis; Adjutant-General, Henry W. Warfield; Attorney-General, Albert C. Ritchie; Superintendent of Education, M. B. Stephens; Commissioner of Insurance, W. Mason Shehan—all Democrats.

**JUDICIARY.** Court of Appeals: Chief Judge, A. Hunter Boyd; Associate Judges, N. Chas. Burke, William H. Thomas, John R. Pattison, Hammond Urner, John P. Briscoe, Henry Stockbridge, and Albert Constable; Clerk, Caleb C. Magruder.

**MARYLAND, UNIVERSITY OF.** A non-sectarian co-educational institution of learning located at Annapolis and Baltimore, Md. In the fall of 1917 there were 878 students in all de-

partments except the training school for nurses—arts and science (St. John's College), 210; medicine, 273; law, 110; dentistry, 212; and pharmacy, 73—and 262 members of the various faculties. Thomas Fell is president of St. John's College and also provost of the University of Maryland; Dr. James M. H. Rowland is dean of the medical school; Henry D. Harlan is dean of the law school; the university was founded in 1784.

**MASKELYNE, JOHN NEVIL.** An English conjurer, died in London, May 18, 1917. He was born in 1839 in Cheltenham and was educated there. At sixteen he made his first appearance with his partner, Cooke, he exposed the Davenport Brothers, spiritualistic impostors. From then on his reputation steadily grew, especially after his London debut in 1873. He was able to lease Egyptian Hall, Piccadilly, and there he gave two shows of magic daily until 1904, after which he transferred to St. George's Hall. Two of his successes were the production of an optical illusion by which he seemed to float out over his audience and back again, and his "Psycho," automaton chess player. He wrote *Modern Spiritualism*, *Sharps and Flats*, *The Supernatural*, etc.

**MASQUERAY, EMMANUEL LOUIS.** An American architect, died in St. Paul, Minn., May 26, 1917. He was born in Dieppe, France, and studied at the Ecole des Beaux-Arts, Paris, where he received the Deschaume and Chaudesaigues prizes. At the Salon of 1883 he was awarded a gold medal. Since 1887 he had lived in the United States and since 1905 in St. Paul. Some of his most important work was done as chief of design of the St. Louis Exposition in 1904. He erected the Cascades, the Colonnade of States and Pavilions, the Agricultural, Horticultural, Fisheries, and Forestry Buildings, also the Louisiana Purchase Monument and twelve bridges. Outside of this achievement he was known as architect of the Long Island College Hospital, Brooklyn, the Cathedral of St. Paul, Minn., the pro-cathedral of Minneapolis, the Cathedral at Wichita, Kans., and the Cathedral and St. Joseph's College at Dubuque, Iowa, and the Iowa Capitol grounds at Des Moines. Mr. Masqueray was a charter member of the American Institute of Architects, and a member of the New York Architectural League and other societies.

**MASSACHUSETTS. POPULATION.** The population of the State in 1910 was 3,344,516, and on July 1, 1917, it was estimated to be 3,775,973.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. Bu.	Value
Corn ....1917	61,000	2,806,000	\$8,083,000
1916	42,000	1,764,000	2,117,000
Oats ....1917	12,000	444,000	860,000
1916	11,000	352,000	232,000
Potatoes .1917	38,000	4,370,000	7,648,000
1916	25,000	2,275,000	3,981,000
Hay ....1917	460,000	a 690,000	18,731,000
1916	480,000	749,000	14,231,000
Tobacco .1917	8,400	b 11,833,000	4,644,000
1916	8,900	14,774,000	8,694,000

a Tons. b Pounds.

**TRANSPORTATION.** The total railway mileage of the State on December 31, 1916, was 4968; of

this, 2141 was main line, 1072 second, third, and fourth track, and 1754 side track.

The lines having the longest mileage are: Boston and Albany, 1128; Boston and Maine, 4200; New York, New Haven, and Hartford, 4411.

**FINANCE.** According to the report of the State treasurer, for the fiscal year of 1917, there was in the treasury on December 1, 1916, \$10,845,633. The receipts for the year ending November 30, 1917, were \$71,625,201, and the expenditures were \$70,218,874, leaving a cash balance in the treasury on December 1, 1917, of \$12,251,959.

The total bonded debt of the State on December 1, 1917, was \$131,151,912, while the sinking fund amounted to \$43,167,818, leaving a net total debt of \$87,984,093.

**EDUCATION.** The total enrollment in the public schools on April 1, 1917, was 601,835. The average daily attendance was 509,183. This includes public day schools, elementary, and high schools. In the public evening schools were enrolled 53,106 pupils, with 2182 teachers. The total expenditure for public evening schools was \$397,780. There were in the State in 1917 256 high schools, in which were enrolled 87,705 pupils with 3636 teachers. The total expenditure for high schools was \$5,942,903. There was expended for the salaries of principals, teachers, and supervisors \$16,806,724. The total expenditure for school purposes was \$28,681,999.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the State Infirmary at Tewksbury, the State Farm at Bridgewater, the Norfolk State Hospital, the Lyman School for Boys at Westborough, the Industrial School for Boys at Shirley, the State Industrial School for Girls at Lancaster, the Massachusetts Hospital School at Canton, the North Reading State Sanatorium, the Rutland State Sanatorium, and the Westfield State Sanatorium. The prisons include the State Prison at Boston, the Massachusetts Reformatory at Concord, the Reformatory for Women at Sherborn, the Prison Camp and Hospital at Rutland, the State Farm at Bridgewater. These are under the control of the Board of Prison Commissioners.

**POLITICS AND GOVERNMENT.** Massachusetts was one of the few States in which elections were held in 1917. On September 25, Governor McCall was renominated in the Republican primaries, and Frederick W. Mansfield for the Democratic. On November 6 Governor McCall was reelected for the third term. The Republicans also gained a seat in Congress. On November 19, Governor McCall refused to honor a requisition from Governor Cornwell, of West Virginia, to John Johnson, charged with attacking a white girl. The governor gave as his grounds for refusing, his belief that Johnson might not secure a fair trial in West Virginia. On December 17 elections were held in Boston for mayor and other city officers. Andrew J. Peters, formerly assistant secretary of the treasury, defeated Mayor J. H. Curley by more than 9000 votes.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below.

Laws relating to judicial procedure were amended in important particulars. Cities and towns were authorized to take steps to conserve

the food supply. A census was authorized to be taken at the request of the Council of National Defense. It was provided that the cultivation of land, harvesting, or transportation of agricultural products shall not be unlawful on Sunday during the war. Provision was made for an allowance supplementing the Federal payment of residents of the State not in the public service, to go into the military service. A moratorium limited to mortgages and judgments was provided for in favor of the men in the national service. It applies only to men of the National Guard and the members in the volunteer forces, as it was enacted before the establishment of the new national army by Congress. The publication of campaign matter anonymously was forbidden, and a candidate nominated by some one other than a political party may not use the name of that party in its political designation. The child labor law was amended in several details. A Defense Act was passed authorizing the suspension of the labor law in individual instances after a hearing and under the restrictions imposed by the board granting the suspension. Working men who are injured are permitted to choose their own physician. The Workingman's Compensation Law was amended by the abolition of the arbitration committee, composed of one member of the board, one employer and one employee, who formerly heard disputes. This jurisdiction is now vested in a single member of the board. Laws relating to insurance were amended. An elaborate act forbidding the sale of narcotic drugs except by prescriptions carefully regulated, was enacted. A measure was also passed authorizing the superintendent of the proper hospital to hold a person afflicted with the use of narcotics at the request of a police officer, a physician, a wife, or a husband.

**STATE OFFICERS.** Governor, Samuel W. McCall, Rep.; Lieutenant-Governor, Calvin Coolidge, Rep.; Secretary of State, Albert P. Langtry, Rep.; Treasurer, Charles L. Burrill, Rep.; Auditor, Alonzo B. Cook, Rep.; Adjutant-General, Jesse T. Stevens, Dem.; Attorney-General, Henry C. Atwill, Rep.; Secretary of the Board of Agriculture, Wilfrid Wheeler; Commissioner of Insurance, Frank H. Hardison; Commissioner of Education, Payson Smith.

**JUDICIARY.** Supreme Judicial Court for the Commonwealth: Chief Justice, Arthur Prentice Rugg; Justices, Edward P. Pierce, William C. Loring, Henry K. Braley, James B. Carroll, Charles A. De Courcy, John C. Crosby.

**MASSACHUSETTS INSTITUTE OF TECHNOLOGY.** A non-sectarian technological institution of learning located at Cambridge, Mass. In the fall of 1917 there were 1698 students and 138 members of the faculty; about 300 students and 10 members of the faculty entered government service in 1917. The library contains 129,811 books and 48,270 pamphlets and maps. Professor Charles R. Cross, head of the department of physics, retired in 1917 and became professor emeritus; Professor E. B. Wilson was appointed head of the department. Among the benefactions during the year were: Charles Hayden, \$100,000; estate C. H. Pratt, \$900,000; anonymous, \$2,500,000; T. C. duPont, \$200,000; General Education Board, \$250,000; miscellaneous donors, \$800,000. The productive funds in 1917 amounted to \$9,112,000 and the income to \$288,000. The institute was founded in 1861 and moved from Boston to a new site on the

Charles River in 1916. President, Richard Cockburn Maclaurin, LL.D. See HARVARD.

**MATTER, THEORIES OF.** See CHEMISTRY.

**MAUDE, Sir FREDERICK STANLEY.** A British lieutenant-general, who was in command of the British Mesopotamian Expedition. Gen. Maude was fifty-three years old when he died on November 18, 1917. He was the son of Gen. Frederick Maude and was a soldier practically from his boyhood up, having entered the army in 1884. In the Sudan Campaign of 1885 he was decorated with the Medal with the Clasp and the Khedive's Star and in the South African War he was given the Distinguished Order Medal and the Queen's Medal with six clasps. Gen. Maude was well known in Canada and had many American friends. From 1901 to 1904 he was military secretary to the governor-general of Canada. Later he was private secretary to the secretary of state for war. When the present war broke out he was a brigadier general attached to the General Staff of the Fifth Division. He took an active part in the early fighting in France, during which he was wounded. In 1915 he was placed in charge of the evacuation of the Suvla Bay trenches on the Gallipoli peninsula after the failure of the Dardanelles campaign. The British troops were withdrawn and embarked practically before the Turks discovered it and the whole operation was completed without a casualty. In August, 1916, he was placed in charge of the Mesopotamian army after a series of British disasters. Under his command the reorganized and strengthened British army more than retrieved the reverses it had met. Consult the article WAR OF THE NATIONS, *Military Operations*, in the present volume and also the YEAR BOOKS for 1914, 1915, and 1916.

**MAURITANIA.** A French West African civil territory, governed from St. Louis (Senegal) by a commission under the direction of the governor-general of French West Africa. The chief towns are Port-Etienne, Boutilimit, Aleg, Moudjeria, Kaedi, Atar, Selibaby, Tidjikdja, etc. See FRENCH WEST AFRICA.

**MAURITIUS.** An island in the Indian Ocean 550 miles east of Madagascar; a British crown colony. Area, 720 square miles. Total population, 368,510; 1915 estimate, 382,740. The natives of European race are in large part French Creoles. Port Louis, the capital, had (1911) with suburbs 50,060 inhabitants; Curepipe, 17,173; Mahébourg, 4068. The cultivation of sugar-cane is the staple industry. Export of sugar, 1915, £3,607,033. Total imports and exports (1915), including shipping charges on home products, £3,204,241 and £3,748,011 respectively. Revenue, 1914-15, £807,587; expenditure, £809,095. Tonnage entered 1915, 374,810. External debt, June 30, 1915, £1,274,390.

**MAYO FOUNDATION.** See UNIVERSITIES AND COLLEGES.

**MAYOTTE AND THE COMORO ISLANDS.** A group of islands belonging to France, administered under the government of Madagascar. Area, 2168 square kilometres (837 square miles); population, as estimated January 1, 1914, 97,900, of whom indigenes 96,619, Asiatics and Africans 754, and whites 527.

**MEAD, ELIZABETH STORES.** An American educator, died at Coconut Grove, Fla., March 25, 1917. She was born in 1832 at Conway, Mass., into a family named Billings, and was

educated at the seminary at Ipswich, Mass. From 1852 to 1858, she conducted, with her sister, a school at Andover, Mass. The Rev. Hiram Mead, of South Hadley, Mass., whom she married in 1858, died in 1881. Thereafter for many years she was a teacher at Oberlin College till 1883, then at Abbott Academy, Andover, till 1889, and from 1890 till 1900 she was president of Mt. Holyoke College. Oberlin conferred on her an honorary degree of A.M. and Smith College that of L.H.D.

**MEAT.** See **FOOD AND NUTRITION**; **STOCK RAISING AND MEAT PRODUCTION**.

**MEATLESS DAYS.** See **FOOD CONTROL**.

**MEAT SUPPLIES.** See **FOOD AND NUTRITION**; **STOCK RAISING AND MEAT PRODUCTION**.

**MECHANICAL STOKERS.** See **RAILWAYS**.

**MECKLENBURG-SCHWERIN.** A European grand duchy, one of the constituent states of the German Empire. The capital is Schwerin. The grand duchy is bounded by Prussia on the east, south, and west; on the north it borders the western end of the Baltic Sea. Area, 5068 square miles. The population at the census of December 1, 1910, was 639,958, as compared with 607,770 in 1900, 553,000 in 1864, and 308, in 1816. The average annual increase from 1816 to 1910 was 0.78 per cent; from 1900 to 1910, 0.52 per cent. In 1910, communes having upwards of 2000 inhabitants aggregated a population of 304,343. Evangelicals numbered 615,511 (96.18 per cent); Roman Catholics, 21,043 (3.29 per cent). The government is feudal in character. The grand duke in 1917 was Friedrich Franz IV, who was born April 9, 1882, and succeeded his father, Friedrich Franz III, April 10, 1897.

**MEDICAL EDUCATION IN THE UNITED STATES.** According to statistics compiled by the *Journal of the American Medical Association*, the total number of medical students in the United States for the year ending June 30, 1917, was 13,764, not including special or post-graduate students, and represents a falling off of 258 below the previous year. The high grade colleges, however, show an increase in the number of students, and the fact that 3379 graduates held degrees in arts or science, indicates that the standard of medical education is yearly becoming higher. Of the total number of students 12,925 attended non-sectarian or regular colleges; 580 homeopathic colleges; 259 eclectic colleges. During the year there were 610 women students and 153 graduates, a slight increase over the previous year. The two medical colleges for women had a smaller attendance, while the co-educational schools had a corresponding increase. The two women's colleges graduated twenty-nine students, and the co-educational institutions graduated 124. During recent years some of the oldest and largest medical schools, such as Columbia, Tulane, and the University of Pennsylvania, have admitted women medical students, which explains the loss of attendance at the exclusively female medical schools. During the year two medical colleges were established and one was suspended, the present total being ninety-six. As to fees, data secured from eighty-two medical colleges show that the average student paid \$150 tuition fee yearly, while the cost to the college for this period was \$419. As evidence that worthy medical students were being helped, thirty-eight medical schools provided 287 scholarships. New York State had the

largest number of students enrolled, namely 2223; Illinois 1802; Pennsylvania, 1411. Illinois graduated 531 students; New York, 485 students; Pennsylvania, 401; and Tennessee, 239. The report concludes with the following observation: "It is evident that the reduction in the total number of students and graduates has been in the lower grade colleges, while the number of students and graduates in the higher grade colleges is actually increasing."

**MEDICAL PROGRESS.** The gathering together of immense numbers of soldiers, made necessary by the great war, and the danger of spreading epidemic diseases incident thereto, has made imperative intensive study of these infections (see **CHOLERA**, **INSECTS** and **THE PROPAGATION OF DISEASE**, **TRENCH FEVER**, **TYPHOID FEVER**, **TYPHUS**). For other topics related to the war, see **PARAFFIN**, **GAS POISONING**, **MILITARY SURGERY**, **ROPE**, and **SHELL SHOCK**. The manufacture of munitions and war supplies has developed special ailments among the workers, and augmented the morbidity among them from already prevalent diseases (see **OCCUPATIONAL DISEASES** and **TUBERCULOSIS**). A considerable number of new drugs, or modifications of old ones, were introduced during the year (see **CALCREOSE**, **CITRESIA**, **GASTRON**, **MERCUROPHEN**, **OPTOCHIN**, **SALVARSAN**, and **STOMINE**). Other medical items and statistics will be found under their respective captions.

**MENSHEVİK.** See **BOLSHEVİKS**.

**MERCUROPHEN.** A new antiseptic discovered by Schamberg, Kolmer, and Raiziss, of Philadelphia, who have been engaged in chemotherapeutic investigations, especially with reference to mercurial and arsenical compounds. Mercuriophen is chemically oxymercury-orthonitro phenolate. It occurs in the form of an odorless, brick red powder, freely soluble in water. As a germicidal it is fifty times more active than bichlorid of mercury. It is useful for disinfecting the hands, sterilizing rubber appliances and surgical instruments. It is non-irritating and does not injure nickel-plated instruments.

**MERRILLITE.** See **MINERALOGY**.

**MESOPOTAMIA.** A division of Asiatic Turkey, in the region of the Euphrates and Tigris rivers, between northern Arabia and Persia. It consists of the vilayets of Mosul, Bagdad, and Busrah. One estimate of area is 143,250 square miles. One estimate of population is 2,000,000, but this figure may be regarded as excessive; the actual number is perhaps less than 1,000,000. See **WAR OF THE NATIONS**, *Military Operations* (4).

**METALLURGY.** The world demand for the various metals and their alloys during 1917 naturally led to efforts for extraordinary production rather than development of new technical methods. In some cases, however, where various foreign supplies of ores were cut off, it was necessary to make good the deficiency either by substitution or by improvements that would lead to increased economies. The entrance of the United States into the war as an active participant naturally brought home to America the necessity of rapid and efficient production as a vital matter, and instead of a large output and increased prices for commercial advantage, it became a national interest with the government regulating the supply, production, and export. The developments of the year were rather in

mass production than in elaboration of technique, and some of the more significant features of the metallurgical progress and development based merely on the authoritative annual reviews in the *Engineering and Mining Journal*, *The Iron Age*, and *Metallurgical and Chemical Engineering* are summarized in the accompanying paragraphs.

**FLOTATION PROCESS.** The record of the year in the development of the flotation process involved litigation and controversy quite as much as technical progress. Decisions were rendered by the courts in several cases, but criticism was made that these decisions were not in sufficiently clear language to provide an unalterable conclusion or settle the matter definitely. The technical mining journals devoted considerable space to the discussion of the legal side of the matter and several research laboratories were engaged in researches to develop processes workable under the patents. The most important technical discussion of flotation in 1917 was concerned with the amount of oil to be used. In the Joplin District, the flotation process to an advanced degree was employed in the southwestern Missouri lead and zinc fields, where it was found to have a distinct use and afforded high grade concentrates. Experimental flotation work with copper ores was carried on, Arizona using it as an auxiliary process to concentration. The addition of flotation made possible the profitable treatment of ores, not only those that could not be handled by gravity, but as an adjunct to gravity concentration. The Murex process, the concentration of lead, carbon, and ores was worked out at Darwin, Cal., and consisted of mixing a magnetic mineral with oil so as to form a paint which would adhere to the ore to be treated upon agitation. The magnetic separator was then used to separate the valuable mineral from the bulk of the ore.

**GOLD AND SILVER.** With the exception of the improvement of process, no noteworthy metallurgical advance was made in the treatment of gold and silver during 1917. This was particularly true as regards gold which was produced at about the usual rate during the year, but with an increased cost due to supplies, labor, etc. The advance in general, of course, was naturally equivalent so far as the mineral was concerned to a decrease in the value of the metal. Gold production occurred during the year at about the usual rate (see **GOLD**) with the exception of Mexico which was less than normal. In Mexico, the cyanide process dominated, and during 1917 there was practically no change in the standard process. The same held true for the Rand of South Africa, where increased economies were necessary, and the same observations were to be made of Australia and New Zealand where labor was, of course, an important consideration.

With the increased price of silver during the year (see **SILVER**) many mines once abandoned or neglected were reopened, and production was universally increased, all plants being worked at the fullest capacity possible. In cobalt, the application of flotation processes to the various ores was the most significant metallurgical advance, and not only was it believed that it would increase but that it would insure increased economies and a greater yield. In Mexico, with but a fraction of the normal output being turned out and various political and commercial condi-

tions hampering active work, there was comparatively little to be noted. With the stoppage of importation of cyanide from Germany, experiments were undertaken which indicated that a good extraction of silver sulphide ores could be obtained by flotation which was a cheaper and simpler process as regards installation and operation than the cyanide process. The product of flotation naturally was a concentrate which had to be retreated, but even so, the method was distinctly advantageous in many cases. The same shortage of cyanide led to experiments in an Arizona silver mill with the result that a permanent flotation system was installed. In the cobalt district of Ontario, flotation was used as an adjunct to the concentration and cyanide systems previously employed. With the cobalt ores an oil that would be strongly adhesive to the powdered mineral, was required as well as the ordinary frothing agents, and for this purpose creosote with a small percentage of pine oil and somewhat less of tar was employed. Comparative figures were given in a paper by Robert E. Dye before the Canadian Mining Institute in 1917, in which he stated that while it was of advantage to use two processes together, yet where one process is being weighed against the other for a complete installation, flotation would bring superior results to that of cyanide.

**COPPER.** The great activity in the production of copper and the enormous increase in the output which marked the years 1915 and 1916, were experienced in the first half of 1917. At the beginning of the last named year, the various plants had so increased their capacity that ore could be treated and the product refined without delay and with a maximum economy. These processes, however, were interfered with in 1917 by the difficulty of obtaining supplies, high prices, labor troubles, and other agencies which caused a decline in the production for the last six months of the year. The only important plant put in commission during the year was that of the New Cornelia Copper Company in the Ajo district of Arizona which was a leaching and electrolytic works where the ore was crushed and then leached in lead-lined concrete tanks. The solution from these tanks after being enriched was then treated electrolytically and the copper deposited. The Utah Copper Company during the year was installing a plant somewhat similar which was to be completed in 1918. In Michigan, the original ammonia-leaching plant of the Calumet and Hecla Mining Company, capable of handling about 2000 tons, was so successful that it was being doubled, while at Kennecott, Alaska, a new ammonia-leaching plant with a capacity of 800 tons a day, was being designed along similar lines to that which began operations in 1916 with such marked success.

The increase in the production of electrolytic copper refineries continued in 1917, and the maximum capacity of ten such plants at the end of 1917 was 2,788,000,000 pounds as compared with 2,584,000,000 pounds in 1916.

**ZINC.** The extraordinary production of zinc which occurred in 1915 and 1916 leading to the construction of new plants and the extending of those in existence to their fullest capacity, was not continued in 1917, as the increasing cost of coal and gas fuel, relatively higher cost of ore, and the decrease of consumption

due to high prices led to a curtailment of output. Under these conditions a lack of progress in the metallurgy of zinc was inevitable for many of the companies were operating with but slight profit and few developments were contemplated. After several years of work at Bartlesville, a new process of treating zinc was about to be tested on a large scale. Here large tonnage of roasted ore was to be distilled in retorts with the use of relatively small quantities of reducing fuel and relatively unskilled labor. While there would be a low extraction of zinc, possibly 60 per cent, the aim was to be not to burn any zinc during the operation, so that the retorts residues containing considerable lead and zinc would be burned in a Wetherill grate furnace. In this way, by rougher and less expensive methods than that previously in use, a relatively high zinc extraction would be secured. Another tendency of the year was for the large zinc smelters to provide themselves with oxide plants and thus save quite a proportion of the zinc contained in various residues.

Perhaps the most notable feature of 1917 was the fact that several new electrolytic extraction plants went into operation, but none obtained large production. At Park City, Utah, the Judge Mining and Smelting Company had a plant in operation producing about three tons of zinc every 24 hours, which was gradually to be increased to fifteen tons. This was the first zinc plant to be equipped with rotating circular cathodes, or, in other words, the first to use zinc-sulphate electrolyte. Late in the year the plant at Risdon, Tasmania, was put in motion and other plants were proposed for that island.

One of the developments of the year was a large rolling mill built by the New Jersey Zinc Company at Palmerton, and it was expected that developments in sheet zinc rolling in the United States would be reported in the near future. Many metallurgists believed that the use of zinc as a sheet metal might be widely extended, particularly as there would be available in the United States facilities for its production. The manufacture of zinc oxide for pigments and other purposes was another development of promise, and several large smelters were being equipped with oxide plants during the year.

**LEAD.** In 1917 lead and silver sold at an increased price with the result that silver-lead ores in the United States and Mexico figured to a greater extent than previously. In the lower Mississippi Valley, various processes were employed including flotation and blast roasting, but there were few new methods of treatment developed during the year. There were marked increases in supplies and labor, but there were few changes in refining practice.

**IRON AND STEEL.** The iron and steel industry in 1917 showed great prosperity and output, but few technical advances in metallurgy. Most of the changes in practice that resulted were due to commercial conditions and especially the shortage of certain raw materials. In regard to the various refractory substitutes, such as magnesite and chromite, there was a marked deficiency, and for the former, deposits in Washington and California were being mined to take the place of the material previously imported, while for chromite, only a few deposits were

known to occur in the United States, so that the shortage of imports was seriously felt.

Chromium was being used as alloy for steel especially in the production of a stainless or rustless alloy, but the alloying element most used was tungsten, which during the year went to an extraordinary price. This, however, served to produce a domestic supply in the Rocky Mountains, while such substitutes as molybdenum, uranium, and ferrosilicon were being employed to replace tungsten. It was claimed that a half per cent of uranium which was being mined in Colorado for its radium content and for other purposes, would replace several per cent of tungsten in tool steel, but the exact merits of the steel so made were more or less in controversy. Ferrosilicon was used increasingly during the year and in part to replace magnesite, but this latter substance had become essential to the manufacture of good steel, so that about 300,000 tons of ferrosilicon were required for the annual American steel output. Manganese ore was being obtained almost exclusively from the tropics and especially from Brazil, but by 1917 deposits were developed in Virginia and adjoining counties of North Carolina, so that by the first of November, the United States production of manganese ore had reached 120,000 tons for the year and was increasing. The steel maker preferred the concentrated ferromanganese which contained about 80 per cent of manganese, and from 6 to 7 per cent of carbon, rather than ore known as spiegeleisen which contained from 20 to 25 per cent of manganese and 5 per cent of carbon.

Some metallurgists believed that the failure to utilize lower grade materials for alloyed steels was due to a spirit of conservatism, and lack of enterprise in the face of active industrial conditions. This, however, was one of the metallurgical discussions of the year. In the production of ferromanganese, the electric furnace had largely taken the place of the blast furnace, as it was more efficient, by preventing the loss of manganese in the form of a silicate, and at the same time cuts down the amount of carbon in the metal.

The Colorado Fuel and Iron Company was successful during the year in making low carbon steel with spiegeleisen using this latter material in place of high-grade ferromanganese. Their practice was to add two-thirds of the required amount of spiegel in the furnace a few minutes before the charge was to be tapped. In this way a large amount of the carbon in the spiegel was oxidized and the manganese was able to enter into combination without an excess of carbon. The remaining third of the charge of spiegel was added in the ladle.

The efficiency of the blast furnace was being increased during the year, and at a notable installation, namely, the Larimer stove at the Joliet works of the Illinois Steel Company, a blast temperature of 1350 degrees with a stack temperature of 150 degrees was being obtained, the stack loss being 3.2 per cent. The use of a preheater to obtain a high constant temperature, namely, of 1450 degrees, was another feature of the year, and an increase of 400 degrees was obtained for the production of ferromanganese.

The most striking development in the foundry was the commercial development of the Stoughton oil-burning cupola for melting pig iron with

an efficiency much higher than that of coke, and a loss in the amount of sulphur in the iron on remelting. In order to resist the onslaughts of steel producers, the makers of chilled-iron and malleable iron were introducing important measures to improve the products and to extend their use. It was reported in one plant that converters were being used to blow out the silicon and lower the carbon of the metal, as was general in the duplex process of steel manufacture, and to finish the blown metal either in the air furnace or in the electric furnace. Chilled iron car wheels were being considered for increased use; however, they had not figured to the extent of steel wheels for many years. One of the new processes of the year was a machine for centrifugal pipe casting by the use of a revolving permanent mold.

In the steel industry outside of the electric furnace discussed in following paragraphs, there was little of novelty during 1917. The Lamber-ton mill which reverses without reversing was introduced into a number of American mills. The essential feature of this machine was a powerful rotating mechanism capable of turning the circular housing of the rolls through 180°, thus reversing the position of the top and bottom roll, also the direction of rotation relative to the ingot. The latter received a pass in the reverse direction after which the housings were rotated back to their original position and the next pass given. The aim was to avoid the necessity of reversing the direction and of rotation of the motor.

In a blooming mill of a new design, two sets of rolls stand alongside each other with their axes in the same vertical plane. There is what would be the middle roll in the three-high mill in each stand, but on one side there is a roll below and one above, while on the other side, one above and one below, the two sets of tables being set the diameter of one roll out of level with each other. The bloom, after being passed to one stand, is transferred sideways to the other stand, and after it is passed to that combination, is returned to the delivery rollers of the first stand, etc.

During the year, the discussion of rail composition and construction continued, and interest was manifested in a paper on the transverse fissures in rails by the engineer physicist of the Interstate Commerce Commission who had for years investigated this subject. This paper was one of considerable technical importance, and was extensively reprinted in the metallurgical and railway papers. An interesting development on the Pacific Coast, was the melting of steel scrap with oil fuel in open hearth furnaces, utilizing the supply of scrap which had accumulated in this region for about forty years.

**ELECTRO-METALLURGY.** The electric steel industry in the United States and in fact in the world generally in 1917, exceeded in its development and progress the remarkable record for 1916. The United States in particular was most active in applying this form of metallurgy and in fact so many and so rapid were the installations that any accurate tabulation was considered hardly possible. On December 31, 1917, there were 233 electric steel furnaces of all types in the United States and 36 in Canada, as compared with 19 for the United States and 3 for Canada on July 1, 1913. On Janu-

ary 1, 1917, the steel industry throughout the world contained 471 electric furnaces, while at the end of the year the total was estimated at 733. On July 1, 1913, the total number of such installations throughout the world was 140.

In the United States, the Illinois Steel Company at South Chicago, Ill., in November, 1917, started up the largest electric steel plant of the kind in the world containing two 25-ton and two 15-ton Heroult furnaces with another 25-ton furnace in course of construction. Large electric steel plants with Heroult furnaces were added at the Anniston Steel Company, Anniston, Ala., with six 6-ton Heroult; the Hess Steel Corporation, Baltimore, Md., with six 6-ton furnaces; the Carpenter Steel Company, Reading, Pa., The Timkin Roller Bearing Company, Canton, Ohio, and the Armstrong Whitworth of Canada, Ltd., Longueuil, Quebec, each with four 4-ton furnaces. The United Alloy Steel Corporation had a 15-ton and a 6-ton Heroult furnace.

The largest installation in point of number of furnaces to be erected in 1917 was that of the British Forgings, Ltd., at Toronto, Canada, which contained ten 6-ton Heroult furnaces.

A new English furnace which was constructed in the United States was the Greaves-Etchells, while another new design exclusively American was the Booth-Hall furnace installed at the plant of the Midland Electric Steel Company, Terre Haute, Ind. The Snyder furnace had 32 new installations in the United States, and three in Canada as against 19 in the United States and three in Canada in 1916. The Grönwall-Dixon had 11 new furnaces in the United States and one in Canada. The Moore electric furnace, also a new type, was installed in Wisconsin and at Richmond, Va.

In Germany and Luxemburg as well as in Austria-Hungary, there was a considerable increase in the number of electric furnaces for which the best available statistics are given in the accompanying table from the *Iron Age*:

TABLE OF ELECTRIC STEEL FURNACES, BY COUNTRIES OF THE WORLD, OPERATING OR CONTRACTED FOR ON DEC. 31, 1917,\* WITH TOTALS FOR 1917, 1916, 1915, 1913, AND 1910

	Total Dec. 31, 1917	Total Jan. 1, 1917	Total Jan. 1, 1916	Total Jan. 1, 1915	Total July 1, 1913	Total March, 1910

\* Largely estimated.

Great Britain in its number of electric furnaces ranked second to the United States, and the various types were distributed as follows: 48, Heroult; 35, Greaves-Etchells; 27, Electro-Metals (Grönwall-Dixon in the United States); 7, Rennerfelt; 6, Snyder; 4, Stassano; 3, Stobie; 2, induction, and 1, Girod. Of these, 70 were in Sheffield, England, which centre contains the largest number of electric furnaces of any source of steel production in the world.

Electric steel furnaces were widely distributed all over the world and were responsible for about 4,000,000 tons per year product, of which the United States and Canada contributed about 1,800,000 tons. See CHEMISTRY, INDUSTRIAL; COPPER; GOLD; IRON AND STEEL; LEAD; etc.

**METALS.** See CHEMISTRY, INDUSTRIAL.

**METEOROLOGY.** The death roll of the year included the names of Professor Kristian Birke-land, of Christiania, distinguished for his investigations of the nature of the aurora borealis; and Dr. William Bullock Clark, professor of geology in Johns Hopkins University, and director of the State Weather Service of Maryland.

**EXTENSION OF WEATHER BUREAU WORK.** When the programme of meteorological observations by the U. S. Weather Bureau was put into effect in 1872, it was confined mainly to the daily forecast and warning service. To meet the great advances of meteorological science made during the decade ended in 1917, as well as the rapidly increasing demands of aviation, a committee of Central Office officials was appointed in November, 1916, to consider the observational work of the bureau, and to report on such revision or extension as seemed desirable. The committee presented its report, which was approved, to come into effect on January 1, 1918. Press of other important work was offered as the reason for not adopting the ideal programme, but the following additions to the programme as carried on were suggested as being well within the bounds of practicability: (1) the making of an observation of relative humidity and cloudiness at all principal stations at the uniform hour of noon, local mean time; (2) the compilation of wind direction and velocity from the automatic record sheets at selected stations; (3) the collection of statistics of hail, thunderstorms, and tornadoes in greater detail than at present.

**THE COLD SPRING OF 1917.** The spring of 1917 in the United States was remarkable for its coldness. The available data were discussed by Preston C. Day in a paper in the *Monthly Weather Review*, in which the mean temperature departures from the normal were clearly shown in a series of maps. The period of cold weather began about April 24, and lasted until about the middle of May in nearly every part of the country. Temperatures were almost continuously below the normal, the daily deficiencies ranging from about 3° F. near all the borders to 9° F. over the interior districts; at a few local points, the deficiency even reached as high as 12° F. After an interval of a week in which the temperatures were generally, though not materially, above the normal over the greater part of the country east of the Rocky Mountains, a second period of cold set in and continued practically without a break until about June 19, a period of four weeks. In almost every respect this second period exceeded the first. Mean

temperatures over the whole of the interior ranged from 6° F. to 8° F. below the normal, while at times the deficiency was as much as 20° F.; only along the Gulf and Southern coast and at a few points in the far Northwest was the temperature above the normal. An examination of the records of the Weather Bureau since 1872 failed to disclose another instance in which the average temperature for the month of May was so universally below the normal. In spite of the continued cold, however, killing frosts were of comparatively rare occurrence. Over many parts of the country the precipitation was also below normal, barely amounting to a tenth of an inch over large areas.

The countries of the north and west of Europe also experienced extremely cold weather, averaging about 4° below the normal from the end of November, 1916, to the latter part of April, 1917, a period of nearly five months. The cold spell finally gave way to much warmer weather about the time the cold weather in the United States began, and the month of May was remarkable for unseasonably high temperatures.

**SNOWFALL OF NEW ENGLAND.** Professor Charles F. Brooks published in the *Monthly Weather Review* a study of the snowfall of New England. After reviewing some of the great historic snowfalls of New England, he pointed out that heavy snowstorms in this region occur under several distinct and well-marked combinations of weather conditions. If a cyclonic disturbance over the Great Lakes and another off the South Atlantic Coast combine south of New England, and move in a northeasterly direction, a strong cyclone is produced, and the cold northerly winds and the moist easterly winds together give rise to the requisite moisture and low temperature. Northeast snowstorms also arise when a single cyclone pushes up the coast against the southward circulation on the east side of an extensive interior anti-cyclone. Other favorable conditions for the occurrence of heavy snowfall are offered whenever, during a period of low temperature, a strong cyclone is passing immediately south of, or northward through, New England, while an anti-cyclone on the northeast or north is on its way.

Despite the small area of the region, there is great diversity in the amounts of snowfall registered in different parts of New England. Heavy snowfall on one side of a mountain range is accompanied by light snowfall on the other side, owing to loss of moisture in the passage of the crest. This makes the Champlain Valley a region of comparatively light snowfall, for it lies in the "snow shadow" of both the Adirondacks and the Green Mountains. The upper Connecticut Valley is a similar region. In the coastal region, it is generally cold enough for snowy ocean winds only in February, March, and April, and the belt of maximum precipitation is some distance from the coast, being further inland the more sharply the country rises. A series of maps based on observations from 178 stations for the period 1895 to 1916 was given showing the distribution for the six months from November to April for different years, and also for the whole period. The February averages are the highest. Only on Cape Cod does the average for that month fall below ten inches, while one small region in northwestern Massachusetts shows an average fall of more than thirty inches; for the White and Green Moun-

tains and the greater part of Maine the average lies between twenty and thirty inches. Attention was drawn to the fact that New England is the focus for most of the cyclones which cross the United States, and as many of the strongest pass south of this region, or across its southeastern portion, this section of the country experiences from time to time extraordinary snowstorms which are one of the greatest characteristics of its climate.

**RAINFALL AND GUNFIRE.** The old question of the connection between rainfall and gunfire was examined again by M. Angot, the director of the French Meteorological Service. The excess of rainfall in Europe in 1915 and 1916 was attributed to the artillery fire of the contending armies, and was hailed by the champions of the theory as conclusive evidence of the soundness of their views. M. Angot made a careful comparison of the daily weather maps and the observed rainfall figures, but failed to find any support of the theory. In fact, as he pointed out, 1915 and 1916 fell into a series of wet years, which began with 1909 and balanced the dry series of 1898-1904, so that their excessive wetness could hardly be regarded as abnormal. Further evidence against the theory was found in the great spring offensive of 1917 which failed to interrupt the long-continued fine weather in which it occurred. English rainfall records also failed to show any indication of a distribution affected by the gunfire in northern France.

**A DESTRUCTIVE AVALANCHE WIND.** A striking instance of the force of the blast generated by an avalanche was reported from Juneau, Alaska. The wind occurred on January 26 as the result of a heavy snowslide into Gold Creek Gulch, near Juneau. Three cabins which stood opposite the bank where the slide occurred were demolished by the force of the blast, and their debris was carried 100 feet up the opposite slope.

**METHODIST EPISCOPAL CHURCH.** The total number in full membership in this denomination in 1917 was 3,843,304, as compared with 3,724,188 the year before, 439,985 probationers, as compared with 403,876; 30,667 church buildings as compared with 30,778; 18,841 ministers in full connection as compared with 18,882; 1679 on trial as compared with 1621; and 14,873 local preachers as compared with 15,239. The total membership, including probationers in 1917 was 4,283,289, as compared with 4,128,064 in 1916. The total number of Sunday schools in 1917 was 36,143, as compared with 36,121 in 1916. The number of officers and teachers in 1917 was 411,402, as compared with 408,244 in 1916, and the number of Sunday school pupils in 1917 was 4,606,700, as compared with 4,579,029 in 1916. The total membership of the Epworth League in 1917 was 1,140,917, as compared with 830,889 in 1916. The estimated value of church property in 1917 was \$225,116,667, as compared with \$217,646,570 in 1916; and of the parsonages \$38,085,036, as compared with \$36,174,636 in 1916. The average salary paid to pastors in 1917 was \$1037.54.

The missionary activities of the denomination are conducted through the Board of Foreign Missions; the Board of Home Missions and Church Extension, the Women's Foreign Missionary Society; and the Women's Home Missionary Society. The mission conferences of the

denomination are: Austria-Hungary, Bulgaria, Burma, France, Inhambane, Kiansi, North Africa, North Andes, Pacific Swedish, Porto Rico, Rhodesia, Southern Swedish, West Central Africa, and West China. Extensive missions are maintained on four continents, as follows: Asia: India, Burma, Malaysia, the Philippine Islands, Java, Borneo and Sumatra, China, Japan, and Korea; Africa: Liberia, Angola, Madeira Islands, Southern Congo, Portuguese East Africa, Rhodesia, Algeria, and Tunis; South America: Argentina, Paraguay, Uruguay, Bolivia, Chile, Peru, and Panama; Europe: the Board of Foreign Missions maintains mission organizations in Italy, France, Bulgaria, Austria-Hungary, and Russia, and makes grants in aid to the Methodist Episcopal conferences in Germany, Switzerland, Denmark, Norway, Sweden, and Finland. Thus in all, thirty-four different countries are benefited, and the gospel is preached in about twice that number of languages.

The total number of missionaries in 1917 was 1568, including 458 men and 471 women, wives, and single missionaries under the board, 497 single women under the Women's Foreign Missionary Society, and 142 other workers, mostly self-supporting missionaries in fields like South Africa. They were assisted by 11,110 native workers, representing an increase of 1688 in the native staff over last year. They care for an enrolled membership of 442,765, to which must be added the baptized children and unbaptized adherents, making a total community, according to the most recent advices to the board in New York City, of 673,657, with a new gain for the year of 12,351. The missionaries of the board are responsible for 7440 Sabbath schools, reporting 346,793 scholars. The total receipts of the missionary societies in 1917 were: Board of Foreign Missions, \$1,940,304; Board of Home Missions and Church Extension, \$1,319,762; the Women's Foreign Missionary Society, \$1,775,758.90; Women's Home Missionary Society, \$1,084,406.

Under the general charge of the Board of Education are maintained in the United States and abroad 420 educational institutions, including 42 colleges and universities, of which the most important are: De Pauw University, Indiana; Northwestern University, Illinois; University of Southern California; Ohio Wesleyan University; Boston University; and Wesleyan University. There are ten theological schools for white students and six for colored.

Besides the missionary and Sunday school organizations and the Board of Education there are: the Methodist Book Concern, through which the publications of the denomination are issued; the Epworth League, the association for the young people of the church; the Methodist Federation for Social Service; the Freed-Man's Aid Society; the Deaconess Work; and the Temperance Society.

**METHODIST EPISCOPAL CHURCH, SOUTH.** The larger number of Methodists in the Southern States are included in this denomination. According to the official returns in 1917, there were 7320 ministers; 5263 lay preachers; 2,123,785 church members and probationers; 16,868 Sunday schools; 147,155 officers and teachers; 1,679,163 Sunday school scholars; and 16,993 churches. The figures for ministers, churches, and members are for 1917, the rest of the figures

for 1916. There were on January 1, 1917, 7517 traveling preachers, not including supplies, 7440 last year, a gain of 77 over last year; 5313 local preachers including supplies, a gain of 50; 2,152,838 members including local preachers, a gain of 50,773; 150,134 Sunday school officers and teachers, a gain of 2979; 1,775,668 Sunday school scholars, a gain of 78,505; 135,278 Epworth League members, a gain of 2215; 17,359 churches, etc., a gain of 127; 5538 parsonages, a gain of 120; 19,699 societies, a decrease of 10; value of church property \$80,908,581, an increase of \$1,858,308; value of parsonages, \$11,754,132, an increase of \$333,836.

The work of the denomination extends over territory in which there are 330 districts and fifty conferences, including the missionary conferences of Brazil, Central Mexico, China, Cuba, German Mission, Korea, Mexican Border Mission, and South Brazil.

**METHODISTS, CANADIAN.** The Methodist Church in Canada was formed in 1883 by the Union of the Canadian branches of the Wesleyan Methodist Church, the Methodist Episcopal Church, the Primitive Methodist Church, the Methodist New Connection Church, and the Bible Christian Church. The territory covered by the operations of the church included the Dominion of Canada, Newfoundland, Bermuda, and Mission Fields in China and Japan. For administrative purposes there are twelve conferences: Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick and Prince Edward Island, Newfoundland, Manitoba, Saskatchewan, Alberta, and British Columbia.

In 1917 there was a total membership of 2860 ministers; 378,802 church members and probationers; 3818 Sunday schools; 42,590 officers and teachers; 415,337 Sunday school scholars; 3782 churches, etc. There were 2327 Young People's Societies, a decrease of 63. The membership of these societies is 93,530. Under the educational control of the church are 17 colleges and universities, of which the most important are: Victorian University, Toronto; Mt. Allison University, Sackville, N. B.; Wesleyan Theological College, Montreal; Wesley College, Winnipeg. The total value of all buildings and equipment is \$5,729,394, and total value of endowments is \$1,470,997. The principal officers of the church in 1917 were: Samuel Dwight Chown, general superintendent; Albert Carman (q.v.), general superintendent emeritus; T. A. Moore, secretary of the General Conference; book steward, Wm. Briggs; W. B. Creighton, editor of the *Christian Guardian*; A. C. Crews, editor of Sunday School Publications; David W. Johnson, editor of the *Wesleyan*.

**METHODISTS, COLORED.** In 1917, there were 3072 ministers; 2786 lay preachers; 240,798 church members and probationers; 4007 Sunday schools; 7098 teachers; 79,876 Sunday school scholars; and 3196 churches. The Colored Methodist Episcopal Church is an offshoot of the Methodist Episcopal Church, South. The African Methodist Episcopal Church, which was formed from the Methodist Episcopal Church in 1815, had in 1917: 5000 ministers; 6302 lay preachers; 620,000 church members and probationers; 5695 Sunday schools; 39,310 officers and teachers; 310,000 Sunday school scholars; 6000 churches, etc. The African Methodist Episcopal Zion Church, organized in 1821, had,

in 1917, 3552 ministers; 649 lay preachers; 568,608 church members and probationers; 2070 Sunday schools; 14,404 officers and teachers; 118,159 Sunday school scholars; 3180 churches, etc. The Union American Methodist Episcopal Church (Colored) had, in 1917, 170 ministers; 19,000 church members and probationers; 78 Sunday schools; 481 officers and teachers; 3372 Sunday school scholars; 212 churches. The Union American Methodist Episcopal Church (Colored) had, in 1917, 170 ministers; 19,000 church members and probationers; 78 Sunday schools; 481 officers and teachers; 3372 Sunday school scholars; 212 churches. The African Union Methodist Protestant Church (Colored) had, in 1917, 200 ministers; 750 lay preachers; 4000 church members and probationers; 66 Sunday schools; 441 officers and teachers; 5266 Sunday school scholars; 125 churches. The Reformed Zion Union Apostolic Church (Colored) had, in 1917, 33 ministers; 3059 church members and probationers; 36 Sunday schools; 212 officers and teachers; 1508 Sunday school scholars; and 45 churches. The Reformed Methodist Union Episcopal Church (Colored) in 1917, had 72 ministers; 4397 church members and probationers; and 58 churches.

**METHODISTS, WESLEYAN.** This is the largest branch of the denomination in Great Britain and Ireland. In 1917 it had 2618 ministers; 19,012 lay preachers; 491,862 church members and probationers; 7428 Sunday schools; 124,428 officers and teachers; 872,674 Sunday school scholars; 8515 churches, etc., with a seating capacity of 2,383,704. The corresponding figures for Ireland are 251 ministers; 637 lay preachers; 27,429 church members and probationers; 340 Sunday schools; 2297 officers and teachers; 23,857 Sunday school scholars; 546 churches. The returns for Canadian Methodism will be found in a separate title. In Foreign Missions the Wesleyan Methodists in 1917 had 727 ministers; 6386 lay preachers; 1,193,360 church members and probationers; 2227 Sunday schools; 9812 officers and teachers; 138,389 Sunday school scholars; 3612 churches. In the French Conference of Wesleyan Methodists there were in 1917 29 ministers; 68 lay preachers; 1586 church members and probationers; 35 Sunday schools; 124 officers and teachers; 1436 Sunday school scholars; 122 churches. In the South African Conference the Wesleyan Methodists in 1917 had 282 ministers; 4407 lay preachers; 139,161 church members and probationers; 890 Sunday schools; 3133 officers and teachers; 42,223 Sunday school scholars; 4160 churches, etc.

**PRIMITIVE METHODISTS.** Ministers, in 1917, 1157; lay preachers, 14,976; church members and probationers, 205,217; Sunday schools, 4121; officers and teachers, 56,669; Sunday school scholars, 428,404; churches, etc., 4841.

**UNITED METHODIST CHURCH.** Ministers in 1917, 784; lay preachers, 5917; church members and probationers, 182,624; Sunday schools, 2223; officers and teachers, 38,957; Sunday school scholars, 278,245; churches, etc., 3036.

**WESLEYAN REFORM UNION.** Ministers in 1917, 26; lay preachers, 491; church members and probationers, 8770; Sunday schools, 201; officers and teachers, 2572; Sunday school scholars, 22,554; churches, etc., 215.

**INDEPENDENT METHODIST CHURCHES.** Ministers, in 1917, 391; church members and probationers, 9298; Sunday schools, 158; officers and

teachers, 3036; Sunday school scholars, 26,157; churches, etc., 146.

**AUSTRALASIAN METHODIST CHURCH.** Ministers in 1917, 985; lay preachers, 8634; church members and probationers, 149,878; Sunday schools, 3849; officers and teachers, 21,964; Sunday school scholars, 203,365; churches, etc., 5147.

**NEW ZEALAND METHODIST CHURCH.** Ministers in 1917, 198; lay preachers, 946; church members and probationers, 24,730; Sunday schools, 407; officers and teachers, 3276; Sunday school scholars, 29,448; churches, etc., 460.

**JAPAN METHODIST CHURCH.** Ministers, 241; church members and probationers, 15,364; Sunday schools, 340; Sunday school scholars (also officers and teachers), 28,438; churches, 245.

**BRITISH METHODISTS.** The Methodist Publishing House of London published the following statistics of British Methodism in 1916. They contained not only the returns for Great Britain and Ireland, but for Methodist churches and missions in foreign fields. The returns for Canadian Methodism will be found in a separate article. British Methodists at home and abroad had in 1916 a total of 10,356 ministers; 64,469 lay preachers; 1,804,890 church members and probationers; 25,803 Sunday schools; 308,731 Sunday school officers and teachers; 2,522,793 Sunday school scholars; and 25,961 churches, etc., exclusive of Great Britain.

Methodism is also represented in several European countries by Conferences and Missions affiliated to the Methodist Episcopal Church of America. The latest returns available are: Austria-Hungary, 955 members; Bulgaria, 691; Denmark, 4053; Finland, 1579; France, 597; Italy, 4132; North Germany, 14,760; Norway, 6261; Russia Mission, 452; South Germany, 14,005; Sweden, 16,451; Switzerland, 10,049.

**METROPOLITAN OPERA HOUSE.** See *MUSIC, Opera*.

**MEXICO.** A federal republic situated between the United States and Central America. The capital city is Mexico, in the Federal District.

**AREA AND POPULATION.** The republic consists of 27 states, three territories, and the Federal District. The area is stated at 1,987,201 square kilometres, including islands of 4042 square kilometres not attached to any state or territory. This area, equivalent to 767,258 square miles, is 25.35 per cent of the area of the United States. The census of October 27, 1910, returned a population of 15,160,369, as compared with 13,607,259 in 1900. In 1912 the population was estimated at 15,501,684. About one-fifth of the people are white, over two-fifths mestizo, and nearly two-fifths Indian. In 1910, males numbered 7,504,471, and females 7,655,898; Spanish-speaking persons, 13,143,372 (most of the remainder speaking Indian languages); Roman Catholics, 15,033,176; persons of foreign birth, 116,527 (including 29,541 of Spanish birth, 21,434 Guatemalan, 20,639 American, and 13,203 Chinese). Population of the larger cities at the 1910 census: Mexico, 471,066; Guadalajara, 119,468; Puebla, 96,121; Monterrey, 78,528; San Luis Potosí, 68,022; Mérida, 62,447; León, 57,722; Veracruz, 48,633; Aguascalientes, 45,198. For other details, including area and population by states, see the 1916 *YEAR BOOK*.

**INDUSTRIES AND COMMERCE.** In proportion to the country's capabilities, agricultural production is small. The leading crops include corn,

cotton, henequen, wheat, sugar-cane, coffee, beans, potatoes, chick peas, and tobacco. An abundant corn crop was reported for 1917. In that year the national government instructed the governors of the states to effect as large an increase as possible of the area under cultivation and to allot lands not cultivated by their owners to applicants who would produce crops. Cattle raising attained considerable importance, but live stock were seriously depleted in the course of the recent civil wars. Mexico has exceptionally rich mineral resources, which have attracted large amounts of foreign capital. The leading metal produced is silver, followed by gold and copper; there is some production of lead, antimony, and zinc. In recent years a large petroleum industry has developed in the Tampico region and the Isthmus of Tehuantepec. The reported production in 1915 was 32,910,508 barrels; in 1916, 39,917,402 barrels. The principal Mexican manufactures are cotton goods, tobacco, sugar, and spirits.

In the fiscal year 1912-13, imports and exports were valued at \$97,886,169 and \$150,202,808 respectively. Classified exports in that year: mineral products, \$94,824,305; vegetable products, \$42,971,477; animal products, \$9,918,916; manufactures, \$1,672,633; miscellaneous, \$815,477. Official statistics are not available for later years. Estimates for the calendar year 1915 place total import values at \$85,000,000 and total export values at \$156,000,000; 1916, \$90,000,000 and \$170,000,000. Estimated imports from and exports to the United States in 1916, \$60,000,000 and \$110,000,000; United Kingdom, \$9,000,000 and \$32,000,000; France, \$5,500,000 and \$3,500,000; Spain, \$3,000,000 and \$1,000,000.

**COMMUNICATIONS.** The length of railways in operation on September 30, 1913, was 15,782 miles. In 1917 the Tehuantepec National Railway, extending from Puerto, Mexico, to Salina Cruz, Mexico, a distance of 188 miles, which had been operated under a 50-year contract from July 1, 1903, between the Federal government of Mexico and the firm of S. Pearson and Son, Ltd., of London, figured in a discussion between the Mexican government and the contractors, who were also managing partners in charge of the operation of the enterprise. An agreement negotiated during the year contemplates the acquiring of the road by the government and also the docks and harbors works under construction at Puerto Mexico and the cancellation of the original contract. The secretary of communications and public works authorized the manager of the Mexican Railway, in compliance with the petition made by the company, to put into effect, beginning on November 1, 1917, a 25 per cent increase in the passenger rates. The proceeds of this increase, as in the case of the one granted to the Mexican Electric Tramway Company, were designed for the benefit of the Federal treasury.

The railways of Mexico during 1917, according to reports of observers, were in bad shape, and facilities were greatly curtailed. The Vera Cruz and Pacific was not in operation and traffic for the Isthmus of Tehuantepec was forced to go by boat from Vera Cruz to Puerto Mexico. The Interoceanic was closed down and the Mexican Central line from San Luis to Tampico was abandoned and could not be operated even by a military train. From Mexico

City to Queretaro, ties and rails had entirely disappeared and only the right-of-way was said to remain. This line paralleled the Mexican National Railway. From Vera Cruz to Cordova, the line was subject to attacks by raiding bands, and was only operated in the daytime, each train being preceded by a guard train. Throughout the country, the rails in various sections had been removed and frequently military guards were required. The line from Monterrey to Tampico was kept open most of the time, but the trains were heavily guarded, as it was subject to raids. Over this line, the fuel oil for the central railways was hauled. Certain large firms in Mexico were carrying on business by owning their own trains and locomotives and cars, and using their own employees, but even these were subject to attack from bandits.

The Federal telegraph line on September 30, 1913, was 22,452 miles, with 58,727 miles of wire and 516 offices; other telegraph wire, 5211 miles. Wireless telegraphy had been installed, and several new stations were constructed in 1917. Post offices in 1913, 2911.

**FINANCE.** The nominal standard of value is gold, with a peso worth 49.846 cents as monetary unit. The common unit of value has been the silver peso; with the rise in the price of silver, the value of the silver peso advanced sharply in 1917, being about 77 cents on October 1. But metallic currency has been virtually withdrawn from circulation as a result of civil war, while enormous quantities of inconvertible paper money have been issued. For the fiscal year 1915, the estimated revenue was 145,957,000 peso silver (customs, 57,875,000; internal taxes, 57,761,000); estimated expenditure, 152,204,898 pesos silver (war and marine, 35,165,428; finance, 41,178,776). Public debt as reported in 1917, 491,806,055 pesos gold, including arrears of interest amounting to 68,159,450 pesos gold.

**GOVERNMENT.** A new constitution came into force May 1, 1917. On that date Gen. Venustiano Carranza was inaugurated president. His term of office is four years and he is not eligible for reelection. Senators and deputies forming the Federal Congress, as well as the president, were elected March 11, 1917. On October 19, 1916, Gen. Carranza, leader of the Constitutionalists, was recognized by the American government as chief of the executive power of the de facto government of Mexico. For the new constitution, see below.

**HISTORY.** The constitutional convention, which opened on December 1, 1916, succeeded in drafting the revised constitution within two months. It was signed on January 31, 1917, and promulgated on February 5. It vested the supreme power in the president, who could hold office only for a single term, and in a congress of two houses, elected by universal suffrage, male and female. Congress was to choose the successor to the president, if he died in office, for there was no vice-presidency. Another feature of the constitution was a series of measures providing for the democratization of the judiciary. It introduced the principle of free justice, without court costs, and to the end of securing social justice created a radical labor code comprising: Minimum wage, to be fixed by the several states; eight-hour day and six-day week; compulsory profit-sharing; national public health department; free employ-

ment bureau. Rigid measures against trusts were another feature. In the above respects the constitution was in theory at least among the most advanced democratic instruments in existence. On the side of land reform which had been one of the leading purposes proclaimed by the revolution, it did not go so far as had been expected. The revolutionary programme for the emancipation of the peon from the landed aristocracy was not realized, but measures of amelioration were adopted, such as the restitution of communal and tribal lands to the villagers and Indians from whom they had been taken. As to the church, the following severe measures were taken: Expropriation of the religious orders; confiscation to the government of churches, schools, and hospitals owned by the church; exclusion of American Protestant missionaries; requirement that the clergy be Mexican-born, thus exiling the Spanish priests; prohibition of the clergy from teaching in the public schools, or in the lower grades of private schools; investment in the government of larger powers of interference with church matters. The provisions which drew the most attention from abroad, and aroused protests, were those for regulating foreign capital. The government was empowered to expel any foreigner whose activities were considered dangerous or embarrassing, and new safeguards were taken against the concession of great oil and mining properties to foreigners, all natural resources being declared public property. Foreign capitalists also objected to the labor laws above mentioned. They had complained of Carranza's previous decree that they should henceforth have only the same rights as Mexicans, and they protested also against the increase of the tax on crude oil to 10 per cent *ad valorem*. The latter subject was discussed in June.

The election which was held on March 11 and brought out an unusually large vote resulted in the choice of Venustiano Carranza as president and in giving his supporters, the Constitutional Liberals, a majority in the new congress. The latter body assembled on April 15, and, as in the United States Congress, there was one woman in the House of Representatives. Carranza was inaugurated on May 1. See **LABOR LEGISLATION; UNITED STATES, Foreign Relations; UNITED STATES AND THE WAR.**

**MIAMI CONSERVANCY.** See **DRAINAGE; FLOOD PROTECTION.**

**MICHIGAN. POPULATION.** The population of the State in 1910 was 2,810,173, and on July 1, 1917, it was estimated to be 3,094,266.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. Bu.	Value
Corn	1917	1,750,000	87,625,000	\$68,478,000
	1916	1,650,000	45,375,000	43,106,000
Wheat	1917	845,000	15,210,000	31,028,000
	1916	800,000	13,280,000	22,178,000
Oats	1917	1,550,000	56,575,000	38,208,000
	1916	1,423,000	42,690,000	22,628,000
Potatoes	1917	378,000	55,910,000	87,708,000
	1916	320,000	15,860,000	24,578,000
Hay	1917	2,558,000	8,887,000	65,998,000
	1916	2,750,000	4,675,000	46,750,000

a Tons.

**MINERAL PRODUCTION.** The mines of the State produced in 1916, 273,692,525 pounds of copper,

valued at \$67,328,361, compared with 265,283-378 pounds of copper, valued at \$46,424,591 in 1915. In connection with this, there were produced in 1916 716,640 fine ounces of silver, valued at \$471,549, compared with 585,933 fine ounces valued at \$297,068 in 1915. The total value in copper and silver in 1916 was \$67,799,910. This was an increase of \$21,078,251 in value over the production in 1915. The average price of copper in 1916 was \$0.246 per pound compared with \$0.175 in 1915. The smelter production or the output of refined copper in 1916 was 269,794,531 pounds compared with 238,956,410 in 1915. The entire output of the copper and silver is from the Keweenaw district.

The coal production in the State in 1915 was 1,156,138 short tons, valued at \$2,372,797, compared with 1,180,360 short tons, valued at \$2,653,182 in 1916. The average price per ton in 1916 was \$2.25, twenty cents greater than in 1915. There were employed in the coal mines of the State 2535 men in 1916, as compared with 2569 in 1915.

Michigan ranks second in the production of iron ore, being surpassed only by Minnesota. The total production in 1915 was 12,514,516 gross tons, compared with a production in 1916 of 18,071,016 tons. There were shipped from the mines of the State in 1915, 13,664,437 tons, valued at \$28,218,627, compared with 18,995,797 tons, valued at \$49,054,340 in 1916, an increase in 1916 in quantity of 39 per cent, and of 74 per cent in value.

**TRANSPORTATION.** The total railway mileage of single track in the State on June 30, 1914, the latest for which statistics are available, was 8898. There has been practically no construction since this date.

**FINANCE.** According to the report of the State treasurer on June 30, 1917, there was a balance on hand on July 1, 1916, of \$12,578,230. The receipts for the year were \$20,061,320, and the disbursements were \$20,819,170, leaving a balance on hand on July 1, 1917, of \$11,820,339.

**EDUCATION.** The total school population of the State in 1916 was 866,570. The total enrollment in the public schools was 620,861; total number of female teachers, 17,998; total number of male teachers, 2981. The average monthly salary of teachers was \$66.90. The total expenditure for school purposes was \$2,469,811.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Pontiac State Hospital, the Kalamazoo State Hospital, the Traverse State Hospital, the Newbury State Hospital, the Ionia State Hospital, the State Psychopathic Hospital, the Michigan Colony and Farm for Epileptics at Wahjamega, the Michigan State Prison at Jackson, the State Hospital of Corrections and Branch Prison at Marquette, the Michigan Reformatory at Ionia, the Industrial School for Boys at Lansing, the State Industrial School for Girls at Coldwater, the Michigan School for the Blind at Lansing, the Michigan State School for the Employment of the Blind at Saginaw, the Michigan School for the Deaf at Flint, the Michigan Soldiers' Home at Grand Rapids, the Michigan State Sanatorium for Tuberculosis at Howell.

**POLITICS AND GOVERNMENT.** The regular biennial session of the legislature was held during the first four months of 1917. The legislature

voted to submit to the electors of the State on election day, next November, an amendment to the State Constitution for equal suffrage for women. This will be the third submission of a woman suffrage amendment in Michigan in six years. Submitted in November, 1912, it was rejected by a majority of 750. Resubmitted in April following, it was rejected by a majority of 96,144. The legislature of 1917 not only voted to resubmit the amendment again in 1918, but enacted a statute to give women the right to vote for presidential electors. This was as far as the legislature could go, until the constitution is amended. An amendment to the constitution for State-wide prohibition having been adopted in November, 1916, the legislative session of 1917 declared by statute that when the amendment goes into effect on May 1, 1918, it shall be unlawful to have, or to bring into the State, for beverage purposes, intoxicants no matter how small the quantity. The use of alcoholic liquids will then be permissible for fine purposes only: medical, mechanical, chemical, scientific, and sacramental.

The legislature being in session when war was declared on Germany in April, authorized a \$5,000,000 war loan for carrying on recruiting service, for caring for dependents of enlisted men, for an insurance or beneficiary fund for soldiers or their dependents, for organizing and equipping home defense units, for general auxiliary work, and for such other purposes as may be deemed necessary for the purpose of State and national defense.

The Michigan National Guard units that were taken into the national army for the war comprised: One infantry brigade of three regiments; one cavalry squadron (four troops); one battalion of artillery; three companies of engineers; two signal corps companies; one field hospital and ambulance company; one medical unit; one veterinary unit.

Michigan's two naval reserve brigades also were taken into the navy for the war. The reserve training ship, *Don Juan de Austria*, stationed at Detroit, being one of the Spanish ships Admiral Dewey's squadron sunk in the battle of Manila Bay, May, 1898, and raised after the war, was sent to Atlantic waters early in the summer for duty. She is manned chiefly by Michigan reserves. The total number of Michigan eligibles who registered under the Conscription Act passed by Congress last summer was 295,158. Michigan's quota under the first call for regular army recruits directly after the declaration of war, was 5622. She was the ninth State to fill her quota under this call.

Michigan's subscription to the Red Cross War Fund was \$4,070,000.

At the State election in April, 1917, all the candidates on the Republican State ticket were elected by pluralities that averaged 120,000. The vote for the Republican candidates ranged from 236,373 to 241,773. The vote for the Democratic candidates ranged from 116,240 to 121,797. The average vote for the candidates on the Socialist ticket was 8700.

On December 22, 1917, there were convicted and sentenced in the United States District Court at Detroit, five Germans on indictments for setting on foot in Michigan a military enterprise against Canada while the United States was still at peace with Germany. The master mind of the group was Albert Kaltschmidt, a

native of Germany who had been a resident of the United States for seventeen years and who at the time of his arrest was engaged in the salt manufacturing business at Marine City, Mich., within half a mile of the international boundary line. Kaltschmidt was convicted on counts of attempting to injure or destroy with explosives the Welland Canal, the Grand Trunk Railways Tunnel under the St. Clair River and which connects the United States with Canada, a bridge of the Canadian Pacific Railroad at Nipigon, Canada, the armories at Windsor, Canada, directly opposite Detroit, a factory on the Canadian side opposite Detroit that was making clothing for the Canadian soldiers, and a factory at Detroit that was making war munitions for the British Government. He was sentenced to four years' imprisonment in the Federal prison at Fort Leavenworth, and fined \$20,000.

His accomplices, convicted and sentenced with him, were two men and their wives. Fritz Neef received a sentence of two years and a fine of \$10,000, and Mrs. Neef received one year and \$10,000 fine. Carl Schmidt received one year and \$10,000 fine, and Mrs. Schmidt received two years and \$10,000 fine. Frank Respa, father of Mrs. Schmidt and seventy years old, was acquitted but was ordered to be interned until the war is over.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

Municipalities are authorized to seize food and fuel found within their limits and resell them to the public. Owners of the food are to be compensated. Provision is made for an investigation as to the desirability of a budget system in the administration of the State finances. The presidential primary act which had been hitherto enforced was repealed. Laws relating to labor were amended in important details. Provision was made for the protection of employees of railroad companies against arbitrary discipline or discharge. Laws relating to property were amended. Provision was made that whenever any leased building is destroyed or so injured as to be untenable, the lessee or occupant may, in the absence of any expressed written agreement to the contrary, or if the destruction or injury was due to no fault of his, surrender possession without liability for subsequent rent. Laws relating to insurance were amended. A general housing code was adopted. Several important measures affecting the solicitation of funds by the charitable organizations were passed. The disbursing, as well as the solicitation, of gifts was regulated. This act does not apply to religious purposes. Provision was made for the establishment of county hospitals for the treatment of tuberculosis.

**STATE OFFICERS.** Governor, Albert E. Sleeper, Rep.; Lieutenant-Governor, Lauren D. Dickinson, Rep.; Secretary of State, Coleman C. Vaughan, Rep.; Treasurer, Samuel Odell, Rep.; Auditor, Oramel B. Fuller; Adjutant-General, John S. Bersey, appointed by State Military Board; Attorney-General, Alexander J. Groesbeck, Rep.; Superintendent of Public Instruction, Fred L. Keeler, Rep.; Commissioner of Insurance, Frank H. Ellsworth, Rep.

**JUDICIARY.** Supreme Court: Chief Justice, Franz C. Kuhn; Associate Justices, John W. Stone, Russell C. Ostrander, John E. Bird, Jo-

seph B. Moore, Joseph H. Steere, Grant Fellows, Flavius L. Brooke; Clerk, Jay Mertz.

**MICHIGAN, UNIVERSITY OF.** A co-educational State institution of learning located at Ann Arbor, Mich. In the fall of 1917 there were 6434 students and 414 members of the faculty, not including 32 non-resident instructors, 134 demonstrators and assistants, 21 major administrative officials, or library or hospital staffs or administrative assistants. Volumes in the library numbered 383,972. During the year George E. Myers was appointed professor of industrial education, and a department of military science was installed under the direction of First Lieut. George C. Mullen, U. S. A., retired, as professor of military science. Between 60 and 70 members of the faculty and administrative staff were in government service and attendance was reduced in 1917 by about 1700 because of the war. About 2500 students, alumni, and faculty members were in government service at the end of the year. Productive funds in 1917 amounted to \$1,044,840 and the income therefrom to \$66,181. The principal gifts were from former Regent Levi L. Barbour of Detroit of \$100,000 for a women's residence hall, and \$100,000 for the establishment of scholarships for Oriental girls, the latter made in the belief that the influence of women in Oriental countries is rapidly growing and that in future years international understanding between the Orient and the Occident can be greatly improved through the influences of Oriental women who have training in America. The university was founded in 1837. President, Harry B. Hutchins, LL.D.

**MICKLE, WILLIAM JULIUS.** An eminent authority on general paralysis of the insane, who was born in Guelph, Canada, seventy years ago and who died on November 14, 1917. He graduated from the University of Toronto and then went to England, where he was made a Fellow of the Royal College of Surgeons of London, and a lecturer at London University and Middlesex College. He wrote an important book on the paralysis of the insane, which has long been considered an authority on that subject. He was also considered an authority on brain and nervous disorders. He was an associate editor of the publication, *Brain*, and contributed articles to *The Journal of Mental Science*.

**MILITARY ACADEMY, UNITED STATES.** See UNITED STATES MILITARY ACADEMY.

**MILITARY PROGRESS.** The great struggle which was being waged in Europe naturally afforded application of the latest developments in the military art. The intensity of the conflict and the training and experience of the veteran combatants indicated that every meritorious idea would be utilized to the utmost and that those without merit would receive slight attention. In its broadest aspects modern warfare, as carried on in Europe, exhibited in 1917 but little change. The absolute necessity of the utilization of all the resources of a beligerent country in the conduct of the war had become even more evident than formerly. In the theatre of war itself the outstanding features still remained the indispensability of aircraft and heavy artillery, and the extreme importance of machine guns in both attack and defense. Though the fundamentals had not been altered in any essential degree, there had been many

Photograph from Jacques Boyer, Paris

CONSTRUCTING A FRENCH NARROW-GAUGE RAILWAY AT THE FRONT

Photograph by Jacques Boyer, Paris

LARGE FRENCH GUN ON RAILWAY MOUNT

details of their application which were of sufficient importance to merit attention.

The siege on a tremendous scale, now known as trench warfare, resulted from the use of great masses of troops, of the airplane, and of heavy artillery. The first two of these factors had been looked for in any future European war, but the employment of heavy guns in the field was a surprise to every one except the Central Powers. As soon as the trench lines had been established all the belligerents began to add to their artillery concentrations as rapidly as possible, devoting particular attention to an increase in the proportion of guns of large calibre. Advice received late in 1917 stated that the Germans had established a ratio of five to six between the numbers of their heavy guns and field pieces. The proportion in the armies of France and Great Britain was equally as great.

The necessity for the munitionment of artillery on so enormous a scale utterly disturbed the calculated relations between civilian and military needs. The result, taken in conjunction with other requirements of the troops at the front, has been to transform the civilian population behind the lines into a multitude of workers supplying the army. At the same time the available number of workmen was continuously reduced by the unavoidable recruiting for the armies at an unexpectedly rapid rate. The lengthy process of siege warfare, multiplied by its severity, necessitated the relief of units from action, their reorganization, and their replacement at a rate never before dreamed of.

**ARTILLERY AND AMMUNITION.** The necessity for the production of artillery and ammunition really developed into an industrial combat between Germany and the Western Allies. In spite of Germany's initial advantage in foreseeing the need for heavy field pieces and the fact that she controlled the important coal and iron regions of France and Belgium, she soon fell behind in the race. It was evident in 1916 that the Entente Powers possessed the advantage in artillery. The preponderance in their favor was even more marked in 1917. As an indication of the increase that had taken place in the production of munitions the following figures are cited. Comparing the French output in the early part of 1917 to the rate at the beginning of the war the production of 75 mm. field pieces had increased thirty times, of projectiles for that piece forty times, of large calibre projectiles ninety times, and of machine guns one hundred and seventy times. The figures for Great Britain were even more remarkable. The relative outputs of British munitions in June, 1915, and the first part of 1917 were: heavy howitzers, 1 to 323; field howitzers, 1 to 46; medium calibre guns, 1 to 66; smaller guns, of which the manufacture had been curtailed because the supply was too great, 1 to 12. The output in a single day of shells for heavy guns, and in a week of shells for field howitzers and three-inch guns equaled the production of these shells during the whole first year of the war. At the time in question there were 4623 Government-controlled munition plants in Great Britain with 2,225,000 employees. The maximum desirable point in gun and shell production had then been reached and there has since been a gradual return of plants to domestic manufacture and export.

Experience has demonstrated that the initiative in modern war rests with the side which possesses the strongest artillery. Hence the great importance which attached to that arm of the service, as there was no reason to believe that there had been a change in the experience of the ages that ultimate victory must fall to the army which retains and uses the initiative. It was the fact that they were opposed by an overpowering weight of artillery rather than that they were outnumbered that forced the Germans to assume the defensive on the Western Front during 1917.

**AERONAUTICS.** The use of aircraft is the factor which has made possible the employment of artillery on the immense scale with which we are now so familiar. In fact, the whole fabric of modern warfare hinges upon the airplane. Mastery of the air was believed to have a deciding influence on the outcome of the war. The advantage in this respect had alternated between the opposing armies on the Western Front, but remained for most of the year 1917 in the hands of the Allies. Military aeronautical development had proceeded along the different lines of reconnaissance and photography, artillery observation, bombing or raiding, and combat planes. The tendency, particularly as regards raiding machines, had been to increase the size of the airplane. The British Handley-Page biplane had a top wing span of ninety-eight feet and was capable of carrying twenty-one passengers or a useful load of equal weight.

The German answer to this machine was the Gotha biplane of seventy-eight feet span, the chief military feature of which was the machine gun tunnel eliminating the so-called "blind spot" under the tail. An enemy is perfectly safe from the machine guns of most airplanes if he can secure a position in line with and a little below its rear elements. The designers of the new Gotha met this difficulty by vaulting the fuselage below like a tunnel, along which a machine gun was trained to meet a "tail attack." Italy at the end of 1917 led in this type of machine with the giant Caproni triplane, which carried a crew of three men, three shell guns, 7500 pounds of bombs and fuel for six hours. The Zeppelin failed to add to its laurels during the year. Only one Zeppelin raid of consequence was made upon England. The resulting material damage was very slight and four of the seven raiders were brought down. Despite the fact that the Zeppelin remains one of the failures of the war the Italians brought forth during the year a dirigible which they believed would prove of more value. The Forlanini was of the rigid type, and was capable of remaining in the air for forty hours, covering during this time a distance of 2000 miles. It could rise to a height of 13,000 feet with a useful load of 6000 pounds, and to 20,000 feet without load, as compared with the Zeppelin's maximum of 12,000 feet. Its speed in attaining these elevations was practically as great as that of the best airplane climbers.

A notable feature of all work in the air during the year was the increased height at which operations were conducted. It was not uncommon for airplanes to meet at elevations above 18,000 feet. Photography from aircraft had become a recognized and necessary adjunct

of trench warfare. The production of maps based upon aerial photographs was a matter of routine procedure and most accurate results were obtained. Comparison of recent maps of the same section made by the opposing armies showed them to be identical in all essential features, though in each case the enemy's positions had been plotted from airplane photographs. The captive balloon was still recognized as necessary for certain services in which it could not be replaced by the airplane or the dirigible. The elongated form of captive balloon had entirely supplanted the spherical type because of the greater ability of the former to withstand strong winds. All balloons were equipped with parachutes for the escape of the observers in case of sudden attack by airplanes. See AERO-NAUTICS.

**MACHINE GUNS.** The use of the machine gun had been developed to such an extent as to make it count practically as a new weapon. In fact, the year saw the formation of a Machine Gun Corps in the British army. One machine gun properly handled was considered to be the equivalent of one hundred men armed with rifles. The great value of the machine gun lay in the rapidity of its fire, the accuracy of its aim, and the shape of its sheaf of bullets. The elongated shape of the bullet cone in the direction of fire led to the universal emplacement of the guns on the flanks of the sectors they were to cover. Frontal fire was no longer employed. The latest development in the tactics of this weapon was its employment for the purpose of forming a barrage in front of a position similar to the artillery barrage. It was used in this way by the British at the capture of Messines Ridge, where the German counter-attack was stopped almost entirely by machine gun fire alone. In this connection a careful distinction must be made between the machine gun and the automatic rifle. The Lewis gun, of which so much has been heard, belongs to the latter class. The typical machine gun proper has two invaluable characteristics. It fires from a fixed mount and can be used effectively at night by previously setting it, while the water cooling system enables it to be fired continuously. The light gun or automatic rifle cannot be fired effectively at night but must have a visible target on which to aim, and it cannot be fired continuously. It has, however, advantages of its own in that it can move forward with infantry at the same rate as the troops, and can be carried on the shoulder, being thus difficult for the enemy to locate.

**TACTICS OF THE OFFENSIVE.** The underlying tactical principles of the various attacks delivered during 1917 followed the same lines as heretofore. Each attack was preceded by an intense artillery preparation lasting several days, by means of which the barbed wire entanglements were broken up and the trenches torn to pieces. Upon the completion of this preparatory bombardment the infantry advanced, and, if successful, occupied the enemy position and began its consolidation in anticipation of the inevitable counter-attack (see YEAR BOOK, 1916). The general scheme of the Allied offensive operations during the year 1917 was quite different in details, however, from that previously employed. The great blow of 1916, the battle of the Somme, was based upon the idea of continuous pounding on one compara-

tively restricted front. This method proved to be effective but expensive, even though it cost the defenders quite as heavy losses. In 1917 the fundamental conception appeared to be that of a series of sharp but very heavy blows delivered at different points along the front, meanwhile maintaining pressure on the whole line by means of artillery. This proved to be a difficult system to oppose if the attackers were willing to remain content with the gains secured in the first sharp struggle. The defending line could not be reinforced until the infantry attack had disclosed the exact location of the threatened point. By the time the reinforcements arrived at this point in sufficient numbers to counter effectively, the attack was over and the ground gained had been firmly organized. As an extension to this system there was developed the principle of the "limited objective." Formerly all units advanced as far as possible, with resulting irregularities in the distance gained according to the resistance encountered. The operation of straightening and readjusting the line was difficult and costly. In 1917 the practice was to designate a definite position as the objective for each unit. All parts of the command reaching their assigned objectives remained there until the whole line was secured, and no unit went forward until ordered to do so. This insured the occupation and consolidation of a practicable line at each stage of the operation. The purpose was to wipe out utterly one strongly fortified zone after another. The artillery preparation for each attack was long, careful, and elaborate. When the infantry advance was started the troops were preceded by a "creeping barrage," a wall of bursting artillery projectiles which was kept just in front of the attacking waves by carefully timed increases in the range. The idea was that the artillery should really gain the ground, the infantry merely moving forward to occupy the territory which had been cleared. This theoretical end was never attained but it was a noticeable result of the new system that the losses of the attacking force were reduced below those of the defenders, thus reversing the old proportion. It was evident that as soon as any advance of appreciable depth had been secured there must be a long wait before the attack could be resumed in that sector due to the necessity of moving forward the heavy artillery with its accompanying enormous supply of ammunition. As it was the heavy guns and not the readily transportable field pieces that must be moved, the concentration of the artillery in the new position to the front was a very slow and laborious task. This led more and more to the use of long-range pieces so the attack could be pushed for considerable distances without the necessity for a change in the emplacements.

**TACTICS OF THE DEFENSE.** As the French and British held the initiative on the western front during 1917 it is to the Germans that we must look for developments in the defensive. The first notable innovation of the year was their application to trench warfare of the old "strategical retirement" by the abandonment of all the positions either directly or indirectly threatened by the Somme operations. The retirement affected a strip of territory some sixty-five miles long and from ten to twenty-five miles wide. This entire area was systematically and

ruthlessly devastated before the retirement—roads, railroads, depots, wells, orchards destroyed, even whole cities deliberately wiped out. The defending army withdrew to strongly fortified lines in the rear. Whatever may be thought of the complete destruction inflicted upon the abandoned area, there can be no doubt that the whole operation was admirably adapted to the requirements of a passive defense and it may well be found advisable to apply the same principle on other occasions and perhaps on a larger scale. Any offensive plans which the Allies might have projected for this part of the line were necessarily made useless and their preparations of no avail. It would require the lapse of months before the devastated area could be made passable for the materials and munitions needed for a new offensive and for the transportation of the artillery to positions within reach of the defenses. As a matter of fact, it was not until November that an important attack was delivered against the new line.

Turning now to the details of the defense, we find that the system of a series of continuous trenches has been abandoned in the sectors of greatest activity. Formerly the German defensive tactics were based upon their offensive formations—the employment of dense masses of troops. The trenches were manned heavily in defense in an attempt to thrust back the attackers by sheer strength of numbers. It was found, however, that the modern profusion of artillery and shells made that method too costly. The latest system—the so-called “Pill Box” defense—was quite different. The front line, often two trenches at a shallow interval in depth, was but lightly held under bombardment. The space between this and the second line, some two to four miles in rear, was thickly dotted with small, heavily protected concrete blockhouses for machine guns. Troops for the delivery of a counter-attack were massed in the rear trenches, which had numerous well-protected dugouts. The machine gun shelters, or “Pill Boxes,” were carefully concealed and the probability of their being struck by direct aimed fire was slight. The theory of this system of defense was that the rushing of the front line trenches and the subsequent encounter with the machine gun posts would leave the attacking formations so disorganized that the counter-attack would have little difficulty in restoring the positions which had been temporarily lost. In some cases this defense did meet with considerable success, but in general it cannot be considered to have shown marked superiority to the old trench lines. One of the chief means employed in combating the “Pill Box Defense” was so to increase the intensity of the artillery preparation as to obliterate practically everything within range. “Tanks” and the small field pieces carried forward with the infantry are used to reduce the shelters which escape the preparatory bombardment.

**THE TANK.** The “Tank,” or armored caterpillar tractor, which was introduced by the British in the Battle of the Somme late in 1916, made for itself a permanent place in the offensive equipment for modern war (see YEAR BOOK, 1916). Two types, the male and the female, were used by the British. The former mounted a field piece in addition to its machine guns, while the latter was armed with machine guns only. So important were these machines recog-

nized to be that a special “Tank Corps,” composed of selected officers and men, was formed during the year in the British service. The French also constructed tanks in large numbers. The particular use for which the tank showed itself especially suited was in the reduction of machine gun posts and isolated groups of riflemen. Proof against small arms fire, it could advance with impunity against the defensive shelter, and either force the surrender of the garrison or crush their protection beneath its enormous bulk. In the offensive toward Cambrai on November 20, 1917, a new field of usefulness for the tank was indicated. Here no artillery preparation was made, in order that the attack might come as a complete surprise. In place of clearing away obstacles by artillery, a great number of tanks were concentrated on the front of attack and moved forward in advance of the infantry to prepare the way. The experiment was entirely successful, which might indicate that a start had been made toward the development of a new tactical method of attack.

#### UNITED STATES

The entry of the United States into the great war necessarily brought in its wake vast changes in the military policy of the country. The regular army, as it existed prior to the declaration of war, was in a satisfactory state of efficiency, but it was too small to be considered a factor in a struggle the size of the present one. The only other force the nation possessed was the National Guard, which had recently been “Federalized” and was even then undergoing a general reorganization in an effort to render it suitable as a first line force to augment the regular establishment in case of war.

**NATIONAL GUARD.** The concentration of national guard troops for service on the Mexican border had shown that this force, as then constituted, was in a far from satisfactory condition. The organizations from a number of the States were excellent, but in too many cases this condition did not obtain. Most commands mobilized considerably below their “paper strength”; some had less than forty per cent of the prescribed war strength, while the average for all of the organizations called into the Federal service was just under sixty per cent of their war strength. Many of the men called out had had insufficient training, a not inconsiderable proportion being raw recruits. Nearly one-fifth of the originally enrolled members failed to pass their physical examinations. Hundreds of officers resigned and it was found necessary to discharge large numbers of men on account of dependents at home. The Federal regulations for the supply of the National Guard were also found to be defective when applied to the sudden equipping of great numbers of recruits.

Though the mobilization of the National Guard on the border disclosed many weaknesses in the system, the organizations which participated were greatly benefited. Most of the non-effectives were eliminated and, as a result of an active recruiting campaign, their places were filled by men of the type most to be desired in the event of a greater emergency. The training which the various commands received during the concentration was most beneficial in assisting in the transformation of the Guard

into a force upon which greater dependence could be placed in time of trouble. The mobilization had another effect, possibly less direct but equally as important. The guardsmen saw themselves, as a result of their having volunteered in time of peace to fit themselves for the service of their country in war, subjected to social and financial sacrifices from which their associates at home were exempt. It was borne in upon them that this system was far from equitable, and the great majority returned home, upon their demobilization, confirmed advocates of the principles of universal liability to service and compulsory military training. The country at large had been gradually reaching the conviction that the traditional volunteer system was not only inequitable but also ineffective. The experience of the National Guard mobilization crystallized this sentiment, rendering much easier the solution of the problem of organizing the forces which would be necessary for the prosecution of the war against Germany.

**THE SELECTIVE DRAFT.** When, on April 2, the president appeared before the Congress and requested that body to declare that a state of war existed between the United States and Germany, he recommended that the armies to be raised for carrying on the war be recruited upon the principle of selective conscription. Considerable opposition to this plan developed on the floor of Congress, but the "Selective Draft Act," embodying the administration's programme, was finally passed and was approved by the president on May 18. This act authorized the president: First, immediately to increase the regular army to the full strength provided by the "National Defense Act" of June 3, 1916, only one increment of which had so far taken effect. Second, to draft into the service of the United States the entire National Guard of the several States. Third, to raise by draft a force of five hundred thousand enlisted men with the necessary officers, and another similar force of equal strength at a later date, in his discretion. The draft was made applicable to all male citizens, or persons not alien enemies who had declared their intention to become citizens, between the ages of twenty-one and thirty years, both inclusive. It was provided that the regular army and the National Guard should be raised to and maintained at their maximum strengths by voluntary enlistment in so far as might be possible, the draft to be resorted to in these cases also whenever the president might decide that the number of volunteers was insufficient for the purpose.

**REGULAR ARMY.** On May 14 the Secretary of War, anticipating the passage of the "Selective Draft Act," authorized the issuance of orders for the formation of all the new regiments of the regular army contemplated by the "National Defense Act" of 1916. This involved the organization of 27 new regiments of infantry, 12 of field artillery, 6 of cavalry, and 4 regiments and 2 mounted battalions of engineers. The new organizations were formed by "splitting" existing regiments, thus forming nuclei of trained officers and men, which were later recruited to full strength. The regular army, as thus enlarged, consisted of 64 regiments of infantry, 21 of field artillery, 25 of cavalry, and 7 regiments and 2 mounted battalions of engineers, besides coast artillery, staff corps, and

special service units. The entire regular army would comprise slightly over 12,000 officers and 293,000 men on the basis of the organization in effect at the time of the increase; i. e., the normal organization for the armies of the United States. In order that American units might agree in size and composition with those of the Allies and might thus better fit in with the positions already constructed on the front in Europe, an entirely new system of organization was temporarily adopted for all the land forces of the United States (see *Organization* below). With this organization it was estimated by the adjutant-general of the army that the prospective ultimate strength of the regular army would be 18,033 officers and 470,185 enlisted men. More than the number of enlisted men necessary to complete the first increase in the strength of the army were secured by voluntary enlistment. The latest reorganization was still under way at the end of the year, but it would appear that the draft must be resorted to if the organizations were to be at all promptly raised to their new strength and maintained there, though 337,347 men had enlisted up to December 15, when the enlistment of men subject to draft was stopped.

The problem of supplying officers for the greatly enlarged army was met in several different ways. The officers of the regular establishment were promoted to fill the vacancies caused in the upper grades by the expansion. Two classes were graduated from the Military Academy, the first in April and the second in August, two months and ten months respectively ahead of their proper times of graduation. This made available 290 new officers. Suitable enlisted men and civilians were encouraged to take the examinations for provisional lieutenant, the successful candidates being given provisional commissions which would be made permanent upon the expiration of two years if fitness was shown in the meantime. Temporary commissions were given to hundreds of enlisted men for the period of the existing emergency and many details to service with the regular army were made from the Officers' Reserve Corps. The process of filling vacancies by these various means was still under way at the end of the year.

**NATIONAL GUARD.** Upon the declaration of war against Germany the strength of the National Guard was 123,605 men. A vigorous campaign for recruits was at once undertaken throughout the country, with the result that when the guard was drafted into the national service on August 5 there were just short of 300,000 men enrolled. That greater care was exercised than formerly in the acceptance of recruits was evidenced by the fact that the rejections for physical defects upon muster into the Federal service were only 9.9 per cent of the number examined, as compared with 18.45 per cent at the time of the Mexican border concentration in 1916. Sixteen National Guard divisions were formed, each division being made up from the troops of contiguous States as far as practicable. New York and Pennsylvania each furnished one complete division; the Ohio division was complete except for one regiment of cavalry. The sixteen divisions were concentrated at an equal number of cantonments, most of which were located in the Southern States where climatic conditions would be more fa-

avorable for winter training than at points farther north. Few of the organizations were at full strength and most of them were short some of the necessary elements, particularly as regards auxiliary troops. With the adoption of the new organization it became necessary to reassign some of the elements and to convert some units into other branches of the service properly to balance the commands. Two additional divisions were later formed for early service abroad and were transported to France, the component parts being selected from all parts of the country. These divisions were popularly called the "Rainbow" and the "Sunset" divisions. A large number of drafted men were transferred to the National Guard to increase its strength, the exact figures not having been given out. On November 30 the National Guard consisted of 15,718 officers and 390,450 men. At war strength it will have approximately 487,000 men.

**NATIONAL ARMY.** The adoption of the principle of universal military service for raising the forces which would be needed to augment the regular army and the National Guard in the prosecution of the war marks one of the most important events in the military history of the country. Heretofore the United States had entered each of its wars using the extravagant and comparatively inefficient volunteer system. It was indeed fortunate that the Congress and the people had the wisdom in this, the greatest test, to turn their backs on the traditional policy and accept the system best suited to the utilization of the resources of the country to the utmost. By a judicious scheme of exempting from service all those who had dependents likely to become public charges and those employed in essential industries, the fighting force was to be formed from the young men of the nation whose absence least would interfere with the internal economy of the land.

The name "National Army" was adopted for the forces called into being for the period of the existing emergency. The first problem in connection with the drafted forces was the matter of providing officers. The War Department at the outset adopted the policy of commissioning all new officers on the basis of demonstrated ability after three months' observation while undergoing training in Officers' Training Camps. Without waiting for Congressional action, but acting under the authority formerly given for civilian training camps, sixteen Officers' Training Camps were started on May 15 with a total attendance of about 40,000. These camps corresponded to the sixteen territorial divisions into which it had been decided to organize the first drafted troops. Each camp was to furnish all the company officers for the corresponding division and such other officers as might be required. At the close of these camps on August 14 there were commissioned 27,341 officers of all arms. Many of these were to be promoted to higher grades upon the calling of the second quota of drafted men. To fill the vacancies thus caused and to supply junior officers for the second draft another series of training camps for officers was held from August 27 to November 26. This afforded the last opportunity for those not in the military service to obtain commissions. Thereafter the necessary officers were to be obtained by the promotion of men already in the service, thus giving to those

who had volunteered or had been drafted for duty an opportunity to become officers to the exclusion of civilians.

The registration of men subject to draft took place on June 5, the total number registering being about 9,600,000. The drawing of the numbers to determine the order in which men should be drafted occurred in Washington on July 20 and six weeks later the first draft reported at their divisional cantonments for muster into the service. A total of 687,000 men were called to the colors in the first draft, 500,000 for the National Army and 187,000 to fill vacancies in the National Guard. It was found necessary, however, to detach more than the estimated number from the National Army. The deficiencies which this left in the sixteen divisions of the National Army were to be filled from the second draft.

**ORGANIZATION.** Though the normal organization of the United States army, based upon each command, consisting of three of the next lower units, was believed to possess many advantages over the usual European practice, it was decided that for the purposes of the present war it would be advisable to more nearly approximate the organization of our Allies. The army accordingly was reorganized as shown in the following summary. The figures are the total of officers and men for each entry. Each infantry division consists of:

1 division headquarters .....	164
1 machine gun battalion of 4 companies....	768
2 infantry brigades, each composed of 2 infantry regiments and 1 machine gun battalion of 3 companies.....	16,420
1 field artillery brigade composed of 3 field artillery regiments and 1 trench mortar battery .....	5,068
1 regiment of engineers.....	1,666
1 field signal battalion.....	262
1 train headquarters and military police..	837
1 ammunition train .....	962
1 supply train.....	472
1 engineer train .....	84
1 sanitary train composed of 4 field hospital companies and 4 ambulance companies....	949
<b>Total strength of division.....</b>	<b>27,152</b>

The new organization increased the ratio of artillery and machine gun strength to infantry. In place of the old division of three brigades with three infantry regiments in each there was a division of two brigades with two infantry regiments in each. But in the new, as in the old, organization, there were three regiments of field artillery to the division. The increased artillery ratio was not quite so great as would appear, however, since the new infantry regiment approximately had twice the strength of the old one. A trench mortar battery, added to the artillery brigade, and three one-pounder cannon, attached to each infantry regiment, added to the gun strength of the division. Each division included a total of fourteen machine gun companies instead of nine as formerly. Each regiment had also been given 48 sections of auto-riflemen, each section carrying four automatic rifles or light machine guns.

An infantry regiment was to comprise 103 officers and 3652 men as follows:

1 headquarters and headquarters company....	303
8 battalions of 4 rifle companies each.....	3,078
1 supply company .....	140

1 machine gun company .....	178
1 medical detachment .....	56
	<hr/> 3,755

Each rifle company was to have a strength of 250 men and 6 officers. It was to be composed of a company headquarters (2 officers and 18 men) and four platoons. Each platoon includes:

1 headquarters .....	2
1 section bombers and rifle grenadiers.....	22
2 sections riflemen, 12 each.....	24
1 section auto-rifemen (4 guns).....	11
	<hr/> 59

The machine gun company was to have 6 officers and 172 men. It was to consist of the headquarters (3 officers and 21 men), 3 platoons (each with 1 officer and 46 men), and a train of 13 men. Its armament was to be 12 machine guns of the heavy type and 4 spare guns with the train.

**MATERIAL.** The entry of the United States into the war found the material military equipment of the country lacking in many essential elements. The Ordnance Department of the army had developed an excellent system of armament for field use (see *YEAR BOOK*, 1916), but lack of appropriations in former years had prevented the manufacture of several of the larger calibres as well as the accumulation of a reserve of small arms and 3-inch field pieces. Though orders were placed at once for large quantities of equipment, ordnance material could not be supplied without the elapse of considerable time and it became necessary to find substitutes to fill the gap. Fortunately the manufacturers who had recently been supplying the British army with rifles were in a position to turn out rapidly the British Enfield, while it would take the better part of a year to equip the plants to make the United States army Springfield. The Enfield, chambered to fit the more powerful United States ammunition, was accordingly adopted to supplement the production of the American rifle. As regards field pieces, the French government stated its ability to supply all that would be needed for at least the first contingents abroad, so that the entire output of American factories could be used for the equipment and training of the troops in the United States. This assistance materially relieved the acuteness of the situation in the ordnance supply. The airplane equipment of the army already had been augmented largely and the manufacture of planes was proceeding at a constantly increasing rate. The "Liberty Motor," with which the new war-planes are to be equipped, has been developed by the co-operation of leading designers and manufacturers, and has satisfactorily met all tests. The motor is highly standardized so that its parts can be made at widely separated plants and assembled at central points (see *AERONAUTICS*). Two types of standard motor trucks have been designed and are being manufactured as rapidly as possible (see *AUTOMOBILES*). In most respects the year 1917 was marked as a period of preparation for supplying the material needs of our forces rather than by actual fulfillment. The spirit of earnest coöperation which has animated all concerned augurs well, however, for an early solution of all difficulties.

**BIBLIOGRAPHY.** For details of matters relating to the armies of the United States consult annual reports of the Secretary of War and of the chiefs of the various bureaus of the War Department for 1917. For military questions, both abroad and in the United States, consult the *International Military Digest*, 1917, *passim*.

**MILITARY SURGERY.** The immense amount of surgical material that has been developed by the war had not produced anything remarkable in the way of novelty. Aside from the important lessons learned from experience in plastic surgery, in the management of perforating wounds of the abdomen, thorax, and brain, will be the better understanding of the control of wound infections. During the first two years of the war no little controversy, some of it quite bitter in tone, took place among the advocates of various methods of wound disinfection, but these questions appear to be satisfactorily settled. During 1917, the chief interest has centred about the Carrel-Dakin method of treating infected wounds. At first it was found difficult to make a definite constant hypochlorite solution, and the process was difficult and intricate. Now, however, the solution can be prepared cheaply, quickly, and accurately, by simply passing chlorine through a metre into a simple solution of sodium bicarbonate. The heads of the base hospitals at which the method is pursued are enthusiastic over the results achieved, and all observers are agreed that the procedure, though somewhat intricate, is by far the best yet devised.

The method and its philosophy as described by Lyle, of New York, is as follows: "To render an infected wound sterile it is necessary to employ a suitable antiseptic in such a manner that the chosen antiseptic comes into contact with every portion of the wound, that the antiseptic is maintained in a suitable concentration throughout the entire wound, and that this constant strength is maintained for a prolonged period. If these conditions are fulfilled, every wound will show its response to the treatment by the diminution and disappearance of its microorganisms." Dakin's solution is a 0.5 per cent solution of sodium bicarbonate. It is isotonic with the blood, a very active germicide and very slightly toxic, and non-irritating. It has, moreover, the important property of being able to dissolve pus, broken down tissues, etc., thus acting as a mechanical cleanser, as well as an antiseptic, while it does not attack living tissues. The wound is first prepared by thorough cleansing and the extraction of all foreign bodies such as dirt, clothing, remnants of shell. The operative field is then painted with tincture of iodine and the necrotic tissue and bruised skin edges trimmed away with knife or forceps. The wound is then laid open, all pockets and recesses explored and cleaned. Where possible the track of the projectile is carefully and gently resected, and comminuted fragments of the bone are removed. All bleeding must be thoroughly stopped, since Dakin's solution, owing to its hemolytic property, invites the danger of a secondary hemorrhage. Contrary to the usual practice, counter openings for drainage are rarely made, and should they be necessary, they should not be at the most dependent point, since the object of the technic is to keep the solution in contact with the wound surfaces and not to have it drain away. The solution is

RECRUITS AFTER THREE MONTHS OF TRAINING

carried to the depths of the wound through a rubber tube, cut to the desired length and having several lateral perforations, so that the fluid may escape in every direction. One or several tubes may be used. They are secured to the edges of the wound by a rubber cuff and suture. In simple deep perforating wounds a single tube without lateral perforations is introduced into the depths of the cavity and the solution is allowed to well up from the bottom. In other large wounds terminating in a cavity with irregular collapsible walls, a little gauze may be introduced to support the walls of the cavity and allow a more thorough penetration of the fluid. Other variations in the placing of the tubes must be made to meet the indications of the particular type of wounds, but the principle is the same. The solution being irritating to the skin, this tissue has to be protected by covering it with sterile petrolatum. The tubes are connected with a reservoir of the fluid, but a continuous flow is not maintained. Instillations of the fluid are made about every two hours by releasing a clamp which controls the flow. The amount of solution required varies with the nature and extent of the wound, but 10 c.c. per instillation is the average amount. Instillations are kept up in this manner until the wound is sterile. The wound is inspected daily; and the number of microbes on the surface determined every second day by transferring some secretion to a slide and counting the number of organisms in the microscopic field. When germs are absent from the wound on three successive countings it is considered sterile and in suitable cases may be closed by suturing. Where this is not possible the edges of the wound may be brought together by the application of adhesive straps. Wounds treated by the Carrel technic have a bright red, healthy appearance, abundant granulations, little secretion, no odor, tenderness, or thickening of the skin edges. They heal with the minimum amount of connective scar tissue and the scars are said to be very pliable. Carrel's method is used exclusively at the Depage Hospital and the favorable results may be estimated from the figures during one month. During this period 137 cases were sutured, complete union taking place in 112, partial union in 23, and failure in 2 cases. These figures include 6 wounds of the knee, 12 amputation stumps, 17 fractures, and 102 wounds of soft tissues. Depage treated 80 compound fractures with entire absence of supuration, and during one month Carrel's service closed 450 wounds, of which only 6 failed to unite.

Dr. Guillaume-Louis extols the virtues of magnesium chloride solution after having an experience with more than 1200 severely wounded soldiers. After employing various other methods of dressings, including Dakin's solution, his procedure resolves itself into the following routine: "Removal of all foreign bodies and necrotic tissue; disinfection with ether." After the first time he made use of various therapeutic measures, but experience led to his preferring magnesium chlorid. He does not use any drains. Instead, he places in the wound a wick which soaks up the solution. On the surface he applies a compress saturated with the same solution. The dressing is renewed every day with the greatest possible aseptic precautions. Rapidly, under the influence of mag-

nesium chloride, the wound is cleansed, the pathogenic agents are diminished in number, and the secretions are dried up. In the course of a few days the wound is disinfected sufficiently so that it can be sutured for secondary union.

**MILLER, WILLIAM HENRY HARRISON.** An American lawyer, died in Indianapolis, Ind., May 25, 1917. He was born at Augusta, N. Y., in 1840 and was reared on a farm. He attended Hamilton College, graduating in 1861. This institution conferred on him an honorary LL.D. in 1889. In 1862 Mr. Miller became a lieutenant in the 84th Ohio Volunteers in the Civil War. After being admitted to the bar in 1865, he practiced at Fort Wayne, Ind., till 1874, and afterward in Indianapolis in partnership with Gen. Benjamin Harrison. The latter, upon being elected President of the United States, appointed his associate attorney-general, and no change was made during the administration. Mr. Miller participated in the conduct of the Terry case, resulting from the killing of David S. Terry, a California lawyer, by a United States marshal; in the Behring Sea litigation; in the dispute regarding the constitutionality of the McKinley Tariff Law; and in the controversy over the Interstate Commerce and Anti-Lottery laws. In the Terry case he contended that the constitution provided for the protection of the judicial branch of the government by the executive. In 1893 he returned to the practice of law in Indianapolis.

**MILLING.** See AGRICULTURE.

**MINERALOGY. GENERAL.** The year's record for mineralogy included no discoveries or investigations of paramount importance. There was no lapse of interest in the subject in consequence of the war, but the trend of research undoubtedly was directed more toward the economic aspects than heretofore. Every country was drawing upon its mineral resources to an unparalleled extent and at the same time was attempting to attain economic independence as far as possible by developing resources that had not been previously utilized. In the United States serious deficiencies in mineral supplies resulted by reason of the disturbance of foreign trade, notably in such essential commodities as potash salts, manganese ores, platinum, and graphite, which ordinarily are mostly imported. The work of the mineralogist in the study and description of field occurrences proved of great service in the development of new sources of supply.

**NOTABLE WORKS.** The issue of mineralogical treatises appeared to keep fully abreast with the growth of interest in the science, if the number of recent publications afforded any criterion. The most recent entry in the list was *Descriptive Mineralogy*, by W. S. Bailey. It presented a comprehensive view of the subject, with a well-sustained balance between the several chapters on mineral classification, blow-pipe analysis, chemical composition, formation and alteration of minerals, and description of the

individual species. The discussion of crystallography, contrary to the usual practice, was omitted, or rather was presented by the author in a separate volume. A new edition of *Elements of Mineralogy, Crystallography and Blowpipe Analysis* was brought out by Moses and Parsons who had thoroughly revised the text and added many new features.

**THE AMORPHOUS GROUP.** The study of amorphous minerals, according to A. F. Rogers, had not kept pace with the progress made in the investigation of crystalline forms. Their neglect may be explained by the difficulties which hitherto have confronted the student who would enter this field, also partly owing to the greater attraction which crystals possess from their definite mathematical and physical properties. Some of the hindrances to their study have been now removed by the recent advances of colloid chemistry. To discriminate the colloid or amorphous from the crystalline state requires the employment of various tests—optical behavior, cleavage, specific gravity, chemical analysis, etc.—whichever may be best available for the particular substance in hand. The presence of water may be a critical factor, since it is almost always an accompaniment of the colloid state. Rogers proposed the term *colloform* for the rounded, nearly spherical shapes assumed by colloidal and metacolloidal substances, the last kind being microcrystalline aggregates of colloid origin. With regard to chemical composition it is possible to place too much reliance upon the quality of variability as a test, since some crystals are known to consist of solid solutions which admit of wide variation. Amorphous minerals that have distinct properties deserve independent rank and a separate designation. As an illustration, Rogers would reserve the name *hematite* for the more common non-crystalline form of iron oxide, whereas the crystalline equivalent is called *specularite*. About 20 species are listed in the class.

**STUDY OF OPAQUE MINERALS.** A summary of the methods applicable to the examination of the opaque minerals, which had been compiled by J. Murdock will be found especially useful by students of ore-deposits who are frequently called upon to distinguish intimate intergrowths of the metallic compounds. Its aim is to place their study upon a similar basis to that which the polarizing microscope has made available for the transparent minerals. The tests employed are in part physical and in part chemical. Of the former color is considered of great importance and has been adopted in the scheme for the classification of minerals into the main groups. Three groups are thus erected—colored, white, and gray. The white group is so extensive that its subdivision is necessary and minor groups recognized according to the particular shades, whether pure white, or gray, pink, yellow, or blue tints of white. Difference in hardness is tested by the steel needle, and the response to chemical reagents permits further differentiations to be made until the specimen under examination may be isolated.

**COLOR IN QUARTZ.** The source of the disperse colors that occur in some kinds of quartz was ascribed by T. L. Watson and R. E. Beard to the inclusion of small amounts of foreign substances, of which the commonest are manganese, iron, and titanium oxides. The amethyst contains more than the average amount of man-

ganese and this is no doubt the cause of the purple color. The manganese is present as oxide in colloidal particles of ultra-microscopic size. Rose quartz can be bleached by heat and its original appearance can not be restored thereafter by exposure to the sun's rays or to radium emanations, so that the color can hardly be due to any inorganic substance. The blue quartz that is a characteristic accompaniment of some titanium ores was found to derive its color from the dispersive property of small rutile crystals that are arranged according to definite pattern.

**REVISION OF SPECIES.** F. W. Clarke gave an explanation of the composition of melilite and gehlenite whose chemical structure had long been an enigma. He came to the conclusion that they were to be considered mixed crystals of a few compounds of similar chemical type. P. A. van der Meulen described certain clays of Georgia which had passed as halloysite but which he found to be really mixtures of kaolinite and hydrargyllite in company with small amounts of other substances. It would appear that some of the high-alumina clays which have been regarded as distinct from kaolin were mixtures of that mineral with alumina hydrates, such as hydrargyllite. The identity of hamlinite and goyazite, according to W. T. Schaller, seemed to be strongly indicated by the similarity of properties. At least additional proof must be forthcoming before they can be regarded as other than variations of one species.

**NEW MINERALS.** *Eakleite* (named after Prof. A. S. Eakle, of the University of California) is a hydrated calcium metasilicate. It occurs in fibrous aggregates at St. Inez, Cal., and may be regarded possibly as a calcium pectolite. Its hardness is nearly that of quartz. *Crandallite*, a hydrated phosphate of aluminum and calcium, forms compact cleavable masses that are without crystal outline and are white to gray in color, transparent in thin section. *Catoprite* is a black metallic mineral of complex composition, having manganous oxide as the chief constituent, but containing also the oxides of antimony, silicon, aluminum, and iron. It occurs at Nordmarken, Sweden, where it is found embedded in calcite with magnetite and other minerals. Its crystallization is monoclinic. *Ectoprite* comes from Langban, Sweden, where so many rare minerals have been discovered. It is a hydrated manganous silicate of opaque black to light brown color, and is associated with garnet, barite, and calcite. The crystal habit seems to be monoclinic. *Flokitite* is one of the zeolite minerals; it contains alumina with minor amounts of lime and soda, united to silica, and yields water. It has a monoclinic form, the crystals being transparent and colorless or faintly tinted. It comes from Eskefjord, Iceland. *Crestmoreite* belongs to the hydrous calcium silicates and has a snow-white vitreous appearance. The locality is Crestmore, Cal. *Riversideite*, another hydrous calcium silicate, contains less water than the preceding and has a silky lustre. It occurs in fibrous veinlets traversing vesuvianite. *Gilpinite* is a pale yellow or greenish yellow uranium sulphide with minor amounts of copper, iron, and sodium. It forms crystalline aggregates that are associated with gypsum, as a coating of copper ore in Gilpin County, Col. Its crystal habit is probably monoclinic. *Magnesiolud-*

*wigite* is magnesium ludwigite of ivy green color, found in the Big and Little Cottonwood districts, Utah. *Lorettoite* consists of a combination of lead oxide and lead chloride in the ratio of six parts of the former to one of the latter. It is probably tetragonal in habit. The color is honey yellow. The locality is Loretto, Tenn. *El Doradoite* belongs to the quartz group, possesses a splendid color in blue or bronze and is employed as a gem stone. It is an ingredient of coarse pegmatite that occurs in El Dorado County, Cal. *Merrillite* is calcium phosphate of meteoric origin.

**MINERAL PRODUCTION.** The increased value of the mineral production of the United States in 1916 was more than \$3,470,000,000, an increase of \$1,076,200,000, or 45 per cent over the value in 1915, and exceeding 1913, the former record year, by over \$1,000,000,000. Practically all the minerals shared in this increase, gold being the only one of the more important which showed a decrease in value. Silver and anthracite coal, while they showed a decrease in quantity, increased in value.

The metal production in 1916 established a new record, exceeding for the first time \$1,000,000,000, and approaching a total of \$1,622,000,000, but the total increase in pig iron and copper contributed 80 per cent. Large gains were made in zinc, lead, aluminum, and tungsten ores. The total value of the non-metallic products increased nearly \$278,000,000 over the value of 1913, the year of next highest output.

**ALASKAN MINERAL PRODUCTION.** Two causes materially reduced the mineral output for the year—first, serious labor troubles, and secondly, the increased cost of materials which made operations unprofitable. As a result the value of minerals in 1917 decreased \$6,870,000, as compared with that of the previous year. It is, however, to be borne in mind that 1916 was the year of maximum mineral productivity in Alaska. The aggregate value of the mineral output to include 1917 exceeds \$391,000,000,—of which the essential values are those of gold, \$293,000,000, copper, \$88,200,000, and silver, \$4,750,000. The annual values of the mineral products for the past three years are: 1915, \$32,854,229; 1916, \$48,632,178; 1917, \$41,760,000. The maximum output for any preceding year was that of 1906, \$23,378,428, when the gold values were at the highest stages, amounting to \$22,036,794.

**Gold.** The production of gold in 1917, to the value of about \$15,450,000, is the minimum output since 1904. The decrease from that of 1916 is small,—\$1,790,000—and is due to the caving-in and flooding of certain levels of the Treadwell mines. The values of the gold mined the past three years are: 1915, \$16,702,144; 1916, \$17,241,713; 1917, \$15,450,000. Of the grand aggregate of \$293,500,000 of gold mined in Alaska, no less than \$207,000,000 was obtained from placers. The placer output of 1917 of \$9,850,000 showed a marked decrease of \$1,290,000 from that of the previous year. While the placers held their own in relative superiority to the lode products, yet it is evident that in future the percentages of placer production will decrease, giving way to those of the lodes. The increases in values in 1917 were confined to the placers in the camps of the Tolovana, Marshall, Ruby, and the new Tolstoi districts.

Elsewhere the high cost of supplies and the scarcity of labor caused decreases. The principal outputs in the Yukon basin, where the yields as a whole were smaller than in 1916, were as follows: Iditarod, \$1,500,000; Tolovana, \$1,100,000; Ruby, \$875,000; Hot Springs, \$450,000; Marshall, \$425,000; Koyukuk, \$250,000; Circle, \$200,000. The Seward Peninsula yielded gold values to the amount of \$2,700,000 in 1917, a slight reduction from the values of the previous year. The Kuskokwim output remained practically unchanged. The number of gold-lode mines operated was 35, an increase of 4 over 1916, but the output decreased from \$5,912,000 in the former year to \$5,250,000 in 1917. The Juneau district continues to be the main centre of the quartz-mining developments. Willow Creek, Prince William Sound, Kenai Peninsula, and Fairbanks await cheap fuel, to come soon with improved transportation facilities, to develop promising gold-lodes.

**Silver.** As yet Alaskan silver is a by-product of gold and copper mining, though economic mining of it is probable at an early date. The silver product of 1917 is valued at about \$1,050,000, against \$907,554 in 1916, and \$543,393 in 1915.

**Copper.** At present copper leads in value the mineral products of Alaska, a position that it attained in 1916 when it exceeded the gold production by about \$2,250,000. The astonishingly rapid development is apparent from the outputs of copper the past four years: 1914, 21,450,268 pounds, valued at \$2,852,934; 1915, 86,509,312 pounds, \$15,139,129; 1916, 119,602,028, \$29,484,291; 1917, 88,200,000, about \$24,000,000. During 1917 there were operated 17 mines,—8 in the Ketchikan, 6 in the Prince William Sound, and 3 in the Chitina district. The production was very materially reduced owing to serious and prolonged labor troubles. The mines of the Chitina district far exceeded in production the other districts. As usual the Kennecott-Bonanza mine overshadowed all others in the ore mined. Developments in the Ketchikan and Prince William Sound districts promise increased outputs in 1918.

**Coal.** Exclusive of the small amounts of low-grade coal used locally, the output for 1917 amounted to about 61,000 tons, valued at \$300,000. Coal of equal value was imported for domestic use largely. The greater part of the Alaskan coal was mined in the Matanuska field, where the largest producer, the Eska Creek mine, was taken over by the U. S. Railroad Commission. The coal lands of the Nenana district have been sub-divided by the government preparatory to leasing to the general public. It is expected that the U. S. Railroad will be so far completed during 1918 as to permit the speedy development of the coal in the Nenana region. The patented coal-lands of the Bering River field are soon to be developed, through the building of a private railroad now in course of construction from Controller Bay to the Bering River Valley.

**Tin.** The output of tin, about 232 tons in 1917, came in large part from the York district. The Lost River lode-tin mines are under development, while considerable tin concentrates are obtained from gold placers, especially in the Hot Springs district.

**Miscellaneous.** The mining of antimony ore (stibnite) has decreased with lower prices.

Tungsten was mined on Seward Peninsula and in the Fairbanks district, the developments in the latter region promising a large increase in 1918. Platinum was obtained in small quantities from placer-gold—about 81 ounces in all. Chromium was first obtained in Alaska in 1917. Marble, gypsum, and graphite were mined in quantities as usual. While the amount of petroleum was somewhat increased, there were no new producing wells obtained. The uncovering of large bodies of magnetic iron ore in the Ketchikan district revealed a source of iron of economic importance.

**MINIMUM WAGE.** Beginning in 1912 with a law in Massachusetts providing for investigations of the wages paid to women in various unskilled trades there has been a great volume of investigation of the same matter in various American States and the enactment of laws prohibiting the payment of wages less than those publicly prescribed. While the first law in Massachusetts merely authorized the investigating commission to publish the facts and recommend a standard wage, depending on public opinion for enforcement, all subsequent laws have either prescribed minimum wages in the statute or created commissions with authority to investigate and promulgate minimum rates. Previous to 1917 minimum wage laws had been enacted in Arkansas, California, Colorado, Kansas, Massachusetts, Minnesota, Nebraska, Oregon, Utah, and Washington. During 1917 new laws were enacted in Arizona and Colorado; there were a few other legislative changes; and there were important judicial interpretations by the State Supreme Court of Arkansas and the United States Supreme Court. There were also developments in Great Britain and Switzerland as indicated below.

**ARKANSAS.** On June 4 the State Supreme Court of Arkansas sustained as constitutional the minimum wage law enacted in 1915. This law limited hours of labor for women to nine per day, except for a total of overtime of ninety days per year; made unlawful payment of less than \$1.25 per day for women workers of six months' experience in manufacturing, mechanical or mercantile establishments, laundries, and express and transportation companies, or less than \$1 per day for inexperienced workers; and required the payment of time and a half wages for any excess over the prescribed nine hours per day. The law also provided for piece workers and for investigations of female labor in canneries, hotels, restaurants, and telephone establishments. The lower court had declared the law unconstitutional. The main ground of the higher court's decision was the necessity of regulating the employment of women and children for the future benefit of the race. The chief justice of the court dissented on the ground that he could perceive no relation between wages of women and their health or morals.

**ARIZONA.** The Arizona law, effective June 6, enacted a minimum wage of \$10 per week for women employed in stores, offices, shops, restaurants, hotels, rooming houses, laundries, and manufacturing establishments.

**CALIFORNIA.** The Industrial Welfare Commission issued a new set of regulations governing hours of labor, sanitary conditions, and minimum wages in part effective on June 16. The new regulations removed a former limitation upon overtime work, but reduced the normal

working hours from ten per day and sixty per week to nine per day and six days per week. But overtime is permitted upon payment of not less than one and one-fourth wages for all excess up to twelve hours per day and not less than double wages for all excess over twelve hours per day. This order also established new minimum time and piece rates for various branches of the fruit and vegetable canning industries, including the care of apricots, pears, cling and free peaches, asparagus, and tomatoes. In general, these orders fixed sixteen cents an hour as a minimum rate for experienced time workers; provided a normal fifty-four-hour week, and consequently a minimum wage of \$8.64 per week. This wage may be compared with the minimum of \$8.90 in Washington, \$8.64 in Portland, Ore., and \$8.25 in the remainder of Oregon. In the latter State the working week is also fifty-four hours, but in Washington there is no absolute limit upon the hours of women workers in canneries.

Another order of the commission, effective September 6, fixed a minimum of \$10 per week and \$44.33 per month for experienced women in mercantile establishments. Rates for learners were: \$6 per week for those under eighteen, and \$8 for those over eighteen, with increases in both classes of fifty cents every six months until \$10 is reached. Hours were fixed at eight per day and forty-eight per week. See **WOMEN IN INDUSTRY.**

An act of the legislature creating highway districts fixed \$3 per day as the minimum wage for labor in highway construction.

**COLORADO.** The Colorado law repealed the act of 1913 and enacted another, making it unlawful to employ women at wages inadequate to "supply the necessary cost of living and maintain in health the women so employed." Minors may not be employed "for unreasonably low wages"; nor women or minors under conditions "detrimental to their health or morals." The Industrial Commission is authorized after investigation, which it must undertake for any trade when requested by twenty-five persons therein, to fix wages, hours, and such other conditions as it deems reasonable. The commission may appoint wage boards for any trade consisting of not more than one of its own members with three representatives of each of the parties, labor, employer, and public. Such board may investigate and present its judgment, but final review must be made by the commission.

**MINNESOTA.** In 1914 the Minnesota Legislature passed a law for the purpose of establishing minimum wages, but without basing such legislation on conditions of hours or health. On November 14, 1914, an injunction was secured preventing the minimum wage commission from taking action under the new law. Three years later, during which time the commission had been unable to act, arguments were made before the Minnesota Supreme Court on the constitutionality of the law. This was the second argument before that court, it being deemed advisable to reargue the case in view of decisions of the United States Supreme Court with reference to workmen's compensation and the Oregon Minimum Wage Law. Decision had not been rendered before the close of 1917. The legislatures of both 1916 and 1917 had made appropriations for the maintenance of the commissions. It was pointed out that if the law

was declared constitutional employers affected by six orders made by the commission before it was enjoined would be liable for civil damages to the extent of differences in wages paid and wages fixed by these decrees.

**MASSACHUSETTS.** The Massachusetts commission may investigate and publish its findings but has no power of enforcement. Nevertheless the law has been attacked as unconstitutional. In 1915 the commission found more than 50 per cent of laundry employees receiving less than \$6 a week, while \$8.77 was deemed necessary to maintain the health of a self-supporting woman. It recommended a minimum wage of \$8 a week after September 1, 1915. It subsequently sought to determine what concerns were applying the recommendation but met with the refusal of some to show their books on the ground that the law was unconstitutional. Argument was made before the State Supreme Court in December, 1917; decision not rendered in 1917.

**NEW YORK CITY.** In 1915, after a careful study of costs of living, wages of sweepers in the street cleaning department wages were fixed by the Board of Estimate and Apportionment at from \$720 to \$840 per year. The cost of living in this case included man, wife, and three children. A similar study in 1917 showed an advance of 16½ per cent in cost of living; consequently the wage scale was made to range from \$792 to \$888 for sweepers, with similar increases for other grades of employees.

**OREGON.** On April 9 the United States Supreme Court rendered a decision upholding the Oregon Minimum Wage Law. This established the right of a State legislature to enact such a law as a health measure. There were two cases before the court, first argued in December, 1914, the brief being prepared by Louis D. Brandeis, afterwards appointed associate justice, and Josephine Goldmark. The cases were reargued in October, 1916, by Professor Felix Frankfurter of the Harvard Law School, the original brief being amplified. This brief is in itself remarkable. It gives the world legislation relating to minimum wages; 687 pages of information on the experience upon which such legislation is based; and a great mass of evidence from government reports, public and private investigations and the opinions of eminent economists and sociologists throughout the world. It thus brought before the court numerous matters of common knowledge and forced the decision upon the basis of economic and social facts rather than upon the basis of legal precedent.

These two cases were *Stetler v. O'Hara*, and *Simpson v. O'Hara*; they came up on appeal from the Supreme Court of Oregon. *Stetler* was a paper box manufacturer in Portland; *Simpson* a woman in his employ at a wage less than that advised by the Industrial Welfare Commission; and *O'Hara* the chairman of that commission. The grounds of attack on the act were: it is contrary to the equal protection clause of the constitution; to the due process clause; and to the privileges and immunities clause. In support of the statute it was argued that the aim of the legislature was legitimate; and "within the scope of the constitution"; that the "means" were "appropriate and plainly adapted" to these ends; and that no rights of the plaintiffs were contravened by these means or ends. The brief pointed out that the law and its administra-

tion were free from arbitrary or wanton interference with the activities of the complainants and did not result in spoliation of their property. The only liberty affected was the prohibition of wage contracts below the standard set by the commission as necessary for normal living. With reference to the *Simpson* case the brief asserted that her case was "inspired," that is, filed in the interest of her employer rather than of herself. The benefits of minimum wage legislation as regards health and general welfare, including industrial peace, were indicated. The elements entering into the minimum wage were set forth, it being indicated that the wage was only sufficient to preserve working energy and to provide shelter and clothing necessary for protection from the elements. The brief said: "The significance of this is that the expenditure by some one of every penny of this whole sum of \$8.64 upon *Simpson* goes to the operation of the industry and merely provides for the cost of that operation. It goes to the maintenance of the average labor power purchased by the employer and devoted to the industry."

**OTHER LAWS.** Hawaii raised the minimum wage for laborers on public works from \$1.50 to \$2 per day. Connecticut appointed a commission to study the minimum wage question along with others pertaining to social insurance (q.v.). Washington extended its law to include the telegraph industry.

**GREAT BRITAIN.** Since the Parliamentary law creating minimum wage boards for certain sweated industries first enacted in 1909, the application of the general principle of determining wages by means of boards or commissions with power to investigate and decree wage schedules has become a general feature of English industrial life. During the war extensive use of this principle has been made in the repeated readjustment of wage scales to harmonize with the increasing cost of living in munition plants and other industries particularly important in the prosecution of the war. In July the House of Commons embodied in the Corn Production Bill a section establishing wage boards for agricultural laborers, with the proviso that in no case should a wage less than \$6.25 per week, including the value of perquisites, be fixed. The Government stated that the bill was not intended to prevent wage boards from establishing a higher minimum for agricultural labor in any section. The bill placed upon the Government responsibility for reimbursing farmers for any loss incurred through any advancement of wages made by wage boards.

**SWITZERLAND.** Early in the spring the Swiss Bundesrat established minimum wage boards for the embroidery industry. The arguments leading to the establishment of such boards were those used in England, United States, and Australia with reference to the necessity of protecting labor in unskilled and sweated trades. The ultimate authority to decree minimum wages is placed with the State Department which, following the report of a representative wage board, may fix both time and piece rates of pay.

**MINING, BUREAU OF.** See UNITED STATES.  
**MINNESOTA. POPULATION.** The population of the State in 1910 was 2,075,708, and on July 1, 1917, it was estimated to be 2,312,445.

**AGRICULTURE.** The acreage, production, and

value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. Bu.	Value
Corn ....1917	3,000,000	90,000,000	\$99,000,000
1916	2,600,000	87,100,000	69,680,000
Wheat ..1917	3,310,000	57,965,000	117,089,000
1916	3,465,000	26,410,000	42,784,000
Oats ....1917	3,250,000	120,250,000	75,758,000
1916	3,325,000	88,112,000	41,418,000
Potatoes .1917	300,000	33,600,000	30,576,000
1916	280,000	16,800,000	21,840,000
Hay ....1917	1,850,000	2,868,000	34,703,000
1916	1,890,000	3,496,000	24,472,000

a Tons.

**MINERAL PRODUCTION.** Minnesota is the first of the States in the production of iron ore. The total quantity mined in 1915 was 33,464,660 gross tons, compared with 44,585,422 gross tons in 1916. The quantity shipped from the mines of the State in 1915 was 32,545,236 tons compared with 45,869,251 in 1916. The value of the ore shipped in 1915 was \$57,742,643, compared with a value in 1916 of \$106,628,784, an increase of 13,324,015 tons, or 41 per cent in quantity and \$48,886,141 or 85 per cent in value. All the iron ore mined in the State is hematite. In addition to the iron ore shown above, there were shipped 240,403 gross tons of manganiferous iron ore, valued at \$790,762, in 1916, compared with 42,973 tons, valued at \$187,971 in 1915.

**TRANSPORTATION.** The total mileage of railroad track in the State on June 30, 1916, was 89,996. The lines having the longest mileage were: The Great Northern, 2100; the Minnesota, St. Paul, and Sault Ste. Marie, 1131; the Chicago, Milwaukee, and St. Paul, 1233; Northern Pacific, 1021.

**FINANCE.** The report of the State treasurer for the fiscal year 1915, the latest for which statistics are available, shows a balance on hand on July 31, 1914, of \$3,807,000. The receipts for the year amounted to \$22,481,933, and the disbursements to \$22,957,751, leaving a balance on July 31, 1915, of \$3,332,006.

**EDUCATION.** The total enrollment in the public schools of the State in 1916 was 481,583. The average daily attendance was 374,632. The number of teachers was 17,792. The average monthly salary of male and female teachers was \$62.15.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Anoka State Asylum, the Hastings State Asylum, the Fergus Falls State Hospital, the Rochester State Hospital, the St. Peter State Hospital, the School for the Blind at Fairbault, the School for the Deaf and the School for the Feeble-Minded at Fairbault, Owatonna State Public School, the Red Wing State Training School, the Sauk Centre Home School for Girls, the St. Cloud Reformatory, the Stillwater State Prison, the State Sanatorium for Consumptives, Phalen Public Hospital for Crippled Children, and the Willmar State Hospital for Inebriates.

**POLITICS AND GOVERNMENT.** There were no elections in the State in 1917 and few political happenings of general interest. In February, the House of Representatives passed a bill providing for the submission of a constitutional amendment to the people, giving full suffrage to women. On February 15, the State Senate

passed a bill previously passed by the House, submitting a prohibition amendment at the election of 1918.

**LEGISLATION.** Among the more important measures passed by the legislature of 1917 are those noted below.

A measure was passed providing for the immediate settlement and distribution of estates of less than \$650 if all the property is exempt from the payment of debt. It was also provided that no person guilty of murder may inherit or share in the property of the person killed. The right of aliens to possess firearms was prohibited. A Public Safety Commission was created with general power to do anything necessary to make efficient use of the resources of the State toward the successful prosecution of the war. This act authorized the removal, if necessary, of any public official. It was made a gross misdemeanor to circulate printed matter or advocate orally that men should not enlist in the military forces of the United States. Provisions were made for the voting of citizens absent from the State in the national service. A uniform sales act was passed. Amendments providing for prohibition and importation of liquors were proposed. The laws relating to labor and labor disputes were amended. It was made a felony to advocate "criminal syndicalism." Legislation was passed looking to the prevention of monopolies and unfair discriminations in the buying and selling of commodities, especially food products. A "Blue Sky" law was enacted. Amendments were made to the laws regulating drainage districts in the State. Concurrent jurisdiction of the courts and administrative officers over all boundary waters between Minnesota, North Dakota, Iowa, and South Dakota was recognized. Important amendments were made to the laws relating to the control and care of the feeble-minded and laws relating to eugenics were passed.

**STATE OFFICERS.** Governor, J. A. A. Burnquist; Lieutenant-Governor, Thomas Frankson; Secretary of State, Julius A. Schmah; Auditor, J. A. O. Preus; Treasurer, Henry Rines; Attorney-General, L. A. Smith; Adjutant-General, Walter F. Rhinon; Superintendent of Education, C. G. Schulz; Commissioner of Insurance, John Sanborn.

**JUDICIARY.** Supreme Court: Chief Justice, Calvin L. Brown; Associate Justices, G. L. Bunn, Oscar Hallam, Andrew Holt, James H. Quinn; Clerk, I. A. Caswell.

**MINNESOTA, UNIVERSITY OF.** A co-educational State institution of learning, located at Minneapolis, Minn. In the fall of 1917 there were 4468 students and 616 members of the faculty; there were also 1315 students in the extension classes. Volumes in the library numbered 245,000. In 1917 M. L. Burton, Ph.D., D.D., LL.D., formerly president of Smith College, was elected president; John R. Allen, dean of the College of Engineering and Architecture; W. E. Hotchkiss, professor of economics; Miss Katherine Ball, vocational advisor of women; and Miss Gertrude Beggs, dean of women. William J. and Charles H. Mayo, of Rochester, Minn., donated to the university through the Mayo foundation the sum of \$1,650,345 for medical education and research. Productive funds in 1917 amounted to \$1,605,356 and the income therefrom to \$59,575. The university was founded in 1868.

**MIRBEAU.** OCTAVE (HENRI MARIE). A French writer, died in Paris, February 16, 1917. He was born at Trévières (Calvados) February 16, 1850, and came of a bourgeois family. The Collège de Vannes, then a Jesuit institution, which he attended for a time, he described in uncomplimentary fashion in *Sébastien Roch*. For a short time, after he had tried his hand at dramatic criticism, he was on the staff of the *Figaro*, but a vitriolic article entitled "Le comédien" brought down the wrath of Coquelin and other actors, and Mirbeau, leaving this paper, joined with Paul Hervieu, Capus, and Grosclos in founding the weekly, *Les grimaces*. His utterances gained him much enmity, among conservatives especially, for Mirbeau seemed to be the champion of each new movement in politics, literature, and art. By turns he was royalist, Catholic, militarist, anticlerical, internationalist, and even anarchist, but before his death loyalty to a united France took the place of all these. It has been declared that to Mirbeau is owed the discovery of such geniuses as Rodin, Pissaro, Monet, Cézanne, and Maeterlinck. In later years he became an advocate of Futurism. Mirbeau declined various honors, but accepted election to the Academy of the Goncourts. His writings are chiefly characterized by the freedom with which the author displays his dislikes and hatreds. Hardly an institution of conventional society escaped his pen, but it is likely that when he appeared to be attacking institutions themselves, it was their faults that he aimed at. His bitter contempt for human customs was in contrast to a remarkable fondness for animals and love of nature. In his fiction he follows rather closely the naturalistic method of Zola. Earlier works were *Le calvaire*, *La famille Cormettes*, *L'Abbé Jules*, and *Sébastien Roch*, and later *Le jardin des supplices*, *Le journal d'une femme de chambre*, *Les vingt-et-un jours d'un neurasthénique*, and *La 628-E8*. Mirbeau's chief dramatic work was *Les affaires sont les affaires* (1903), a comedy of character comparable to Molière. His first play, *Les mauvais Bergers*, deals with the conflict between capital and labor. It was followed by *L'épidémie*, *Vieux ménages*, *Le portefeuille*, *Scrupules*, and *Le foyer*, with Nathanson. He also wrote many articles and reviews for leading journals.

**MISSIONS, DIPLOMATIC AND FOREIGN, TO U. S.** See UNITED STATES AND THE WAR.

**MISSISSIPPI. POPULATION.** The population of the State in 1910 was 1,797,114, and on July 1, 1917, it was estimated to be 1,976,570.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

	Acreage	Prod. Bu.	Value
Corn .... 1917	4,100,000	84,050,000	\$115,989,000
1916	3,400,000	47,600,000	46,648,000
Wheat .. 1917	14,000,000	210,000	680,000
1916	6,000,000	90,000	158,000
Oats .... 1917	300,000	5,700,000	5,358,000
1916	350,000	6,300,000	4,662,000
Rice .... 1917	2,100	63,000	120,000
1916	1,900	53,000	42,000
Potatoes .. 1917	14,000	1,092,000	1,835,000
1916	12,000	780,000	1,248,000
Hay .... 1917	261,000	a 371,000	5,676,000
1916	275,000	385,000	4,235,000
Cotton .. 1917	2,801,000	b 895,000	127,538,000
1916	3,110,000	812,000	83,209,000

a Tons. b Bales of 500 pounds gross weight.

**TRANSPORTATION.** The railway mileage of the State in 1916 was 4351. There was no construction during the year.

**FINANCE.** The latest year for which statistics are available is 1915. In that year the receipts amounted to \$3,873,254, and the disbursements to \$4,248,109. There was a balance at the beginning of the year of \$636,708, and at the end of the year of \$261,362. The bonded debt of the State is \$2,500,000.

**EDUCATION.** The number of school children in the State in 1916 was 788,927. Considerably over half of the children of school age in the State are colored. In addition, there are about 400 Indian children of school age. The State has no compulsory school law.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State are under the control of the State board of charities and corrections. They include the State Prison, Institute for the Blind, Institute for the Deaf and Dumb, and Charity Hospital, all at Jackson. There are also hospitals at Vicksburg and at Natchez.

**POLITICS AND GOVERNMENT.** The legislature met in its biennial session in 1917, but enacted no measures of more than local importance.

**STATE OFFICERS.** Governor, Theo. G. Bilbo; Lieutenant-Governor, Lee M. Russell; Secretary of State, J. W. Power; Treasurer, J. P. Taylor; Auditor, Robert E. Wilson; Adjutant-General, E. C. Scales; Superintendent of Education, W. F. Bond; Attorney-General, Ross A. Collins; Land Commissioner, M. A. Brown; Commissioner of Agriculture, P. P. Garner; Commissioner of Insurance, T. M. Henry—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, S. Smith; Associate Justices, S. C. Cook, J. Morgan Stevens, E. O. Sykes, J. B. Holden, George H. Ethridge; Clerk, George C. Myers.

**MISSISSIPPI, UNIVERSITY OF.** A co-education State institution of learning located at Oxford, Miss. In the fall of 1917 there were 402 students and 31 members of the faculty; in the year about 50 students and 3 members of the faculty were in government service. Volumes in the library numbered 31,000. A school of commerce and business administration and various courses to prepare men and women for war service were added in 1917. Productive funds amounted to about \$700,000 and the income to \$42,000. The university was founded in 1844. President, Joseph Neely Powers, LL.D.

**MISSISSIPPI DAM.** See DAM.

**MISSISSIPPI RIVER.** See CANALS.

**MISSOURI. POPULATION.** The population of the State in 1910 was 3,294,335, and on July 1, 1917, it was estimated to be 3,429,595.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

	Acreage	Prod. Bu.	Value
Corn .... 1917	7,200,000	252,000,000	\$287,280,000
1916	6,775,000	132,112,000	118,901,000
Wheat .. 1917	1,800,000	27,540,000	53,703,000
1916	1,950,000	16,675,000	27,849,000
Oats .... 1917	1,480,000	59,200,000	36,112,000
1916	1,290,000	32,250,000	17,092,000
Rice .... 1917	400	18,000	34,000
1916	200	10,000	10,000
Potatoes .. 1917	109,000	9,483,000	12,992,000
1916	91,000	5,460,000	8,628,000
Hay ..... 1917	3,180,000	a 3,657,000	63,998,000
1916	3,410,000	4,483,000	41,227,000

		Acreage	Prod. Bu.	Value

	1916	133,000	63,000	5,956,000

a Tons. b Pounds. c Bales of 500 pounds gross weight.

**MINERAL PRODUCTION.** The production of silver, copper, lead, and zinc in the State in 1916 was valued at \$74,143,607, compared with \$53,683,420 in 1915. Lead is the most important mineral product in point of value. The value of the lead mined increased \$12,384,784 so that the largest increase in the total value was caused chiefly by the much larger output under higher prices of lead in 1916 compared with 1915. The total production of lead was 233,088 tons in 1916, compared with 210,440 in 1915. In 1916 the value was \$32,166,144, compared with a value of \$19,781,360 in 1915. The zinc produced in 1916 was 155,960 tons, valued at \$41,797,280 compared with 136,300 valued at \$33,802,400 in 1915.

The coal output increased from 3,811,593 net tons in 1915, valued at \$6,595,918, to 4,742,146 tons, valued at \$9,044,505, in 1916. This is a record production for the State.

**TRANSPORTATION.** The total railway mileage of the State in 1917 was 9364. The railroads having the longest mileage were: St. Louis and San Francisco, 1719; Chicago, Burlington, and Quincy, 1135; Chicago and Alton, 1052; Missouri Pacific, 1013.

**FINANCE.** The report of the State treasurer for the fiscal year 1917 shows the receipts to be \$15,585,244. The expenditures during the fiscal year were \$16,102,946. There was a balance on hand on January 1, 1917, of \$3,508,843 and on January 1, 1918, the balance on hand was \$2,991,111. The bonded indebtedness of the State amounted to \$2,384,000.

**EDUCATION.** The latest statistics available for education are those of 1915. In that year the enrollment in the public schools was 711,355. The total number of students of school age was 922,731. The average daily attendance was 528,153. The total number of teachers was 19,826. The average annual salary of male teachers was \$603, and of females \$511. The total amount of payments for educational purposes during the year was \$19,700,000.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State are under the supervision of the State Board of Charities and Corrections. They include hospitals at Fulton, St. Joseph, Nevada, and Framington, Industrial School for Boys at Boonville, Colony for Feeble-Minded and Epileptics at Marshall, Missouri School for the Deaf at Fulton, Missouri School for the Blind at St. Louis, Federal Soldiers' Home at St. James, Confederate Soldiers' Home at Higginsville, State Sanatorium at Mount Vernon, and State Penitentiary at Jefferson City.

**POLITICS AND GOVERNMENT.** The legislature met in its biennial session in 1917, but enacted no measures of more than local importance.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below.

Laws relating to criminal procedure were amended in important respects. Capital punishment was abolished. Amendments were made to the laws relating to the administration of

estates. Provision was made for the voting of citizens absent on military service. Additional provision was made for the voting of trainmen and traveling salesmen at primary elections. It was forbidden to publish campaign matter anonymously. Amendments were proposed prohibiting the importation of alcoholic liquors. The inspector of beers is required to inspect all so-called "soft drinks." An income tax was created, modeled largely upon the Federal income tax. Other changes were made in the laws relating to taxation. The laws relating to banking were amended in important details.

**STATE OFFICERS.** Governor, Frederick D. Gardner; Lieutenant-Governor, Wallace Crossley; Secretary of State, John L. Sullivan; Auditor, George E. Hackmann; Treasurer, George H. Middelkamp; Attorney-General, Frank W. McAllister; Superintendent of Education, Vel W. Lamkin—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Archelaus M. Woodson; Associate Justices, Walter W. Graves, Robert F. Walker, Charles B. Faria, H. W. Bond, James T. Blair, Fred L. Williams; Clerk, Jacob D. Allen.

**MISSOURI UNIVERSITY OF.** A co-educational State institution of learning, located at Columbia, Mo. In the fall of 1917 there were 2061 students and 257 members of the faculty. Volumes in the library numbered 200,000. Productive funds in 1917 amounted to \$1,311,339 and the income therefrom to \$65,900. The university was founded in 1839. President, Albert Ross Hill, LL.D.

**MODERN SCHOOL.** The institution much discussed under this title in the newspapers and magazines of the United States during 1916 and 1917 is the Lincoln School of Teachers College, briefly described under EDUCATION in THE UNITED STATES and COLUMBIA UNIVERSITY.

**MOLDAVIA.** A former principality, now the northern division of Rumania. On the west are Transylvania and the Bukovina; on the north-east and east, the Russian government of Bessarabia, from which Moldavia is separated by the Pruth River. The area of Moldavia is stated at 14,759 square miles, which is a little larger than the combined areas of Massachusetts, Rhode Island, and Connecticut. Population, 2,145,464, according to the census of January 1, 1913. The old capital of Moldavia was Jassy (Iassi), which, when the government fled before the German advance late in 1916, became the temporary capital of Rumania. Prior to the great war, Jassy had 76,120 inhabitants; Galatz (Galatsi), 72,512; Botushani, 32,874; Barlad, 25,367; Focshani, 25,287; Bacau, 19,000; Piatra, 19,000.

**MOLECULAR PHYSICS.** See CHEMISTRY.

**MOLLENHAUER, EMIL.** See MUSIC, Orchestras.

**MOLYBDENUM.** See CHEMISTRY, INDUSTRIAL; METALLURGY.

**MONACO.** A hereditary constitutional monarchy (constitution of January 8, 1911), covering 1.5 square kilometres and having a population in 1913 of 22,956. Population of Monaco (town), 2247; of La Condamine, 11,082; of Monte Carlo, 9627. Roman Catholicism is the only creed tolerated. The revenue, derived chiefly from the gambling concession at Monte Carlo, is spent largely for improvements. Reigning Prince, Albert (born November 13,

1848); heir-apparent, Prince Louis (born July 12, 1870).

**MONEY.** The total stock money in the United States on October 1 was \$5,597,367,000, as compared with \$4,699,389,000 on October 1, 1916, or an increase during this single year of nearly \$900,000,000. These totals may be compared with \$4,482,000,000 on June 30, 1916; \$3,989,000,000 on June 30, 1915; \$3,738,000,000 on June 30, 1914, and \$3,419,000,000 on June 30, 1910. Thus, during the somewhat more than three years since the beginning of the war, money in circulation in the United States, including coin, bullion in the treasury, bank notes, and United States notes, had expanded by the enormous sum of nearly \$2,000,000,000. The money in circulation on October 1, 1917, amounted to \$4,820,546,000, an increase of \$642,000,000 over one year earlier. The amount in circulation on June 30, 1915, was \$3,569,000,000 and on June 30, 1914, \$3,402,000,000. The per capita circulation increased from \$34.35 on June 30, 1914, to \$35.44 on June 30, 1915, to \$39.29 on June 30, 1916, and to \$46.10 on October 1, 1917. These changes were due fundamentally to the remarkable volume of gold imports (see **FINANCIAL REVIEW**). This not only increased the money supply directly but furnished a basis for a great expansion of bank note issues. This latter moreover was demanded by the increase in prices (for which in turn the greater circulation was partly responsible) and by the great industrial prosperity of the country; and was made possible by the security and confidence in financial circles obtained through the Federal Reserve System.

Paper currency in the United States at the close of the fiscal year 1917 amounted to \$4,209,000,000 according to the *Report* of the treasurer of the United States. Of this sum the government has issued directly \$2,934,000,000 and the banks \$1,275,000,000. The most notable change in the paper currency was the increase in the amount of \$1 and \$2 bills. In spite of every effort to increase their supply there was still a scarcity of them. It was expected that an act of October 5 authorizing national banks to increase their circulation of \$1 and \$2 bills would meet this deficiency. The total amount of United States notes or "greenbacks" was, as previously, \$346,681,016. Of the Treasury Notes of 1890 only \$1,976,000 were still outstanding. The paper currency included gold certificates of \$1,584,000,000. Efforts were made in the latter half of the year to reduce their circulation. Silver certificates were outstanding on June 30 to the amount of \$477,184,000. The standard silver dollars in the American monetary system on June 30 numbered \$568,269,000, of which \$71,825,000 were in circulation and the remainder in the treasury. Subsidiary silver coin to the value of \$198,274,000 was included, nearly all in circulation. Minor coins totaled \$73,337,000.

**MONGOLIA.** A Chinese dependency west of Manchuria and between China proper and Sinkiang, on the south, and Siberia, on the north. Estimated area, 1,076,292 square miles. Estimated population, 1,800,000. Higher estimates for both area and population are published. In November, 1917, it was announced that the Chinese government had under consideration the delimitation of the proper boundary between Inner Mongolia, the southern part of the coun-

try, and Outer Mongolia, the northern part. Soon after the outbreak of the Chinese revolution Outer Mongolia declared its independence and proclaimed the Hutuktu as emperor. Its autonomy was recognized by Russia and was further supported by a Russo-Mongolian convention signed at Urga November 3, 1912. On November 5, 1913, an agreement was reached at Peking between China and Russia whereby China recognized the autonomy of Outer Mongolia and Russia recognized Chinese suzerainty therein. Both China and Russia agreed not to colonize Outer Mongolia and not to send troops there other than as consular or official guards. Outer Mongolia is administered by the emperor, Jehtsum Dampa Hutuktu (Venerable Sacred Saint), who is assisted by a cabinet of ministers. The Chinese executive officials for Outer Mongolia are Chen Yu, resident-general at Urga, and Chang Ching Tung, Liu Chung Hui, and En Hua, deputy residents-general at Khiakta, Kobdo, and Uliasutai respectively.

**MONITORS.** See NAVAL PROGRESS.

**MONTANA.** **POPULATION.** The population of the State in 1910 was 376,063, and on July 1, 1917, it was estimated to be 472,935.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. Bu.	Value
Corn	.....1917	81,000	1,012,000	\$1,771,000
	.....1916	74,000	1,850,000	1,720,000
Wheat	.....1917	1,727,000	17,963,000	34,489,000
	.....1916	1,485,000	28,635,000	46,134,000
Oats	.....1917	680,000	13,600,000	11,016,000
	.....1916	660,000	25,080,000	11,788,000
Potatoes	.....1917	57,000	155,000	5,528,000
	.....1916	39,000	5,415,000	5,850,000
Hay	.....1917	759,000	1,063,000	19,772,000
	.....1916	825,000	1,402,000	15,422,000

a Tons.

**MINERAL PRODUCTION.** The value of the output in gold, silver, copper, lead, and zinc in 1917 was nearly \$113,000,000, a decrease from 1916 of over \$20,000,000. There was a marked decrease in the output of all metals except lead. The mined output of gold was valued at \$3,371,000, a decrease from \$4,550,494 in 1916. The output of silver decreased from 16,494,366 ounces in 1916 to 12,788,000 in 1917. The value in spite of increased prices decreased from \$10,853,293 to \$10,358,000. The mined production of copper decreased from 352,928,373 pounds in 1916 to 278,000,000 pounds in 1917, or a decrease of nearly 75,000,000 pounds. This decrease in value was proportionately less owing to the unusually high price from \$86,820,380 to \$81,000,000. The mined output of lead increased from 13,595,136 pounds in 1916, to 17,000,000 pounds in 1917, a gain of over 3,000,000 pounds. The value of the output was \$936,064 in 1916. The mined production of zinc decreased from 229,259,075 pounds in 1916 to 180,000,000 in 1917, a decrease of nearly 5,000,000 pounds. The value of the output in 1916 was \$30,720,716. The mining of metal in 1915 was a record for the State.

The coal production of the State in 1916 was 3,632,527 short tons, valued at \$6,286,197, which was an increase of 30 per cent in quantity, or 39 per cent in value over 1915. There were employed in the coal mines of the State in

1916 3781 men, compared with 3158 in 1915.

Montana is an important source of high-grade manganese ore. The shipping in nine months, from January to September, 1917, amounted to 33,859 gross tons, compared with shipments of 3268 tons in the twelve months of 1916.

**TRANSPORTATION.** The total railway mileage in the State on December 31, 1916, was 6678. The longest mileage owned is by the Great Northern Railway—2154; the longest mileage operated is by the Northern Pacific Railway, 2234.

About one hundred miles of new track were constructed during the year.

**FINANCE.** The receipts for the fiscal year 1914, the latest for which statistics are available, were \$5,550,909, and the disbursements amounted to \$5,207,011. At the beginning of the year there was a balance of \$1,039,749, and at the end, of \$1,383,646.

**EDUCATION.** The number of pupils enrolled in the schools in 1914, the latest for which statistics are available, was 85,782. Of these 43,046 were males, and 42,736 females. The average daily attendance was 62,686. The total number of children of school age in 1913, the latest date on which a census was taken, was 114,032. The total number of teachers was, in 1914, 3778, of whom 3252 were females, and 526 males. The average monthly salary of male teachers was \$93.29, and of females, \$75.55. The expenditure for school purposes during the year was \$6,951,903.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the State Prison at Deer Lodge, the State Industrial School at Miles City, a Home for Orphans, Foundlings and Destitute Children at Twin Bridges, a Soldiers' Home at Columbia Falls, the State Hospital for the Insane at Warm Springs, and the State School for the Deaf and Blind and Feeble-Minded at Boulder.

**POLITICS AND GOVERNMENT.** On June 8 an explosion and fire in Butte caused the death of more than 100 employees.

On August 2 Frank Little, an organizer and agitator of the Industrial Workers of the World, was lynched at Butte. He had come into the State for the purpose of organizing a strike in the metal mines. In connection with this order, he denounced the army and Federal government, declaring that if the government took control of the mines, the situation would be made so difficult that it would be impossible to send troops to France. The State authorities were at the point of persecuting him for these utterances, when seven men went at night to his lodgings and took him in an automobile to a railroad trestle on which they hanged him. See **STRIKES.**

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

The laws relating to the administration of justice and the organization of courts were amended in important detail. Attorneys were required to pay an annual license tax or fee, and a penalty of \$25 was imposed for practice without a license. Measures were passed regulating the manufacture, storage, and handling of explosives. The possession of a shell or bomb is considered as evidence that the possessor intended to use it for unlawful purposes, and the law provides for his punishment. Cities were

authorized to adopt a commission form of government. A law was passed relating to the enforcement of prohibition laws, which applies to every liquid capable of use as a beverage which contains 2 per cent in volume of alcohol, and applies prohibition to the "ardent spirits, or any compound thereof, capable of use as a beverage."

Provisions were made for the regulation in detail of the construction and maintenance of electrical apparatus employed in manufacturing or mining. An eight-hour law for women was adopted in a large number of employments. Measures were passed relating to the prevention of monopolies and unfair discrimination in the buying and selling of food products in different parts of the State. The payment of a license of \$6000 is required for the giving of premiums or bonuses in the selling of merchandise. The laws relating to taxation were amended in important details. A temporary tax and license investigation committee was created.

**STATE OFFICERS.** Governor, Samuel V. Stewart, Dem.; Lieutenant-Governor, W. W. McDowell, Dem.; Secretary of State, A. M. Alderson; Treasurer, H. L. Hart, Rep.; Auditor, William Keating, Dem.; Adjutant-General, Phil Greenan, Dem.; Attorney-General, S. C. Ford, Rep.; Superintendent of Education, May Trumper, Rep.; Commissioner of Insurance, the State Auditor.

**JUDICIARY.** Supreme Court: Chief Justice, Theo. Brantly; Justices, Sydney Sanner, Wm. L. Holloway; Clerk, J. T. Carroll.

**MONTANA, STATE UNIVERSITY OF.** A co-educational State institution of learning at Missoula, Mont. In the fall of 1917 there were 549 students and 70 members of the faculty. Volumes in the library numbered 60,000. At the opening of the fall 1917 term a change was made from the semester to the quarter year plan. The university was founded in 1892. E. O. Sisson assumed duties as president in August, 1917, succeeding acting-president, F. C. Scheuck.

**MONTENEGRO.** One of the lost small nations, submerged in the flood of the German invasion. A European monarchy, hereditary and constitutional; a Balkan state, lying between northern Albania on the south and Herzegovina on the north. Area, 9080 square kilometres (3506 square miles); population, 285,000 (31 per square kilometre). These figures relate to area and population previous to the Balkan Wars; by the terms of the treaty of November 12, 1913, defining the Serbo-Montenegrin frontier, Montenegro came into possession of new area, estimated at 2130 square miles, carrying a population of about 150,000. The Montenegrins belong to the Serbian branch of the Slav race. The majority of the original population are of the Orthodox Church. Cetinje (5300 inhabitants) is the capital; Pedgoritzha had 10,053, Dulcigno 5081, Antivari 2317. Montenegro is a mountainous, wooded country, with cultivable tracts where agriculture is carried on. Chief products are corn, potatoes, sumac, cattle, castradina (smoked mutton), hides, and tobacco, which was created a monopoly, and conceded for twenty-five years to an Italian company.

Reigning sovereign, Nicholas I (born 1841), father of the Queen of Italy. Heir-apparent, Prince Danilo (born 1871). The government was transferred, when Cetinje became untenable, to Bordeaux, France; and was later removed

to Neuilly-sur-Seine. See WAR OF THE NA-TIONS.

**MONTGOMERY, DAVID.** An American comedian, died in Chicago, April 20, 1917. He was born in St. Joseph, Mo., in 1870. The famous partnership of Montgomery with Fred Stone was formed after they had met in 1894 in Galveston, Tex. Stone was member of a stock company there, when Haverley's Minstrels, among whom was Montgomery, came to town. Stone cast his lot in with the minstrels, and when they disbanded, shortly after, the two comedians, who had not yet been "discovered" but had discovered each other, stayed together. They played in New Orleans, then in Chicago, and finally got to New York, where they made their debut at the old Miner's Bowery Theatre. It wasn't long after that that they were receiving \$200 a week at Hammerstein's. Charles Frohman presented them in *The Girl From Up There*, and they went to London, where they had already been once, in this play. In their later years of success Charles B. Dillingham was their manager. The show that started them on the road to one of the most extraordinary of stage careers was *The Wizard of Oz*, in 1903. Their New York run and tour of the country in this piece kept them busy three years, and they duplicated this record in the succeeding plays, which, as presented by this pair, provided hilarious amusement for hundreds of thousands. They were *The Red Mill*, *The Old Town*, *The Lady of the Slipper*, to which Elsie Janis contributed, and *Chin Chin*. During all these years Dave Montgomery and Fred Stone were not only business partners, but the closest of friends. Each seemed indispensable to the other, though Montgomery himself recognized that his comic gift was not equal to Stone's. These two knew how to be funny without being vulgar.

**MONTSEBBAT.** A presidency of the Leeward Islands (q.v.).

**MOODY, WILLIAM HENRY.** An American public official and jurist, born on December 23, 1853, died July 2, 1917. He graduated from Harvard University in 1876 and was district attorney for the Massachusetts Eastern District from 1890 to 1895. He served several terms in Congress and made a great reputation as a parliamentarian. He was secretary of the navy under President Roosevelt from 1902 until 1904, succeeding J. D. Long. In 1904 he became Attorney General and in 1906 was appointed Associate Supreme Court Justice of the United States, succeeding Associate Justice Brown, who retired. Justice Moody was retired by a special act of Congress in 1910 on account of ill health. Among the noted opinions he rendered during his brief stay on the bench were the Knoxville Water Company and the Consolidated Gas Company decisions.

**MORAVIA.** A crownland of Austria. On the west is Bohemia; on the south, Lower Austria; on the northeast, Silesia; on the southeast, Hungary. The area is 8580 square miles, which is a little larger than the State of Massachusetts. The population at the census of December 31, 1910, was 2,622,271 (about 9.18 per cent of the total for Austria), as compared with 2,437,706 in 1900. In 1910, the number of Austrian subjects was 2,604,857; of these, Bohemian, Moravian, or Slovak (which are almost identical) was the vernacular of 1,868,971 (71.75 per cent); German, 719,435 (27.62); Polish, 14,924 (0.57).

Catholics numbered 2,502,808, or 95.45 per cent of the population. Brunn, the capital, had 125,737 inhabitants in 1910. Moravia has a diet of 151 members. The crownland is represented by 49 members in the Austrian Reichsrat.

**MORAVIANS**, also called **MORAVIAN BODIES**, **UNITED BRETHREN** (Unitas Fratrum), and **MORAVIAN CHURCH**. There are two bodies of this denomination in the United States, only one of which is important numerically. The smaller body is called the Union Bohemian and Moravian Church. It had in 1917, 4 ministers, 21 churches, and 1000 communicants. The main body, the Moravian, had, in, 1917, 144 ministers; 126 churches; and 20,859 communicants. Missions are maintained in nearly all parts of the world, and the educational institutions under the control of the Moravian have a high reputation for efficiency. The latter include the Moravian College and Theological Seminary, the Moravian Parochial for Boys and Girls, and Moravian Seminary and College for Women at Bethlehem, Pa., Linden Hall Seminary for Girls at Latitz, Nazareth Hall for Boys at Nazareth, Pa., and an Academy for Girls and a college for women at Salem, N. C. The Moravians are strongest in Pennsylvania.

**MÖRNER, KARL AXEL HAMPUS, COUNT.** A Swedish physician and chemist, died in May, 1917. Born at Ljunarsberg, Örebro, Sweden, in 1854, he studied at the University of Upsala, and in 1884, the year that he became medical licentiate of the Karolinska Medico-Chirurgical Institute, he was appointed to teach chemistry and pharmacy in the institute. Two years later he became ordinary professor of these subjects and a doctor of medicine. Since 1897 he had served as director of the institute. Count Mörner held the important post of president of the committee charged with awarding the annual Nobel prize in medicine. He himself received the Alvarenga prize in 1895. His researches and publications dealt with physiologic chemistry, toxicology, and chemical analysis.

**MOROCCO.** An African sultanate chiefly under French protection. The largest of the Barbary States, situated in the northwestern part of Africa, between 27°-36° N. lat. and 1°-11° 40' W. long, made up of the kingdom of Fez and Morocco, to the north of the Atlas, and the territories of Sûs, Drâ, Wadi Tafflet, Tuat, and others to the south, which are again subdivided into 33 districts, each under the superintendence of a "Kaid"; the semi-independent tribes are ruled by their own chiefs, and scarcely acknowledge the authority of the sultan. The area of the protectorate is given at 416,800 square kilometres, with an estimated population of 3,000,000. The Spanish concessions cover about 21,800 square kilometres, with about 404,000 inhabitants; Tangier, which is to be internationalized, has 600 square kilometres, and 60,000 inhabitants. Fez is the capital, with 101,820 inhabitants; Morocco (Marakesh), 60,034; Rabat, 47,144; Tangier, 46,270. The inhabitants are chiefly Berbers, Bedouins, and Mued-Arabs and Tuaregs, and belong to the Malekite sect of the Sunnite Mohammedans.

Among the chief products of the country are wheat, barley, corn, beans, peas, oil, esparto, and hemp; among fruits, the fig, almond, pomegranate, lemon, olive, orange, and date are common; but agriculture is greatly neglected. Morocco is said to be rich in mineral treasures;

antimony, iron, coal, copper, lead, tin—the last three in considerable quantities. Gold and silver are also found. The chief ports are Tetuan, Tangier (where the representatives of foreign nations reside), El Araish (Laraiche), Rabat, Casa Blanca (or Dar-al-baida), Mazagan, Saffi, and Mogador.

In 1917 there were in existence 773 kilometres (480 miles) of railway in Morocco, lines actually operating and exclusive of railways under construction. These lines were narrow-gauge (60 centimetres, or 2-ft. gage) military railways which up to the outbreak of the war in 1914, owing to diplomatic conventions with Germany, could not be used for civilian or ordinary traffic. Free from all diplomatic conventions made with Germany, the French government opened all lines to ordinary traffic. The traffic receipts per kilometre for the whole of 1916 varied between £740 (\$3626) and £935 (\$4582). In 1917 there was before the French parliament a bill for a proposed Tangiers-Fez line of standard gage. The French government proposed to give a concession for the whole of the standard gage lines under construction or to be constructed (altogether 670 miles) to a private corporation.

Telegraphic communication from Tangier is by submarine cable of Eastern Telegraph Company to Gibraltar, by Spanish government telegraph to Tarifa, and by French cable to Oran (Algeria); there are wireless stations at Tangier, Rabat, Casa Blanca, and Mogador. The principal exports (1915) were barley, £532,392; wheat, £237,652; wool, £164,358; eggs, £251,055; almonds, £181,648. Imports were cottons, £1,517,534; sugar, £2,423,667; tea, £435,934; hardware, £348,216; flour, etc., £946,869. Total imports, 1915, £10,867,410; exports, £2,561,995.

Reigning sultan, Mulai Yussuf, son of Mulai Hassan; proclaimed at Fez August 17, 1912, in place of his brother, Mulai Abd-el-Hafid. There is a French resident commissioner-general; a Spanish high-commissioner resides at Tetuan.

**HISTORY.** It became known, January 16, 1917, that the United States was ready to recognize the French protectorate of Morocco, and the State Department had prepared a note, which was ready to be transmitted to the Paris Foreign Office. The extra-territorial rights which this country enjoyed under treaty with Morocco were not surrendered, but the exercise of them was suspended. The question of the recognition of the French protectorate had been a subject of negotiation since 1912.

When the war broke out there was great anxiety as to its effect upon the unruly tribes in Morocco and many called to mind the fact that the massacres of Fez had occurred no longer ago than April, 1912; that Morocco was far from being completely conquered, that few French colonists had settled in it and that, moreover, it had been undermined everywhere by German intrigues. In spite of this, Morocco remained firmly loyal and the French were not obliged to send all their effective troops to reinforce the army there. On the contrary, a large part of the Moroccan forces were brought back to France where these regiments on many occasions distinguished themselves in battle. Moreover, thousands of the Moroccans had voluntarily joined the French at the front and their quality was shown by the large

number of military medals and crosses of war that they had won. Further than that, Berber peasants were cultivating French lands and Moroccan workmen were employed in French factories. To these gains should be added the economic support which Morocco had given France. Between August, 1915, and June, 1916, Morocco had sent more cereals to France than Algeria and Tunis put together, that is to say, about two million quintals. In 1917, though the exact figures were not at that date available (June 19, 1917), the Moroccan contribution had increased still more in spite of unfavorable weather conditions, insect pests, etc. Two million quintals were enough to supply bread to France for two months and in addition to that Morocco exported great quantities of wool, goat-skin, and sheepskin. In commenting on these conditions the press praised highly the intelligent administration of the governor, M. Grandclément as well as the effective work of the officials in charge of the agricultural department. The latter had put into force very effective means for increasing the output; for example, the foundation of native provident societies whose members received free seed; the supply of farm implements for the purpose of assuring a greater production; the supply of motor power. The purposes of these organizations were first to increase the production by extending the area of arable land, and second to increase the productiveness of each piece of land.

The work of pacification and reorganization was carried vigorously forward under Gen. Lyautey in the latter part of the year. In general his policy was to destroy none of the country's institutions and to respect not only the religion but the customs and even prejudices of the natives; not to assume the attitude of a conqueror, but that of a collaborator; to show respect to the sultan, and not to resort to force when other means were possible. A great fair was held at Rabat, the third since the war broke out, and there were many evidences of the prosperity of the country and of good feeling between natives and Europeans. The French forces kept a close watch on the malcontents such as Abd-el-Malek in the north and El-Hiba in the south, and also on those tribesmen whom the German agents had stirred up against the French. Relations with Algeria were satisfactory.

**MOTHERS' PENSIONS.** See PENSIONS FOR MOTHERS.

**MOTOR SPIRIT.** See CHEMISTRY, INDUSTRIAL.

**MOTOR VEHICLES.** See AUTOMOBILES.

**MOULTON, JAMES HOPE.** An English theologian, died from exposure in April, 1917, after the ship on which he was homeward bound from a missionary tour to India had been sunk. He belonged to a distinguished family, his father being William F. Moulton, theologian and educator, one uncle, Lord Moulton, jurist, and another uncle, Richard Green Moulton, the American literary scholar. J. H. Moulton was born at Richmond College, where his father was then professor, in 1863, and his earlier education was obtained at the Leys School, Cambridge, founded by his father. Here he served as master from 1886 to 1902, lecturing on classics at the same time at Girton and Newnham Colleges. Professor Moulton was a

graduate of King's College, Cambridge, of which he was elected fellow in 1888. As early as 1886 he became a Wesleyan minister, and in 1902 he was appointed tutor in the Wesleyan College at Didsbury. From 1908 till his death, in addition, he held the Greenwood professorship of Hellenistic Greek and Indo-European philology in the University of Manchester. London University awarded him a gold medal in classics and gave him the degree of D.Lit., and he received the D.D. from Edinburgh, the D.C.L. from Durham, and D.Theol. from Berlin and Groningen. Professor Moulton was author of contributions to scholarly journals, of the article on Zoroastrianism in Hastings's *Dictionary of the Bible*, and of: *Grammar of New Testament Greek*, *Early Religious Poetry of Persia*, *Early Zoroastrianism* (Hibbert Lectures, 1912), *Religions and Religion* (Fernley Lecture, 1913), *Vocabulary of the Greek Testament* (Parts I and II, 1914-15, with Prof. Milligan).

**MOUNT HOLYOKE COLLEGE.** A non-sectarian institution for the education of women at South Hadley, Mass. In the fall of 1917 there were 858 students and 149 members of the teaching and administrative staffs. Volumes in the library numbered 64,208. Late in 1917 the science building containing the laboratories of the departments of zoology, botany, physiology, geology, and psychology was burned to the ground and valuable equipment and the contents of several museums were lost. During 1917 about \$30,000 was received as gifts. Productive funds amount to \$104,212 and the income to \$67,259. Mount Holyoke was founded as a seminary but was chartered as a college in 1888. President, Miss Mary Emma Woolley, Litt.D., L.H.D., LL.D.

**MOUNT WILSON SOLAR OBSERVATORY.** See ASTRONOMY.

**MOVING PICTURES.** The activities concerned with the moving picture business showed a moderate but steady growth in 1917. It was of course affected to a certain extent by the habits of economy that began to be practiced by the public soon after the United States entered the war. Later in the year, after the enactment of the war tax legislation, the fear of the managers that the added price of the tax on admission tickets would act as a deterrent to the patronage of moving picture theatres was not justified to any marked extent, although reports from certain quarters were quite pessimistic in this regard.

As to productions, there were few novelties brought out; and although the amount of new film shown was very large, the subjects treated were just about the same in range as those of the previous year. Romance, adventure, comics, the sex play, history, and current events all had their share of publicity before audiences that evinced the never-failing kind of interest aroused by presentation on the screen. Of course, the war's influence was marked, not only by the exhibition of films showing the various activities of the armies in Europe, but also the organization, training, and routine of the large bodies of men at the cantonments in the United States and drilling and evolutions in the navy and marine corps. These and other patriotic subjects were usually included in the weekly "topical revues" issued by several producing companies that specialized in films news service. It is difficult, however, to correctly

estimate the most popular type of scenario presented for public view. The play depicting the adventurous features and scenes of ranch and border life maintained its popularity to a remarkable degree, as did also the detective play, and that which appealed to the spirit of activity and adventure in every phase of life. Then, too, the scenario that is alleged to convey a great moral lesson by pointing out the inevitable punishment that overtakes the criminal or the equally certain bad results that are attained by the man or woman who transgresses the conventions of society still seemed to have an eager public following. Of dramatizations of historical characters and of standard works of fiction there were many, some well done, others merely adaptations to suit modern conditions, possibly with a view to securing greater public appreciation.

One of the notable features of the year was the evidence of the separation of the ideals, objects, and limitations of the film play and the spoken drama respectively. Whereas a few years ago the rapidly increasing popularity of moving pictures and the concurrent commercial importance of such undertakings caused some uneasiness and apprehension on the part of the producers of the legitimate drama, the latter no longer entertain any fears that the "movies" will supplant the "legitimate" in popular approval. The experience in both these lines of effort during 1917 made certain what was becoming increasingly evident before that year that each form of entertainment occupied its own field apart and distinct from the other, each catering to a certain extent to the same class of the public, yet to a larger extent having followers and devotees of its own. It became definitely settled that the spoken drama will not soon be displaced by the film play. Each constitutes a different form of expression and each has its sphere of action and appeal.

The better class of moving picture theatres were increasingly notable for their improved design and modern, fireproof construction comprising better seating arrangements and heating in addition to varied lighting effects that leave little to be desired by patrons. There was also a marked improvement in the quality of music furnished, it being usual in such theatres to maintain permanent orchestras with highly competent conductors. In addition to carefully selected incidental music accompanying the screen presentations, a more or less extensive musical programme was commonly offered.

The photography of the films produced in 1917 was even better than was observed formerly, the skillful work of experienced camera men and operatives contriving to successfully carry out the endeavors of producers and directors.

There was an encouraging increase in the use of moving pictures for educational purposes. In addition to a long series of films showing manufacturing processes and operations, it was increasingly common for educational institutions of all grades to use them for instruction in all branches of science and technology, thus giving added interest to the subjects taught. At the various army cantonments the great value of the films as a means of entertainment and instruction for thousands of soldiers was soon recognized.

This sort of entertainment was modified so

as to prove highly instructive to these large bodies of men by showing many phases of military activity both along the battle front in Europe and in transport, sanitation, and routine work at the cantonments. Brief talks by officers and other experts were a frequent accompaniment of these moving picture demonstrations.

Concerning the personal side of moving picture drama, the recent development of the film play brought out well marked tendencies of histrionic technique. Thus the successful film star made use of many arts and mannerisms not called for in the spoken drama. Experience had demonstrated the difference in the requirements of the two kinds of acting. Many men and women who had attained success before the moving picture camera could never properly impersonate an important part in a spoken play, and the reverse, as is well known, has often proved to be the case; that is, that many successful actors made failures in endeavoring to act for the movies. Conditions have therefore formed two almost distinct types of actor, and it seemed likely, in view of the developments of 1917, that the distinction would continue to be very marked.

**MUCK, KARL.** See **MUSIC, Orchestras.**

**MUNICIPAL GOVERNMENT.** Improvement in the framework of city government continued. The commission plan was still gaining in numbers, but the yearly accessions reported were small compared with a few years previously. The accessions were doubtless somewhat larger than the reports indicate, because (1) some cities were heralded as having adopted the manager plan when a complete statement would put them on the commission-manager list, and (2) the commission plan being an old story its adoption was not always reported. The largest city to adopt commission government in 1917 was Newark, N. J., which had a population of 347,000 in 1910. It voted by a large majority to accept the provision of the so-called Walsh Act, under which a large percentage of the cities of New Jersey in 1917 were governed. Other cities having over 300,000 population which had previously adopted the commission plan were Buffalo and New Orleans, with populations of 424,000 and 339,000 in 1910. Dayton, Ohio (117,000), and Grand Rapids, Mich. (113,000), are still the largest cities under the city manager plan, each of these being in the commission-manager class. Late in the year, Norfolk, Va. (67,000 population in 1910), adopted the commission-manager plan by a large popular majority, the charter following closely the new model city charter of the National Municipal League (q.v.). A city manager for New York City was advocated at length by Henry Bruere, formerly director of the New York Bureau of Municipal Research and subsequently city chamberlain of New York, in a pamphlet distributed during the year by the Municipal Reference Library of New York City. Mr. Bruere's plan was designed to relieve the mayor of New York City of executive functions, leaving him free to devote his time to matters of city policy. A mayor-manager plan was recommended for Chicago in a report by the Chicago Bureau of Public Efficiency. The mayor, city clerk, and controller would be chosen by a city council of thirty-five members (one from each ward instead of the present two), and would appoint depart-

ment heads. Neither the three officials named or the department heads would have fixed terms of office. The plan would require legislative authorization. The yearly number of cities adopting the commission plea from 1901 to 1917 were as follows:

1901	1	1912	67
1905	1	1913	112
1906	1	1914	45
1907	7	1915	39
1908	5	1916	25
1909	23	1917	30
1910	66	Unknown	7
1911	96		
Total			525

The reported 1917 accessions to the commission plan, with yearly adoptions from 1901 to 1917, and a list of 136 manager cities reported up to nearly the close of 1917 are given in the table on pages 463 and 464.

The 30 new commission cities, added to those listed in the *INTERNATIONAL YEAR BOOK* for 1916, brings the total number reported to 525. The apparent gain in manager cities was 36 in 1917. The New York State optional city charter law, enabling cities to choose by popular vote between several types of government, was upheld by the Court of Errors and Appeals late in the year, thus removing doubt from the city manager charters of Niagara Falls and Watertown. Lynn, Mass., and Appleton, Wis., voted to abandon the commission plan during the year and Portland, Ore., voted against abandoning it. The cities adopting commission government in 1917, according to records kept by the National Municipal League and *The American City*, were:

City	Population—1910
Auburn, Me.	15,064
Jamestown, N. Y.	31,297
Watertown, N. Y.	26,730
Newark, N. J.	347,469

**BOULDER'S PROGRESSIVE CHARTER.** On October 30, the citizens of Boulder, Colo., adopted a commission-manager charter which, besides the common features of nomination by petition, the initiative, referendum, and recall, provided for the Hare system of preferential voting in electing members of the commission. The city manager appoints and supervises the work of the heads of the six departments of service, finance

and record, health, welfare, safety, and planning and parks. The manager is appointed by the council on the merits of his executive and administrative qualifications, for an indefinite period, and he need not be a resident of Boulder. The director of service must be an engineer with training and experience in municipal work and is ex-officio city engineer. The director of health must be either a sanitary engineer or a member of the medical profession.

**CONSERVATIVE HOME-RULE CHARTER OF CINCINNATI, OHIO.** The new charter for Cincinnati, Ohio, like that for Boulder, was framed by a charter commission, and thus was of the home-rule type. The Cincinnati charter provided that the city "shall have all the powers of local self-government and all other powers possible for a city to have" under the State constitution. The city was to continue to be governed by a mayor and council, who, with an auditor, would be elected for terms of four years. The mayor was to appoint the chief executive officers. The city planning commission is described under CITY PLANNING.

**COUNCIL-COMMISSION CHARTER FOR JACKSONVILLE, FLA.** In striking contrast with the locally-framed and adopted charters of Boulder and Cincinnati, was one put through the Florida legislature in twenty-four hours, under suspension of the rules, without the knowledge of the people of Jacksonville.

The council commission charter provided an improvement over the previous system of mixed government, but did not accord with either the new commission-manager plan or the old mayor and council plan. The city was formerly governed by a mayor, a city council, a board of trustees for water-works and improvement bonds (which included a committee on public works, a board of health, and an election commission), and a park commission. Under the new charter there was to be a mayor, a council of eighteen members, and a commission of five members. The council and commission were to be elected by popular vote—eleven councilmen by wards and seven at large. The commissioners serve for four years, are paid \$5000 a year each, and each must give bond for \$5000. The councilmen are paid \$240 a year. The chairman of the commission, who is elected by that body, serves as mayor ex-officio. The city recorder, treasurer, and judge are elected by popular vote.

All other officers than those already named are appointed by the commission, which also employs all laborers. The city council confirms the appointment of library trustees, charity commissioners, city attorney, and members of the police force, and appoints a special city auditor annually. The commission frames the annual budget and must approve all contracts and warrants. The mayor and council of 1917 hold office until June, 1919. The present council appointed the first commission, which took office on July 3.

**BIBLIOGRAPHY.** The more notable works of the year included Cushman, *Excess Condemnation* (New York); James, *Municipal Functions* (New York); Wright, *American City* (Chicago). Reviews of the progress of municipal civil service and of budget making accounting appeared in the *National Municipal Review* for November, 1917.

# CITIES AND TOWNS UNDER CITY-MANAGER GOVERNMENT

**MUNICIPAL LEAGUE, NATIONAL.** Organized in 1894 for the study of municipal problems and the dissemination of information on the subject, the National Municipal League held its twenty-third annual meeting at Detroit, Mich., November 21-23, in conjunction with the City Managers' Association, the Conference of Bureaus of Governmental Research, and the Civic Secretaries Association. Among the reports presented at this meeting were those dealing with the city manager as a profession (Dr. Henry M.

Waite, chairman), draft of a model library section (Samuel H. Ranck, chairman) State municipal leagues (Homer Talbot, Lawrence, Kans.), county government (Otto G. Cartwright, chairman), franchises (Dr. Delos F. Wilcox, chairman).

Among the subjects discussed at the meeting were the experiences of Canadian and English cities during war times, American cities during war times, effects of war on a trained public service, municipal pensions, executive or legislative budgets, consolidation of city and county governments, training city managers, getting trained men into public service, will the city manager form of government fit all cities, non-partisan city government, and selling good government to the people.

Steps were taken to extend the league's work, and establish it upon a still more efficient basis. To that end a Survey Committee was appointed to recommend ways and means of increasing the league's income, expanding its field of efforts, and perfecting a closer coordination of its work with other associations in closely allied fields of effort. A resolution was also adopted offering the proper Federal authorities the cooperation and services of the organizations assembled for any special service which in the opinion of the Federal authorities they may be peculiarly qualified to perform.

A Conference of State Leagues of Municipalities was formed as a separate organization to meet annually in conjunction with the league.

The following officers were elected: president, Lawson Purdy, New York; vice-presidents: John Stewart Bryan, Richmond, Va.; Richard S. Childs, New York; Katherine Bement Davis, New York; Frank J. Goodnow, Johns Hopkins University; Meyer Lissner, Los Angeles; A. Lawrence Lowell, Harvard University; George McAneny, New York; Oliver McClintock, Pittsburgh; J. Horace McFarland, Harrisburg; Charles E. Merriam, Chicago; Robert Treat Paine, Boston; L. S. Rowe, Philadelphia; Charles Richardson, Philadelphia; Dudley Tibbits, Troy, N. Y.; treasurer, George Burnham, Jr., Philadelphia; secretary, Clinton Rogers Woodruff, Philadelphia; chairman of Executive Committee, M. N. Baker, Montclair, N. J.

The Baldwin Prize for the best essay on "Tendencies in Municipal Budget Making" was awarded to Albert Elmer Marks, of Harvard University, with honorable mention of the essays submitted by Joseph Low, A. T. Ginsburgh, Edmund Jolles of Harvard, and Miss Wilhelmina M. Josopait of Wellesley.

The Portland Prize for an essay on "The Public Defender" was awarded to Drott N. Larsen of Reed College.

The Morton D. Hull Prize was awarded to Robert D. Armstrong, graduate of the University of Wisconsin, for his essay on "Public Utility Regulation in Indiana, 1906-1917."

During the year the following volumes were published in the National Municipal League Series: *Municipal Functions*, by Herman G. James, and *Town Planning for Small Communities*, by Charles Sumner Bird, Jr.

The league's official publication, the *National Municipal Review*, was continued under the editorship of Clinton Rogers Woodruff and his associates, Prof. Howard L. McBain, Dr. C. C. Williamson, Prof. Herman G. James, and Miss

Alice M. Holden. It was converted into a bi-monthly.

**MUNICIPAL OWNERSHIP.** No marked changes occurred during the year 1917 as regards the ownership of franchise utilities, but war conditions stimulated agitation for the municipal supply of milk and coal. Towards the close of 1917 a number of cities, acting independently or in connection with Federal and State governments, took direct charge of some part of the coal supply within municipal limits. One of the features of the platform on which the Democratic party as represented by Tammany went back into power in New York City was a strong and sweeping demand for municipal ownership.

**BIBLIOGRAPHY.** Important books of the year were: Thompson, *Municipal Ownership* (New York), a readable brief on the negative side; and Bolton, *A Municipal Experiment* (New York), another brief against municipal ownership, which deals with power plants and is in the New York City Hall of Records.

**MUSEUMS.** See PAINTING AND SCULPTURE.

**MUSIC. GENERAL NEWS.** The entrance of the United States into the war had no noticeable effect upon musical affairs until after the opening of the autumn season. All organizations concluded their spring season, carrying out their plans as originally announced. No discrimination was made against "enemy music," nor were the German musicians who happened to be in the country at the time molested in any way. During the summer months, however, opposition to German music made itself felt in certain quarters, so that those responsible for the management of the larger musical organizations became somewhat apprehensive. The managers of opera, excepting the Metropolitan Opera House, immediately eliminated German singers and German operas; whereas the managers of concert enterprises waited for the opening of the regular fall season to determine the feeling of their subscribers and patrons. Not all adopted such drastic measures as Walter Damrosch, who at the first concert before taking his baton, read a letter of protest from a subscriber against the productions of any works by a German composer, and practically put the question to a vote. As the season progressed it became evident that the serious music-lovers wished no discrimination made in matters of art, and of all the great symphony orchestras that of Philadelphia was the only one to place German music under the ban. This sudden awakening of the patriotic feeling has undoubtedly been of benefit to the American composer. Although for some years past his works have appeared in ever increasing numbers upon the programmes of the important orchestral and choral associations, an examination of the programmes performed since October shows that very few concerts have been given without some representative American composition. The regrettable Muck incident (see *Orchestras*) stirred up considerable ill feeling for a time, especially in non-musical circles, but swiftly moving events of greater moment caused this particular excitement to be forgotten almost as suddenly as it had sprung up. Special propaganda for French music was made by the

"French-American Association for Musical Art," which brought over to this country the "Société des Instruments Anciens" (see *Chamber-Music*), Joseph Bonnet (see *Artists, Instrumentalists*), and Eugène d'Harcourt (see *Choral Societies*).—The "Union des Femmes Artistes Musiciennes," founded in Paris in 1910, established a branch in New York as the "Musical Union of Women Artists of America," under the direction of Mme. Christiane Eymael, who had been the director of the Paris organization for five years.—Several of the larger music-publishers, having considered the matter of reprinting German copyright music, decided to respect the copyright, as infringement might lead to complications after the reestablishment of peace.

#### THE UNITED STATES

**ARTISTS. Instrumentalists.** Although an enormous number of piano-recitals were given during the year, there is only one important début to be recorded, that of the young Chilean pianist, Rosita Renard (New York, March 12). Her remarkably fine and reliable technic and highly developed sense of tonal color won for her more than ordinary success. After an absence of several years Arthur Friedheim, the unexcelled Liszt interpreter, was heard again with genuine pleasure. In a number of recitals devoted exclusively to the works of Liszt he also appeared in the novel rôle of lecturer, prefacing each number by a few words of explanation. Tina Lerner, who for the past few seasons had been playing in the West, revisited the Eastern States, and was warmly received. The Dutch pianist, Jean Sickez, found that his protracted absence had not dimmed the memory of his fine art. Dorothy Berliner, who hitherto had confined herself to programmes of a more intimate nature exhibiting her exquisite refinement and eminently poetic temperament, showed that she is also equal to the demands made by works cast in the heroic and passionate moods. Rudolf Ganz, whose admirers have complained of his comparatively infrequent appearances in public, has remedied that fault during the past year, with the result that his superb qualities have won for him many new admirers. Otherwise the list of pianists heard during the past year is almost a duplicate of that of the artists of the preceding year. The list includes the names of Ignace Paderewski, Leopold Godowsky, Harold Bauer, Josef Hofmann, Percy Grainger, Mischa Livitzki, John Powell, Carl Friedberg, Ossip Gabrilowitsch, Edwin Hughes, Richard Buhlig, Harold Henry, Leo Ornstein, Arthur Shattuck, Fanny Bloomfield Zeisler, Olga Samarov, Ethel Leginska, Guiomar Novaes, Margaret Volavay, Ethel Newcomb, Eleanor Spencer, Yolanda Merö, Marguerite Melville-Lisniewska. In the year's record Teresa Carreño should be mentioned separately, for on March 13 that great artist was heard for the last time in the United States (New York). Her very last public appearance took place in Havana on March 21. A stroke of apoplexy necessitated the cancelling of her Cuban tour (see *CARREÑO*).—The début of the young Russian violinist, Jascha Heifetz (New York, October 27), was one of the most emphatic successes on record. Without a dissenting voice the critics pronounced him the equal of the greatest living masters, both as regards technical equipment and ma-

turity of conception. Just before the United States declared war upon Austria Fritz Kreisler cancelled his American tour, involving contracts to the amount of \$85,000. Immediately Maud Powell offered to fill the dates at the original prices, and to turn the entire amount over to the Red Cross. On January 8 she gave a unique recital, playing a request-programme selected exclusively from the records she had made for the Victor Company. Marie Caslova, who some years ago had made a premature début, returned as a finished artist. Although her tone is not large, it is very sympathetic; she made an excellent impression through her faultless intonation, purity of style, and general grace and refinement. Other well-known violinists heard were Eugene Ysaÿe, Mischa Elman, Efrem Zimbalist, Theodore Spiering, Albert Spalding, Francis Macmillen, Maximilian Pilzer, Édouard Deru, Eddy Brown, Samuel Gardner, Isolde Menges, Marie Zentay, Vera Barstow. —More representatives of the violoncello were heard than usual. Among the newcomers there were no stars of the first magnitude, but all were masters of their instrument. Engelbert Roentgen, a Dutchman, who was engaged as solo-cellist of the New York Symphony Orchestra in the fall of 1916, made his début as soloist with that organization on January 21, playing his father's (Julius R.) concerto. Maurice Dambois, a Belgian, made the deepest impression with his unusually large and sympathetic tone (New York, April 21). Max Gegna, a Russian, also proved himself an artist of sterling merit (New York, March 23). Among the prominent masters heard were Pablo Casals, Boris Hambourg, Alwin Schröder, Leo Schulz, Willem Willeke, Herman Sandby, Paulo Gruppe, Bogumil Sykora, Vladimir Dubinsky, Gerald Maas.—An event of special interest was the début of the famous French organist, Joseph Bonnet, who was first heard on the fine organ at the College of the City of New York (January 30). In the fall he gave a series of five historical concerts, presenting the development of organ-music from the forerunners of Bach to the modern masters.

**Vocalists.** Great interest was aroused by the announcement of a series of four historical recitals by that past mistress of her art, Marcella Sembrich. Unfortunately she sang only the first recital (January 4), presenting folk-songs of various nations. Overwork in connection with her duties as president of the Polish Relief Commission caused a nervous breakdown, necessitating the cancellation of all engagements. Francis and Florence MacLennan, who before had proved their worth as operatic artists, appeared with equal success on the concert-stage, notably in their duet-recitals. Louis Graveure, the Belgian baritone, who had made such a deep impression the preceding year, appeared in numerous recitals and as soloist at most of the important festivals, winning universal recognition as one of the world's foremost concert-singers. Among the recognized favorites that were heard during the year were Ernestine Schumann-Heink, Elena Gerhardt, Julia Culp, Maria Barrientos, Tilly Koenen, Alma Gluck, Olive Fremstad, Frieda Hempel, Margarete Matzenauer, Marcella Craft, Marcia van Dresser, Ratan Devi, John McCormack, Emilio de Gogorza, Karl Jörn, Léon Rothier, Reinald Werrenrath.

**ORCHESTRAS.** The New York Philharmonic So-

cieté celebrated the seventy-fifth anniversary of its foundation by an extra series of four festival concerts (I, Beethoven-Wagner-Liszt. II, American and French composers. III, Bach-Beethoven. IV, American, French, and Slavonic composers) and a grand banquet, at which Arthur Curtiss James presented to the society the sum of \$100,000 for the purpose of creating a building fund for the erection of their own concert-hall. At the same time George F. Baker contributed \$10,000 to that fund. In the autumn the orchestra began its seventy-sixth season with a new concert-master, the Belgian violinist, Alfred Megerlin, and a new harpist, Alfred Kastner, formerly solo-harpist of the Queen's Hall Orchestra of London. Under its regular conductor, Josef Stransky, it also gave a number of concerts at various camps, performing lighter music that could be enjoyed by the average soldier. A notable concert of the New York Symphony Orchestra (Walter Damrosch) was that of March 11, when Beethoven's Triple Concerto was performed with Kreisler, Casals, and Bauer as soloists. To the orchestral forces of Chicago a new organization of fifty players, under the conductorship of Arthur Dunham, was added, beginning rehearsals in June, and opening their first season in the fall. In San Francisco a new municipal orchestra of sixty players, under Friedrich G. Schiller, was established for the purpose of giving high class symphony concerts for a nominal admission fee of ten cents. The first season opened on February 22, and was a great artistic and financial success. Having safely passed the crisis, which for a time seemed to threaten the very existence of the organization, the San Francisco Symphony Orchestra (Alfred Hertz) concluded a most successful season. During the months of June and July the New York Civic Orchestra gave a second season of summer concerts under a new conductor, Pierre Monteux. The largest attendance was on those nights on which the principal number was a Beethoven symphony. The series was severely criticized for the performance of much French music of inferior quality, while the works of American composers were entirely ignored. After several years of residence in Berlin Sam Franko returned to New York and resumed in January his former famous "Concerts of Ancient Music." The New York Society of Friends of Music, who in their first two seasons had limited themselves to the cultivation of chamber-music, enlarged the scope of their activities by including in their series some fine orchestral concerts. On one occasion they had engaged the Philadelphia Symphony Orchestra; on a second occasion they presented a number of new works by Ernest Bloch with the Metropolitan Opera House Orchestra under Bodansky; and at a third concert Bloch himself conducted a programme of his own works and several by modern French composers. In three orchestral concerts which he gave in New York Ossip Gabrilowitsch, the famous pianist, revealed himself as a conductor of unusual ability. In Boston Emil Mollenhauer formed an orchestra of seventy performers, primarily for the purpose of educational concerts. A novel feature was the arrangement of private rehearsals to give an opportunity to composers of hearing their own works. The Boston Symphony Orchestra (Karl Muck) gave their entire New York Series without the assistance of a single

FOUR MUSICAL ARTISTS PROMINENT IN 1917

outside soloist; in fact, the only work requiring the services of a soloist, Brahms's Double Concerto, was played by Anton Witek and Heinrich Warnke, the leaders of the violins and cellos, respectively. At the last concert of the spring season (both in Boston and New York) there was played for the first time in America a revised version of Liszt's *Faust Symphony*, made by the master in 1883, the MS. score of which was discovered in Bayreuth by Dr. Muck. The autumn season of the famous orchestra opened in storm and stress, owing to the conductor's rather tactless refusal to play the national anthem at the first concert in Providence. The incident aroused nation-wide comment, and in some localities bitter resentment, especially in Washington, Baltimore, and Pittsburgh, where the civil authorities forbade the concerts of the organization. For a time there were rumors that Col. Higginson would disband the orchestra, but gradually matters adjusted themselves, so that the concerts in Massachusetts and New York were given as scheduled. Dr. Muck receded from the position he had taken, and has since opened every concert with the national anthem, a practice adopted by all symphony orchestras. On December 16 the orchestra gave a concert for the benefit of the Halifax sufferers, which netted the sum of \$10,000. As a result of the opposition aroused the Philadelphia Symphony Orchestra (Leopold Stokowski) was requested to eliminate from its concerts in Pittsburgh all works by German composers. The directors not only acceded to the request, but passed a resolution barring works by German and Austrian composers from all concerts of the orchestra. Before the opening of the season in the fall Dr. Ernst Kunwald, the conductor of the Cincinnati Symphony Orchestra, had tendered his resignation to the board of directors, who refused to consider it. After his sudden arrest by the Federal authorities on December 8, for reasons not made public (Dr. Kunwald is an Austrian subject), and his equally sudden release the next day he again presented his resignation, which the directors accepted with sincere regret. For the remainder of the season the system of engaging guest conductors was adopted, the first one being Walter Rothwell.—In the matter of novelties brought forward the year was a remarkably poor one, both for the quality and the number of the works produced. Worthy of mention are Edward Ballantine's symphonic poem, *The Eve of St. Agnes*, a work showing delicate imagination and refined taste, and Ernest Bloch's *Trois Poèmes juifs*, both given by the Boston Symphony Orchestra (January 19 and March 23, respectively). The Chicago Symphony Orchestra brought out Eugène d'Harcourt's *Symphonie Neo-classique* (March 3), an interesting and successful experiment showing that the classical form can be perfectly adapted to modern contents. A few days later (March 9) the same orchestra gave Felix Borowski's very beautiful *Élégie symphonique*. The Los Angeles Symphony Orchestra (Adolf Tandler) contributed C. W. Cadman's *Thunderbird Suite* (January 20), constructed entirely on original Indian themes. See also *Festivals*.

**CHAMBER-MUSIC.** The Cherniavsky Trio, formed by the three brothers, Jan (piano), Leo (violin), and Michael (cello), having begun its first American tour in the West in the fall of 1916, were heard for the first time in New York

on January 16, and aroused great enthusiasm through their perfect ensemble. Another foreign organization that made a profound impression on the occasion of its American début (New York, January 14) was the "Société des Instruments Anciens," founded in 1900 in Paris, and brought here under the auspices of the French-American Association for Musical Art. The members are Henri Casadesus (viola d'amour), Maurice Hewitt (quinton), Eugène Dubruille (viola da gamba), Maurice Devilliers (hass viol), Regina Patorni (harpsichord), and Mme. Henri Casadesus (harp-lute). Their performances met with such favor that in the fall they began a second season, Louis Hasselmans taking the place of E. Dubruille, who had been called to the colors. For the first time in the history of the Flonzaley Quartet a new player took the place of one of the original members. Louis Bailly, formerly a member of the Capet, Marsick, and Geloso Quartets, replaced Ugo Ara, the viola, who had joined the Italian army. Like a shock came the news of the dissolution of the famous Kneisel Quartet, whose farewell appearances (Boston, March 13) and New York (April 3) became the occasions for tumultuous demonstrations. Founded in 1886 (with Franz Kneisel, Otto Roth, Louis Svecenski, and Fritz Giese as the original members), it had played thirty-two consecutive seasons in Boston and twenty-five in New York, besides having made numerous tours of the United States and two of Europe. Its influence in practically creating and cultivating a taste for chamber-music in America can scarcely be overestimated. For many years it had enjoyed an international reputation as one of the finest quartets in the world. After its dissolution Fritz Kreisler announced for the season of 1917-18 three special concerts by the ensemble (Hans Letz, Louis Svecenski, and Willem Willeke), himself taking the place of Kneisel. The first of these concerts took place on December 21 in New York. Hans Letz, for the last five seasons the second violin of the Kneisel Quartet, formed his own quartet with Sander Harmati, Edward Kreiner, and Gerald Maas, making a successful début in New York (October 30).

**CHORAL SOCIETIES.** On April 1, the Scranton Oratorio Society, with the assistance of an orchestra of 150 under the direction of Edgar Varese, gave at the Hippodrome in New York a performance of Berlioz's *Requiem*, in honor of the fallen of all nations. That the work made little impression was not altogether due to the execution, which was not above criticism; the chief fault lay with the composition itself, which, as time passes, seems to become more dull, hollow, and bombastic. The forced resignation of Louis Koemmenich as conductor of the New York Oratorio Society caused a violent dissension, which for a time threatened to disrupt the society (founded by Dr. Leopold Damrosch in 1873). In this crisis the directors turned to the founder's son, Walter Damrosch, who himself had been the conductor from 1885-99. While he accepted the post only for the season of 1917-18, in order to enable the directors to secure a permanent conductor, his popularity succeeded in uniting the warring factions. The famous Apollo Club of Chicago (H. M. Wild), which was about to be disbanded because of financial difficulties, was saved by the contributions of several music-lovers and the proceeds

of a benefit concert arranged by the Piano and Organ Dealers' Association. The Philharmonic Society of Chicago (O. G. Erickson) gave the premiere of Clough-Leigher's *The Christ of the Andes* for eight-part chorus and orchestra, which made a very favorable impression. The New York Liederkranz celebrated the seventieth anniversary of its foundation with an elaborate festival concert (January 9) under its regular conductor, Otto Graff, assisted by Teresa Carreño as soloist. Mr. Graff died in May, and was succeeded by Eugen Klee. Under the direction of Eugène d'Harcourt a special performance of Gounod's *Mors et Vita* was given at the Metropolitan Opera House (April 8) by the Metropolitan chorus, orchestra, and soloists, the proceeds of which were turned over to the Franco-American Relief Committee of the Paris Conservatory. In connection with the Bach-Beethoven festival concert of the New York Philharmonic Society the famous Beethoven-Bach Choir (Frederick Wolle) was heard for the first time in New York, and fully justified its national reputation.

**FESTIVALS.** The thirty-first annual Norfolk Festival (Litchfield County Choral Union) took place under the direction of Arthur Mees, Henry Schmitt, and Frederick Stock (June 5-7). The novelties produced were John A. Carpenter's *First Symphony*, of almost ultra-modern tendency, Percy Grainger's *The Warriors*, an imaginary ballet, N. Laucella's *Whitehouse*, a series of symphonic impressions, and C. V. Stanford's *Irish Rhapsody* No. 5. The sixtieth annual Worcester Festival was held on October 3-5, and conducted by Arthur Mees and Thaddeus Rich. The principal number was Saint-Saëns's *Samson and Delilah* (in concert form). The novelties were Horatio Parker's *Red Cross Hymn* (words by John Finley), Percy Grainger's *Marching Song of Democracy*, and Henry Hadley's *Ode to Music* (words by Dr. Henry van Dyke); the last two were written specially for this festival. Of the three, Hadley's *Ode* was the best, and was received with the greatest enthusiasm. The twelfth annual Norwegian Sangerfest at Seattle (August 31-September 3) was marked by the unveiling of a colossal statue of Grieg by the sculptor, F. H. Frolick, a former resident of Seattle. The concerts were under the direction of Rudolf Moller, whose comic opera, *Tjarlie Trallerud*, had its première on that occasion. From April 24-28 Frederick Stock conducted the first music festival on a grand scale which Chicago has had in thirty-three years. For the performance of the principal number, Mahler's *Eighth Symphony* in E flat (given on three successive days), the Chicago Symphony Orchestra had been increased to 150 players, and a chorus of 850 voices had been recruited from seven local choral societies. At the University of Pennsylvania De Koven's *Masque of the American Drama* (text by Albert E. Trombly) was produced in commemoration of the 150th anniversary of the production in Philadelphia of the first American drama, *The Prince of Parthia*. The fiftieth anniversary of the admission of Nebraska into the Union was celebrated by an elaborate pageant by Hartley B. Alexander, with music, partly original and partly based on themes of the Omaha Indians, by Howard I. Kirkpatrick, both of the University of Nebraska.

**OPERA.** At the Metropolitan Opera House, of

New York, 159 performances were given from a repertory of 40 works by 24 composers. According to nationality these were divided as follows: Italian, 17 works by 9 composers totaled 76 performances; German, 14 works by 6 composers totaled 38 performances; French, 6 works by 6 composers totaled 30 performances; Russian, 2 works by 2 composers totaled 9 performances; American, 1 work totaled 6 performances. Wagner, represented by 8 works, and Verdi, represented by 4, each had 23 performances; next came Puccini with 20 performances of 4 works. The works most frequently given were Bizet's *Carmen* (10 times), Verdi's *Aida* (9) and Mussorgsky's *Boris Godunov* (7). Beethoven's *Fidelio* was given only once. The falling off in the number of representations of Wagner's works, which had always exceeded those of any other composer, was due to their elimination from the repertory with the opening of the fall season. In order to obtain a correct perspective, the 23 performances of Wagner (January 1-April 20) should be compared with the number of performances of Verdi and Puccini for the same period, which shows 16 for Verdi and 11 for Puccini. Thus it is seen that the same relative proportion has been maintained as in past years. Only two novelties were produced. De Koven's *The Canterbury Pilgrims* (March 8), with Ober and Sembach in the principal rôles, under the direction of Bodanzky, was received cordially. The libretto, by Percy MacKaye, offers too many complicated situations, and is not effective from an operatic standpoint. The music, while fresh and sparkling, is more adapted to operetta than to comic opera of the higher type; it also lacks originality, being frequently reminiscent of the composer's earlier operettas, especially *Robin Hood*. Rabaud's *Marouf* (December 19), with Alda, de Luca, and Rothier in the principal rôles, under the direction of Monteux, owed its favorable reception perhaps more to the superb stage-setting and splendid interpretation than to the power of its music, which lacks individuality. There is fine and very effective orchestration, which is the chief merit of the score; the musical invention is not striking, and the general style, a mixture of Wagnerism and impressionism, is wanting in homogeneity. More satisfactory were the revivals of Mozart's *Nozze di Figaro* (January 24), Gounod's *Faust* (November 17) and Donizetti's *Figlia del Reggimento* (December 17). The last named opera (not given since 1903, with Semblich) was especially interesting as proving the vast superiority of Donizetti's comedies over his tragedies. Two new conductors made their first appearance. Roberto Moranzoni (début with *Aida*, November 12) justified the verdict of Boston, where he had made an excellent reputation as one of the conductors of the Boston Opera Company. Pierre Monteux was not exactly unknown, having been heard in New York the year before as conductor of the Russian Ballet, and also during the past summer as conductor of the Civic Orchestra; he made his début with *Faust* (November 17), and has since proved himself a more efficient operatic than symphonic conductor. The new singers, Julia Claussen (début as Dalila, November 23), Morgan Kingston (as Manrico, December 1) and Florence Easton-MacLennan (as Santuzza, December 7) were artists of established reputation in the operatic world, and proved

themselves valuable additions to the Metropolitan Company. May Peterson and Ruth Miller were excellent interpreters of secondary rôles.—The Chicago Opera Company brought out two novelties, Mascagni's *Isabeau* (November 16) with Raissa, Crimi, and Maguenat, and Campanini as conductor, was received with marked enthusiasm. The critics gave high praise to the text of *Illica*, and described the music as a faithful and effective portrayal of the dramatic situations. Henry Hadley's *Azora* (December 26), with Fitts, Middleton, Lamont, and Goddard, under the direction of the composer, was cordially received. The work is frankly melodious; the orchestration was criticized as a trifle too heavy for the voices. Among the new singers Riccardo Stracciari (début as Rigoletto, November 25) created a sensation almost equaling that of Galli-Curci of the preceding season, while Geneviève Vix (début as Manon, December 1) also revealed a voice and talent of the highest order. Instead of the Sunday Wagner performances of former years, symphony concerts were given, at which many works by American composers were produced.—After the Boston National Grand Opera had gone into bankruptcy with liabilities amounting to over \$123,000 (in the spring), its director, Max Rabinoff, organized the Boston Opera Company. A few performances were given in Canada and the United States, but early in December, owing to the reduction of passenger trains and consequent inability to maintain its schedule of performances, it was disbanded.—Under the management of Edoardo Petri, of the Metropolitan Opera House, a season of "educational opera" was given in connection with the summer courses at Columbia University (July 17-31). In spite of the excessively hot weather the attendance surpassed all expectations. The same was true of the regular summer season given at Ravinia Park (Chicago).—Under the modest name of "Society of American Singers" Albert Reiss gave a very successful season of "intimate opera" in English at the Lyceum Theatre, New York (May 7-19). In that short season occurred the American premières of Donizetti's *Campanello di Notte* and Pergolesi's *La Serva Padrona* (May 7) and Gounod's *Le Médecin malgré lui* (May 10). Besides unusually successful seasons in several of the larger cities, Fortune Gallo's San Carlo Opera Company gave special performances for the soldiers at Camp Funston, Kans. (December 12 and 13). Three days after the first production of his *Azora* at Chicago (December 26) Henry Hadley was notified that his *Bianca* had been awarded the \$1000 prize offered by W. W. Hinshaw, with the guarantee of production during 1918.

**EUROPEAN COUNTRIES.** According to the meagre reports received from Germany, musical activity there did not decline, whereas in England, and especially in France and Russia, it increased remarkably. In Italy the operatic seasons in the principal cities were so disastrous that many of the foremost opera houses (among them La Scala in Milan) closed their doors. On the other hand, an experiment tried by the military authorities of furnishing operatic entertainment to the soldiers in the field met with unqualified success. The "Teatro del Soldado" during the months of August and September gave 149 performances, at which some of the stars of the first magnitude were heard.

The attendance was estimated at 600,000. All expenses were met by the military authorities.

**Bibliography. REFERENCE.** *The Art of Music* (14 vols., New York), prepared under the supervision of D. G. Mason as editor-in-chief and César Saerchinger as managing editor by several of the foremost authorities on music, such as Richard Strauss, Sir C. H. H. Parry, C. M. Widor, Ernest Newman, Harold Bauer, Alfred Hertz, Leland Hall, Edward B. Hill, David Bispham, etc. Vols. 1-3 contain a full history of music from the earliest times to the present day; vol. 4, Music in America; vol. 5, The Voice; vol. 6, Choral and Church Music; vol. 7, Piano-forte and Chamber-Music; vol. 8, The Orchestra and Orchestral Music; vol. 9, The Opera; vol. 10, The Dance; vols. 11 and 12, Dictionary of Musicians; vols. 13 and 14, Musical Examples. The work is comprehensive in scope, including the very latest composers; the space allotted to the various topics is admirably proportioned to the relative importance of the subject matter; facts are stated concisely and accurately; the critical estimates have the weight of authority. In a work executed along the lines laid down occasional duplication is unavoidable, but divergent opinions of different writers on the same topic would seem to stimulate the critical faculty of the reader. A novel and very valuable feature is the plan on which the dictionary volumes have been prepared; they contain complete biographies, and ample references to the preceding volumes, where fuller treatment is found, give them the character of a very elaborate and complete index to the entire work, including the musical examples.—**BIOGRAPHY.** M. H. Flint, *Caruso and His Art* (New York), a biography and detailed analysis of his principal rôles, panegyric rather than critical; M. Montagu-Nathan, *Glinka* (London), the first biography in English; id., *Mussorgsky* (London), critically appreciative; A. E. Hull, *Skriabin* (London), full biography with detailed, critical analyses of principal works from the standpoint of the sympathetic admirer, with a tendency to overestimate the composer's importance; H. T. Finck, *Richard Strauss: The Man and His Music* (Boston), with the exception of Steinitzer's (the standard work, in German) by far the most comprehensive and important biography in any language, surpassing Steinitzer in impartiality and critical acumen.—**HISTORY.** W. Goodrich, *The Organ in France* (Boston), a concise and accurate account with full specifications of several representative instruments; M. Hargrave, *The Earlier French Musicians* (London), dealing with the period 1632-1834, a mere compilation from various sources, lacking in cohesion and orderly arrangement; W. W. Longford, *Music and Religion* (London), a brief survey of the art of music as the handmaid of religion; M. Montagu-Nathan, *An Introduction to Russian Music* (Boston), a clear and very concise exposition limited strictly to essentials; C. Macpherson, *Short History of Harmony* (London), rather superficial, much too condensed for so broad a subject; E. M. Skinner, *The Modern Organ* (New York), a brief, but authoritative, history of the evolution of modern organ-building.—**CRITICISM, etc.** J. G. Huneker, *Unicorns* (New York), a collection of essays dealing with art, literature, and music; A. H. Moncur-Sime, *Shakespeare: His Music and Song* (London), explains allu-

sions to music and musical instruments in the dramas, with a special chapter on the songs of birds; M. Montagu-Nathan, *Contemporary Russian Composers* (New York), preceded by a survey of Russian music, treats critically and in detail the works of nine important composers; C. van Vechten, *Interpreters and Interpretations* (New York), contains, besides sketches of several contemporary singers, essays expressing strongly subjective judgments with a decided leaning toward futurism; C. Scott, *The Philosophy of Modernism* (London), a collection of very stimulating essays dealing with various aspects of modern music.—SINGING. G. Heller, *The Voice in Song and Speech* (London), a lucid exposition of fundamental principles, with hints as to practical execution; F. E. Miller, *Vocal Art Science* (New York), a thoroughly scientific treatise built on the fundamental thesis, that all defects in voice-production are due to physical defects, and therefore can be cured by removing the physical cause.

**NATIONAL BANKS.** Much of the matter contained in the article BANKS AND BANKING relates to the national banks because they are the principal constituents of the Federal Reserve System. The growth of national banks in recent years has been truly remarkable. According to the report of the Comptroller of the Currency giving a summary of the combined business of all national banks on November 20, 1917, there were 7656 such banks with total resources of \$18,553,000,000. This was an increase over November 17, 1916, of \$3,033,000,000 and was more than 50 per cent greater than the aggregate resources at the end of 1912. Even more remarkable was the increase of \$2,009,000,000 between September 11, 1917, and November 20. The total resources of national banks exceeded those of all State commercial banks, including trust companies and private banks, by \$500,000,000.

The total deposits on November 20 were \$14,798,000,000,000, an increase of \$2,309,000,000 over November, 1916, and an increase of \$1,564,000,000 over September 11, 1917. The increase between these two dates in 1917 was spread more or less uniformly throughout the country.

Total loans and discounts on November 20 were \$9,535,000,000, an increase of \$1,189,000,000 over the preceding year. Cash in vaults and due from Federal reserve banks amounted to \$1,759,000,000 on November 20. United States bonds and certificates of indebtedness held by national banks aggregated \$2,354,000,000 on November 20, an amount nearly three and one-half times as great as the amount held in November, 1916. Most of this increase in this latter item was due to short term certificates of indebtedness. Other bonds and securities held on November 20 amounted to \$1,906,000,000. Total capital, surplus, and undivided profits on

November 20 were \$2,236,000,000, an increase of only \$93,000,000 over November, 1916.

**TRUST POWERS.** The United States Supreme Court in the case of Bank v. Fellows, handed down on June 11 an important decision upholding the constitutionality of the provision of the Federal Reserve Act, authorizing member banks to exercise the powers of executors, trustees, administrators, and other fiduciary activities. The Federal District Court of Michigan had decided against the constitutionality of this section. The Supreme Court declared the section undoubtedly constitutional, thus granting the national banks full authority to enter a field previously monopolized by the trust companies. For many years the national banks had felt the increasing competition of the trust companies who, in addition to their trust and administrative functions, had entered the field of commercial banking. The effect of the decision therefore was to equalize the competitive advantages of national banks and trust companies and to stimulate the latter to enter the reserve system. With these new powers, moreover, the small national banks can better serve their communities than was possible heretofore.

**NATIONAL BOARD OF FIRE UNDERWRITERS.** See FIRE PROTECTION.

**NATIONAL CIVIC FEDERATION.** This association held its seventeenth annual convention at the Hotel McAlpin, New York City, on January 23-24. About 600 men and women from all sections of the United States were present. Memorial services were held for the late Seth Low, formerly president of the association. Henry L. Stimson, former secretary of war, and Dr. John H. Finley, New York State commissioner of education, addressed the gathering and urged more extensive military training in the United States. A resolution was adopted seeking to obtain the establishment of a Federal commission to regulate immigration. In September it was announced that the federation was planning a big campaign of labor, capital, and politics to help win the war. The officers of the association are: V. Everitt Macy, president; Samuel Gompers, vice-president; and Ralph M. Easley, chairman of the executive council.

**NAVAL PROGRESS.** By far the most important naval event of the year was the entrance of the United States navy into the war and the addition of its forces to those of the

Entente powers. Under existing conditions its battleships were not needed, the British battlefleet alone being so vastly superior to the German that the latter did not dare to venture beyond the protection of its mine fields. But the American destroyers and patrol ships were of enormous value, particularly the destroyers, which were the most effective enemy of the submarine—actively, in chasing and destroying it, and passively, in protecting merchant ships against attack.

It is no longer possible to describe the developments of the various navies with accuracy. First, because of the secrecy enforced by the warring powers regarding their activities, but most of all because the United States itself is in the war and no information of value to the enemy should be published. With respect to the Entente Allies this confines us to a consideration of such information as has been made public by the various governments and published in the press at home and abroad. As the authorities had been very liberal in giving out information not considered detrimental to the Allied operations or undesirable for the enemy to learn, sufficient was known to give a general idea of the development of naval matters in friendly countries. As regards Germany and Austria a good deal of information was obtained from the press of neutral countries, captured vessels, prisoners, and other sources. Much of it was unconfirmed rumor but applying various tests, comparisons, and reasoning, some strongly probable conclusions might be derived even from rumors.

**GREAT BRITAIN.** At the end of 1917 the British navy still held its commanding position as the greatest of all navies. Its strength in ships of every class (except submarines), guns, and men was twice that of any other power. Since the war began not less than fourteen dreadnought battleships and six battle cruisers had been added to its fleet, besides many light cruisers, destroyers, and submarines. This addition alone exceeded the total strength of any other navy except that of the United States or Germany. According to German reports, four of the new British battle cruisers were of the *Tiger* type improved, and had a displacement of 30,000 tons, a speed of 32 knots, and 8 16-inch guns. Their names were the *Leopard*, *Glorious*, *Furious*, and *Courageous*. From the same German source we learned that six light cruisers of 3600 tons were building or completed. They were to have 40,000 I. H. P., a speed of 31 knots, an armor belt of 3-inch thickness, and carry 6 6-inch guns.

In 1915, 31 shallow-draft monitors were built and 3 purchased from Brazil. All were reported to carry two guns varying in calibre from 6 to 15 inches depending upon the size of the vessel; and nearly all were said to be fitted with caissons at the sides to reduce the danger of torpedo attack. They were found to be exceedingly useful in the Gallipoli operations, in the African rivers, and on the coast of Belgium.

The number of destroyers under construction at the outbreak of war was about 50. These were of course completed and it was estimated that at least 100 more had been built. The British reported 30 to 40 sunk, many of which were small and old boats. A large number of merchant vessels were taken into the naval service. Some were armed as auxiliary cruisers,

others fitted as hospital ships, transports, supply ships, patrol vessels, etc. Hundred of trawlers were taken over and perhaps half as many more built. These were armed and used for patrol service and mine-sweeping. The work of these sturdy, seaworthy little vessels did much to neutralize the German mining operations on the British and Belgian coasts, and they destroyed many submarines. The cost of the British navy was about one billion a year. The estimates for 1917-18 provided for 450,000 men.

**UNITED STATES.** When the building programme of 1917 was completed the United States would be the second naval power by a safe margin over Germany of more than 35 per cent in displacement and gun power of the capital ships. On December 31, 1917, the war building programme actually in hand comprised a little more than 800 vessels. Including those commenced before the United States entered the war, it was, according to government reports, approximately as follows: 5 battleships of 32,000 tons, 12 14-inch guns, 21 knots speed; 4 battleships of 32,600 tons, 8 16-inch guns, 21 knots; 4 battleships of 42,600 tons, 12 16-inch guns, 23 knots; 5 battle cruisers of 34,800 tons, 10 14-inch guns, 35 knots; 6 scout cruisers of 7100 tons, 8 6-inch guns, 35 knots; more than 300 destroyers of 1100 tons, 4 4-inch guns, 35 knots; about 100 submarines (including those building before April 6, 1917, and not yet completed); 1 fuel ship of 14,500 tons, 1 hospital ship of 9800 tons, 1 ammunition ship; 345 submarine chasers; 20 to 50 mine-sweeping seagoing tugboats (this number likely to be increased to almost any figure).

To the foregoing list of vessels building must be added a vast number of merchant vessels, yachts, and pleasure craft which were taken over during 1917 to be employed as transports, fuel ships, hospital ships, patrol vessels, etc. The cost of the vessels building was estimated at \$1,250,000,000. The normal rate of construction was greatly accelerated, particularly in the case of the destroyers, which were all to be completed by February 1, 1919. The submarine chasers were being delivered at the end of 1917; all of them and all the first batch of mine sweepers ordered were to be delivered by the spring of 1918.

To the floating navy must be added some hundreds of aircraft—kite-balloons, dirigibles, and airplanes (hydroplanes, torpedoplanes, flying boats, etc.). The personnel was increased between April 6 and November 15, 1917, approximately as follows: enlisted force of the navy, 64,680 to 149,169; naval reserve force (January 1, 1917, to November 15), 500 to 49,000; naval militia (National Naval Volunteers), 9500 to 16,000; hospital corps, 2000 to 7000; marine corps, enlisted force, 13,266 to 30,000; marine corps, officers, 426 to 1197. There were, on November 15, 1917, about 13,000 officers in the Navy, Naval Reserve Force, and National Naval Volunteers. The number of officers and men in the Marine Corps Reserves and National Naval (marine) Volunteers about 1800.

In addition to other developments, a great naval base had been established at Hampton Roads, the Jamestown Exposition Grounds and Pine Beach property constituting the land area. On this were being erected all the structures necessary for a fleet operating base, a naval training station, an aviation base, a submarine base,

and other purposes. These included wharves, piers, offices, barracks, shops, and great storehouses of every kind. The enlargement of the Naval Academy provided for 2000 midshipmen. More than 1000 warrant officers were commissioned and over 1300 enlisted men were appointed to warrant rank. All navy yards were greatly expanded to take care of new construction, repairs, supplies, etc., and supply depots of large capacity were established at the principal naval ports. Also, new shipbuilding plants of unprecedented size were built to insure completion of the destroyer programme.

**FRANCE.** Of the French navy there is little to record. Three light cruisers of 4500 tons, laid down in 1914, were said to have been completed. Naval expenditure in 1917 was devoted chiefly to the repair and maintenance of the existing fleet and the construction of destroyers, patrol vessels, mine-layers, mine-sweepers, etc. The French army bore the brunt of the German onslaught and upon its continued efficiency depended the success of the Allied cause. Therefore, and because the British navy can safely be relied upon to hold the main German fleet in blockade, the French have turned all their energies into military channels. However, since the French navy at the outbreak of war was the fourth in the world, it was able without material accession of strength to be of enormous service in the Mediterranean and the British Channel as well as in defending its own coasts and commerce against submarine and destroyer operations.

**ITALY.** Like France, Italy began no important vessels since her entry into the war—and for similar reasons. In the first ebullitions of war enthusiasm her navy conducted raiding operations in force along the Austrian coast, but the sinking of two armored cruisers by Austrian submarines showed the futility of such tactics and indicated the most dangerous enemy—a title it proceeded to further justify by the sinking of Italian merchantmen. In consequence of the "submarine menace," Italy pressed all suitable craft into her anti-submarine campaign and began building destroyers. She also carried the shallow-draft, torpedo-proof idea one step farther by the construction of gun-rafts. These were of sufficient size and buoyancy to carry heavy guns and a supply of ammunition; owing to their very light draft they were not likely to be struck by a torpedo, and if struck, they would not be put out of action.

**JAPAN.** Early in 1917 the Japanese government formulated a programme of construction which later was adopted by the parliament. The vessels proposed were as follows: 3 battleships, 2 battle cruisers, 6 light cruisers, 3 scouts, 2 large destroyers, 15 destroyers, 11 large submarines, 9 smaller submarines, 3 naval auxiliary ships. The sum of 260,641,700 yen (\$130,000,000) was appropriated for their construction, the expenditure of which was to be spread over seven years. During 1917 the following ships were to be laid down: 1 battleship of 32,000 tons, 1 light cruiser of 7200 tons, 1 light cruiser or scout of 3800 tons, 1 destroyer of 1200 tons, 1 destroyer of 700 tons, 2 submarines of 700 tons, 1 naval auxiliary of 10,000 tons. In addition to the foregoing, at the request of the minister of marine, a supplementary sum of 12,000,000 yen was appropriated for the immediate construction of 6 destroyers. These were at once laid down

and their completion in April, 1918, was expected. The other vessels under construction in 1917 were: 2 battleships of 30,800 tons, which were to be ready for service early in 1918; several destroyers, all of which were to be completed before the end of 1917; several submarines, one or two of which were completed during the year. The Japanese part in the war up to the end of 1917 was wholly naval. During 1917, cruisers were employed in policing the Pacific and Indian Oceans and a destroyer flotilla in the Mediterranean. In January, 1917, the battle cruiser *Tsukuba* (13,750 tons) was destroyed by an internal explosion and in June the destroyer *Sakaki* (665 tons) was sunk in the Mediterranean.

**RUSSIA.** The Russian navy at the end of 1917 was apparently in the same condition as the Russian army—disorganized as a mass, ineffective as a force, but with here and there a unit possessing some fighting qualities. There was no shipbuilding going on at the end of 1917 and the vessels of the fleet were said to be deteriorating from lack of intelligent care.

**GREECE.** The Greek fleet was dominated by the Allies while Constantine held the throne and many of the destroyers were seized and manned by the French, British, or Italians. It was reported in December that these had been returned and remanned by Greek officers and men. The Greek navy possessed about a dozen destroyers and about the same number of torpedo boats and they could be made of much use against German or Austrian submarines operating in the vicinity of her coasts. A 24-knot battleship of 19,200 tons, the *Salamis*, was building in Germany at the outbreak of war but was seized by the German naval authorities. A similar vessel was ordered in France in 1914; the degree of completion accomplished was unknown but it was doubtful if much work had been done on it.

**GERMANY.** Such knowledge as we possessed at the end of 1917 concerning the building operations of the year in the German navy was fragmentary and inconclusive. At the outbreak of war the High Seas Fleet consisted of 17 dreadnought battleships and 20 pre-dreadnoughts. Since the war began 3 new dreadnoughts were completed and at least one pre-dreadnought lost. In 1914, 4 battle cruisers were in service and 4 building. Since that date, 4 battle cruisers were completed; 1 (the *Lutzow*) was lost, 1 (the *Goeben*) was in the Black Sea and nominally in the Turkish navy, and 1 (the *Von der Tann*) was thought to have been lost early in the war but the report was unconfirmed from any German source. Of 8 armored cruisers only 2 of the smaller and weaker ones remained. Of 23 light cruisers with a speed exceeding 22 knots that were in service in 1914, 13 had been sunk. At least 9 had been completed since the war began; and of these 2 were also sunk. The number of destroyers in service in 1914 was 149 and 17 were building. German destroyers, like German submarines, carry numbers instead of names and from several boats that were destroyed or captured it was deduced that not less than 90 boats have been laid down and completed since 1914 and there was no doubt that the new boats were much larger than the old ones, better armed, and probably equal in size, speed, and gun power to the American or British destroyers.

### DISTINGUISHING DEVICES OF PETTY OFFICERS AND MEN

### UNITED STATES NAVAL INSIGNIA

As to the number of German submarines in active service, building, lost, etc., there was a lack of sufficient information on which to base a close estimate. However, there was considerable reason to believe that at the beginning of the ruthless warfare against commerce on February 1, 1917, Germany had between 200 and 300 U-boats ready for use. Since that date she had probably built 125 to 175 (including small submarines and mine-laying boats) and had lost not less than 100. According to statements from British sources, 39 were sunk between November 1 and November 15, 1917. The report was probably an exaggeration, but many were certainly destroyed at that time. Most of the large boats of late type are of about 1200 tons and carry two 3.5-inch, two 4.1-inch, or two 5-inch guns. A larger type, possibly of more than 2000 tons, appeared in June, 1917, and were said to carry one or two 6-inch guns. Both the 1200 and 2000 ton types were rumored to have 2-inch armor over the top of the pressure hull and about the base of the conning tower. All U-boats were said to be built by classes, the parts standardized, and built in many steel-works in different parts of Germany. Not more than one-third of the completed boats were operating at one time as the duty was hard on the delicate machinery and fittings and there was constant need of repair.

One of the serious difficulties confronting the German navy was the personnel. During the early part of the war the submarine crews were made up of volunteers from the various ships of the fleet. But by September, 1915, the losses had become so great that volunteering practically ceased and men were detailed for the work. This, added to the shortage of food, was sufficient to cause discontent and unrest in the enlisted force. The terrible punishment received by many of the German vessels at the battle of Jutland and the realization by the men that the German fleet had no chance against the British greatly reduced the spirit and morale even of the better men and totally broke down that of others. Meanwhile the food situation grew worse and idleness in port, because the ships dare not go to sea (at least not far beyond the minefields), made conditions worse. During this period socialistic propaganda began to have considerable effect. Then came the Russian revolution, and its effect was instantly apparent in the fleet and among the workmen in shipbuilding and munition plants.

Early in the spring of 1917 a riot in which thousands took part broke out at Kiel, chiefly among the civil classes. Trouble of serious character occurred about this time on several ships. Of the *König Albert's* crew, 250 were sent to prison in Cologne. The next movement was a mutiny on the new cruiser *Nürnberg*. The men had overpowered the officers and were proceeding to Norway with the idea of being interned when the vessel was overhauled by destroyers, captured, and brought back. It became increasingly difficult to get submarine crews. A submarine school was established and 1000 men put under instruction. Many were sullen, disaffected, and made no attempt to learn except when forced to give attention and do their work. A few refused to go aboard submarines and these were summarily tried for mutiny and shot.

In August or September the crews of four vessels at Wilhelmshaven rose in revolt, hoisted

the red flag, and took possession of the ships. Exactly what occurred in each case is not known. On the *Westfalen* the captain was locked in the cabin and the ship seized. On the *Prinz Regent Luitpold*, the captain and several officers were said to have been thrown overboard, the captain being drowned. On some ship or ships guns were disabled or dismounted and thrown over the side. The mutiny was finally quelled by calling in troops from the garrison. The reports refer only to the crews of the battleships *Kaiser*, *Westfalen*, and *Prinz Regent Luitpold* and of the light cruiser *Hamburg*, but doubtless other crews were similarly affected—perhaps to a very much less degree. Kaiser Wilhelm demanded that one in seven of the mutinous crews be shot, but the naval chief declared this impossible, though a number of men were executed and many others imprisoned. The basic facts of these serious mutinies was admitted by the German naval chief in the Reichstag and, whatever the details may have been, they indicate a condition of affairs in the German High Seas Fleet that is incompatible with efficiency.

AUSTRIA. Information concerning the Austrian navy was even more meagre than that concerning the German—possibly because there was not much to learn. Reports from fairly reliable sources stated that the four dreadnought battleships, proposed in 1914 but given up, were afterwards commenced. Two were completed in 1916. Little transpired as to the others but it was believed they were in service. Three fast light cruisers of about 4800 tons were about to be laid down when the war broke out. Reports indicated that two had been completed and that the third was destroyed at Monfalcone by Italian gunfire. One light cruiser, the *Zenta*, had been sunk and a second one reported destroyed, but the report lacked confirmation.

At the outbreak of war there were eighteen destroyers in the navy. Since that time the Austrian government had taken over one or more Chinese boats which were building at Trieste; and at least two destroyers had been sunk. Six destroyers of about 800 tons were proposed in 1914. Operations in 1917 seemed to show that many new ones of more than 800 tons had been built. In 1914, Austria had in service eight small submarines and there were at least three building. Soon after the war broke out she began the construction of others at Pola navy yard and at the Whitehead Works in Fiume. At least half of these are apparently of German design. Some German boats were sent into the Mediterranean via Gibraltar during 1915, and small mine-layers, like the one on exhibition in New York in the autumn of 1917, were sent from Germany in sections by rail. One French (the *Curie*) boat and one Italian (the *Giacinto Pullimo*) boat were repaired and added to the fleet; the former was sunk in Austrian waters and subsequently raised, while the latter was captured.

TURKEY. The Turkish navy was reorganized and to some extent revived by the Germans, but the process did not appeal to the Turkish officers—it was possibly too strenuous or the German officers were too overbearing. At any rate, a strong sentiment against German control of the fleet was developed and the German admiral (Souchon) who was acting as commander-in-chief was recalled during 1917. It

was presumed that most of the German officers returned to Germany with him. Whether the battle cruiser *Goeben* and the light cruiser *Breslau* had been turned over to the Turks was unknown but probably the Germans were keeping control of the ships for many reasons. First, they had no respect for the ability or the energy of the Turkish officers. Second, it would enable Germany to keep in touch with Turkish naval operations. Last and not least, it would enable Germany to control the Black Sea if Russia went out of the war or if her Black Sea fleet became moribund through mutiny or Bolshevik propaganda. The navy yard at Constantinople, which had deteriorated until its machinery and equipment were practically useless, was undergoing mild regeneration when Turkey joined in the war. Since then, according to report, the Germans had put it in working order for repair of vessels and possibly for the building of small craft. In 1914, Turkey possessed ten new destroyers and ten torpedo boats a few years older. Since then she had lost two of each class. Due to German efforts, the remaining boats were probably in serviceable condition. There were a number of submarines flying the Turkish flag, but reports indicated they were all manned by Germans. One submarine was acquired in 1908; the others were supposed to be German boats sent via Gibraltar, English and French boats which had been raised and repaired, and small mine-layers sent from Germany by rail. At the end of 1917, aside from the *Goeben*, *Breslau*, and small craft, the Turkish navy possessed three ships—the old battleship *Torgut Reis* (1891), the old coast-defense ship *Muin-i-Zaffer* (1869—rebuilt, 1907), and the protected cruiser *Hamidieh* (3800 tons—built 1903).

**LESSER POWERS.** Among the lesser powers, Spain was building one or more light cruisers (four in all were to be laid down) and several submarines (twenty-eight were projected and some were finished). Sweden was building two coast-defense armor-clads of 6800 tons and possibly some submarines and destroyers. Norway may have been building some destroyers or submarines, but this was improbable. Denmark completed a coast-defense armor-clad of 3900 tons in 1916 or 1917; no other work was known to be in hand. The Netherlands were building two light cruisers of 7100 tons, about eight submarines, and possibly some destroyers. Nothing was reported at the end of the year concerning their condition except that all construction had been greatly delayed. In the other navies there was no construction of importance because none of them had facilities for building large vessels and the great shipbuilding countries were fully occupied with work for themselves or for their allies.

**NAVAL OPERATIONS OF THE YEAR.** These were chiefly confined to the German war against commerce and the Allied war on the submarine. In addition to her U-boats, Germany was able to equip and send to sea several surface commerce raiders that had very successful careers and one returned in safety to a German port.

The principal naval events, operations, and incidents of the year were as follows:

On January 9, the old-type British battleship *Cornwallis* (14,000 tons) was sunk by an enemy submarine in the Mediterranean. On January 13, the Japanese battle cruiser *Tsukuba*

(13,750 tons) was blown up by an internal explosion caused by a fire on board. About this time reports of German commerce raiders operating in the Atlantic became alarmingly frequent. On February 1, the German government announced unrestricted war against all vessels, enemy or neutral, which were found within specified areas surrounding the coasts of Great Britain, France, and Italy, the Mediterranean zone comprising nearly the whole sea (see SUBMARINE OPERATIONS). All vessels would be sunk without warning and without regard to the safety of persons on board. The boundaries were carefully defined, but this was superfluous, as neutral and belligerent merchant and fishing vessels had not only been sunk when far beyond zone limits but also within neutral waters.

On March 1, Italy notified all powers of the laying of extensive mine fields about her coasts. On March 12-14, the revolution broke out in Russia which swept the czar off his throne. For a moment, enthusiasm and a hope for better things revived the army. In the navy, revolution degenerated into bloodthirsty mutiny at once. The ships were seized, the officers murdered—400 being killed on the vessels at Kronstadt and Petrograd. Power and military control passed to the hands of the soldiers, sailors, and workmen; discipline, decision, order, and organization disappeared, and after a momentary flash in the pan in the army, the military and naval power of Russia melted away like snow under an April sun. On March 19, the French dreadnought battleship *Danton* (18,000 tons) was sunk by a submarine in the Mediterranean.

On March 22, the German sea-raider *Moewe* returned safely to a German port after a second cruise in which she sank twenty-two steamers and five sailing vessels of a total tonnage of 123,000. She was commanded by the same officer as on her first expedition, Count Schledien. Her success in passing through the British blockade was regarded as a most remarkable exploit. The sea-raider *Seeadler* was almost as successful in her destructive career as the *Moewe*. Formerly the captured American ship *Pass of Balama*, she was fitted with a powerful Diesel engine, wireless concealed in her rigging, and an armament of two 4.1-inch and sixteen machine guns stowed in her hold. Over these was piled a cargo of lumber and she slipped through the British blockade in the guise of a Norwegian sailing ship. After sinking thirteen vessels in the Atlantic she passed around Cape Horn, sank three American schooners, and then was wrecked on Mopeha I., Society Group. The captain (Lieut. Von Luckner), three officers, and two men put to sea in an armed motor boat and were soon captured. The remainder of the officers and men seized the small French schooner *Lutece* which had put in at Mopeha, armed her and proceeded to sea. Nothing further was heard from them.

On March 20, a German submarine sunk the British Red Cross hospital ship *Asturias*. She carried navigating and other lights, the Red Cross signals, and had the Red Cross flag brilliantly illuminated by a search-light. The sinking was therefore deliberate. The Germans alleged that they were sinking hospital ships because the British were using them to carry munitions and troops across the Channel. Possibly the Germans would commit such a faithless

breach of law and humanity and they expect it in others. An arrangement was made subsequently by which a Spanish officer was to sail on each hospital ship and guarantee that it was used only for hospital purposes. Many other hospital ships were sunk during the year, some without Red Cross markings. On two of these German wounded were being carried and a number were drowned.

On April 6, the United States declared war against Germany. A destroyer and patrol fleet was rapidly prepared and, under the command of Vice-Admiral W. S. Sims, U. S. N., arrived in a British port on May 4 and joined the Allied anti-submarine forces. On April 20, occurred one of the most notable destroyer fights of the year. The large British destroyers or flotilla leaders *Swift* (2170 tons) and *Broke* (1850 tons) met a squadron of six German destroyers of the new large type (1200 tons—perhaps the flotilla leader was larger). Two German destroyers were sunk and the rest fled. During May, Italy reported that thirteen Austrian submarines had been sunk by Italian patrols in the four weeks preceding.

On May 1, the British ship *Gena* was sunk by an automobile torpedo dropped from a German seaplane. This was the first use of the air-plane as a torpedo carrier in the war, though the idea was suggested by Rear Admiral Fiske, U. S. N., several years ago, and had been repeatedly urged by him since. Plans of the "torpedo-plane" for carrying, directing, and dropping automobile torpedoes had been furnished by him to the Navy Department and doubtless torpedo-planes were in the United States naval service. On April 19, a British and a German submarine collided while submerged. They both rose, sighted each other, and resubmerged. In manœuvring for position to use their torpedoes they lost sight of each other. A similar incident earlier in the spring took place in the same way, but when they resubmerged, the British boat went down slowly and landed on the German's conning tower, which was crushed in. In that position the Briton remained in order to insure putting the U-boat out of action. When it finally rose to the surface it dropped bombs on the German to make the latter's fate certain.

In June, the French armored cruiser *Kleber* (7600 tons) was sunk by a mine in the Atlantic. During the same month Vice-Admiral Sims temporarily succeeded to the command of British and United States naval forces in Irish waters. On June 12, King Constantine of Greece abdicated and on June 29, Venizelos, the new premier, proclaimed a state of war with Germany. Shortly after this, the Greek destroyers which had been seized and manned by the French, were returned to the Greek naval authorities.

Early in July the Brazilian navy joined the United States forces in the patrol of the South Atlantic. On July 9, the British dreadnought battleship *Vanguard* (19,250 tons) was destroyed by an internal explosion while at anchor. Of those on board at the time there were but two survivors. About this time the first large contingent of American troops arrived in France. The convoy was attacked by German submarines, but they were sunk or driven off. Not a man of the American army was lost during the year while on his way to France, though it was presumed that the German sub-

marines were making extraordinary efforts to intercept the constantly arriving transports.

In the latter part of August or early in September a mutiny occurred on vessels of the German navy (see remarks on the German navy, *ante*) which indicated serious discontent in the fleet. In October, an American destroyer was torpedoed but was able to reach port. In the same month the old Russian battleship *Slava* (13,500 tons) was sunk by the Germans in their attack on Riga. On November 3, during a fight in the Kattegat between British destroyers and German light forces the German auxiliary cruiser *Marie* and ten German patrol boats were sunk. On November 20, the United States destroyer *Chauncey* was accidentally sunk by a merchant vessel she was convoying; three officers and eighteen men were drowned.

On December 6, the United States destroyer *Jacob Jones* was torpedoed and sunk by a German submarine; about sixty officers and men were lost. On December 14, the old French armored cruiser *Château Renault* was sunk by a submarine in the Ionian Sea. Nearly all on board were saved. The attacking submarine was sunk by Entente destroyers and her captain, two officers, and nineteen men made prisoners.

The table of warship losses has become so large that it was decided not to republish it in the YEAR BOOK for 1917. The following table gives a list of the important vessels lost during the year and forms a supplement to the table published in the YEAR BOOK for 1916, page 468 *et seq.* The meanings of the abbreviations used are given in the YEAR BOOK for 1916, page 470. Many more German and Austrian destroyers and submarines have been destroyed or captured that are not included in the table, but definite reports of them are wanting.

## WARSHIP LOSSES

NAVY. See BATTLESHIPS, ETC.; NAVAL PROGRESS; SUBMARINE OPERATIONS; SUBMARINES; UNITED STATES.

**NEBRASKA. POPULATION.** The population of the State in 1910 was 1,192,214, and on July 1, 1917, it was estimated to be 1,284,126.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1916-17, were as follows:

	Acreage	Prod. bu.	Value
Corn .... 1917	9,240,000	249,480,000	\$299,376,000
1916	7,400,000	192,400,000	150,072,000
Wheat ... 1917	997,000	13,704,000	26,840,000
1916	3,540,000	68,550,000	109,680,000
Oats .... 1917	3,038,000	115,444,000	70,421,000
1916	2,250,000	79,875,000	37,541,000
Potatoes . 1917	147,000	12,495,000	13,370,000
1916	105,000	7,065,000	11,498,000
Hay ..... 1917	1,590,000	2,544,000	38,669,000
1916	1,850,000	3,885,000	27,584,000

a Tons.

**TRANSPORTATION.** The total railway mileage on December 31, 1916, was 8335. The railroads having the longest mileage were: Chicago, Burlington, and Quincy, 3609; Union Pacific, 2111; Chicago and Western, 1307.

The legislature of 1917 passed a law relating to car distribution and the loading of live stock ships. There was very little construction during the year.

**FINANCE.** According to the report of the State treasurer for the biennial period, December 1, 1914-November 30, 1916, the total receipts were \$14,120,267 and the disbursements \$13,677,702. At the beginning of the period there was a balance on hand of \$746,188, and at the end a balance of \$1,288,674.

**EDUCATION.** The total number of children of school age in 1916 were 385,508, of whom 228,680 were subject to compulsory education. The total enrollment in the public schools was 295,225. The number of female teachers was 11,100 and the number of male, 1506. The average monthly salary of male teachers was \$73.21, and of females \$50.94.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State are under the control of the board of commissioners

of State institutions. They include the Nebraska Institute for Feeble-Minded Youth at Beatrice, the Girls' Industrial School at Geneva, the Nebraska Soldiers' and Sailors' Home at Burkett, the Asylum for the Insane of Nebraska at Engleside, the State Hospital for Tuberculosis at Kearney, State Industrial School at Kearney, the Hospital for the Insane at Lincoln, Orthopedic Hospital at Lincoln, The Nebraska Industrial Home at Milford, the Institute for the Blind at Nebraska City, Hospital for the Insane at Norfolk, School for the Deaf at Omaha, and the Home for Dependent Children at Lincoln.

**POLITICS AND GOVERNMENT.** On November 22, Governor Keith Neville resigned to become Colonel of the 7th Regiment of the Nebraska National Guard.

**LEGISLATION.** Among the more important legislative measures passed by the legislature of 1917 are those noted below.

Provision was made for the submission to the voters of the question whether a constitutional convention should be summoned to revise the State constitution. A modern and uniform accounting system was created. Provision was made for a State Publicity Bureau. The city manager plan for the government of cities was approved. The right of women to vote was extended to all offices not specified in the State constitution. Measures were enacted providing for the voting of citizens absent on military service. A novel method for eliminating presidential electors from the ballot was put into operation. The governor is required to appoint as the presidential electors of the State those electors nominated by the party whose candidate for president and vice-president receive the highest number of votes. Provision was made also for the election of the judiciary and certain school officers by non-partisan ballots. A State fund was created to meet the crop losses caused by hail. Pipe lines for conveying salt were declared common carriers.

**STATE OFFICERS.** Governor, Keith Neville,\* Lieutenant-Governor, Edgar Howard; Secretary of State, C. W. Pool; Treasurer, G. E. Hall; Auditor, W. H. Smith; Attorney-General, W. E. Reed; Superintendent of Education, W. H. Clemmons—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, A. M. Morrissey; Justices, Chas. B. Letton, Francis G. Hamer, William B. Rose, Samuel H. Sedgwick, James R. Dean, Albert J. Corniah; Clerk, H. C. Lindsay.

**NEBRASKA. UNIVERSITY OF.** A co-educational State institution of learning at Lincoln, Neb. In the fall of 1917 there were 2763 students and 325 members of the faculty; under normal conditions it is estimated that the enrollment in 1917 would have been at least 3500. Volumes in the library numbered 137,050. Productive funds in 1917 amounted to \$840,127 and the income to \$51,100. The university was founded in 1869. President, Samuel Avery, Ph.D.

**NEUROLOGY.** The following list contains the names of notable persons who died in 1917. An asterisk before a name indicates that it will be found in its proper alphabetical place in the YEAR BOOK as the title of a separate article.

\* Abramovitz, Jacob.

Achells, Frederick. Formerly president of the North German Lloyd Steamship Company and a

\* See above.

director of the National Bank of Bremen, Germany. Seventy-seven years old. Died, May 20.

Allen, John. Lord Allerton. A Member of the House of Commons for more than twenty years, up to the time he was made First Baron of Chapel Allerton, in 1902. He was Financial Secretary of the Treasury from 1885 to 1891 and was Chief Secretary for Ireland in 1891 and 1892. Born 1840. Died, April 4.

Ambruster, Karl. German pianist conductor and lecturer. Apostle of Wagner. Born 1846. Died in London, June 10.

Anderson, Elizabeth Garrett. English woman physician and first woman Mayor in England; for some years a militant suffragist; at first was refused a medical degree by College of Physicians and Surgeons in England, but received a degree later from the University of Paris; elected Mayor of Aldeburgh in 1908. Born 1836. Died December 17.

Anderson, Thomas McArthur. Retired Major General of Volunteers, U. S. A. Was studying law in Cincinnati when the Civil War broke out. Rose to the rank of major at the battle of the Wilderness and was breveted lieutenant colonel for his services at the battle of Spotsylvania. Born January 21, 1836. Died, May 8.

\* Anderson, Winslow.

\* Andrews, Eliza B.

Aoyama, Tanemichi. Dean and professor of the Medical College of the Tokio Imperial University, having held these positions since 1888. One of the Imperial Court Physicians. Born 1859. Died, December 23.

Argente, G. Professor of surgery, University of Palermo. Seventy years old. Died, c. April.

\* Arnold, Conway Hillyer.

\* Arriaga, M. José de.

Wicker, George Ray. Professor of economics at Dartmouth College. Extensive writer on economic subjects. Died, November 25.

Williams, Mosely H. A noted Congregational preacher and widely known as an author on religious subjects. Seventy-eight years old. Died, November 9.

Willits, George Sidney. Rear admiral, U. S. N., retired. Graduated from Naval Academy in 1875. Member of American Society of Naval Engineers. Sixty-four years old. Died, May 3.

Wills, Nat M. A well-known actor in New York City. Forty-four years old. Died, December 9.

\* Winter, William.

Witherbee, Frank Spencer. Engaged in iron mining and active in Republican politics. Member of many clubs and societies. Born, 1852. Died, April 18.

Wollnski, Barnett. A Russian rabbi who came to America forty years ago. One hundred and thirteen years old. Died, September 25.

Woodward, Joseph H. Retired iron and steel capitalist and reputed to be the wealthiest man in Alabama. Seventy-five years old. Died, December 15.

Woolridge, Henry Elias. English musicologist: a successful painter until 1894, when he devoted himself to musical research, and published several valuable editions of early English music; he wrote the first two volumes of the *Oxford History of Music*. Born, 1845. Died in London, January 13.

Wordsworth, William. Oldest surviving grandson of poet, and himself a scholar and poet. Studied at Balliol College, Oxford; entered Indian Civil Service in 1861; retired, 1890. C. D. E. Was for a long time president of Elphinstone College, Bombay. Eighty years old. Died, March 7, in Rome.

\* Wright, Hamilton.

Wright, John Dunbar. A millionaire artist, amateur photographer, and philanthropist; at one time in the oil business. Fifty-five years old. Died, October 6.

Württemberg, Philip Alexander, Duke of. Head of the senior ducal line of the Württemberg family. Born, 1838. Died, October 11.

Young, Warren S. For thirty-six years social secretary of the White House, Washington. D. C. Seventy-three years old. Died, November 18.

Youngman, Robert Barber. Teacher for forty-nine years at Lafayette College and professor emeritus of the Greek language and literature. Born, c. 1840. Died, March 1.

\* Zamenhof, Ludwlg.

\* Zeppelin, Ferdinand A. A. H.

**NEGRI SEMBILAN, THE (NINE STATES).** A federation of states composing a state of the Federated Malay States (q.v.).

**NEGRO EDUCATION.** See EDUCATION IN THE UNITED STATES.

**NEPAL.** An independent kingdom in the Himalayas, bounded by Tibet on the north, Sikkim on the east, and British India on the south and west. Area, about 54,000 square miles. Estimated population, 3,000,000; some estimates

are higher. The exports include hides and skins, drugs, gums, dyes, jute, pulse, and cereals. According to British India returns, exports from India to Nepal were valued at £1,276,000 in 1914-15 and £1,379,000 in 1915-16; imports from Nepal to India, £2,565,000 and £2,632,000 respectively. Nepal has a standing army of about 30,000. The capital is Katmandu, with some 50,000 inhabitants.

**NEPTUNE.** See ASTRONOMY.

**NETHERLANDS, THE (or HOLLAND).** A maritime kingdom of central Europe, situated on the North Sea, in lat. 50° 46'-53° 34' N. and long. 3° 22'-7° 14' E., consisting of eleven provinces. The Hague is the capital.

**AREA AND POPULATION.** The total area, including the rivers of Zeeland and South Holland, the Zuider Zee, the Dollart, and the Wadden (the shallows extending along the shores of Friesland and Groningen as far as the Dollart), based on a low-tide planimetric calculation, is 40,828.71 square kilometres (15,764 square miles). The area by provinces, and the population according to the census of December 31, 1909, together with the population as calculated December 31, 1915, are given in the table below.

	Sq. km.	1909	1915
North Brabant . . . .	4,972.84	623,079	684,146
Gelderland . . . . .	5,024.40	639,602	691,716
South Holland . . . .	2,981.00	1,380,744	1,586,724
North Holland . . . .	2,762.01	1,107,693	1,220,624
Zeeland . . . . .	1,881.75	282,515	242,137
Utrecht . . . . .	1,368.21	288,514	313,644
Friesland . . . . .	3,220.25	369,552	376,471
Overijssel . . . . .	3,354.50	382,880	418,458
Groningen . . . . .	2,283.52	328,045	350,501
Drenthe . . . . .	2,662.09	172,318	192,386
Limburg . . . . .	2,194.68	832,007	892,543
Total . . . . .	32,600.25*	5,858,175	6,449,348

\* 12,587 square miles.

In 1917 a project was afoot for the draining of some 530,000 acres of the Zuider Zee to provide a new province. The bill was passed September 9, 1916.

The urban population in 1915 numbered 2,634,298; the rural, 3,815,050. According to nationality, the elements of the population are Dutch, 5,788,193; Germans, 37,534; Belgians, 18,338, etc. The larger cities (communal population as calculated December 31, 1915) follow: Amsterdam, 616,589; Rotterdam, 480,240; The Hague, 322,081; Utrecht, 130,010; Groningen, 84,448; Haarlem, 72,362; Arnhem, 67,096; Leiden, 59,733; Nimeguen, 62,372; Tilburg, 56,798; Dordrecht, 50,718; Maastricht, 39,758; Apeldoorn, 41,465; Leeuwarden, 40,277; Bois-le-Duc, 36,625; Enschede, 39,275; Delft, 35,900; Schiedam, 35,977; Zwolle, 34,551; Hilversum, 34,326; Emmen, 34,002; Deventer, 30,775; Breda, 28,099; Helder, 29,768. There were (1915) 42,651 marriages, 107,423 births, and 79,613 deaths, 6625 stillbirths; excess of births over deaths, 87,810. Emigrants numbered in 1915, 1074 (of whom 657 adult males, 278 adult females).

**PRODUCTION.** The area (in hectares) devoted to principal crops, and the production (in metric quintals) for two years, are as follows:

	Hectares		Quintals	
	1917	1916	1917	1916
Wheat . .	49,555	54,203	939,586	1,281,796
Rye . . . .	187,255	199,855	3,087,416	2,913,674

	Hectares		Quintals

Pigs .....	1,185,565	1,850,204	164,639

\* Exclusive of lambs born in 1917.

Nearly all of the fishing interests of the Netherlands announced a prosperous year in 1916. In spite of limitations due to the war, the catches were large and the prices were high. The Dutch herring fleet announced a more prosperous year for 1916 than any since 1913. The total proceeds to the shipowners in the herring business were estimated at \$14,800,000 in 1916, as against \$12,000,000, \$5,000,000, and \$6,800,000 in 1915, 1914, and 1913, respectively. The largest herring shipments are made from Scheveningen.

**COMMERCE.** The developments that took place in the commerce and industries of the Netherlands during 1916 reflect the influences of the European War. The country is so situated geographically that its commercial activities have been affected by the measures taken by one or more of the belligerents. The fact that its commerce has been restricted and curtailed has caused factories to be built and has strengthened Dutch industry to such an extent that it will leave a permanent effect upon the foreign trade of the country.

Imports of most products during 1916 were reduced to what was actually needed in the country. The transit trade was largely brought to a standstill. Regular shipping lines have suspended much of their ordinary business and have undertaken to transport the grain needed by the government. The Netherlands is practi-

1917-17

cally a free-trade country. The few duties levied have a fiscal rather than a protective object. The total imports for consumption and exports of domestic produce are seen below for three years (precious metals included), in guilders (par value of the guilder, 40.196 cents):

	1911	1912	1915
Imports .....	3,333,000,000	3,613,000,000	2,111,000,000
Exports .....	2,782,000,000	3,118,100,000	1,749,000,000
Transit .....	13,696,000,000	14,706,000,000	6,549,000,000

The Dutch foreign trade statistics, which are generally available in April or May of the year following the report year, had not been published. Generally speaking, the imports from belligerent countries decreased in 1916 as compared with the years 1913, 1914, and 1915. The principal imports from the United States, such as breadstuffs, cotton, flour, edible oils, etc., made a favorable showing, because these materials could not be obtained from other sources on account of the war. Dutch exports to belligerent as well as to neutral countries continued to decrease during the year, principally on account of lack of adequate communication with the colonies. Representative imports for consumption and exports of domestic produce are shown below (values in thousands of guilders, 1915):

<b>Imports</b>	<b>1,000 qt.</b>	<b>Exports</b>	<b>1,000 qt.</b>
Cereals, etc. ....	218,238	Iron and steel..	72,079
Iron, etc. ....	181,411	Flour, etc. ....	11,946

Vegetables .....	870	573	18,286	26,518
Fruits .....	6,051	10,335	6,762	16,451

Generally more than seven-eighths of the breadstuffs consumed in Holland is imported from foreign countries. Local production had only slightly increased since the war began, and the difficulty of obtaining grain was one of the most serious problems which Holland was called upon to face. The grain import figures for 1916 were not as satisfactory as those for 1915. The import of rye was much below the average. During the first eleven months of 1916 only 11,725 tons of rye were imported, as compared with 55,032 tons for the same period of 1915. Approximately the same amount of wheat was imported in 1916 as in 1915, but the imports of

barley showed a marked decline. The total amount of breadstuffs imported during the first eleven months of 1916 was 757,777 tons, as against 818,426 tons in 1915.

The government made arrangements during 1916 by which the Commission of Grain Dealers at Rotterdam and the Commission for the Grain Trade at Amsterdam should receive 100 tons weekly to be placed at the disposition of dealers. The demand was so great that this arrangement could not be carried out during the first month of the year. Persons needing grain for cattle feed were required to state the amount they used during the corresponding period of 1915, the amount being used as a basis for the 1916 distributions. An average of 30 per cent of the amounts asked for was granted. The government finally attempted distribution through the various agencies for the grain trade which had formerly existed, the commissions being regulated by law. Breadstuffs for human consumption were controlled even more closely than cattle feed. The local oat crop was requisitioned for the army until sufficient quantities were imported from America. The failure of the Dutch East Indies to supply the usual supply of corn, owing to shipping conditions, necessitated increased imports of barley (fodder), linseed cake, oats, and grain from the United States. The price of American linseed cake was lower than other cattle feed. For this reason large quantities were bought in the Netherlands, and more would have been imported had shipping conditions been favorable. The government held the price of wheat in Holland quite firm. The price from January to September was fixed at \$147.93 per 5291 pounds; in September, \$178.85; and in November, \$183.31.

The flour trade in 1916 was exclusively in the hands of the Dutch government. No importations were made until February, when the government made it known that it desired bids from American millers. About 100,000 sacks of 110 pounds each were ordered each month, only patent flour being purchased. Millers in the United States and Canada shipped the flour to the seaboard, where it was placed on steamers chartered by the Dutch government. The distribution of American flour by auction sales was discontinued late in the year, sales now being made direct to the bakers. The introduction of bread cards in February, 1917, corrected many abuses in distribution.

The table below gives countries of origin and destination in the 1914 and 1915 trade, values in millions of guilders; it must be borne in mind, however, that while over-sea trade is generally credited to the country of first origin, trade by the frontiers is credited to the immediate transmitter, so that much of the trade with France is classed as Belgian, etc.:

	Imports		Exports	
	1914	1915	1914	1915
Germany .....	875.7	608.0	1,043.5	714.4

**SHIPPING.** The reports of Dutch shipping companies show increased dividends for 1916. The Royal Netherlands Steamship Company returned a net profit of 16,154,108 florins, compared with 8,934,092 for 1915, paying a dividend of 20 per cent, as against 15 per cent for the previous year. The Royal West India Mail Service paid dividend of 12 per cent, the same as for 1915. Income from operations amounted to 2,629,200 florins, as against 2,472,389 florins, service on the main line of the company being considerably reduced. The Oostzee Steamship Company earned a net profit of 2,334,034 florins, nearly double that of 1915, and paid a dividend of 60 per cent, the same as in the preceding year. The Holland-Gulf Steamship Company was able to increase its dividend from 10 per cent in 1915 to 40 per cent last year, net profits being 1,059,494 florins, as against 717,395 florins. The report of the Royal Holland Lloyd shows a net profit of 5,002,278 florins, compared with 2,919,216 for 1915, the dividend being increased from 12 per cent to 25 per cent. The year's working account of the Hollandsche Stoomboot-Maatschappij shows a gross surplus of 1,299,368 florins, as compared with 1,495,892 florins for the preceding year. The principal loss was the sinking of the company's two best ships, the *Berkeleestroom* and the *Waalstroom*, which fell victims to the German submarine.

A compilation made by *Lloyd's List* from information published in the Dutch newspapers shows that on January 1, 1917, there were building in shipyards of the Netherlands ninety-one steamers of more than 1000 gross tonnage each, in addition to which there were on hand twenty-two boats of smaller size on that date. Twenty-nine of these vessels, including principally ships of about 1000 tons and none of more than 3000 tons, are listed as being constructed for foreign account. The aggregate tonnage of the 113 vessels reported then building was 324,933 tons gross. The total includes four steamers of 20,000 tons each, building at Amsterdam for the Kroninklijke West Indische Maatschappij. These are the *Prins Willem III*, the *Johan de Witt*, the *Prins Willem V*, and a cargo steamer, not named. This company also has under construction at a Rotterdam yard the *Prins Maurits*, of 4300 tons gross. Vessels ordered by the Rotterdamsche Lloyd were the *Patria* of 9700 tons, the *Djambi* of 7050 tons, the *Garoet* of 7000 tons, the *Fosari* of 7060 tons. For the Stoomvaart-Maatschappij Nederland two ships, the *Billiton* of 6500 and the *Bengkalis* of 6400 tons, were listed as at hand. Four other ships of more than 5000 tons, building for various owners, were also included in the report.

During 1916, seventy-one steamships and one motor schooner, with a total gross tonnage of 144,000, were launched in the Dutch shipbuilding yards, as compared with forty-four vessels, of 103,000 tons, during 1915. Of the seventy-one vessels floated in 1916, fifty-four, with a tonnage of 124,000, were built for Dutch interests; seventeen vessels, of 20,000 tons, were built for foreign account.

At the close of the year there were 117 steamships and four motor schooners, with a total tonnage of 254,500, either ordered or in the course of construction, as compared with December 31, 1915, seventy ships, of 250,000 tons.

For various reasons such as accidents, etc., thirty-three vessels disappeared from the Dutch

register, by which the mercantile fleet was diminished by about 96,000 tons. About twenty-five accidents from mines and torpedoes occurred during the course of the year. The danger became so great that the Association of Captains and Engineers decided not to sail until measures to insure safety were taken by the Dutch government. The Seamen's Association Volharding also demanded that the government should take protective measures. After compromise, an agreement was reached between the associations, the steamship companies, and the minister for foreign affairs, and navigation was finally continued. Difficulties did not occur again until December, when the Association of Engineers made further demands. These difficulties were not settled during the year and were still pending during the first part of 1917, when all shipping came to a standstill as a result of the institution of unrestricted submarine warfare.

**FINANCE.** The rates of exchange were favorable to Dutch industry, and foreign gold continued to pour into the country. The Netherlands Bank had a satisfactory year. During 1916 money was easy, because many branches of industry had made large profits. Prices have also risen to an extraordinary degree. Nearly all commercial branches availed themselves of the easy money to enlarge their capital. The interest rate on first-class investments was lower during 1916 than formerly. The Dutch government succeeded in floating a 4 per cent and a 4½ per cent loan during the year, although formerly loans had to be issued at 5 per cent. The prices of nearly all forms of industrial stock improved. Companies interested in the manufacture of war material experienced a particularly satisfactory year. The railways were in a position to strengthen their financial condition. Several foreign state issues improved, particularly Russian bonds, large amounts of which are held in Holland. The Central Powers have financed most of their war expenditures themselves, but such bonds and loans as found their way to Holland were not favorably accepted and gradually declined in value.

The 1917 budget is given below in detail:

Revenue	1000 gl.	Expenditure	1000 gl.
Excise .....	65,477	Internal adm. ....	32,546
Direct taxes .....	67,495	Interior (dept.) ..	45,987
Stamps, etc. ....	33,017	Public debt .....	44,144
Posts, etc. ....	144	War .....	36,008
Customs .....	18,159	Finance, etc. ....	57,291
Railways .....	4,549	Navy .....	39,841
Pilot dues .....	3,953	Agriculture, etc. ..	23,832
Domains .....	1,850	Justice .....	13,425
Lottery .....	655	Colonial office ....	3,974
Bank profits .....	3,475	Foreign affairs ....	1,621
Mine duties .....	14,174	Civil list .....	815
Colonies .....	2,355	Cabinet, etc. ....	855
Miscellaneous ...	....	Miscellaneous .....	....
Total .....	250,265	Total .....	300,389

The total public debt stood, January 1, 1917, at 1,508,081,900 guilders; interest, 63,806,061.

**GOVERNMENT.** The executive power is vested in the sovereign; the legislative, in a parliament (States-General) of two chambers acting jointly with the sovereign. Reigning sovereign, Queen Wilhelmina, born August 31, 1880; succeeded on the death of her father, November 23, 1890, under the regency of her mother; became of age and was enthroned, August 31,

1898; married, February 7, 1901, Henry, Duke of Mecklenburg-Schwerin. Heiress-apparent, Princess Juliana, born April 30, 1909.

**HISTORY.** On February 22 the German submarines torpedoed seven Dutch merchant vessels in the North Sea. It appeared that the date of their departure from England and the direction of their voyage had been determined in accordance with the German naval department which had promised to let them cross. After a discussion which lasted several months the Dutch government received satisfaction, Germany promising to replace the vessels by German ships of an equal value. This was interpreted by the Allies as due to Germany's realization that the Netherlands must not be pushed too far, for Germany derived supplies from that source. On April 21 it was announced that the United States State Department had been notified by the Dutch government that the latter would strictly observe neutrality in the war between United States and Germany. The German and Dutch governments discussed the economic situation in the latter half of July. The coal and credit problems were the most important. The German representatives declared that Germany could not export to Holland more than 200,000 tons of German and 50,000 tons of Belgian coal. This quantity she could deliver until March 31, 1918. In order to render the rate of exchange stable Germany proposed, as with certain other countries, especially with Switzerland, that for the coal obtained by Holland a definite amount of florins should be placed at the disposal of Germany to be covered partly by cash payment and partly credit. The credit would be carried by a consortium of German banks. Germany insisted that the means she proposed for stabilizing credit were reasonable. Meanwhile, the negotiations had gone on so long that Germany objected to paying the prices that remained current and she made demands for a considerable increase in prices. It was reported on September 11 that England was ready to deliver regularly to Holland 180,000 tons of coal a month if Holland would place 180,000 tons of shipping space at the disposal of the Belgium Relief Commission. At the opening of the States General on September 18 the queen's speech referred to the continued necessity that Holland should hold herself ready to resist any possible infringement of her neutrality. It pointed out that it was becoming much more difficult to supply people with the necessities of life and raw material for industry. Measures for meeting the most urgent needs would shortly be introduced in Parliament. See PRICES and UNITED STATES and THE WAR.

**NEUTRALITY.** See UNITED STATES and THE WAR; WAR OF THE NATIONS.

**NEVADA.** POPULATION. The population of the State in 1910 was 81,975, and on July 1, 1917, it was estimated to be 110,738.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. bu.	Value
Corn .....	1917 2,000	60,000	\$80,000
	1916 1,000	34,000	42,000
Wheat .....	1917 41,000	1,140,000	2,052,000
	1916 55,000	1,592,000	2,229,000
Oats .....	1917 14,000	560,000	538,000
	1916 14,000	602,000	452,000

		Acreage	Prod. bu.	Value
Potatoes	1917	15,000	3,105,000	3,727,000
	1916	14,000	2,660,000	3,458,000
Hay	1917	234,000	6,679,000	10,796,000
	1916	225,000	540,000	5,184,000

a Tons.

**MINERAL PRODUCTION.** The value of gold, silver, copper, lead, and zinc from the mines of the State in 1917 was over \$53,000,000 according to the estimates of the United States Geological Survey. This represents an increase of over \$3,000,000 over 1916. There were fair increases and record productions in copper and lead, but a slight decrease in zinc, and marked decreases in gold and silver. The gold output was valued at approximately \$6,852,000, a decrease of about \$2,000,000 from the output of 1916. The mined production of silver was about 11,394,000 ounces, a decrease from 13,837,625 ounces in 1916. The value of the output on account of the higher prices of silver increased from \$9,105,092 to about \$9,229,000. The production of copper increased from 105,116,813 pounds in 1916 to over 110,000,000 pounds in 1917, an increase of nearly 5,000,000 pounds, with an increase in value of from \$25,858,736 to about \$32,000,000. The production of lead increased from 25,637,278 pounds in 1916 to over 28,000,000 pounds in 1917. The value of the output increased from \$1,768,972 to about \$2,537,000. There was a decrease in the production of zinc from 32,443,189 pounds in 1916 to about 28,500,000 pounds in 1917. The value of this output decreased from \$4,347,387 to about \$2,613,000.

**TRANSPORTATION.** The total railway mileage of the State in 1916 was 2831. Of this, 2269 miles were main track. The railroads having the longest mileage were: The Southern Pacific, 746; Western Pacific, 427; the Los Angeles and Salt Lake, 212.

**FINANCE.** The report of the State treasurer showed a balance on hand on January 1, 1916, of \$302,420. The receipts for the fiscal year were \$1,814,412, and the disbursements were \$1,488,392, leaving a balance on December 31, 1916, of \$628,440. The State bonds outstanding on December 31, 1916, amounted to \$680,000.

**EDUCATION.** The total school population of the State in 1916 was 14,087. The total enrollment was 12,941, with an average daily attendance of 9456. There were 94 men, and 563 women teachers. The average monthly salary of men teachers was \$133.41, and that of female teachers was \$87.55.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Orphans' Home, State Prison, and the Nevada Hospital for Mental Diseases. The Crittenton Home at Reno receives aid from the State, but is not under State supervision.

**POLITICS AND GOVERNMENT.** Nevada supplied her quota to the regular army before any other State. A total of over 2000 voluntary enlistments in all branches was reported by the adjutant-general at the close of the year. In addition a full draft quota of 1051 men was supplied. Nevada was the only State in the union to furnish her draft quota for entrainment without cost to the Federal government.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below:

Laws relating to judicial procedure were amended. Penalties were imposed for the pollution or poisoning of the water supply of the State. Non-partisan ballots are required for the election of a judiciary and certain school officials. The eight-hour day was applied to women working in a large number of employments. The weekly assignment of work for women is 56 hours. Railroads are required to maintain fences on both sides of tracks and barriers at highway crossings, and failure to comply makes them liable for the market value of animals injured or killed. The award of damages for the trespass of live stock on cultivated lands is prohibited, unless such land is inclosed by a legal fence as defined by the act. Untrue, deceptive, or misleading advertisements are penalized. Merchants using trading stamps are required to pay a license of \$2000. The office of State assayer to assay ores on the request of the shipper was created. The definition of railroad is extended to include automobiles carrying passengers for hire, and they are required to keep on file an indemnity bond. The banking laws of the State were amended in important detail.

**STATE OFFICERS.** Governor, Emmet D. Boyle; Lieutenant-Governor and Adjutant-General, Maurice J. Sullivan; Secretary of State, George Brodigan; Treasurer, Ed. Malley; Comptroller, George A. Cole; Superintendent of Public Instruction, John Edward Bray; Attorney-General, Geo. B. Thatcher—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, P. A. McCarron; Justices, Ben W. Coleman and J. A. Sanders; Clerk, William Kennett.

**NEVADA, UNIVERSITY OF.** A co-educational State institution located at Reno, Nev. In the fall of 1917 there were 298 students (140 men and 158 women) and a teaching staff numbering 51; it is estimated that in 1917 60 students left the university to enter government service and 6 members of the faculty were engaged in war work. There are 30,000 bound volumes and several thousand unbound pamphlets in the library. Productive funds in 1917 amounted to \$337,593 and the income to \$14,201. The university was founded in 1873. Walter E. Clark, professor of political science at the College of the City of New York, was elected president in 1917.

**NEWARK.** See MUNICIPAL GOVERNMENT.

**NEW BRUNSWICK.** One of the Maritime Provinces of Canada. It is situated east of the State of Maine and south of the province of Quebec. Capital, Fredericton. The area is stated at 27,985 square miles, of which 74 water; this is somewhat larger than the combined area of New Hampshire, Vermont, and Massachusetts. Population (1911), 351,839. The city of St. John had (1911) 42,511 inhabitants; Moncton, 11,345; Fredericton, 7208. There were no other towns in 1911 having more than 5000 inhabitants.

The provincial government is administered by a lieutenant-governor, appointed by the governor-general of Canada for five years; he acts through an executive council, or responsible ministry. The legislative power is exercised by the House of Assembly, a single chamber of 48 members elected for five years. In the House of Commons of the 13th Canadian Parliament, elected December 17, 1917, New Brunswick is represented by 11 members. On June 29, 1916, Gilbert

White Ganong was appointed lieutenant-governor, in succession to Josiah Wood. Ganong died October 31, 1917. On November 6 William Pugsley was appointed lieutenant-governor. Premier, Walter E. Foster. See CANADA.

**NEW CALEDONIA.** A French Melanesian colony. Area, with the Loyalty Islands, etc., 18,653 square kilometres, with about 50,600 inhabitants in 1911. Of this total the Wallis Archipelago occupies 96 square kilometres, and contains 4500 inhabitants; Fortuna and Alofi, 159 square kilometres, with 15,000. Nouméa, with 6968 inhabitants, is the capital. There are 16 kilometres of railway. Imports, 1915, £465,000; 1915 exports, £640,000. Vessels entered in the 1915 trade, 91, of 102,568 tons.

**NEWFOUNDLAND.** An island colony of Great Britain, on the northeast side of the Gulf of St. Lawrence. Area, 42,734 square miles; population (1911), 242,619; as estimated, 1914, 247,710. St. Johns, the capital, had 32,292 inhabitants; Harbor Grace, 4279; Bonavista, 3911; Carbonear, 3540; Twillingate, 3348. Fishing, agriculture, mining, and lumbering are the chief industries. The settlements are largely on or near the coast. Paper and pulp mills have been established at Grand Falls and Bishop's Falls.

Imports (1914-15), £2,538,772; exports, £2,700,359, shipping entered and cleared, 1,962,342 tons; revenue, £811,829; expenditure, £823,995. Public debt, 1915, £6,465,683. Reported length of government railway open to traffic, in 1915, 828 miles; private railway, 47 miles; telegraph, 4524 miles.

Attached administratively to Newfoundland is that part of the peninsula of Labrador comprehended between Hudson Strait and Blane Sablon, including the Hamilton basin. Labrador has a 600-mile coast line and an area of about 120,000 square miles; population (estimated 1913), 3998.

**NEW GUINEA.** An East Indian island; after Australia and Greenland, the largest island in the world. The area may be estimated at about 310,000 square miles. The number of inhabitants is conjectural, but is estimated at slightly less than a million. The western part of the island (to 141° E.) is included in the Dutch East Indies; the northeastern part is Kaiser-Wilhelmsland (q.v.); the southeastern part constitutes most of the British colony of Papua (q.v.). See DUTCH EAST INDIES; GERMAN NEW GUINEA; PAPUA.

**NEW HAMPSHIRE.** POPULATION. The population of the State in 1910 was 430,572, and on July 1, 1917, it was estimated to be 444,429.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the U. S. Department of Agriculture in 1916-17 were as follows:

	Acreage	Prod. bu.	Value
Corn ..... 1917	26,000	1,092,000	\$2,370,000
..... 1916	19,000	874,000	1,005,000
Oats ..... 1917	14,000	532,000	447,000
..... 1916	12,000	444,000	306,000
Potatoes .... 1917	21,000	2,247,000	3,752,000
..... 1916	15,000	1,800,000	2,988,000
Hay ..... 1917	506,000	a 638,000	8,196,000
..... 1916	529,000	767,000	11,122,000
Tobacco ..... 1917	100	b 167,000	45,000
..... 1916	100	165,000	28,000

a Tons. b Pounds.

**TRANSPORTATION.** The total railway mileage in the State in 1917 was 1202; of this total the lines controlled or leased by the Boston and Maine comprise 1020 miles. The Maine Central has 100 miles in the State.

**FINANCE.** According to the report of the State treasurer for 1917, the receipts during the year were \$3,488,321, and the expenditures were \$4,017,324. There was a balance at the beginning of the year of \$671,393, and at the end \$142,390.

**EDUCATION.** According to the school census of September, 1915, there were 67,461 children in the State between the ages of 5 and 16 years. This does not include the city of Manchester which would bring the total up to 81,123. The registration in the public schools in 1916 was 62,040, and in the parochial schools 16,508. The total number of teachers employed in 1915-16 was 2493. The average monthly salary of teachers was \$73.12. The total number of women teachers below high school were 2409 and the total number of men 84. The number of school houses in the State was 1631. The total expenditure for school purposes was \$2,068,686.

**CHARITIES AND CORRECTIONS.** The State board of charities and corrections has charge of the charitable and correctional institutions of the State. These include the State Hospital for the Insane, New Hampshire State Prison, State Sanatorium, State Industrial School, School for the Feeble-Minded, New Hampshire Soldiers' Home, and county jails in each of the counties. The county prisons and jails are also under the supervision of the board.

**POLITICS AND GOVERNMENT.** On May 29, at an election for Congressman, Sherman E. Burroughs defeated Patrick H. Sullivan. Mr. Burroughs was the Republican candidate and Mr. Sullivan the Democratic. See LIQUOR REGULATION.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below:

The acts relating to the conduct of trials were amended. Penalties were imposed for injury to roads, bridges, public utilities, and other public property. The manufacture, storage, and handling of explosives were regulated in detail.

Provision was made for a constitutional convention to convene in the first week of June, 1918. Laws relating to local governments were amended. Municipalities are forbidden to establish sinking funds to redeem bonds issued, and requires all bonds to be in serial form.

Provision was made for the voting of citizens of the State absent on military or naval service. Laws relating to the administration of laws affecting labor were amended in important particulars. Employers in certain factories are required to furnish safeguards and devices and do other things "reasonably necessary and practicable to lessen the dangers." The weekly hours of work for women are reduced from 55 to 54.

The governor is given authority to suspend the labor laws at the request of the Council of National Defense. Several laws were passed looking to the safety of the public on highways of the State. Measures were passed requiring signs to be erected on the crossings, and for a reduction of speed on or near the crossings. Several measures looking to the prevention of monopolies and unfair discrimination in the buying and selling of commodities, especially of

food products, were enacted. The attorney-general, whenever the price of necessities of life rises, on petition of 100 voters, may institute judicial proceedings against the offender, and, if found guilty, he may be fined or imprisoned. A "Blue Sky" law was enacted. Several measures relating to eugenics were passed. Laws relating to banking were amended in important details as were the educational laws. Provision was made that children above 14 and under 16, who had not completed the required course of study, may be withdrawn from school upon recommendation of the superintendent of schools, approved by the recommendation of the superintendent of public instruction.

**STATE OFFICERS.** Governor, Henry W. Keyes, Rep.; Secretary of State, Edwin C. Bean, Rep.; Treasurer, John W. Plummer, Rep.; Adjutant-General, Charles W. Howard, Rep.; Attorney-General, J. P. Tuttle, Rep.

**JUDICIARY.** Supreme Court: Chief Justice, Frank N. Parsons; Associate Justices, Reuben E. Walker, John E. Young, Robert J. Peaslee, William A. Plummer; Clerk, Arthur C. Chase.

**NEW HAMPSHIRE COLLEGE.** A co-educational State institution located at Durham, N. H. In the fall of 1917 there were 552 students. Volumes in the library numbered 35,000. Productive funds in 1917 amounted to \$900,000 and the income to \$37,500. The college was founded in 1866. Ralph D. Hetzel was elected president in 1917.

**NEW HEBRIDES.** A group of Melanesian islands jointly administered by France and Great Britain through the French and English high commissioners: M. King, British; L. Miramende, French. Estimated area, 5100 square miles; estimated population, 70,000. There are Presbyterian and Roman Catholic missions. Vila, in the island of Efate, is the seat of government. A large proportion of the natives are cannibals, and the sale to them of arms, ammunition, and intoxicating liquors is prohibited. For 1914-15, the estimated revenue and expenditure were £21,218 and £10,400. Deficits are met by the British and French governments jointly. In addition, for 1914-15, there was an estimated British expenditure of £8156.

**NEW JERSEY. POPULATION.** The population of the State in 1910 was 2,537,167, and on July 1, 1917, it was estimated to be 3,014,194.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. bu.	Value
Corn .....	1917	297,000	12,771,000	\$21,711,000
	1916	270,000	10,800,000	10,800,000
Wheat .....	1917	89,000	1,891,000	3,602,000
	1916	90,000	1,800,000	2,952,000
Oats .....	1917	73,000	2,482,000	1,737,000
	1916	69,000	2,070,000	1,263,000
Potatoes ...	1917	98,000	11,172,000	15,753,000
	1916	85,000	10,370,000	16,074,000
Hay .....	1917	350,000	a 508,000	10,160,000
	1916	375,000	600,000	10,560,000

a Tons.

**MINERAL PRODUCTION.** The production of iron ore in the State in 1916 was 493,004 gross tons, compared with 415,234 tons in 1915. The total shipments from the mines of the State in 1916 were 528,084 tons, valued at \$1,877,056 compared with 391,115 tons, valued at \$1,140,400 in 1915.

The zinc production of New Jersey is confined to the output of the Mine Hill and Starling mines at Franklin Furnace, Sussex County. There were 712,464 tons of crude ore produced at these mines in 1916, which yielded a total of 221,396,000 pounds of zinc, calculated as zinc oxide and spelter, compared with 233,236,000 pounds in 1915.

**TRANSPORTATION.** The total railway mileage for 1917 was 5980. The lines having the longest mileage were: Pennsylvania, 1864; Central Railroad of New Jersey, 1149; Delaware, Lackawanna, and Western, 696; Lehigh Valley, 514. There was very little construction in 1917 and this was chiefly in side-track, yards, etc. The legislature in 1917 passed several important laws in relation to railways. One of these empowered the Board of Public Utilities Commissioners to require any common carrier by railroad to employ a sufficient number of men in the management of any of its trains. This act repealed a previous act intended to promote the safety of travelers and employees upon railroads. An act forbade the construction of track crossings without the approval of the Public Utilities Commission.

**FINANCE.** The report of the State treasurer for the period ending October 31, 1916, showed a balance on hand on October 31, 1915, of \$2,457,687. The receipts for the year were \$12,917,658; the disbursements, \$11,297,103, leaving a balance on hand on October 31, 1916, of \$4,078,242.

**EDUCATION.** The total enrollment in the public schools in 1917 was 579,243 with the average daily attendance of 427,874. The number of male teachers was 14,803 and the number of female teachers 2493. The average monthly salary of day school teachers was \$104.15. The total expenditure for current expenses was \$19,677,588.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State, under the control of the State Department of Charities and Corrections, include the State Hospital at Morris Plains, New Jersey State Village for Epileptics at Skillman, State Home for Feeble-Minded at Vineland, Sanatorium for Tuberculosis at Glen Gardner, New Jersey State Prison at Trenton, New Jersey Reformatory at Clinton, New Jersey State Reformatory at Rahway, New Jersey State Home for Boys at Jamesburg, New Jersey State Home for Girls at Trenton, New Jersey State Home for Disabled Soldiers at Kearny, New Jersey Home for Disabled Soldiers and Sailors and Their Wives or Widows at Vineland.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below:

The laws relating to judicial procedure were amended in important particulars, especially those relating to bar examinations. Provision was made that any person who brings into the State property which he stole or received, knowing it to have been stolen, in another State, shall be punished in the same way as if the theft had been committed within the State. Strict measures were passed relating to the marriage of people having infectious diseases. Provision was made for the purchase and sale of food by designated officials. The governor was authorized "to organize and employ any and all resources within the State" and "to exercise

any and all power necessary in his judgment to render such assistance." The use of prisoners to replace free labor on strike or in any case, if free labor is obtainable, is forbidden. Revisions or reductions in the civil service are subject to investigation and approval by the civil service commissioner. A measure was enacted providing for the organization and future administration of all municipal sinking funds. Municipalities are required to adopt a budget system. An attempt was made to improve the administration of laws dealing with labor by the division of labor inspectors into four grades. In the lower of these grades appointment is to be made from the civil service lists; promotion to higher grades is to be made from higher examinations after a service of five years in the lower grades. Laws relating to safety and sanitation in labor conditions were amended. The full-crew law passed several years ago was repealed, but provides that no reduction in any train crew as constituted prior to such repeal shall be made without the authorization of the public utilities commission, and the commission is given power to request any railroad to employ on its trains such number of employees as it deems necessary to offer safe, adequate, and proper service. A commission was reappointed for the survey of municipal finances and to study taxation, revenue, and expenditures. Laws relating to health were amended in important details. See **PENOLOGY**.

On October 9 the voters of Newark, the largest city in the State, adopted the commission form of government.

**STATE OFFICERS.** Governor, Walter E. Edge, Rep.; Secretary of State, Thomas F. Martin, Dem.; Treasurer, William T. Read, Rep.; Comptroller, Newton A. K. Bugbee, Rep.; Attorney-General, John W. Wescott, Dem.; Commissioner of Education, Calvin N. Kendall, Dem.; Commissioner of Insurance, G. M. La Monte, Dem.

**JUDICIARY.** Court of Errors and Appeals, composed of the Chancellor, presiding, the Chief Justice of the Supreme Court, the Associate Justices, and six lay Judges as follows: Chancellor, Edwin Robert Walker; Chief Justice, William S. Gummere; Justices, Charles G. Garrison, Francis J. Swayze, Thomas W. Trenchard, Charles W. Parker, James J. Bergen, James F. Minturn, Samuel Kalisch, Charles C. Black; Lay Judges, John Josiah White, Henry S. Terhune, Ernest J. Heppenheimer, Robert Williams, Frank M. Taylor, and Walter P. Gardner.

**NEWLANDS, FRANCIS GRIFFITH.** An American legislator, born near Natchez, Miss., August 28, 1848, died suddenly on December 24, 1917. He entered Yale as a member of the class of 1867, but left in the middle of his junior year and took up the study of law at Columbian (now George Washington) University, and before his graduation was admitted to the bar of the Supreme Court of the District of Columbia. He went to San Francisco in 1870 and became there a distinguished member of the bar. In 1888 Mr. Newlands became a resident of the State of Nevada, from which he was shortly afterwards elected to the Fifty-Third Congress. He was reelected to the Fifty-Fourth and Fifty-Seventh Congresses. While a member of the House he served on the Committees of Foreign Affairs, Banking and Currency, and Ways

and Means. In 1903 he succeeded United States Senator John P. Jones, Republican, and was reelected in 1908 and again in 1914. While in the House Mr. Newlands was the author of the Reclamation Act (1902), a bill which provided that money collected from the sale of public lands should be devoted to irrigation projects. In the Senate he was one of the leaders of the Republican party and took an active participation in important legislation concerning railroad rate laws, internal improvement measures, regulation of industrial combinations, and tariffs. The Newlands Act of 1913 provided for mediation and arbitration in railroad wage disputes. He played a prominent part in the framing of the Interstate Trade Commission Act in 1914. When the United States entered the war Senator Newlands was the chairman of the Joint Congressional Committee on Transportation Problems, as well as of the Interstate Commerce Committee. He was closely identified with the railroad situation during the war, and consulted with President Wilson concerning the solution of the problem. He was regarded as the administration spokesman on railroad legislation work. He piloted the Adamson Eight-Hour-Day Bill through the Senate during the last Congress. Because of his deep interest in these questions he was regarded as the preëminent expert on them in the Senate and probably in Congress.

**NEW MEXICO. POPULATION.** The population of the State in 1910 was 327,301, and on July 1, 1917, it was estimated to be 423,649.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. bu.	Value
Corn .....	1917	170,000	3,400,000	\$6,362,000
	1916	125,000	2,625,000	2,966,000
Wheat .....	1917	203,000	2,582,000	5,551,000
	1916	113,000	2,104,000	3,156,000
Oats .....	1917	45,000	1,350,000	1,124,000
	1916	64,000	1,856,000	1,244,000
Potatoes .....	1917	11,000	1,276,000	2,105,000
	1916	8,000	816,000	1,428,000
Hay .....	1917	202,000	a 384,000	8,064,000
	1916	185,000	370,000	5,180,000

a Tons.

**MINERAL PRODUCTION.** The output of the State in 1916, according to the United States Geological Survey, was valued at \$30,827,767. The gold production was valued at \$1,382,480. There were 1,766,274 ounces of silver, 92,747,289 pounds of copper, 8,214,189 pounds of lead, and 36,570,649 pounds of zinc. These figures indicate decreases of \$78,625 in gold, and 238,257 ounces of silver, but increases of 15,958,923 pounds of copper, 3,671,828 pounds of lead and 11,166,585 pounds of zinc. The value of the metals was higher than in 1915. The total was \$30,827,767 compared with \$19,279,468 in 1915.

The output of metal in the State in 1917 is estimated by the United States Geological Survey as follows: gold \$1,010,000, silver 1,268,000 ounces, lead 8,340,000 pounds, copper 104,500,000 pounds, zinc 27,900,000 pounds. These figures show decreases of \$372,480 in gold and 498,274 ounces of silver, but increases of \$130,056 in the value of the silver, 11,800,000 pounds in quantity and \$5,600,000 in the value of the cop-

per, and 126,000 pounds in quantity and \$200,000 in value of lead.

The coal production of the State in 1916 was 3,793,011 tons net loss valued at \$5,580,369, a decrease of less than 1 per cent in quantity but an increase of nearly 2 per cent in value. The decrease was in the shipments from the two largest fields, the Raton field in Colfax County and the Gallup field in McKinley County; both decreases were caused largely through the decrease in demand for railroad fuel.

Except in November the supply of cars was ample, but there was a shortage of available labor. The market for coal from New Mexico was extended on the Pacific Coast, and to interior points that normally depend on water-borne coal.

**TRANSPORTATION.** The total railway mileage of the State is about 3000. The lines having the longest mileage are: Atchison, Topeka, and Santa Fé, 1194; El Paso and Southwestern, 625; Denver and Rio Grande, 217.

**EDUCATION.** The school population of the State in 1917 was 110,969. There were enrolled in the public school 77,062 with the average daily attendance of 51,374. The number of female teachers was 1296. The number of male teachers was 648. The average monthly salary of teachers was \$54.60. The total expenditure for school purposes was \$2,004,662.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Insane Asylum at Las Vegas, the State Penitentiary at Santa Fé, the Reform School at Springer, the Miners' Hospital at Raton, and the Deaf and Dumb Asylum at Santa Fé.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

Amendments were made for the regulation of law examinations for candidates for the bar, and other statutes relating to the administration of the law. The workmen's compensation law was enacted. Provisions were made for the part payment of transportation expenses of normal school students from distant parts of the State.

**STATE OFFICERS.** Governor, W. E. Lindsey, Dem.; Lieutenant-Governor, Vacant; Secretary of State, Antonio Lucero, Dem.; Treasurer, H. L. Hall, Dem.; Auditor, W. G. Sargent, Rep.; Adjutant-General, James Baca, Dem.; Attorney-General, Harry L. Patton, Dem.; Superintendent of Public Insurance, John H. Wagner, Rep.; Commissioner of Insurance, Cleofes Romero.

**JUDICIARY.** Supreme Court: Chief Justice, R. H. Hanna; Associate Justices, Clarence J. Roberts and Frank W. Parker; Clerk, José D. Sena.

**NEW SOUTH WALES.** A State of the Commonwealth of Australia. It lies in the southeastern part of the continent, being bounded on the north by Queensland, on the east by the Pacific, on the south by Victoria, and on the west by South Australia. The capital is Sydney, which, including environs, is the second largest city of the southern hemisphere (Buenos Aires being first). The estimated area of the State is 309,460 square miles, which is slightly more than one-tenth the area of the Commonwealth and about equivalent to the combined area of Nevada, Utah, and Arizona. Estimated population, June 30, 1916, 1,856,093, as compared with 1,868,656 in 1915 and 1,646,734 at

the 1911 census (these figures being exclusive of full-blooded aboriginals). The population of Sydney in 1911 was 112,921 or, including suburbs, 629,503; as estimated at end of 1915, 763,300. At the end of 1915, Newcastle and suburbs had an estimated population of 58,750; Broken Hill, 28,350; Parramatta, 12,600; Maitland, 11,850; Granville, 10,900; Auburn, 10,700; Goulburn, 10,100.

The operation of the New South Wales railways during the fiscal year ending June 30, 1917, showed a deficit of £394,064. This was due to the fact that the low grade traffic carried in undue proportion does not pay expenses. Compared with 1912, the freight traffic on the New South Wales railway increased 32 per cent, but the traffic earnings under 1d. per ton mile increased by 226,924,606 ton-miles and the paying traffic earning over 1d. per ton-mile only advanced by 47,544,336 ton-miles. The comparative figures for the year 1912-17 are shown herewith:

	Year ended June, 1912	Year ended June, 1917
Capital expended:		
Lines open .....	\$53,514,903	72,006,621
Goods carried:		
Tons one mile.....	862,016,104	1,136,485,046
Passengers carried:		
No. one mile.....	1,091,087,609	1,478,707,236
Gross earnings .....	\$6,491,473	8,380,085
Working expenses and interest on capital.	\$6,075,960	8,774,149
Result .....	\$415,513 (Surplus)	\$394,064 (Deficit)

A general increase in railway and tramway rates went into effect on the railways of New South Wales on August 8. The increases were: Passenger fares, 10 per cent; hay, straw, and chaff, 10 per cent; coal in railway-owned trucks, 10 per cent; coal in privately-owned trucks, 15 per cent; parcels, 10 per cent; tramway fares on penny sections, 50 per cent; but no change in the fares for two or more sections. Workmen's fares on street railways were also increased. The estimated additional revenue was £460,000 per annum from the railways and £80,000 from the street railways.

The legislative power is exercised by a parliament of two houses, the Legislative Council and the Legislative Assembly. Members of the Council (52 in 1916) are appointed by the crown for life; members of the assembly (90) are elected by universal suffrage for the duration of parliament, which is not more than three years. The executive authority rests with a governor, who is appointed by the crown and acts through a responsible ministry. The governor in 1917 was Sir Gerald Strickland, Count della Catena, G.C.M.G., who assumed office in March, 1913. Premier and treasurer, William Arthur Holman. See AUSTRALIA.

**NEW YORK. POPULATION.** The population of the State in 1910 was 9,113,614, and on July 1, 1917, it was estimated to be 10,460,182.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

	Acreage	Prod. bu.	Value
Corn ....1917	840,000	20,040,000	\$51,559,000
1916	700,000	21,000,000	23,100,000
Wheat ....1917	430,000	8,385,000	17,808,000
1916	400,000	8,400,000	14,112,000
Oats .....1917	1,275,000	44,625,000	33,469,000
1916	1,206,000	81,856,000	19,441,000

	<i>Acres</i>	<i>Prod. Bu.</i>	<i>Value</i>
Potatoes .1917	400,000	88,000,000	49,400,000
1916	320,000	22,400,000	35,392,000
Hay .....1917	4,158,000	a 6,110,000	92,261,000
1916	4,350,000	a 7,047,000	83,859,000
Tobacco ..1917	2,500	b 3,125,000	688,000
1916	3,700	b 4,551,000	592,000

a Tons. b Pounds.

**TRANSPORTATION.** The total railway mileage within the State on December 31, 1916, was 8443. The lines having the longest mileage were: The New York Central, 2820; the Erie Railroad, 950; New York, Ontario, and Western, 477; Delaware and Hudson, 724; Lehigh Valley, 659; Delaware, Lackawanna, and Western, 493; Pennsylvania, 461; Long Island Railroad, 397.

**FINANCE.** According to the report of the State treasurer the total receipts at the end of June, 1917, were \$106,850,928. The expenditures amounted to \$95,777,249. There was on hand on July 1, 1916, a balance of \$41,924,672, and on June 30, 1917, a balance of \$51,998,351. The bonded debt of the State on June 30, 1917, was \$236,309,351. The chief sources of revenue are direct taxes, indirect taxes, corporation, inheritance, and other taxes. The chief expenditures are for the support of State institutions, for education, and for the maintenance of canals and highways.

**EDUCATION.** The latest statistics for education in the State are for 1915-16. In this year the school population in the State amounted to 2,273,779. The total enrollment in public schools was 1,625,777 with the average daily attendance of 1,318,605. There were 47,685 female and 5906 male teachers. The average yearly salary of teachers is \$967.27. The expenditure for school purposes during the year was \$70,179,935.

By an act of the 1917 legislature the township school system was adopted. By this enactment over 10,000 school districts are now under the supervision of 982 town Boards of Education. In addition, there are 195 separate districts which do not come under the township system. These are villages having a population of 1500 or employing fifteen teachers or more; villages of 5000 or more employing a superintendent of schools and cities do not come under the township system.

**CHARITIES AND CORRECTIONS.** For information on charities and corrections in New York, see articles on CHARITIES, PENOLOGY, ETC.

**POLITICS AND GOVERNMENT.** Aside from events relating to the war, there were few incidents of interest in the State during the year. From a political point of view the most significant happening was the carrying of the woman suffrage amendment in the election of November. See WOMAN SUFFRAGE.

On April 4 the legislature completed the passage of a bill creating a State constabulary similar to the State constabulary of Pennsylvania. This body was organized during the year and had begun to do effective service in the rural communities.

On September 7, Dudley Field Malone resigned as Collector of the Port of New York, avowedly in protest at the treatment given the suffrage pickets before the White House in Washington. The president appointed Byron G. Newton to succeed him.

The most important election in 1917 was for mayor and the other officials of New York City.

Mayor Mitchel at first declined to become a candidate, but was finally induced to run for another term. An attempt to unite the Republican and Independent voters to a common action in nominating Mr. Mitchel failed, and at the primary election he failed to receive a sufficient number of Republican votes to become their nominee. Their votes were cast for William Bennett, former Congressman. The Democrats nominated Judge John F. Hylan, of Brooklyn. The Socialists nominated Morris Hillquit. On October 1, Mayor Mitchel accepted from a mass meeting the independent nomination for mayor. The campaign was spirited and bitter. The Mitchel supporters assailed the record of Judge Hylan and asserted that he had been identified with certain pro-German and pacifist movements. Judge Hylan denied these charges and replied by accusing Mr. Mitchel and the other officers of the city of being tools of the corporations and of an attempt to wreck the school system for political purposes.

Men of national prominence took part in the campaign chiefly as advocates of Mr. Mitchel's reelection. These included Charles E. Hughes, Theodore Roosevelt, and Henry Morganthau, and others. The newspapers also, almost without exception, supported him strongly. In spite of this, and in spite of the excellent record which he had made during his term of office, he was defeated by Judge Hylan by an enormous plurality. The figures are as follows: Hylan, 313,871; Mitchell, 155,488; Hillquit, 145,456; Bennett, 56,385. It is to be noted that the Socialist vote was nearly as large as that cast by the Fusionists for Mitchel, and greatly surpassed the vote for the Republican candidate, Bennett. The Democrats elected in addition to the mayor, all the other city officials.

On October 12 the new Catskill Aqueduct was opened in New York City with appropriate ceremonies. See AQUEDUCTS.

The political and economic life of New York was greatly effected during the year by the state of war. The declaration of war was greeted with great enthusiasm throughout the State. New York City was the scene of many imposing parades and ceremonies (see UNITED STATES AND THE WAR). A general census of all persons in the State under the age of 45 was taken in June, for the purpose of determining the economic possibilities of the population. Two military cantonments were established: one for the National Guard troops at Camp Mills, Mineola, and one for the National Army at Camp Upton, Yaphank. At the former were gathered troops of many States including the 69th regiment of New York. From the diversity of the composition, it was called the Rainbow Division. After several months of training these troops were transported to France. At Camp Upton were gathered the selected men of the National Army from New York City. The training there continued throughout the year. A camp for the former regiments of the New York National Guard was formed at Spartanburg, S. C. There also training was in progress at the end of the year. On April 29, prior to their departure for training camps, the 27th division of the New York National Guard marched in review down Fifth Avenue. On September 4, the first of the State's quota for the new National Army paraded on Fifth Avenue. The 7th Regiment left for Camp Wadsworth, Spar-

tanburg, S. C., on September 11. It was followed on the 14th by the former 12th Regiment.

On November 12, the president made an address at Buffalo before the National Convention of the American Federation of Labor. In this he insisted that free industry could not continue if the Pan-German plan of World Dominion was achieved. For an account of the activities in the State relating to war relief, Liberty Loans, food control, fuel control, see the articles devoted to these subjects.

**LEGISLATION.** A special session of the legislature was called by Governor Whitman to pass a law creating a commission to control, during the war, the production, distribution, and transportation of foods, and to prevent the forcing up of foods by hoarding. George W. Perkins was appointed chairman of this commission by the governor, but the Senate refused to confirm the appointment and after a delay of two months Governor Whitman withdrew his name and appointed John Mitchell, at that time state industrial commissioner, to the post. The two other members of the commission appointed were Jacob Shurman, president of Cornell University, and Charles H. Weiting, former state agricultural commissioner.

During the session of the legislature, many important measures were passed. A State Food Supply Commission was created for the purpose of encouraging the production of food. The work of this commission was later taken over by the food control commission. There was also created a State Council of Farms and Markets which is to be permanent. Compulsory military training for boys between the ages of 16 and 17 was provided for. Several important measures affecting public health were enacted. Provision was made for the education of children with retarded mental development. The public health law which regulates the sale and distribution of habit-forming drugs was amended. It was provided that children of 12 years of age or over might be released from school attendance between April 1 and November 1 for employment in the production and care of food products. The minimum school period was increased from 160 to 180 days in other than public schools. Provision was made for the compensation of State and municipal officers and employees while absent on military service. The creation of a State constabulary force was authorized. A local option law was passed, which is noted in the article on LIQUOR REGULATION. See STRIKES.

**STATE OFFICERS.** Governor, Charles Seymour Whitman; Lieutenant-Governor, Edward A. Schoeneck; Secretary to Governor, William A. Orr; Secretary of State, Francis M. Hugo; Comptroller, Eugene M. Travis; State Treasurer, James L. Wells; Attorney-General, Merton E. Lewis; State Engineer and Surveyor, Frank M. Williams; Superintendent of Insurance, Jesse S. Phillips; Superintendent of Banking Dept., George I. Skinner; Superintendent of State Prisons, James M. Carter; Superintendent of Public Works, W. W. Wotherspoon; Commissioner of Education, John H. Finley.

**NEW YORK, COLLEGE OF THE CITY OF.** A municipal institution for the education of men in New York City. In the fall of 1917 there were 2007 students in the Day Session, 3868 in the Evening Session and the Division of Vocational Subjects, 4230 in Extension Courses, and

1280 in Townsend Harris Hall. There were 234 members of the faculty. During the year 1917 Professor C. H. Parmly of the department of engineering died. D. H. Steinman was appointed associate professor of engineering and Professor C. L. Brownson was chosen head of the department of classical languages and literature. Professor Walter E. Clark, of the faculty of political science, resigned to become president of the University of Nevada. In 1917 courses in civil, electrical, mechanical, and chemical engineering were instituted. There were 66,000 volumes in the library. The college co-operated with the U. S. Signal Corps Reserve and trained and furnished quarters for a company. The college was founded in 1847. It is supported by New York City. President, Sidney E. Mezza, LL.D.

**NEW YORK BARGE CANAL.** See CANALS.

**NEW YORK CITY.** See WATER-WORKS.

**NEW YORK UNIVERSITY.** A non-sectarian educational institution in New York City. Women are admitted to some of its departments. In the fall of 1917 there were 6908 students and 508 members of the faculty. Volumes in the library numbered 134,488. Productive funds amounted in 1917 to \$1,394,657 and income therefrom to \$60,522. Jacob H. Schiff made a gift of \$50,000 in 1917 to endow a division of public affairs. Beginning in 1917 the school of commerce recommends such of its students as are graduates of approved colleges and have completed the required work of the school, for the degree of Master of Business Administration. The university organized a War Council of Deans, Acting Deans and Administrative Officers to consider plans for effective cooperation with various activities concerned with the prosecution of the war. It was estimated at the end of the year that from the School of Applied Science alone, 62 teachers were in war work and about 75 students had left to join the colors. New York University was founded in 1831. Chancellor, Elmer Ellsworth Brown, LL.D.

**NEW ZEALAND, DOMINION OF.** Three principal and several smaller islands in the South Pacific; an autonomous British dependency. Capital, Wellington.

**AREA AND POPULATION.** Area of North Island, 44,468 square miles (563,729 inhabitants, census of April 2, 1911); South Island, 58,325 square miles (444,120); Stewart Island, 665 (357); total, New Zealand proper, 103,659 square miles; total population (including 262 on Chatham and Kermadec islands), 1,008,468. Annexed islands, 1903 square miles (12,340 inhabitants); making a total of 104,751 square miles and 1,021,068 inhabitants, exclusive of 49,844 Maoris. Total population with Maoris, 1,070,910. Wellington had 64,372 inhabitants (with suburbs, 70,729); Auckland, 82,482 (102,676); Christchurch, 53,116 (80,193); Dunedin, 41,529 (64,237); Invercargill, 12,782 (15,858).

Total population October 15, 1916, 1,099,295 exclusive of aborigines (552,085 males, 547,210 females). Marriages, 1915, 10,028; births, 27,850 (1152 illegitimate); deaths, 9965; immigrants, 25,551; emigrants, 22,476.

**PRODUCTION.** The area of land under occupation in 1916 was 29,404,291 acres. Area under crops, 16,841,575 acres.

In the table below will be found the acreage under main cereals with the yield for two years:

	Hectares		Quintals	
	1917-18	1916-17	1917-18	1916-17
Wheat .....	118,976	88,625	1,370,870	1,743,243
Oats .....	196,270	72,194	.....	967,715
Corn .....	2,604	3,272	71,991	86,458
Potatoes ...	10,320	12,063	1,329,061	1,308,740

Live-stock, January 31, 1917, as compared with 1916, is detailed below:

	1917	1916	Difference
Horses .....	367,167	371,331	— 4,164
Cattle .....	2,502,700	2,417,491	+ 85,209
Sheep .....	24,753,324	24,788,150	— 34,826
Pigs .....	278,186	297,501	— 19,315

Of the cattle, 760,108 in 1917 and 750,323 in 1916 were milch cows.

**COMMERCE, ETC.** The export of wheat, barley, oats, flour, meal, linseed, and cotton is prohibited to any other destination than the United Kingdom and British possessions and protectorates, except with the consent of the minister of customs. The export of foodstuffs and fodder is also prohibited to foreign ports in Europe of the Mediterranean and Black Seas, other than those of France, Italy, Russia (except Baltic ports), Belgium, Spain, and Portugal.

Prohibition of export is also in force as regards all goods which for the time being are contraband of war (either absolute or conditional) under any proclamation or order in council of the British Government. By order in council dated February 8, 1917, the export of wheat, oats, and other cereals, with their products, is entirely prohibited, except with the consent of the minister of customs.

In the table below is shown the trade with the United Kingdom, the colonies, other countries, and totals for three years:

Imports	1912	1914	1915
U. K. ....	£12,499,787	£11,985,946	£10,623,426
Australia ..	2,583,887	3,376,371	2,786,174
United States..	2,049,618	2,282,966	2,862,537
Other .....	.....	.....	.....
Total .....	£20,976,574	£21,856,096	£21,728,854
Exports	1912	1914	1915
U. K. ....	£16,861,256	£21,383,891	£25,389,030
Australia ..	2,848,664	1,928,410	2,548,605
United States..	620,988	1,028,054	2,006,507
Other .....	.....	.....	.....
Total .....	£20,330,908	£26,261,447	£31,748,921

Some details of the 1915 trade follow, with values in thousands of pounds sterling:

Imports	£1,000	Exports	£1,000
Clothing, etc. ....	3,672	Wool .....	10,388
Iron and steel....	3,128	Gold .....	1,695

Specie .....	1,070	Specie .....	318
Other .....	.....	Other .....	.....
Total .....	21,720	Total .....	31,749

In his report for the fiscal year ending March 31, 1917, the minister for railways of New Zealand reported that there were 2070

miles of main lines in operation. The total earnings for these amounted to \$23,363,142, an increase of \$1,228,567 over the previous year. The expenditures amounted to \$14,243,584, leaving a net profit of \$9,119,558, or a return of 5.3 per cent on a capital investment of \$190,000,000. In 1915-16 the tonnage of goods carried was 6,370,946, and the passengers numbered 14,201,506.

In the fiscal year under review there were 14,173,115 passengers carried, as compared with 14,201,506 for the previous year, and 5,826,265 tons of freight were handled, as compared with 5,960,562 tons in 1916, and 412,908 tons of live stock as compared with 410,383 tons in 1916. The increased receipts for the year ended March 31, 1917, were due to the increased passenger and freight rates charged, as the aggregate business in 1916-17 was less than for 1915-16. During the year 1917 a new locomotive constructed at the government workshop at Dunedin was tested on the heavy-graded section between Oamaru and Dunedin, and also on the North Island on the Wellington-Taihape section.

**FINANCE, ETC.** In the table below are shown financial statistics for comparative years:

	1911-12	1914-15	1915-16
Revenue .....	£11,032,544	£12,451,845	£14,186,095
Expenditure ...	10,340,368	12,379,803	12,493,107

Gross public debt March 31, 1916, £109,637,397; accrued sinking fund, £3,679,964; net debt, £105,957,433.

A governor administers the Dominion (the Earl of Liverpool in 1917). Prime minister, W. F. Massey.

**NIAGARA FALLS.** See WATER-WORKS.

**NICARAGUA.** The largest of the Central American republics. The capital is Managua.

**AREA, POPULATION, ETC.** Nicaragua is divided into 13 departments, 3 districts, and 2 comarcas; the total estimated area is 49,552 square miles, which is a little larger than the gross area of the State of New York. The population, which is principally mestizo or Indian, was estimated at 703,540 at the end of 1914. Estimated population of chief towns: León, 63,000; Managua, 48,367 (according to a 1917 enumeration); Granada, 25,000; Matagalpa, 16,000; Bluefields, the chief eastern seaport, 15,000. In 1915, there were 414 state primary schools, with about 35,000 pupils enrolled. Illiteracy is general.

**PRODUCTION AND COMMERCE.** The principal crops are bananas (in the Bluefields region), coffee (in the western districts), corn, sugar cane, and beans, while also of some importance are coconuts, rice, tobacco, cacao, and various fruits. Cattle raising, especially in the northwest, is a profitable industry. Mining is almost limited to gold.

Imports and exports in 1916 were valued at \$4,777,597 and \$5,284,863 respectively. Valued in thousands of dollars, imports and exports have been as follows:

	1907	1912	1913	1914	1915	1916
Imports ...	2,811	4,967	5,770	4,134	3,159	4,778
Exports ...	3,360	3,862	7,712	4,955	4,567	5,285

Leading imports in 1915 and 1916 respectively, in thousands of dollars: cotton goods, 592

and 1157; iron and steel manufactures, 381 and 608; chemicals, drugs, and medicines, 182 and 431; wheat flour, 378 and 295; hides and skins and manufactures thereof, 145 and 233. Principal exports have been as follows:

	Metric Quintals		\$1,000	
	1915	1916	1915	1916
Coffee .....	91,325	104,528	1,983	2,171

**COMMUNICATIONS.** A railway extends from Corinto, on the Pacific, to Chinandega, León, Managua, Masaya, Granada, and Diriamba; its total length, with short branches, is 171 miles. On the Atlantic coast near the Rio Grande are 20 miles of private railway and the Pearl Lagoon Railway, of which in 1917 15 miles were in operation and 40 miles of roadbed completed.

Telegraphs: wire, 3637 miles; offices, 148. Post offices, 151.

**FINANCE.** The legal standard of value is gold. Monetary unit, the córdoba, at par is equivalent to the American dollar; exchange rate, October 1, 1917, \$1.00 = 1.01 córdobas. Estimated revenue for 1917, \$2,160,000 (customs, \$1,000,000; liquors and tobacco, \$900,000); estimated expenditure, \$2,094,944 (treasury and public credit, \$691,614; war and marine, \$327,450; police, \$310,237; public instruction, \$192,762). Foreign debt December 31, 1916, £1,179,620; internal debt in 1917, about 11,000,000 córdobas.

**GOVERNMENT.** The legislative power is exercised by a congress of two houses, the Senate and the Chamber of Deputies. Senators (13 in number) are elected for six years and deputies (40) for four years, all by direct vote. The president is elected by direct vote for four years and is ineligible for the next term. For the term ending December 31, 1916, the president was Adolfo Díaz. On October 1, 1916, Emiliano Chamorro was elected president; he was inaugurated January 1, 1917. First designate, Senator Salvador Chamorro; second designate, Deputy Vicente Rappaccioli.

**NICKEL MINERALS.** See **GEOLOGY**, *Economic Geology*.

**NIEMANN, ALBERT.** A German dramatic tenor, died in Berlin, February 5, 1917. He was born in 1831 at Erxleben, near Magdeburg, and began his career as an actor, taking minor rôles at Dessau in 1849. He also sang in the chorus at this time, and his voice was discovered by Friedrich Schneider, who, with a baritone named Nusch, gave him his early training. At Hanover, where he sang from 1854 to 1856, he gained royal favor and was sent to Paris to study under Duprez. After appearing in various other German cities, among them Halle, he returned to Hanover in 1860 and remained there six years. During this period he was chosen by Richard Wagner to create the chief rôle of *Tannhäuser* at its first performance in Paris in 1861. This was a memorable occasion, for the opera was riotously received by the Parisian public and after three performances the company was glad to escape under police protection. From 1866 till his retirement in 1889 he was a member of the Royal Opera in Berlin, where he gained fame as an interpreter of Wagner. The composer chose him to create the rôle of Siegmund in *Die Walküre* at Bayreuth in 1876, and the seasons of 1886-88 he spent in New York as a member of the Metropolitan Opera Company, appearing with Lilli Lehmann and other noted singers. Particularly as Tristan, and as Siegfried in *Die Götterdämmerung*, he left a record of magnificent acting and vocal power. His handsome presence made him an ideal embodiment of the Wagner heroes. He essayed operas of another type, such as *Faust*, *Robert le Diable*, and *Rienzi*, but they did not fit him, and for Italian opera he had no aptitude at all. But in his own field, he will remain among the great figures. He was appointed *kammersänger* to the German emperor. Niemann was twice married to famous actresses, Marie Seebach, from whom he was later divorced, and Hedwig Raabe.

**NIGER, MILITARY TERRITORY OF THE.** See **MILITARY TERRITORY OF THE NIGER**.

**NIGERIA, COLONY AND PROTECTORATE OF.** A British possession in West Africa, composed of the old protectorate of Northern Nigeria and the old protectorate and colony of Southern Nigeria. The country is separated into three principal districts—the colony proper (area, 1400 square miles), the Northern Provinces (255,700), and the Southern Provinces (78,600). The government headquarters is at Lagos, pending the completion of the future capital, Kaduna, now building on the main railway line through the province of Zaria in the Northern Provinces. This railway, begun in 1914, is to be known as the Eastern Railway, and will run from the head of the Bonny estuary to Kaduna, where the main line from Lagos to Kano crosses the Lagos River, about fifty miles south of the town of Zaria. The Nigerian Government Railway runs from Lagos to Kano—712 miles; it has a branch from Zaria to the Bauchi tin mines and another from Minna (near Zungeru) to Baro (on the Niger). The entire system is of three and one-half foot gauge.

The colored population is estimated to number in the neighborhood of 16,258,000; Europeans, 2600. Agriculture is practiced by the natives, who raise cotton, cacao, corn, cassava, yams, etc.

For 1915 the total imports were valued at

£5,016,951, and the total exports at £5,660,796. The export of palm kernels was valued at £1,692,711; palm oil, £1,462,162; cotton, £56,351. Total tonnage entered and cleared, 1,129,363, of which 1,068,030 tons British. Revenue, 1915, £2,703,268; expenditure, £3,434,215.

Sir F. D. Lugard was governor-general in 1917.

**NITRON.** See CHEMISTRY.

**NOBEL PRIZES.** The literature prize was divided between M. Pontoppidan and M. Gjellerup of Denmark. The legal and literary faculties of Stamboul University urged that the peace prize be given to Emperor William of Germany. The Norwegian Zimmerwold Socialist urged that it be given to Lenine and Trotsky, the leaders of the Russian Bolsheviks. It was finally awarded to the International Red Cross Committee of Geneva. Owing to the disorganized condition of the scientific world, due to the war, no awards were made in this field.

**NORFOLK.** See MUNICIPAL GOVERNMENT; MUSIC, *Festivals*.

**NORFOLK, HENRY FITZALAN-HOWARD**, fifteenth Duke of. An English nobleman and Roman Catholic leader, died in London, February 11, 1917. Born in 1847 in Carlton Terrace, the son of the fourteenth Duke of Norfolk, and Augusta, daughter of the first Lord Lyons, he succeeded his father in 1860. He then took his place as ranking member of the English nobility, premier duke, and also premier earl, his line of descent reaching back to the Earl of Arundel, whose title was created in 1139. He was educated at the Oratory School founded by Newman and early showed his interest in affairs of his church. From its foundation in 1871 he was president of the Catholic Union of Great Britain, and he served also as chairman of the Catholic Education Council and of the Catholic Record Society. Queen Victoria made him a Knight of the Garter in 1886 and the following year sent him as special envoy to the Jubilee of Leo XIII. This pope conferred on him the Order of Christ and Pius X that of the Golden Fleece. It is said to have been his influence that gained the red hat for Newman. The Duke served as lord mayor of Sheffield and was chosen as the first chancellor of the University of that city, after helping to found the institution. As postmaster general of Great Britain from 1895 to 1900 he helped to found the imperial penny post. Moreover, he was prominent in Sussex affairs, serving with the Sussex Yeomanry in the South African War, as lieutenant colonel of the 4th Royal Sussex from 1902 to 1912, and as lord lieutenant of the county. As Earl Marshal of England he was master of ceremonies on great occasions such as the coronation of Edward VII and George V. He owned almost 50,000 acres, bringing in an income of some \$1,500,000 annually. He gave largely to charities and built a number of churches, in the designing of which he had a large share. It is said that after the death of his first wife in 1887 he decided to enter a monastery, but was dissuaded by the Queen. In 1904 the Duke married again, this time a cousin, who on the death of her father, a large landowner, became Baroness Herries.

His young son, the Earl of Arundel, succeeded to the family title.

**NORTH CAROLINA. POPULATION.** The population of the State in 1910 was 2,202,287, and on July 1, 1917, it was estimated to be 2,434,381.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. bu.	Value
Corn	...1917	3,000,000	60,000,000	\$102,000,000
	1916	2,600,000	48,100,000	59,910,000
Wheat	..1917	930,000	9,765,000	22,850,000
	1916	870,000	9,135,000	18,078,000
Oats	...1917	340,000	5,780,000	5,375,000
	1916	390,000	6,825,000	5,050,000
Rice	...1917	300	8,000	16,000
	1916	300	6,000	5,000
Potatoes	..1917	50,000	4,500,000	6,435,000

	1916	440,000	572,000	10,010,000
Tobacco	..1917	325,000	b 204,570,000	64,496,000
	1916	320,000	176,000,000	32,200,000
Cotton	..1917	1,453,000	c 570,000	78,945,000
	1916	1,451,000	c 655,000	63,497,000

a Tons. b Pounds. c Bales of 500 pounds net weight.

**MINERAL PRODUCTION.** The value of gold, silver, and copper in the State in 1916 was \$29,084. North Carolina ranks first among the Southern States in the production of gold. The total mined in 1916 was 1269 fine ounces, compared with 8321 in 1915. There was also a small silver production.

North Carolina ranks first in the United States in the production of mica, the value of its output in 1916 was \$422,580 compared with \$300,593 in 1915. It also leads all the States in the production of kaolin, the high-grade white-burning clay used by potters.

**TRANSPORTATION.** The total railway mileage of the State in 1917 was 4958. There was no construction during the year. The railways having the longest mileage were: Southern Railway Co., 1364; Atlantic Coast Line, 951; Seaboard Air Line, 609; Norfolk Southern Railroad, 783.

**FINANCE.** The report of the State treasurer for the year 1916 shows a balance in the treasury on December 1, 1915, of \$133,435. The total receipts for the year amounted to \$5,227,230, and the disbursements to \$5,002,607, leaving a balance on December 1, 1916, of \$224,623.

**EDUCATION.** The total school population of the State in 1915-16, the latest year for which the figures are available, was 826,320; of these 560,707 were whites, and 265,613 were colored. The total enrollment in the schools was 649,246, of which number 449,447 were white pupils and 199,809 were colored. The average daily attendance of white pupils was 318,917 and of colored pupils, 127,274. The total number of teachers was 14,550, of which 12,015 were in the rural schools and 2535 in the city schools. The white teachers numbered 11,095 and the colored teachers numbered 3455. The average annual amount paid to teachers was \$264.36. The average yearly salary of white teachers was \$296.62 and of colored \$155.80. The total value of school property was \$11,489,881. The value of white school property was \$10,205,859 and of colored school property \$1,284,022. The number of white rural schools was 5500 and of colored 2356.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include hospitals at Morgantown, Raleigh, and Goldsboro, the Epileptic Colony, the School for the Blind, the School for the Colored Blind and Deaf, the Soldiers' Home, the State Prison, the School for the White Deaf at Morgantown, the Jackson Industrial and Manual Training School at Concord, and the Orphanage for White Children and the Orphanage for Colored Children at Oxford.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below.

Laws relating to criminal procedure were amended. It was provided that when there were several charges against the same defendant for the same act or transaction, or for two or more acts or transactions connected together, or for two or more transactions of the same class of crimes or offenses, they shall be joined in separate counts in one indictment. Laws relating to divorce were amended in some respects. Among the measures relating to military service, it was provided that whites and blacks shall not be compelled to serve in the same organization, and that blacks shall be under the command of white officers. A check on the abuse of the power to flog prisoners was made by requiring the flogging to take place in the presence of the prison physician or chaplain. The contract system of leasing prisoners was forbidden, and provision was made for a State use system under which the prisoners are put to work to make articles which may be used by the State or its municipalities. The question whether there shall be a constitutional convention was to be referred to the people at the next general election. The act provided for the convention to limit its session to sixty days with a recess of thirty day sittings. Provision was made for improved accounting methods in the State administration offices with the requirement that they shall be adopted and used by all State offices. A budget system was created. A general act was passed providing for the government of municipalities. Among the other things this act required was a modern accounting system, and provided for distinct plans for city government, any one of which may be adopted by the voters of the municipality. A general municipal finance act was also passed. This required an annual budget and limited the period of bond issue to the probable period of usefulness of the improvement made from the proceeds of the bond. Provision was made for the voting of citizens absent in the national service. Laws were passed providing for the inspection and regulation of gasoline and similar products. The preparation of any false statement regarding the curative effect of any alleged remedy was prohibited, as was also the sale or advertisement of patent medicines to cure any disease for which no cure has been found, or the sale of mechanical devices whose claims for the treatment of the disease are false or fraudulent, or which has been declared valueless by the State board of health. Laws relating to conservation were extensively amended. Provision was made for the imposition of an income tax. A special tax commission was created to report a comprehensive taxation plan and especially to make an exhaustive study of the question of separation of the sources of the state and local revenue. A commission was ap-

pointed to make a survey of the educational system and to study the school laws and to make recommendation for changes therein. On April 31, the Federal Child Labor Law prohibiting the shipment, in interstate commerce, of products of child labor was declared unconstitutional by a justice of the United States Supreme Court.

**STATE OFFICERS.** Governor, Thos. W. Bickett; Lieutenant-Governor, O. Max Gardner; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacy; Auditor, W. P. Wood; Adjutant-General, B. S. Royster; Attorney-General, James M. Manning; Superintendent of Education, J. Y. Joyner; Commissioner of Agriculture, W. A. Graham; Commissioner of Insurance, J. R. Young—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Walter Clark; justices, Geo. H. Brown, Wm. A. Hoke, Wm. R. Allen, P. D. Walker; clerk, J. L. Seawell.

**NORTH CAROLINA, UNIVERSITY OF.** A State institution of learning at Chapel Hill, N. C. In the fall of 1917 there were 1049 students and 94 members of the faculty. Volumes in the library numbered 80,000. In 1917 Mrs. Robert W. Bingham made a bequest which will provide \$75,000 annually for the university's use. The total income in 1917 was \$219,548. The university was founded in 1795. President, Edward K. Graham, LL.D., D.C.L.

**NORTH DAKOTA. POPULATION.** The population of the State in 1910 was 577,056, and on July 1, 1917, it was estimated to be 765,319.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. bu.	Value
Corn ....	1917	590,000	5,310,000	\$3,018,000
	1916	510,000	13,515,000	11,353,000
Wheat ...	1917	7,000,000	58,000,000	112,000,000
	1916	7,150,000	38,325,000	59,774,000
Oats .....	1917	2,375,000	38,625,000	23,048,000
	1916	2,500,000	53,750,000	23,650,000
Potatoes ..	1917	90,000	3,870,000	5,031,000
	1916	75,000	6,975,000	8,021,000
Hay .....	1917	550,000	a 484,000	5,566,000
	1916	550,000	935,000	5,010,000

a Tons.

**TRANSPORTATION.** The total railway mileage in the State in 1916 was 1460. The railways having the longest mileage of main track were: The Great Northern, 426; The Northern Pacific, 377; Minneapolis, St. Paul, and Sault Ste. Marie, 361.

**FINANCE.** The report of the State treasurer for the fiscal year 1917 showed a balance on hand July 1, 1916, of \$1,758,162. The total receipts for the year were \$6,196,611 and the expenditures were \$6,468,953, leaving a balance on hand on June 30, 1917, of \$1,485,820. The bonded debt of the State on July 1, 1917, was \$462,000.

**EDUCATION.** The total population in the State in 1916 was 186,341. The total enrollment in the graded schools was 138,671, and in high schools 9500. The average daily attendance was 124,996. The male teachers numbered 1329, and females numbered 6664. The average monthly salary of male teachers was \$74.99, and of females, \$59.84.

**CHARITIES AND CORRECTIONS.** The charitable

and correctional institutions of the State include the State Reform School at Madan, the State Penitentiary at Bismarck, the Hospital for the Insane at Jamestown, the Institute for the Feeble-Minded at Grafton, the School for the Blind at Bathgate, the School for the Deaf at Devil's Lake, and the Tuberculosis Sanatorium at Dunseith.

**POLITICS AND GOVERNMENT.** On January 23, Governor Frazier signed a measure extending the franchise to women for all except constitutional offices. On July 10 John M. Baer, the candidate of the Farmers' Non-Partisan League, defeated O. B. Burtness, Republican, for Congress.

The success of the Farmers' Non-Partisan Political League in the State election of November, 1916, gave to that body the State government, and the control of the legislature. So great a mass of legislation was proposed to be enacted, by the members of the league, that the leaders in the legislature recommended the turning of the body into a constitutional convention, which should enact and submit to the people a revised constitution. This was made necessary by the fact that the legislature, under the present constitution, could not pass all the bills which had been presented.

Among the recommendations in Governor Frazier's message to the legislature, were the State ownership of terminal elevators, flour mills, packing plants, cold storage plants, exemption of farm improvements from taxation, and the State inspection of rural credit banks. As political measures, the league favored the short ballot, the four-year term for State officials, equal suffrage for men and women, the initiative, referendum, and recall.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below:

Several amendments were proposed to the State constitution relating to the judicial system and the administration of justice. One of these provided that the concurrence of four out of five judges of the Supreme Court shall be necessary to declare a law unconstitutional. Measures were enacted providing for the absent voting for citizens of the State engaged for the national service. The Torrens system of the registration of land titles was put into effect. A constitutional amendment was proposed creating a hail insurance fund for the protection of the farmers' crops. Several measures relating to conservation were enacted. The banking laws of the State were amended in important details.

**STATE OFFICERS.** Governor, Lynn J. Frazier; Lieutenant-Governor, A. T. Kraabel; Secretary of State, Thomas Hall; Treasurer, John Steen; Auditor, Carl Kositzky; Attorney-General, Wm. Langer; Superintendent of Education, N. C. MacDonald; Commissioner of Agriculture, John N. Hagan; Commissioner of Insurance, S. A. Olmstead—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Andrew A. Bruce; Associate Justices, J. E. Robinson, L. E. Birdzell, R. H. Grace, and A. M. Christianson.

**NORTH DAKOTA, UNIVERSITY OF.** A co-educational State institution located at Grand Forks, N. D. The post office is University, N. D. In the fall of 1917 there were 772 students and 73 members of the faculty; over 150 students

left the institution to enter government service and 8 members of the faculty were on leave engaged in war work. President Frank L. McVey resigned in 1917 after serving as head of the university for eight years, and Thomas Franklin Kane, Ph.D., LL.D., was elected to succeed him, Earle J. Babcock, Sc.D., meanwhile acting president. The family of James F. Twamley, an early trustee, established a student loan fund in 1917. Productive funds in 1917 amounted to \$1,721,262 and the income therefrom to \$65,000. Volumes in the library numbered 58,915. The university was founded in 1883.

**NORTHERN TERRITORY.** A territory of the commonwealth of Australia. It is situated in the central and northern part of the continent between Western Australia and Queensland and extends south to South Australia at lat. 26° S. Formerly the territory belonged to South Australia, from which it was transferred to the commonwealth January 1, 1911. The estimated area is 523,620 square miles, which is about 17.6 per cent of the area of the commonwealth and nearly twice the land area of Texas. The estimated population, September 30, 1916, was 4956, as compared with 3310 (2734 males, 576 females) at the 1911 census. These figures are exclusive of full-blooded aborigines, whose number is variously estimated at from 20,000 to 50,000. The capital is Darwin, situated on Port Darwin, an excellent harbor; it had 958 inhabitants in 1911. From Darwin a railway extends inland 145 miles to Pine Creek. Administrator of the Northern Territory, J. A. Gilruth. See AUSTRALIA.

**NORTHWESTERN COLLEGE.** An educational institution at Napierville, Ill. It is supported by the Evangelical Association, but it is non-sectarian in its requirements for admission. In the fall of 1917 students numbered 340 and there were 28 members of the faculty; 40 students left to enter government service before the end of the year. T. J. McCarter, of the University of Texas, was made professor of physics. Volumes in the library numbered 12,500. Productive funds in 1917 amounted to \$211,000 and the income therefrom to \$10,642. The college was founded in 1861 and incorporated in 1876. Edward Everett Rall, Ph.D., was inaugurated president on May 17, 1917.

**NORTHWESTERN UNIVERSITY.** An institution of learning under the auspices of the Methodist Episcopal Church, located at Evanston, Ill. In the fall of 1917 there were 3878 students and 483 members of the faculty; nearly 800 alumni and students entered the national service in 1917. Many of the faculty, including deans of the schools of engineering, law, commerce, and oratory have been given leaves of absence. Military training is required in the colleges of liberal arts and engineering. Gifts to endowment and other permanent funds of the university amounted to over \$500,000 in 1917. The total of productive funds is \$4,384,313 and the income therefrom in 1917 was \$274,337. Volumes in the library numbered 170,000, not including 80,000 pamphlets. The university was founded in 1861. President ad interim, Thomas Franklin Holgate, LL.D.

**NORTHWEST PROVINCES.** The Prairie Provinces (q.v.) of Canada.

**NORTHWEST TERRITORIES.** That part of Canada not comprised within any province

or the Yukon Territory. On the west, it is bounded by the Yukon Territory; on the south, it is separated by the 60th parallel from British Columbia and the Prairie Provinces. It does not include any of the mainland east of Hudson Bay, but Baffin Land and other islands north of the continent belong to the Northwest Territories. Estimated area, 1,242,224 square miles, of which 34,298 water. The population is very sparse, and the means of subsistence scanty. Population according to the 1911 census, 5900.

**NORWAY.** A constitutional monarchy of northern Europe; united with Sweden under the same king from November 4, 1814, to June 7, 1905, when the union was dissolved. Norway, the western and northern portion of the Scandinavian peninsula, is about 1100 miles in length, its greatest width about 250 miles. It is divided into twenty provinces, or amter. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. Christiania is the capital. Area, 322,909 sq. km. (124,675 sq. mi.); population, 2,357,790; density, 7.6.

The majority of the people are Lutherans (2,329,229 belonging to the state church and 15,287 to the Free Lutheran Church); Methodists and Baptists are next in numbers (10,986 and 7659 respectively). All creeds are tolerated, but Jesuits are debarred.

**PRODUCTION AND SUPPLIES.** The cultivated area is about one-thirtieth of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains. Agriculture, though pursued with some vigor of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of food and raw materials. Since the entrance of the United States into the European War and the shutdown on exportation to Scandinavian countries of materials suitable for reexportation into Germany, these countries have faced actual starvation. Upon guarantees avoiding reexportation, agreements were entered into between the United States and the Scandinavian countries for limited shipments of certain supplies. Norway was the first of the northern European neutrals to be rationed. The statement issued by the War Trade Board reads in part:

"The following schedule of Norway's allotment of commodities containing quantities determined has been handed to Dr. Nansen:

"Proposed schedule of commodities agreed to by the United States and her associates in the war as sufficient to cover Norway's 1918 requirements considering the existing conditions: Bread grains, including rice, 300,000 metric tons; starches, 1000 metric tons; cocoa, 1400; coffee, 14,500; tea, 160; sauces and pickles, 80; syrup, 5000; spices, 382; fruit, dried, 4000; fruit, fresh, 8000; sugar, 50,000; pork and beef, 10,000; vegetable and animal oils, 10,000; mineral oils, 76,500; oil seeds (for seed crushing plants), 20,000; silk, yarn and tissues, 110; cotton, raw, yarn, and manufactures, 8000; wool, wool yarns, and products, 3700; corkwood, 900; tin, raw, 80; lead, 1000; antimony, 12; asbestos, 350; borax and boric acid, 80.

"In addition to the quantities mentioned, further quantities may be granted where it is found

that the amount stated is not sufficient for the needs of the country. Norway's requirement of oil cake, when ascertained, will be allowed. There is to be included in the foregoing schedule certain textiles, hides and skins, and a large tonnage of raw phosphate for agricultural purposes, together with necessary agricultural machinery and other articles to assist Norway in increasing her own production of foodstuffs.

"Norway's import of the foregoing quantities to be conditioned upon her continuing certain exports to the Powers associated with the United States. The War Trade Board agrees to the exportation of 48,000 tons export weight of fish and fish products per annum to the Central Powers.

"The exportable surplus of copper controlled by the United States and its associates is not sufficient to meet all demands. But so far as the war needs of the United States and its associates permit the board will assist in every way in supplying the copper needed by Norway. The board agrees to Norway's export of copper to the Central Powers only in compensation for copper received from those Powers in manufactured form, plus 5 per cent to cover wastage.

"Norway will, of course, agree that no commodity which the United States or its associates may furnish to it shall be exported to the Central Powers, and that no commodity except fish and fish products, upon which Norway has in the past placed restrictions on export, by virtue of an agreement or understanding between herself and British or French governments before the entry of the United States into the war, shall be exported to the Central Powers. And in case Norway shall export to any neutral country contiguous to the Central Powers, or either of them, any commodity which Norway agrees not to export to the Central Powers. Norway will provide by agreement with the government of such neutral country that no commodity so exported shall be reexported directly or indirectly to the Central Powers.

"As to the duration of the proposed agreement, this board agrees that it should be operative for the period of the war, subject to termination by either party at the expiration of one year from the date of the agreement and at any time thereafter, provided three months' notice shall be given of such termination."

Below are seen areas devoted to main crop and yield for two years:

	Hectares		Quintals	
	1917	1916	1917	1916
Wheat ....	5,533	5,526	65,712	86,063
Rye .....	19,585	19,713	166,613	239,157
Barley ....	39,897	39,800	663,244	782,157
Oats .....	124,094	120,015	1,713,645	2,282,940
Potatoes ..	46,162	46,162	7,547,819	7,944,110

The value of the principal crops in 1916 is reported as follows: Hay, \$57,687,131; potatoes, \$11,709,624; oats, \$12,241,918; turnips, \$1,172,361; barley, \$5,240,445; others, \$3,351,098; total, \$91,402,577.

Live stock on farms is shown below for two years:

	1916	1915	Difference
Horses .....	189,175	186,217	+ 2,958
Cattle .....	1,119,306	1,120,517	- 1,211
Sheep .....	1,281,080	1,329,559	- 48,529
Goats .....	230,055	240,303	- 10,248
Pigs .....	221,217	208,522	+ 12,695

**FISHERIES.** Norway's total catch of codfish in 1916 was considerably below the average (about 77,000,000 for the period 1911-15), being only 51,400,000, compared with 66,800,000 in 1915 and 81,500,000 in 1914; but the quality of the fish and the yield of oil and roe were better than usual. Very high prices prevailed, the value of the haul for 1916 being estimated at \$20,100,000, against \$9,380,000 for 1915. Large quantities were sold in fresh condition, and most of the salted fish went to the belligerent countries.

The total quantity of salted codfish exported from Norway in 1916 was 72,752,500 pounds of split cod (96,342,000 in 1915); 104,719,560 pounds salted in bulk (56,217,870 in 1915); and 42,990,140 pounds salted in boxes and barrels (27,116,850 in 1915).

Although the exports of cod-liver oil from Norway in 1916 were little more than half those in 1915 their value was greater, on account of unprecedented prices, amounting to about 30,000,000 kroner (\$8,040,000), compared with 20,000,000 kroner (\$5,360,000) in 1915. The past year's shipments were 84,500 barrels, of which 50,000 barrels were steam-refined, 14,500 raw, and 20,000 brown oil; in 1915 there were 139,300 barrels (100,000 steam-refined, 5300 raw, and 34,000 brown oil). Prices of steam-refined cod-liver oil were \$30.40 per barrel in February, 1916 (\$22.78 in February, 1915); \$107.20 in March, 1916 (\$44.22 in March, 1915); \$120.60 in July, 1916 (\$67 in July, 1915); and \$127.30 from August to December, 1916 (\$80.40 for the corresponding period of 1915). Prices of brown cod-liver oil in 1915 and 1916 were as follows: February, \$64.32 per barrel; March, \$24.12 and \$68.34; July, \$26.80 and \$93.80; and from August to December, \$50.92 and \$93.80.

Fish roe brought about \$13.40 per barrel during the first part of 1916. The price advanced to \$21.44 and \$22.78 per barrel, and as much as \$26.80 was paid for a short while, but quotations later fell to the former figures. Of the 45,000 barrels of roe exported from Norway in 1916 about 30,000 were taken to France, Spain, and Portugal.

The catch of herring was exceptionally good and prices were high. The government bought the entire haul of mackerel at a fixed price.

On account of the unprecedented demand in Europe for canned fish all reserve stores were disposed of at a high price. Norway's total export of this product was 82,019,290 pounds in 1914, 114,107,972 pounds in 1915, and 84,839,839 pounds in 1916. The large amount shipped in 1915 represents the surplus of the storehouses, which must be replaced before exports resume their normal course.

**COMMERCE AND COMMUNICATIONS.** In the table below are seen imports and exports for three years, values in kroner (the par value of the krone is 26.799 cents):

	1913	1914	1915
Imports .....	552,433,600	567,276,700	867,967,800
Exports spec. ....	380,912,100	394,390,000	660,996,400
Exports transit * ..	11,700,800	15,631,600	15,763,400

\* 1913, direct transit not included.

The following table shows in thousands of kroner leading imports for consumption and exports of domestic produce for the year 1915:

Imports	1,000 kr.	Exports	1,000 kr.
Cereals, etc. ...	105,309	Animal prods. ..	228,701
Ores .....	118,422	Timber .....	118,408
Machinery .....	129,772	Grease, etc. ....	79,065
Oils, etc. ....	69,518	Hair, skins ....	14,967
Textiles .....	59,106	Paper, etc. ....	46,709
Metal mfrs. ....	26,788	Metals .....	42,899
Provisions .....	60,971	Mineral mfrs. ...	62,031
Metals .....	58,336	Minerals, raw ..	36,450
Yarn, etc. ....	39,580	Ships .....	22,275
Wooden wares ..	23,244	Live animals ...	1,010
Animal prods. ..	17,065	Rope, etc. ....	1,692

Countries of origin and destination follow, with the value of the 1915 trade given in millions of kroner:

	Imps.	Exps.		Imps.	Exps.
Germany .....	155.2	192.7	Belgium ....	.4	.2
U. K. ....	253.6	187.7	France .....	13.9	27.6
Sweden .....	75.2	67.5	Spain .....	22.4	72.0
Russia .....	2.5	12.1	Italy .....	7.0	9.7
U. S. ....	221.1	57.6	Portugal ....	4.6	8.9
Denmark ....	39.1	33.2	Other .....	...	...
Netherlands ..	36.6	18.2			
Total.....867.9 676.7					

Total vessels entered at Norwegian ports in 1915, 10,811, of 5,344,193 tons; cleared, 10,993, of 5,418,075. The merchant marine included January 1, 1917, 2036 vessels, of 2,562,395 tons.

**COMMUNICATIONS.** Length of railways in operation December 31, 1916, 1685 miles; private lines, 288 miles. A further and very substantial temporary increase in the rates on the Norwegian State Railways, both for passenger and goods traffic, was decided upon owing to the great increase in operating costs. Including previous temporary increases in the railway rates, the rise amounted to 80 per cent for first and second-class passengers, 60 per cent for third-class passengers, 100 per cent on passengers' luggage, and 100 per cent on express and ordinary goods traffic, except articles of food, feedstuffs, manure, and fuel, for which commodities the increase amounts to 70 per cent, and milk, for which it is 50 per cent. It was understood that these prices would be revised with the return of more normal conditions. State telegraph lines, 14,070 miles; wires, 61,707. Telegraph receipts for 1916, 13,731,053 kroner; expenditure, 7,771,562 kroner.

**SHIPPING.** Shipbuilding in 1916 was below normal, owing principally to labor troubles and the delay and difficulty experienced in obtaining materials. The total number of Norwegian ships of over 100 tons lost from war causes in 1916 was 186 and their combined tonnage 260,000, of which 109 ships of 149,000 tons were lost in the last quarter of the year.

The increased demand for Norwegian tonnage due to the war has caused the shipowners of Stavanger and Haugesund to place orders for new ships abroad, especially in the United States. Shipowners for the port of Stavanger alone have contracted for more than 120,000 dead-weight tons, mostly with Pacific coast shipyards.

Freight rates to and from the United States had advanced about 700 per cent since August, 1914. The difficulty of obtaining tonnage from America has complicated matters, and shipments have sometimes been delayed from six to eight months after the invoices have been received. The demand for Norwegian tonnage in the United States seems to have influenced the value of the dollar. In 1916 it never reached the normal

of 3.731 kroner, but generally ranged from 3.40 kroner (\$0.91) to 3.60 kroner (\$0.96). This rate prevailed, notwithstanding the relatively high value of the American unit compared with that of other countries and the balance of trade favorable to the United States. Norway's total merchant marine contains 2036 vessels, with a gross tonnage of 2,562,395.

**FINANCE.** The krone (worth \$0.268) is the monetary unit. In the following table are shown revenue and expenditure for comparative years:

	1911-12	1913-14	1914-15
Revenue .....	140,730,210	175,962,000	197,339,000
Expenditure ..	132,932,368	168,716,000	186,448,000

The 1916-17 budget is detailed below, amounts in thousands of kroner:

Revenue	1,000 kr.	Expenditure	1,000 kr.
Customs .....	54,000	Railways .....	35,868
Income tax .....	30,000	Defense .....	33,468
Railways .....	36,302	Finance .....	6,711
Post Office .....	12,000	Instruction .....	20,840
Tels. and tels. ....	10,200	Justice .....	5,942
Domains .....	7,065	Interior .....	17,977
Excise, spirits ....	5,060	Highways .....	9,036
Excise, beer .....	5,000	Debt .....	5,877
Stamps .....	4,600	Interest .....	16,279
Succession .....	1,500	Foreign affairs...	1,975
Fees .....	1,250	Civil list .....	748
Mines .....	1,002	Storthing .....	904
Misc. ....	.....	Misc. ....	.....
Total ord.....	186,000	Total ord.....	186,000
Extraord. ....	73,555	Extraord. ....	73,555
Total .....	259,555	Total .....	259,555

The 1917-18 budget was estimated to balance as follows: 237,500,000 kr. ordinary, 30,722,875 kr. extraordinary. Public debt, June 30, 1915, 421,323,752 kr. See **FINANCIAL REVIEW**; **PRICES**.

**NAVY.** See **NAVAL PROGRESS**.

**GOVERNMENT.** The executive power is vested in a king (Haakon VII, elected November 18, 1905), aided by a council of state composed of responsible heads of departments. The Storthing (representative), made up of the Lagthing and the Odelsting, is the legislative body.

Heir-apparent, Prince Alexander, born July 2, 1903; renamed Olaf upon his father's accession to the throne. The Cabinet is made up (1917) as follows: Prime Minister, Gunnar Knudsen; N. C. Ihlen, Minister of Foreign Affairs; A. T. Omholt, Finance and Customs; L. K. Abrahamson, Labor; O. Blehr, Justice and Police; K. Friis-Petersen, Commerce, Navigation, Industry, and Fisheries; C. Th. Holtfodt, Defense; J. Löwland, Worship and Instruction; F. A. M. O. Nalun, Public Works; O. J. Vik, Food and Supplies; Th. Prydz, Industrial Provisions. This Cabinet was formed in January, 1913.

On November 29 a conference of the Scandinavian Powers was held at Christiania at the instance of King Hakon of Norway and King Gustav of Sweden. The proceedings were not reported in the press and there was much speculation as to the purpose of the meeting. In certain quarters it was explained as an endeavor on the part of the three Scandinavian countries to find a means of self-defense against the Central Powers. The strong feeling in Norway against Germany on account of the latter's submarine warfare and especially the reported brutality of the Germans in firing upon defenseless sailors and

passengers on merchant vessels was said to have brought Norway to the verge of war. The meeting was interpreted by some as the result of Norway's efforts to cooperate with Sweden and Denmark in measures of self-protection.

**NORWEGIAN LITERATURE.** See **SCANDINAVIAN LITERATURE**.

**NORWEGIAN SÄNGERFEST.** See **MUSIC, Festivals**.

**NOTRE DAME, UNIVERSITY OF.** A Roman Catholic institution for the education of men, located at Notre Dame, Ind. In the fall of 1917 there were 1285 students and 91 members of the faculty. Volumes in the library numbered 103,000 and there were in addition 151,000 manuscripts. A gift of \$85,000 was received for a residence hall and one of \$17,000 for scholarships. New chemistry laboratories were built in 1917. The university was founded in 1842. President, Rev. John Cavanaugh, D.D., C.S.C.

**NOVA SCOTIA.** One of the Maritime Provinces of Canada. Capital, Halifax, chief naval station of the Dominion. The estimated area is 21,428 square miles, of which 360 water. Population (1911), 492,338, the increase over 1901 being 7.13 per cent. Halifax had 46,619 inhabitants in 1911; Sydney, 17,723; Amherst, 8973; Sydney Mines, 7470; Yarmouth, 6600; New Glasgow, 6383; Truro, 6107; Spring Hill, 5713; North Sydney, 5418; Dartmouth, 5058. There were no other towns in 1911 having more than 5000 inhabitants.

The provincial government is administered by a lieutenant-governor, appointed for five years by the governor-general of Canada; he acts through an executive council, or responsible ministry. The legislature consists of two chambers: the Legislative Council of 21 members appointed by the crown for life; the House of Assembly of 43 members elected for five years. In the House of Commons of the 13th Canadian Parliament, elected December 17, 1917, Nova Scotia is represented by 16 members. The lieutenant-governor in 1917 was McCallum Grant, appointed November 29, 1916, to succeed David MacKeen, who died November 13. Premier, G. H. Murray. See **CANADA**.

**NYASSALAND PROTECTORATE.** A British protectorate (formerly British Central Africa) extending from German East Africa to Portuguese East Africa, between Rhodesia and Lake Nyassa, and having an area stated at 39,801 square miles. Population (1916), 785 Europeans, 379 Asiatics (exclusive of Sikh troops), 1,140,000 natives. The administration headquarters are at Zomba; the chief town is Blantyre, in the Shiré Highlands. The cultivation of coffee has declined, that of cotton increased, 106,086 pounds being exported in 1915-16. Tobacco exported in 1915-16, 3,706,203 pounds. Total imports, 1915-16, £253,403; exports, £263,668. Local revenue, 1915-16, £137,911; expenditure, £125,666. There is a railway (129 miles) from Blantyre to Port Herald; its extension to the Zambezi has been undertaken. Steamships ply on Lake Nyassa and on the rivers of the protectorate.

**OATS.** The average annual world's production of oats is normally nearly four and one-half billion bushels. In most countries furnishing estimates of their production in 1917 the yield was satisfactory, but the data available covered only about 60 per cent of the oat-

producing areas usually reporting. Over 90 per cent of the crop was produced in the northern hemisphere, but the production of the countries reporting, according to provisional figures published by the International Institute of Agriculture, Rome, aggregated only 2,682,210,000 bushels, which was 15½ per cent above their production in 1916. About one-half of the world's crop in peace times is produced in the United States and Russia, and over three-fourths of it by these two countries in conjunction with Germany, Canada, and France, given in the order of their importance.

The production of Great Britain and Ireland in 1917 was estimated at 248,741,000 bushels, or considerably above the average. The yield of France, not including invaded territory, was reported at 237,447,000 bushels. Canada produced, according to estimates, 393,570,000 bushels, or about 12 per cent more than in 1916, the increase being due to a larger acreage rather than to a higher yield. The production of the United States as estimated by the Department of Agriculture was 1,587,286,000 bushels on an area of 43,572,000 acres, both production and acreage never having been surpassed. The production was greater by 335,449,000 bushels and the area by 2,045,000 acres than in 1916, and by 356,787,000 bushels and 4,869,000 acres than the average production and acreage, respectively, of the five-year period 1911-15. The average yield per acre, 36.4 bushels, was higher only in 1912 and 1915. The average farm value on December 1, 1917, was 66.9 cents per bushel, as compared with 52.4 cents on the corresponding date the year before, and on this basis the total value of the crop amounted to \$1,061,427,000, as against \$655,928,000 in 1916 when the bushel value was 52.4 cents. The bushel value and the total value were without precedent, and it was the first time in the history of the country that the value of the crop passed the billion dollar mark. The acreage of winter oats in the Southern States as reported by the Department of Agriculture was 3,278,000 acres, an increase of 7.3 per cent over the acreage of 1916.

About 7 per cent of the entire oats area of the United States is winter- or fall-sown oats. The world's trade in oats was very much restricted through the export regulations and prohibitions imposed by most governments, and the domestic trade in many countries was regulated through the fixation of prices for requisition for army use and for ordinary transactions. Germany in March, 1917, fixed the price at \$1.37 per bushel, Austria in August at \$1.06, Hungary in July at \$1.29, Great Britain in August at \$1.03, Italy in August at \$1.00, Switzerland in October at \$1.62, etc. The prices varied in different countries and were changed from time to time as conditions demanded.

**OBERLIN COLLEGE.** A non-sectarian co-educational institution located at Oberlin, Ohio. In the fall of 1917 there were 925 students in the college of arts and sciences; 42 in the graduate school of theology; 330 in the conservatory of music, and 152 members of the faculty. In the library there are 175,625 bound volumes and 185,469 pamphlets. The Dudley R. Allen Art Building, which cost \$200,000, was completed in 1917. Productive funds amounted to \$5,183,684 and the income from the endowment to \$130,700. The college was found-

ed in 1833. President, Henry Churchill King, D.D., LL.D.

**O'BRIEN, JOHN.** Captain John O'Brien, known throughout the world as a soldier of fortune, and having the soubriquet of "Dynamite Johnny," died on June 21, 1917. He was born in 1837 in New York City of Irish parents. He served in the Civil War as the third officer of the *Illinois*, which ship was soon mustered out of Federal service. He then sailed unknowingly on a ship that was to carry to Mexico a cargo of munitions, which was ultimately to be delivered to the Confederates. His first filibustering expedition was in 1885, when he carried arms and ammunition to the revolutionists in Colombia. He earned the title "Dynamite Johnny" when he carried a cargo of 60 tons of dynamite to revolutionists in Cuba in 1888. He helped supply Gen. Hippolyte, who was carrying on a successful revolution against Gen. F. D. Legitime in Haiti in 1889. He sided with the rebels of Cuba in the "Ten Years' War" and carried many cargoes of munitions to them despite the watchfulness of the United States Secret Service and the Spanish blockading squadron. Just before he died he was the official pilot of Havana.

●  
**OBSERVATORIES.** See **ASTRONOMY.**

**OCCUPATIONAL DISEASES.** During the past few years the increasing attention to problems of workmen's compensation has been accompanied by a growing demand that diseases of occupation should be treated in a manner similar to industrial accidents. Only a few years ago the number of diseases directly connected with specific industries was very small, but attention once centred upon the problem revealed numerous ailments directly traceable to occupational hazards. The importance of these risks has appeared greater and greater with every new investigation. Consequently we have annually a considerable number of special investigations of industrial diseases; we have a growing volume of legislation requiring the reporting to public authorities of all cases of occupational disease; and we have an increasing number of States in which compensation of the same nature as that provided for industrial accidents is authorized for those whose health has been undermined in specific ways by industrial conditions.

One of the notable reports of the year was a discussion by the medical, pathological, and epidemiological sections of the Royal Society of Medicine of Great Britain, of "the origin, symptoms, pathology, treatment, and prophylaxis of toxic jaundice observed in munition workers." Until the outbreak of the war toxic jaundice in industry was nearly always a form of arsenic poisoning; but subsequently to the outbreak of war it was observed among employees in airplane factories and workers in trinitrotoluol (T.N.T.), a compound extensively used in munitions manufacture. The number of cases rapidly increased in England; up to July, 1916, there were seventy cases with twelve deaths in airplane works, and during 1916 there were 181 cases in T.N.T. works with fifty-two deaths.

The United States Bureau of Mines has issued *Safe Practice at Blast Furnaces, A Manual for Foremen and Men*; *Carbon Monoxide Poisoning in the Steel Industry*; and *Occurrence and Mitigation of Injurious Dust in Steel Works*; both the latter being prepared by J. A. Wat-

kins. That bureau also issued *Organizing and Conducting Safety Work in Mines*, prepared by H. M. Wilson and J. R. Fleming. The New York State Industrial Commission completed an investigation into the health hazards involved in the manufacture of paris green. The commission printed a set of rules to be observed by workers in paris green establishments which are typical of the minute attention given to the necessary practices to be observed by workers in many modern industries. For example, workers are advised not to hang clothes to be dried in the dry room; not to leave the factory in work clothes; not to place work clothes and street clothes in the same locker; not to eat in or about the factory except in the lunch room; to always wash face and hands with hot water and soap before eating; not to scratch or touch any part of the body before washing the hands; not to sweep the floor with a broom; to keep gloves clean on the inside; to bathe at home daily; to drink milk instead of beer and whiskey; to tie clean cotton waste twice daily over nose and mouth as a respirator; to keep the dust settled; and to keep hair, mustache, and finger nails short. In addition, numerous recommendations are made to employers having to do with the cleaning of work rooms, halls, stairs, and lunch rooms, the periodic medical examinations of employees, the provision of overalls, gloves, respirators, lunch rooms, wash rooms, and proper rest periods. The New York State Commission also gave considerable attention to dangers of the airplane industry. From an investigation of eight factories in the State it found that in only three was any considerable attention given to the health of the employees. The danger in these factories is connected with the application of a varnish, popularly called "dope," with which the wings, rudders, and other parts of airplanes are covered. The newness of the industry and the excessive speed demanded have made difficult the introduction of health measures in this very dangerous occupation. Here again the commission drew up a series of health recommendations.

The Bureau of Standards of the Department of Commerce has issued an article prepared by W. W. Coblantz and W. B. Emerson entitled *Glasses for Protecting the Eyes from Injurious Radiation*. The purpose was to furnish information of means to protect the eyes from infrared or so-called heat rays and ultra-violet rays of light. Continued exposure to either class of rays produces conjunctivitis or cataract, the heat rays now being believed to be in industry a more serious danger than the ultra-violet rays. The Bureau of Labor statistics, in compliance with a resolution of the Council of National Defense of April 7, began the publication of summaries of "reports of the committee appointed by the British Minister of Munitions to investigate conditions affecting the health and welfare of workers." It also published in its *Industrial Accidents and Hygiene Series* a special report by Dr. John B. Andrews on "Anthrax as an Occupational Disease," and the report by Dr. Hamilton noted below.

**MINERS' CONSUMPTION.** The Public Health Service investigated 433 cases of miners' phthisis among the zinc miners in southwestern Missouri. The zinc ore is imbedded in a very hard flint containing over 9 per cent of silica. This forms a very fine, hard, sharp, and insoluble dust,

which on account of drilling and blasting permeates the air of the mine and becomes extremely irritating to the lungs of the worker. In all 720 miners were examined; 433 had miners' consumption; and 103 also showed tubercle bacilli in their sputum. It was found that five years' steady work under such conditions was nearly certain to produce the first stages of the disease. It was found that 56 per cent of the 433 afflicted miners had begun work underground before the age of 21. Investigation was made of 190 cases of death in 130 out of 480 families visited. The average age at death of the miners was 37 years; the average number of years mining, 13.7; the average number of years in hard rock, 8.6; the average number of years of disability before death, 1 year; hence in that district miners dying from consumption do so within 10 years after the beginning of exposure to siliceous dust.

**MUNITION PLANTS.** Under the direction of the United States Bureau of Labor Statistics Dr. Alice Hamilton made an extensive investigation into the occupational dangers in plants manufacturing explosives and filling shells. Results were published in *Bulletin 219*. She visited 41 factories employing 30,000 workers exposed to poisons, but secured information from only 28 plants. In these there were 2507 cases of industrial poisoning and 53 deaths during 1916. Of the cases 1389 were poisoning due to nitrogen oxides and nitric acids; 702 to trinitrotoluol; 205 to anilin; and 111 to fulminate of mercury. Of the deaths 28 were due to nitrogen oxides; 13 to trinitrotoluol; and 7 to benzene and toluol.

**NEW YORK.** The Department of Health of New York City established a Labor Sanitation Conference in coöperation with trade unions of the city. Representatives of 750,000 unionists drew up a resolution approving the work of the Division of Industrial Hygiene of the Health Department and presented the same to Mayor Mitchel. A movement was begun to secure more adequate sanitary inspection. An estimate showed, however, that fifty additional inspectors at a minimum salary of \$1080 each, besides \$10,000 for educational work, would be necessary to put industrial health inspection on a proper basis. This conference gave special attention to anthrax, due to handling of wool, hides, and skins; hydrofluoric acid in glass-blowing plants; other chemical dangers; and the bad effects of conditions in laundries.

**ABROAD.** Similar problems to the foregoing were given attention in Canada, England, France, and elsewhere. Especially was this true in Great Britain where the Health of Munition Workers Committee made numerous inquiries into the relations of hours and conditions of labor to health and efficiency of workers. Reports were made by it on various "special industrial diseases," effects of ventilation and lighting, eye strain in industry, effects of long hours, Sunday labor, and fatigue, tetrachlorethane poisoning, dope poisoning, and numerous aspects of the employment of women and children as related to health.

According to the *Labor Gazette*, there were in the first nine months of 1917 a total of 589 cases of industrial diseases reported to the Home Office, an increase of 65 over the same period of 1916. In these 9 months there were

86 fatal cases, as against 75 in 1916. Of the total cases, 161 were due to toxic jaundice referred to above, while 40 of the deaths were due to the same cause.

**OCEANIA.** See ANTHROPOLOGY.

**OESSEL ISLAND.** See LIVONIA.

**OFFICERS' TRAINING CAMPS.** See MILITARY PROGRESS.

**OHIO. POPULATION.** The population of the State in 1910 was 4,767,121, and on July 1, 1917, it was estimated to be 5,212,085.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. Bu.	Value
Corn ....	1917	3,950,000	150,100,000	\$204,136,000
	1916	3,600,000	113,400,000	102,060,000
Wheat ...	1917	1,870,000	41,140,000	83,928,000
	1916	1,800,000	21,600,000	36,504,000
Oats ....	1917	1,775,000	78,100,000	49,984,000
	1916	1,717,000	48,076,000	25,480,000
Potatoes .	1917	160,000	16,000,000	22,880,000
	1916	140,000	6,300,000	11,466,000
Hay ....	1917	2,925,000	a 4,154,000	78,926,000
	1916	3,250,000	5,102,000	54,081,000
Tobacco .	1917	103,200	b 99,072,000	24,768,000
	1916	100,000	95,000,000	12,350,000

a Tons. b Pounds.

**MINERAL PRODUCTION.** There was great progress in the coal industry of the State in 1916. The production according to the United States Geological Survey was from 22,434,691 net tons, valued at \$24,207,075 in 1915, to 34,728,219 tons, valued at \$46,150,907, an increase of 55 per cent in quantity and 91 per cent in value, in 1916. The production in 1913, the banner year for the State was 36,200,000 tons. In 1914 it was 18,343,000 tons. In January, February, and March of 1916, the production averaged nearly 3,000,000 per month. April showed a decrease of nearly half, but after the lake season began, the output increased, and in June it had reached the high record of the year, more than 3,500,000 tons. From July to October an almost even rate was obtained, but in November and December there was a slight decrease. About 5,000,000 tons of coal from Ohio were shipped up the lakes, a larger quantity shipped than in any previous year except 1913. There was a substantial increase in the quantity of coal taken by the railroads for fuel, and the largest factors were greater shipments by the lakes and increased demands from industrial plants, chiefly within the State. During the period of labor troubles in western Pennsylvania, coal from Ohio was shipped into the Pittsburgh district to supply the shortage, and in the last quarter of the year, Ohio coal was shipped by way of Buffalo to New York and New England. Lack of transportation facilities was not felt in Ohio as in other fields, probably because of the shorter average haul to market.

The production of petroleum in the State in 1916 was 7,774,511 barrels, valued at \$16,154,940, compared with a production of 7,825,326 barrels in 1915, valued at \$10,061,493, a decrease of 1 per cent in quantity, but an increase of 61 per cent in value. Natural gas to the value of \$15,601,144 was produced in the State in 1916, compared with \$17,391,060 in 1915.

**TRANSPORTATION.** The total railroad mileage of the State on June 30, 1914, the latest for which statistics are available, was 9147.

**FINANCE.** The total receipts during the year 1917 were \$20,842,248. The total expenditures were \$21,161,700. At the beginning of the year there was a balance on hand of \$7,105,631, and at the end, \$6,791,829. The State as a whole had no bonded debt, but the cities and other municipalities had a debt of \$414,163,520.

**EDUCATION.** The total school population in 1916-17 was 1,351,573. The total enrollment in the public schools was 980,749, with the average daily attendance of 790,796. The total number of female teachers was 25,541, and of male teachers 687. The total expenditure for school purposes was, for the year 1915-16, \$45,418,465.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the following: The Athens State Hospital, the Cleveland State Hospital, the Columbus State Hospital, the Dayton State Hospital, the Lima State Hospital, the Longview State Hospital at Cincinnati, the Massillon State Hospital, the Toledo State Hospital, the Ohio Hospital for Epileptics at Gallipolis, the Institution for Feeble-Minded at Columbus, the State School for the Blind at Columbus, the State School for the Deaf at Columbus, the Ohio State Sanatorium at Mount Vernon, the Ohio Soldiers' and Sailors' Home, the Madison Home at Madison, the Boys' Industrial School at Lancaster, the Girls' Industrial School at Delaware, the Ohio Penitentiary at Columbus, the New Prison Farm at London, the Ohio State Reformatory at Mansfield, the Ohio Reformatory for Women, the Ohio State Brick Plant at Junction City.

**POLITICS AND GOVERNMENT.** In Ohio politics 1917 was the "off year." There were no State elections. The municipal elections were marked by large increases in the Socialist strength. Two Socialists were chosen members of the Cleveland city council and one was elected to the Cleveland board of education. Republicans were generally successful in the local elections, electing mayors in Cleveland, Cincinnati, and Columbus. Cincinnati adopted a new home-rule city charter which goes into effect January 1, 1918. It is considered a conservative instrument and introduces no innovations.

The Ohio legislature met in regular session in January and adjourned in March. All branches of the government were controlled by the Democrats. The outstanding act of the legislature was the passage of a law permitting women to vote for presidential electors. This law was brought to a popular referendum vote in November and rejected by a popular majority of 145,629. At the same election a prohibition amendment to the State constitution, offered by the initiative process, was rejected at the polls by a majority of 1137. The legislature granted the cities of the State some scant financial relief, but not enough to help the situation materially.

Toward the end of the year the State was seriously affected by the coal shortage, which led to a conflict between Governor Cox and the national fuel administration when the governor ordered the confiscation of coal intended for lake shipment, but which the closing of navigation had stalled on Ohio sidings. Ohio responded to the national draft without protest or disorder. Ohio National Guardsmen mobilized at Camp Sheridan, Montgomery, Ala., and the drafted men went into camp at Chillicothe, Ohio.

**LEGISLATION.** Among the more important

measures passed by the legislative session of 1917 are those noted below. Several amendments were made to the laws affecting the administration of the State government. A central purchasing agency was created. Provision was made for the voting of citizens of the State absent in the national service. Women are prohibited from working over six days in the week in restaurants. Provision was made for the protection of railroad employees against arbitrary discipline or discharge. Penalties, similar to those for horse stealing, were imposed for the stealing of automobiles. The insurance laws were amended in important particulars. A committee was created to study health and old age insurance and to make recommendations as to their adoption. See PROSTITUTION.

**STATE OFFICERS.** Governor, James M. Cox; Lieutenant-Governor, Earl D. Bloom; Secretary of State, William D. Fulton; Treasurer, Chester E. Bryan; Auditor, Vic Douahey; Attorney-General, Joseph McGhee—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Hugh L. Nichols; Associate Justices, Thomas A. Jones, Edward S. Matthias, James G. Johnson, Maurice H. Donahue, O. W. Newman, R. M. Wanamaker; Clerk, Frank McKean.

**OHIO NORTHERN UNIVERSITY.** An educational institution conducted under the auspices of the Methodist Episcopal Church, located at Ada, Ohio. In the fall of 1917 there were 1667 students and 40 members of the faculty; it is estimated that 300 students left the university to enter the service of the government in 1917 and that 5 members of the faculty were engaged in war work. There were 7500 volumes in the library. The university was founded in 1871. President, Albert Edwin Smith, D.D., Ph.D.

**OHIO STATE UNIVERSITY.** A co-educational State institution at Columbus, Ohio. In the fall of 1917 there were 4187 students and 481 members of the faculty. Volumes in the library numbered 187,000. Income from State and Federal governments in 1917 amounted to \$1,930,075. The university was founded in 1872. President, William Oxley Thompson, LL.D.

**OHIO UNIVERSITY.** A co-educational State institution at Athens, Ohio. In the fall of 1917 there were 828 students, a loss of 25 per cent of the 1916 enrollment, and 87 members of the faculty, not including critic teachers, student assistants, and a few instructors giving part time service. The university receives its support from three sources—a State mill tax, legislative appropriations, and receipts from incidental fees, rents, and interest on permanent funds forming a part of the Irreducible Debt of Ohio. The latter amounts to \$131,226 and the income therefrom in 1917 was \$7873. Total income therefrom was \$403,030. Volumes in the library numbered 48,750. A new department of advertising and salesmanship was added during the year. The university was founded in 1804. President, Alston Ellis, LL.D.

**OHIO WESLEYAN UNIVERSITY.** A co-educational institution under the auspices of the Methodist Episcopal Church, located at Delaware, Ohio. Some of its departments are in Cleveland. In the fall of 1917 there were 1026 students and 62 members of the faculty. Professor William E. Smyser was appointed to the newly created office of dean of the college. Productive funds in 1917 amounted to \$1,150,000

and the income therefrom to \$62,000. Volumes in the library numbered 67,882. The university was founded in 1844. President, John Washington Hoffman, D.D., LL.D.

**OIL-SHALE.** See GEOLOGY.

**OKLAHOMA. POPULATION.** The population of the State in 1910 was 1,637,155, and on July 1, 1917, it was estimated to be 2,289,253.

**AGRICULTURE.** The acreage, production, and value of the principal crops as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn	1917	3,900,000	33,150,000	\$48,730,000
	1916	3,950,000	53,325,000	49,592,000
Wheat	1917	3,100,000	35,650,000	69,161,000
	1916	3,050,000	29,585,000	49,407,000
Oats	1917	1,150,000	26,450,000	19,838,000
	1916	1,160,000	14,500,000	8,265,000
Potatoes	1917	36,000	2,484,000	4,471,000
	1916	34,000	1,802,000	3,514,000
Hay	1917	575,000	a 920,000	14,168,000
	1916	550,000	935,000	8,415,000
Cotton	1917	2,838,000	b 890,000	117,925,000
	1916	2,562,000	823,000	78,325,000

a Tons. b Bales of 500 pounds gross weight.

**MINERAL PRODUCTION.** The production of coal in Oklahoma in 1916 amounted to 3,608,011 short tons, valued at \$7,525,427, a decrease of 2 per cent in quantity, but an increase of \$89,521 or 1 per cent in value. The number of men employed during the year was 7800, compared with 8457 in 1915. The production was curtailed by lack of business during the earlier part of the year at a time when most of the coal fields were producing at a high rate. The demand for coal improved after September 1, but labor trouble resulted in a temporary shutting down of the mines, and on some of the railroads there was a shortage of cars.

The production of petroleum in Oklahoma in 1916 far surpassed that of any previous year, and the State continued to rank first, as an oil producer. For the second time since 1908 it surpassed California. There were produced 97,915,243 barrels, valued at \$56,706,133 in 1915, compared with 107,071,715 barrels, valued at \$128,463,805 in 1916, an increase in 1916 of 9 per cent in quantity and 127 per cent in value. The Oklahoma-Kansas field is estimated to have produced 147,000,000 barrels of petroleum in 1917, compared with 115,809,072 in 1916.

The value of recoverable lead and zinc in 1915 was \$4,236,636, compared with \$9,378,142 in 1916. The metal content of lead concentrates increased from 7306 in 1915 to 12,115 tons in 1916, and to 28,754 tons in 1917. The value increased to \$1,671,870. The recoverable spelter increased from 14,314 tons, valued at \$3,549,872 in 1915, to 28,754, valued at \$7,706,272 in 1916.

**TRANSPORTATION.** The total railway mileage in the State during 1917 was 6435. The railroads having the longest mileage were: The St. Louis and San Francisco, 1498; the Chicago, Rock Island, and Pacific, 1326; the Atchison, Topeka, and Santa Fé, 982; the Missouri, Kansas, and Texas, 703. There were about fifty miles of new road constructed during the year.

**FINANCE.** The report of the State treasurer for the fiscal year of 1917 shows the total receipts to be \$7,638,909. The expenditures were \$7,186,169. There was a balance in the treasury at the beginning of the year of \$1,922,780,

and at the end of the year \$2,373,620. The bonded debt of the State was \$4,367,000.

**EDUCATION.** The total school population in the State in 1916 was 587,134. The total enrollment in the public schools was 514,401, with an average daily attendance of 325,032. There were 3802 male teachers and 8928 female teachers. The average monthly salary of first grade male teachers was \$84.02, and of female teachers \$63.05; of second grade male teachers \$66.65, and of female teachers \$58; of third grade teachers, \$57.24, and of third grade female teachers \$50.12.

**CHARITIES AND CORRECTIONS.** The State penal and charitable institutions include the Oklahoma State Orphans' Home at Pryor, the Confederate Soldiers' Home at Ardmore, Hospitals for the Insane at Vinita, Supply, and Norman, the School for the Blind at Muskogee, the Institute for the Feeble-Minded at Enid, the State Training School for Boys at Pauls Valley, the School for the Deaf and Dumb at Sulphur, the Industrial School for Girls at Chickasha, the Industrial School for the Deaf and Blind at Taft, the Industrial School for Colored Orphans at Taft, the Training School for Negro Boys at McAlester, the School for Wayward Incurable Girls at Oklahoma City, the State Penitentiary at McAlester, and the State Reformatory at Granite.

**POLITICS AND GOVERNMENT.** There was some trouble in the State over the enforcement of the draft in August as a result of agitation carried on in several districts. A number of men gathered to resist conscription. Most of these were tenant farmers whose hardships in this capacity had aroused sentiment against the government. These men organized several radical associations. Associated with them were a few negroes and Indians, and a number of criminals. The centre of the disturbance was in Seminole County and neighboring counties. The citizens of the State organized posses of several hundred armed men to round up the outlaws, and bring them to justice. In most cases, they surrendered without resistance. There was, however, a conflict in Holdenville, where the posse raided a country school house, in which a number of draft resisters had taken refuge. One of these was killed and two others wounded. Two members of the posse were also wounded. The greater number of the agitators surrendered within a few days. The authorities were assisted in putting down the insurrection by a number of Indians. A charge of treason was brought against the prisoners since they had waged war against the government with an armed force.

**STATE OFFICERS.** Governor, R. L. Williams; Lieutenant-Governor, M. E. Trapp; Secretary of State, J. L. Lyon; Treasurer, W. L. Alexander; Auditor, E. B. Howard; Adjutant-General, Ancel Earp; Attorney-General, S. P. Freeling; Commissioner of Insurance, A. L. Welch; Commissioner of Education, R. H. Wilson; Commissioner of Agriculture, F. M. Gault—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Matthew J. Kane; Associate Justices, John B. Turner, J. F. Sharp, Summers Hardy, and Charles M. Thacker; Clerk of the Court, William M. Franklin.

**OKLAHOMA UNIVERSITY OF.** A co-educational non-sectarian State institution, located

at Norman, Okla. In the fall of 1917 there were 2516 students and 141 members of the faculty. Dean Stocking of the school of pharmacy resigned in 1917 and was succeeded by Howard Storm Browne. The school of commerce and industry was changed to the school of public and private business and a new school of social service was established. A school of manual training, offering a two-year course in manual training, for the preparation of teachers of manual training in high and normal schools, was established in the college of engineering. The total income for the year 1917 was \$413,520. The legislature appropriated \$625,000 for four new buildings—\$150,000 for an auditorium; \$75,000 for a wing of the library; \$100,000 for a new geology building; and \$200,000 for a State hospital to be under the control and direction of the school of medicine. The total value of the land endowment and proceeds from the sale of school lands is estimated at \$3,670,000 and the income from land funds for 1917 was \$123,000. The university was founded in 1892. President, Stratton Duluth Brooks, LL.D.

**OLD AGE PENSIONS.** In connection with the general movement for Social Insurance (q.v.) considerable attention has been given to the problem of old age dependency. Every advanced country except our own has some form of public old age pensions which obviate the necessity of laborers who have been honest and industrious throughout life from becoming paupers in their old age. Abroad such plans are either non-contributory as in England or contributory as they are in most other nations. Under the non-contributory principle the worker is assumed to have earned the right to a pension by faithful labor during his active and productive years. Elsewhere the contributory principle is considered necessary as a means of preserving the self-respect of labor and desirable also as an encouragement to thrift. In the United States provision of retirement pensions has been made by most civil authorities, for their own employees, but there has been no public provision for the employees of private industry. Nearly all large corporations, however, have found it economically advantageous to introduce retirement schemes whereby employees after various ages from 60 to 70 may retire on weekly or monthly payments made by the former employer. These schemes increase the loyalty of labor and raise productive powers, while at the same time reducing the losses from "labor turn-over." The American Federation of Labor and other labor union groups have strenuously objected, however, to such plans because they tie laborers to their jobs and reduce the feasibility of strikes for higher wages and better conditions.

**MASSACHUSETTS.** The State Commission on Social Insurance reporting in January, 1917, found opinion in the State sharply divided on the question of whether a public old age pensions scheme should be contributory or non-contributory. While organized labor was in favor of a non-contributory system, much opinion was decidedly opposed on the ground that a contributory plan would not only preserve the dignity of labor but meet the requirements of sound public finance.

In consequence of several years' agitation and repeated investigation the opinion of the State

has come generally to accept the desirability of public old age pensions. In his inaugural message in January, Governor McCall said: "I am of the opinion that an annuity should be paid without contribution to deserving citizens seventy or more years of age who do not have children able to support them nor an income more than \$200 a year, and who have been residents of the Commonwealth at least ten years."

The State Bureau of Statistics issued reports of an exhaustive canvass of all data relating to persons sixty-five years of age and over within the State. It was found that there were 189,047 such persons of whom 34,496 were dependent upon public or private charity to a greater or less extent. To these latter had been paid in the year ending March 31, 1915, \$3,234,000 in various forms of public and private aid, but not including Federal pensions. These payments included the aid given by public correctional institutions, insane hospitals, pauper institutions, overseers of the poor, State and military aid, soldiers' relief, and private aid given by "homes" and other institutions. The total amount of public relief in that year was \$2,251,000 given to 26,403 persons. Of all persons aided, 73 per cent received less than \$100 each, and only 2.8 per cent received \$300 or more each. While only 31 per cent of the total population of Massachusetts is foreign-born, and while only 39.4 per cent of all persons 65 years of age and over are foreign-born, of the 34,496 receiving aid over 52 per cent were foreign-born. Nevertheless 95 per cent of all persons 65 years of age and over had resided in the State at least 10 years, and about 80 per cent of those receiving aid in 1915 had resided in the State for at least 30 years. Two-thirds of the dependent aged women were widows, and one-third of the aged male dependents were widowers.

**GREAT BRITAIN.** Owing to the high cost of living, especially the high prices of food (see PRICES) the British Government late in 1916 awarded additional allowances to old age pensioners for the period of the war. These allowances were restricted to cases of special hardships and to pensioners whose total income, including pension, did not exceed \$3.04 per week. In no case may the additional allowance exceed 60.8 cents (2s. 6d.); and in no case may the total income of a pensioner receiving the addition exceed \$3.16 per week. If the pensioner is one of a married couple living together and their joint means do not exceed \$4.74 per week their income may be raised to \$4.87 per week by an additional allowance, but no such allowance may exceed 60.8 cents per week. Moreover no additional allowance may be paid to pensioners already in receipt of the full old-age pension of \$1.22 (5s.) per week. Considerable discretion is given to local pension committees in determining allowances.

**OLNEY, RICHARD.** An American statesman, died in Boston, April 8, 1917. He was born at Oxford, Mass., September 15, 1835. After graduating A.M. from Brown University in 1856, he attended Harvard Law School, and was admitted to the Boston bar in 1859. Mr. Olney early distinguished himself in his profession, as a specialist in probate, trust, and corporation law. For one year, 1874, he served in the Massachusetts House of Representatives, but he

was not known to the country at large, nor even to leading politicians in Washington when he was appointed attorney-general in President Cleveland's cabinet in 1893. For some time he had been a warm friend of Mr. Cleveland, who was a man of similar type and tastes. It was on Olney's advice that the president called out Federal troops to put down the Debs railroad strike in Chicago, and the attorney-general successfully defended the action as a measure justified by the Constitution to prevent interference with the mails and interstate commerce. The case was of far-reaching importance. Mr. Olney was not, as some supposed, hostile to labor, as was shown when he upheld the right to organize. At the end of an examination of labor conditions, made for the government, he indorsed the principles of mediation and arbitration in disputes, and drafted the bill relating to labor that was passed by the House in February, 1895. In June, 1895, Mr. Olney was transferred to the post of secretary of state, which he continued to hold until the end of the term, March 4, 1897. During this short period he made a notable record, especially in his treatment of the boundary dispute between Great Britain and Venezuela. Supported by Cleveland, he insisted on the arbitration of the entire controversy, and at the risk of bringing on war, upheld the Monroe Doctrine. He remained firm even after Lord Salisbury, the British prime minister, had refused to submit to the American demand, and eventually accomplished his purpose. He also collected from Spain the Mora claim, which had long remained unsettled. President Wilson offered to Mr. Olney the ambassadorship to Great Britain in 1913, but he felt obliged to decline this honor, as well as the tender of the governorship of the Federal Reserve Board, in 1914. He did, however, become a member of the International Commission under the treaty between France and the United States in 1915. He served as a regent of the Smithsonian Institution from 1900 to 1908, and received honorary degrees from Harvard, Brown, and Yale.

**OMAN.** An independent Mohammedan state in southeastern Arabia. Estimated area, 82,000 square miles; estimated population, 500,000. The capital is Muscat; its population, including that of the adjacent Muttra, is about 25,000. Imports in 1915-16, 3,644,912 rupees, and exports, 2,822,829 rupees; in 1913-14, 6,116,520 rupees and 4,073,044 rupees. Chief imports in 1915-16: rice, 1,241,475 rupees; piece goods, 672,097; coffee, 519,758; twist and yarn, 104,749, etc. Chief exports: dates, 1,533,799 rupees; fish, 138,295; cotton goods 222,700; limes, 66,633. These figures are only for sea-borne trade; in addition, there is a large unrecorded caravan trade with the interior. Reigning sultan, Seyyid Timar bin Faisal, who was born in 1886 and succeeded his father, Seyyid Faisal bin Turki, October 5, 1913. British consul and political agent in 1917, Major E. B. Howell.

**ONTARIO.** The second largest province of Canada. It extends from Quebec (which is the largest province) westward to Manitoba; on the north it is bordered by Hudson and James bays, and the greater part of its southern limits is marked by lakes Ontario and Erie, Georgian Bay, and lakes Huron and Superior. Capital, Toronto, the second largest city of the Dominion. The area is estimated at 407,262 square miles,

of which 41,382 water; the land area of the province is a little larger than the combined land area of Oregon, California, and Arizona. Ontario is the most populous of the Canadian provinces; the number of inhabitants was 2,523,274 at the 1911 census, the increase over 1901 being 15.58 per cent. Estimated population of Toronto in 1916, 470,000 (as compared with 376,538 at the 1911 census); Ottawa, capital of the Dominion, 102,000 (87,062); Hamilton, 101,000 (81,969); London, 56,000 (46,300).

The provincial government is administered by a lieutenant-governor, appointed for five years by the governor-general of Canada; he acts through an executive council, or responsible ministry. The legislative power is exercised by a unicameral assembly of 111 members elected for four years. In 1917 the suffrage was extended to women in provincial and municipal elections. In the House of Commons of the 13th Canadian Parliament, elected December 17, 1917, Ontario is represented by eighty-two members. The lieutenant-governor in 1917 was Col. Sir John Strathearn Hendrie, appointed September 26, 1914, to succeed Col. Sir John Morison Gibson. Premier, Sir William Howard Hearst, K.C.M.G. See CANADA.

#### OPERA. See MUSIC.

**OPIMUM.** The ten-year agreement between Great Britain and China in regard to the importation of opium expired in March, 1917, and Dr. Wu Lien Teh at the National Medical Congress in Canton, China, said that the year would be historic because of the banishment of opium, the curse of China for seventy-five years. But a still more serious condition of affairs was developing from the substitution of morphin for opium. In the provinces of Manchuria and Shantung the ravages of the drug were alarming. Criminals and beggars as well as poor people consumed large quantities, mostly by hyperdermic injection. In 1911 it is said that Great Britain alone furnished five and a half tons of morphin; in 1914, 14 tons, and in 1916 over 16 tons. The morphin habit was first introduced by emigrants from Swatow, and is increasing rapidly. The drug is distributed in small packages under various fanciful names.

**OPTOCHIN.** A synthetic derivative of cupreine, an alkaloid extracted, together with quinine, from the bark of *Remijia pedunculata*. The substance is known chemically as ethylhydrocupreine, its formula being  $C_{15}H_{21}N_2O_4H$ .  $CC_2H_5$ . Optochin has the anesthetic and antimalarial properties of quinine and in addition has a specific bactericidal effect on the pneumococcus, and is therefore used with good effect in the treatment of *ulcus serpens*, a pneumococcus infection of the cornea of the eye. The drug is uncertain in its action and dangerous when given internally, relatively small doses having produced deafness and blindness, sometimes transient, sometimes permanent. Optochin occurs as a white or yellowish, odorless powder, having a bitter taste, and is nearly insoluble in water. For use in the eyes it must be prepared in an ointment or solution in bland oil.

Optochin hydrochloride has the same actions and uses as those of optochin, but is soluble in two parts of water and may therefore be dropped into the eye in a watery solution. A strength of from 1 to 2 per cent is recommended.

**ORANGE FREE STATE.** A province of the Union of South Africa since the formation of the Union, May 31, 1910. The capital is Bloemfontein, which had at the last census 26,925 inhabitants, of whom 14,720 white. See SOUTH AFRICA, UNION OF.

**ORE-DEPOSITS.** See GEOLOGY; MINERALOGY.

**OREGON.** POPULATION. The population of the State in 1910 was 672,765, and on July 1, 1917, it was estimated to be 861,992.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. bu.	Value
Corn	....1917	42,000	1,260,000	\$1,890,000
	1916	40,000	1,240,000	1,273,000
Wheat	...1917	821,000	12,811,000	23,316,000
	1916	850,000	19,550,000	28,347,000
Oats	....1917	365,000	9,125,000	6,844,000
	1916	360,000	17,280,000	8,467,000
Potatoes	1917	75,000	8,100,000	6,480,000
	1916	55,000	8,250,000	7,425,000
Hay	.....1917	840,000	1,688,000	28,665,000
	1916	850,000	1,855,000	21,810,000

♠ Tons.

**MINERAL PRODUCTION.** The total output of gold in the State in 1915 was valued at \$1,861,796, compared with a value of \$1,902,179 in 1916. The silver production in 1916 was 231,342 ounces valued at \$152,223, an increase of 113,395 ounces in quantity, and \$92,424 in value. The copper output in 1915 was 451,172 pounds, compared with 3,581,886 pounds in 1916. There were produced in 1915 62,957 pounds of lead, compared with 28,000 in 1916.

The preliminary estimates of the value of the metals mined in the State in 1917 showed a material decrease from 1916. The output of gold in 1916 was \$1,902,179, and for 1917, \$1,466,419. The output of silver in 1916 was 231,342 ounces, and in 1917, 115,697. The copper output of 1916 was 3,581,886 pounds, and in 1917, 1,508,639 ounces. The lead output was 28,000 pounds in 1916, but no production of this metal had been reported for 1917.

There are about 100 productive mines in the State, and although two-thirds of them are placer mines, the larger part of the output of gold comes from the deep mines, and of course, all the output of the other metals. There were no important discoveries in any of the mining districts of Oregon in 1917.

**TRANSPORTATION.** The total mileage of main line in the State in June, 1916, was 2860. The roads having the longest mileage were: The Oregon and Washington Railroad and Navigation Company, 967; the Oregon and California, 680; the Southern Pacific, 356.

**FINANCE.** The total receipts for the two years ending September 30, 1916, amounted to \$12,044,354, and the disbursements to \$11,473,469. There was cash on hand on October 1, 1914, to the amount of \$567,917, and on September 30, 1916, of \$1,138,802. There was no State debt.

**EDUCATION.** The total school population in the State in 1917 was 205,417. The total enrollment was 141,333, with the average daily attendance of 104,740. The number of female teachers was 4894, and the number of male teachers was 1116. The average monthly salary of male teachers was \$89.62, and that of female

teachers was \$65.75. The total expenditure for school purposes was \$7,874,853.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the Oregon State Hospital at Salem, the Eastern Oregon State Hospital at Pendleton, the Oregon State Penitentiary at Salem, the Institute for the Feeble-Minded, Oregon State Training School, Oregon State Tuberculosis Hospital, Oregon State School for the Blind, Oregon State School for the Deaf, the Oregon State Industrial School for Girls, all at Salem, and the Oregon State Soldiers' Home at Roseburg.

**POLITICS AND GOVERNMENT.** The legislature, at the request of Secretary Lansing, withdrew the anti-alien bills then before it. These bills were to prevent Japanese from owning land in the State. The secretary's action was taken following the protest on the part of the Japanese Ambassador. Governor Withycombe, on February 2, signed the prohibition bill passed by the legislature forbidding the importation of liquor into the State.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below. An act was passed creating in the courts of each justice of the peace a small claims department with jurisdiction over amounts not exceeding \$20. This is the so-called "poor man's court." The Supreme Court was authorized to appoint a commission on law reform with members to serve without pay, to report to the next legislature. A measure was enacted making failure to respond to the governor's draft punishable by a military tribunal. A moratorium for the payment of mortgages and judgments for men in the military service was provided for. It was made a misdemeanor willfully to communicate orally or in writing, any statement concerning a discharged or pardoned convict, which might deprive him of employment or extort money from him. Murderers were exempted from the benefits of the indeterminate sentence law.

An amendment to the State constitution was proposed declaring it the function of the constitution to define a plan of government "every provision of which is consistent and harmonious with every other provision thereof, and to perpetuate such consistency and harmony, any and all amendments of this constitution shall be so worded that their adoption by the people will leave the amended constitution without any conflicting provisions." A proposed amendment adds, "and as a vital consideration in construing any amendment in the effect of the amendment upon the entire constitution, no amendment shall have the effect of rendering any other part or parts of the constitution ineffective without expressly repealing such other part or parts."

Provision was made for an investigation of all State departments by representative business men. Provision was made, also, for a State rural credit system. Measures were passed providing that primary ballots are to be printed with the names of the candidates in as many different rotations as there are candidates, thus placing each name at the top of the list on practically an equal number of ballots. Several amendments were made to the prohibition laws of the State. Women employed in the care and preparation of foods are partially exempted from the operation of the eight-hour law. A

council was appointed to consider making workmen's compensation compulsory and self-supporting. Measures prohibiting untrue, deceptive, or misleading advertisements were passed. Laws relating to insurance were amended in important details. There were several important acts relating to conservation, and provision made for the formation and regulation of irrigation districts. The taxation laws were amended. Measures providing for the commitment and care of the feeble-minded or criminally inclined persons were passed. Segregation of the feeble-minded and insane by removal from other institutions was provided for. Amendments were made to the banking laws of the State. The establishment of parental schools for the discipline and instruction of habitual truants, absentees, or school offenders was authorized. Provisions were made for the establishment of county tuberculosis sanatoriums and hospitals. Other important amendments were made to the laws governing the administration of hospitals.

**STATE OFFICERS.** Governor, James Withycombe, Rep.; Auditor and Secretary of State, Ben W. Olcott, Rep.; State Treasurer, Thomas B. Kay, Rep.; Superintendent of Public Instruction, J. A. Churchill, Rep.; Acting Adjutant-General, John M. Williams; Attorney-General, Geo. M. Brown, Rep.; Commissioner of Insurance, Harvey Wells.

**JUDICIARY.** Supreme Court: Chief Justice, Thos. A. McBride; Justices, Wallace McCamant, Frank A. Moore, Henry J. Bean, George H. Burnett, Lawrence T. Harris, and Henry L. Benson; Clerk, J. C. Moreland.

**OREGON, UNIVERSITY OF.** A co-educational State institution located at Eugene, Ore., with the medical school in Portland. In the fall of 1917 there were 1903 students in all departments and 140 members of the faculty. Compulsory military drill was established in 1917, five hours weekly being required in addition to three hours' work in a required lecture course in military science. Col. John Leader, late of the British army, was made professor of military science. Dr. John Landsbury was made dean of the school of music to succeed Professor R. H. Lyman. Volumes in the library numbered 75,000. Productive funds amounted to \$55,000 and the income therefrom to \$2200. The university was founded in 1876. President, Prince L. Campbell, LL.D.

**ORGANIC CHEMISTRY.** See **CHEMISTRY.**

**ORNITHOLOGY.** Bird study received the usual amount of attention during the year, both from an economic and from the bird lover point of view. As has been stated in earlier **YEAR BOOKS**, the economic relations between birds and insects had not received as much attention in Europe as in the United States, but Collinge especially had urged upon the British public the necessity for more economic bird study. He stated that in the absence of official information, there was not much data to be had on the question of the influence of birds on agriculture, but gave as his personal opinion that the wood pigeon was most destructive to agriculture in England, with the rook, the starling, the bullfinch, and the blackbird nearly as bad. In his opinion, there was urgent need in England for some remedies for this condition. The importation of feathers into England was prohibited for the duration of the war and it was hoped that this might be made

permanent, as otherwise stocks would be accumulated until the time when the prohibition would be removed, and this would nullify the efforts made at protection. A report that on account of gunfire in Europe the usual number of migratory birds had not appeared in England was investigated by a correspondent of *Nature*, who reported that there was no indication that this had happened.

Dunlop described cases of polygamy in rooks, where in some cases two females sat side by side in the same nest and were fed by the male, who also fed the young when they hatched. In other cases the females had different nests, but were fed by the same male. It was reported that Kolb's Vulture had entirely disappeared from Humansdorp, Cape Province, South Africa, apparently having been exterminated by feeding on cattle which died of rinderpest.

Cornell University recently acquired a passenger pigeon which was killed in 1909 at Clyde, N. Y. Bartsch recorded a story told by a hunter in Arkansas that in 1879 a fire swept over a roosting place of the passenger pigeons and practically exterminated the flock. Since this time no more had been seen in that locality. The starling was spreading over the United States, and promised to be a troublesome pest. A winter nesting place at "Aldie" near Doylestown, Pa., was estimated to contain over 1,000,000 birds. The first bird reservation east of the Mississippi area was opened in 1916 at Sieur de Monts on Mt. Desert Island, Maine. This lies near the border of the Canadian faunal limit, and because of its location is an important station in the spring and fall migrations. The American Ornithologists Union held its 35th annual meeting at Cambridge, Mass., from November 12 to 16. John H. Sage, of Portland, Conn., and Dr. T. S. Palmer, of Washington, D. C., were elected president and secretary respectively. See ZOOLOGY.

**OSTERHAUS, PETER JOSEPH.** An American soldier, died in Berlin, Germany, January 4, 1917. Born at Coblenz on the Rhine in 1823, and early an officer in the Prussian army, he came to the United States in 1849, after the failure of the popular uprising, with Carl Schurz, Abraham Jacobi, and others who became famous. At the beginning of the Civil War, resident in St. Louis, he became major of the 2d Missouri Rifle Battalion, which he commanded at Boonville and Wilson's Creek. Promoted brigadier general in 1862, he was placed in command of the 9th Division of the 13th Army Corps, and participated in the battles of Campaign Hills, Fort Gibson, and Black River Bridge, where he received severe wounds. At the battle of Big Black River he prevented Gen. Johnston from raising the siege of Vicksburg, thus contributing to the Confederate general's collapse and surrender to Grant. Later Gen. Osterhaus was with Sherman in the Jackson, Miss., campaign, and with Grant before Chattanooga, and after taking part in the battles of Lookout Mountain and Missionary Ridge, he became major general of volunteers (1864). He held various assignments thereafter, being commandant of the Military Department of Mississippi when mustered out in 1866. For a year immediately after the war he served as United States consul at Lyons, France, and then settled in Germany, at Duisburg. In 1905 he was placed on the retired list as brigadier general,

U. S. A., and in 1916 was promoted major-general, retired. His son, Hugo Osterhaus, became rear admiral in the United States navy.

**OTIS, HARRISON GRAY.** An American newspaper owner and soldier, born near Marietta, Ohio, on January 10, 1837, died July 30, 1917. He worked during the early years of his life as a printer and was a delegate to the Republican National Convention in 1860, which nominated Lincoln for the presidency. At the outbreak of the Civil War he enlisted as a private in the Twelfth Ohio Volunteer Infantry. He was brevetted lieutenant colonel in 1865. He was brevetted major general in 1899 on account of meritorious service in the Philippines during the Spanish-American War. From 1867 to 1870 he was employed in the government printing office and became chief of one of the divisions. He acted as a newspaper correspondent and was the editor of the *Grand Army Journal*. In July, 1882, he purchased an interest in the Los Angeles *Daily Times* and the *Weekly Mirror*. The former paper became widely known for its bitter opposition to organized labor. Inspired by a feeling of revenge a group of union labor men dynamited the *Times* plant in 1910 and wrecked the building and killed twenty-one employees. The McNamara brothers confessed their share in the crime in 1911. For a history of the case consult the articles on California and Trade Unions in the NEW INTERNATIONAL YEAR BOOK for 1911.

**PAHANG.** A state (the easternmost) of the Federated Malay States (q.v.).

**PAINTING AND SCULPTURE.** The year 1917, the fourth of the great war, was marked by an increased lack of artistic production outside of the United States, and a corresponding scarcity of foreign art in this country. The customary official exhibitions were held as usual in Paris and London, and many of the paintings were military in subject. Stirring war posters, lithographs, and cartoons from France and Great Britain were exhibited in New York. The important art schools abroad were much depleted in the number of male students, and many young artists were killed in action, an unrecoverable loss. In France and Italy the stress of modern warfare has desolated precious historical edifices, churches, chateaux, cathedrals.

The necrology list for the year included, among Americans, the veteran painter, Albert Ryder; the portraitist, Carroll Beckwith; the decorative artist, Howard C. Cushing; the landscape painter, Jules Turcas; and the well-known painter of sheep, John A. Monks; the sculptors, Sir Moses Ezekiel, long resident in Rome, John J. Boyle, and Bela L. Pratt; the illustrators, Albert B. Wenzell and Philip Boileau. Mention should be made of the death of William MacBeth, a pioneer among art dealers of American paintings. France mourned the loss of Auguste Rodin (q.v.), her greatest and most influential sculptor; the versatile painter, Carolus-Duran, and Edgar H. G. Degas, one of the foremost impressionists. Charles Napier Henry, the noted English marine painter, and Matthew Maris, the Dutch painter, who had lived most of his life in London, conclude the list.

**ARCHITECTURAL LEAGUE EXHIBIT.** This exhibition, the first of the season, is held early in January. The honor medal for painting went to Maxfield Parrish, that for sculpture to Hermon MacNeil. The imposing Temple of the

Scottish Rite, designed by Russell Pope and erected in Washington, won him the architectural medal. Characteristic pieces of sculpture were offered by Daniel Chester French, Evelyn Longman, John Gregory, and others. Especially ambitious were the mural decorations, including the huge canvas "Columbine" by Arthur Crisp, a stage set showing eastern influences with exotic and brilliant color by Hugo Ballin, and some decorative work by the late Howard C. Cushing. Other notable exhibitors were Robert Ryland, E. Benda, Louis Valliant, J. Mortimer Lichtenauer, and Edith Magonigle. The American Academy at Rome added to the general interest, if not excitement, its usual quota of careful, sincere, and efficient work. To the student of architecture many interesting plans and problems were offered in a somewhat unobtrusive manner.

**PENNSYLVANIA ACADEMY.** The one hundred and twelfth exhibition of the Pennsylvania Academy at Philadelphia presented its usual interesting aspect of paintings of those artists already weighed in the balance and not found wanting. Few new names appeared. To George Bellows, for his vibrant if slightly chaotic "Day in June," went the Temple Gold Medal and Stotesbury Prize. "Sarset," a sensitive and interesting portrait study by Arthur B. Carles, received the Walter Lippincott Prize, and the Carol H. Beck gold medal was carried off by Joseph Pearson's quaint and decorative but rather wooden double portrait, "The Twins, Virginia and Jane." A goodly number of portraits of widely varying interest invited attention. Beginning with four tempered and serious efforts by the late Thomas Eakins, the unusually representative list included examples by the late Wm. M. Chase, J. S. Sargent, Leopold Seyffert, Robert Henri, John McClure Hamilton. Especially noteworthy were a sturdy "Portrait of a Judge," by George Bellows, a sensitively rendered "Portrait in Blue," by Edmund Greacen, an ambitious group by Kenneth Frazier, and a richly brilliant effort by Hugh Breckenridge. Figure compositions which call for special mention were the glowing and sun-warmed nudes of Childe Hassam, the melancholy "Beggar" by Sidney Dickinson, a sympathetic "Mother and Child" by Marie Page; the "Woman and Macaws," vibrantly colorful, by George Luks; "Courtship" by James Hopkinson; "Europa," a little composition of classic reminiscence, by Everett L. Bryant, and characteristic studies of New York's east side by Eugene Higgins. Among the landscapes exhibited were agreeable and satisfying examples by Gardner Symons, Edward Redfield, Charles Rosen, Walter Griffin, Emil Carlsen, Willard Metcalfe, and other artists of established reputations. Special mention should be made of Hayley Lever's "Morning in the Harbor," with a somewhat too insistent foreground, which was awarded the Jennie Seenan Gold Medal; Nancy Ferguson's "New England Street," Martha Walter's "Breezy Day," painted with amazing swiftness and sureness, the color almost floating off the canvas, and two enjoyable little paintings by Paul King and Ross E. Moffat.

**NATIONAL ACADEMY, SPRING EXHIBITION.** The usual and expected aspect of an academy exhibition was not wanting the past spring. Generally speaking, the walls presented an interesting if somewhat monotonous aspect. The lack

of crowding gave comfort, and a rather unusual number of interesting and ambitious figure compositions invited inspection. Varying phases were observable, such as the attenuated "Improvisation," by Alden Weir, presenting a much fretted pigment surface; "Unrest," by Sidney Dickinson, winner of the third Hallgarten Prize, portraying a nude young girl with a pallid skin of ivory hardness against heavily hanging red draperies; Charles Hawthorne's "Lovers" static and impressive; a typical Richard Miller, of lovely, vaporous color; an ambitious Friescke, "Breakfast in the Garden," fresh and blooming, but skin deep; and a vigorous and skilful "Nude," by Leopold Seyffert. There were also the usual Indian compositions, by Irving Coue, E. Blumenschein, and others. An unusually good portrait, claiming more than cursory attention, was that of the sculptor, Bela Pratt, by Howard E. Smith, which was awarded the first Hallgarten Prize. Subdued and melancholy in color, it gained impressiveness by the simple and forceful characterization. A breezy representation of a "Young Lady in Pink," by Louis Betts occupied the place of honor in the Vanderbilt Room, with a study in browns, the portrait of a young woman by Irving Wiles, not far away. Other notable portraits were by Douglas Volk, Ben Ali Haggin, Lydia Field Emmet, DeWitt Lockman, Kenyon Cox, Henry Salem Hubbell, Albert Herter, Edward Dufner, Mary Fairchild Low, and Joel Levitt. A "Young Woman" in sombre garments, by Adolphe Borie, received the Maynard Prize; the flamboyant and arresting "Children of the Sands," vivid in color, somewhat original in composition, was awarded the Thomas B. Clarke Prize. A life-size portrait of the dancer, Jeanne Cartier, by Luis Mora, showed bright and daring color.

Among the landscapes the first Altman Prize went to Charles H. Davis for "Call of the West Wind," embodying all sound and conservative principles of the American school; the second to Ben Foster's "Late Summer Moonrise," characteristic of this artist's sincere and well-composed work. John Follinsbee received the third Hallgarten prize for his "Canal in Winter," well designed and cheerfully executed. Of unusual composition, impressive and convincing, was Charles H. Chapman's "In the Deep Woods," awarded the Saltus Medal, and afterwards acquired by the Metropolitan Museum of Art. The Inness medal went to Ernest Lawson's "Hills at Inwood," perhaps not quite as sensitively satisfying a work as is usual with this artist. Not very representative were the forty-four pieces of sculpture exhibited. The portrait busts of J. Francis Murphy by Scarpitta Cartaino, J. Carroll Beckwith by George T. Brewster, Charles McKim, an excellent characterization, by Albin Polasek, and Jacob H. Schiff by Victor Brenner, might be noted. A novel feature was the exhibition of one hundred miniatures by members of the American Society of Miniature Painters.

**CHICAGO ART INSTITUTE.** The thirtieth annual exhibition of contemporary American painting and sculpture, held in November, presented an eminently conservative appearance, giving the impression of general meritoriousness and sincerity of individual effort. The Potter Palmer prize of \$1000 went to Ernest Blumenschein for "The Chief Speaks," painted in this artist's well-known manner, serious and con-

vincing. Other prize winners were Guy Wiggins' "Lightly Falling Snow," afterwards purchased for the Institute Collection, and Charles Reifel's "In the Hills."

The works of artists familiar through other exhibitions, including prize winners such as Max Bohm's "Children of the Sand," and Arthur Davies's "Castalías," were in evidence. Characteristic paintings by such well-known artists as Emil Carlsen, Rosen, Redfield, Smedley, Frieske, Gifford Beal, Childe Hassam, Kronberg, and Leon Kroll, brought to the beholder renewed enjoyment and appreciation. Three Chicago artists, Ralph Clarkson, the portraitist, Frederick Grant, and James Hopkinson, contributed examples of their art, which added to the general interest. Included in the sculpture exhibit was Albin Polasek's portrait of Charles Hawthorne, awarded the Logan medal and prize.

**NATIONAL ACADEMY, WINTER EXHIBITION.** Fewer paintings than usual were exhibited this year, some three hundred in all. Of special interest was the increased number of large figure compositions; such as the impressive "Somewhere in Arizona," a group of Indians, bright in color and interesting in composition, by Luis Mora; the already familiar "Twins," and a decorative landscape with wild geese by Joseph Pearson, Jr.; "Crossing the Bar," by Max Bohm, colorful and tense in action; "The Canoeists," two forceful young people in reposeful attitudes on a hillside, by William Cottan; William Paxton's "The One in Yellow," of enamel-like finish and obtrusive color, and an oddly wooden "Equestrian Portrait," by Kenneth Frazier. Charming bits of child life were "Woman and Child," by Marie Page and "Sleepy Child," by Martha Walters. The first Altman Prize went to Daniel Garber for "Boys," a group of three young men in attitudes of studied simplicity; the second to the large and ambitious portrait group of "A Mother and Five Sons," with passages of delicious color, by Karl Anderson. The Isidor Medal was awarded to Alice Stoddard's charmingly fresh "Child of Monhegan." An uninteresting portrait of a little boy by Wm. J. Whittemore won him the Proctor Prize. J. S. Sargent's recent portrait of John G. Rockefeller, suave and characteristic, occupied the place of honor in the Vanderbilt Room. Other noteworthy works were "Twilight," a wonderfully spiritual and lovely colored female figure by Charles Hawthorne; "Padre," by George Bellows, a spirited female portrait by Leon Kroll, and Fritz Kreisler, by Leopold Seyffert. Paintings of southwestern Indian life were contributed by Walter Ufer, Mathias Sandor, Irving Coussé, and E. Blumenschein.

The usual number of landscapes by artists of established reputations contributed their share towards making a general impression of efficiency. There was also a sprinkling of the unusual, such as the brilliantly glowing "Lake," by Hugh Breckenridge. Edward Redfield's characteristic "River in Winter" was awarded the Carnegie Prize. Two marines, "In the Caribbean" and "Foaming Crests," by Frederick Waugh, "The Island," by Charles Rosen, the "Millstream," by Jonas Lie, and "Westchester Hillside," by Ernest Lawson, deserve especial mention. Other artists represented were Henry B. Snell, Childe Hassam, Paul King, Colin Campbell Cooper, Ben Foster, Hugo Ballin, Anne Goldthwaite, Bruce Crane, Charles Woodbury,

Everett Warner, Helen Turner, Carl Rungius, Ivan Olinsky, Philip Hale, F. Frieske, Howard R. Butler, and Jane Petersen, a widely varied list.

The fifty-six examples of sculpture exhibited constituted an interesting and stimulating little collection. Many of the pieces showed the archaeological influences, radiating from the American School at Rome, which have lately become so popular in American sculpture. No more unfinished blocks of marble, with corrugated surfaces—on the contrary, so polished and smoothed down have they become that many might serve as mirrors. Paul Manship sent in his well-known and delightful "Dancer and Gazelles," awarded the Helen Foster Barnett Prize, and "Indian and Antelope," a large group of robust strength, both in his familiar archaistic style. Classic in style, of a serene and stately beauty, was the delicately treated "Unfinished Figure" by Sherry Fry, which was awarded the Watrous Medal. The realistic phase was well represented by Robert Aitken's "Une Trouvaille," a tastefully tinted group, and Malvina Hoffman's joyous "Russian Bacchanale," which received the Shaw Memorial Prize. Imaginative and sensitively modeled little statuettes by Winifred Ward, small single figures by Louise Allen, Attilio Piccirilli, Edward F. Sanford, and M. Apel, a little group, "Mother and Children," by Isidore Konti, and two charming pieces by Chester Beach, "The Wave," and "Beyond," were of special interest. Included among the portrait busts were characteristic examples by A. H. Atkins, Leon Droucker, C. S. Pietro, Giulio Novani, and Charles Gaffey, the latter a striking characterization of Paul W. Bartlett.

**OTHER EXHIBITIONS.** Memorial exhibitions of W. M. Chase, and Thomas Eakins in the Metropolitan Museum of Art, New York, of John W. Alexander in Cincinnati, John J. Enneking in the Boston Art Club, and of Howard C. Cushing in various western museums, were held during the year. That of Thomas Eakins was of especial interest, revealing to many for the first time the importance of this sincere and earnest realist. An exhibition of many recent and some early works of the popular Spanish painter, Ignacio Zuloaga, was held in Brooklyn, N. Y., Boston, Buffalo, Chicago, Pittsburg, and other western art centres. A very interesting and important exhibition of early American painting, with many paintings in private possession never before exhibited, was held in the Brooklyn Museum in February. During the late winter appeared the Retrospective Inness Exhibition at the Ainslie Galleries, in which the master's development could be traced from the earliest panoramic effects under the influence of the Hudson River School to his last style of evanescent color and dreamy sentiment. The first exhibition of the Society of Independent Artists was held in April in the Grand Central Palace, New York. A novel feature was the absence of a jury and of awards. On payment of a small fee any applicant became a member and was allowed two exhibits. The result was a hitherto unknown diversity of material shown, ranging from the most rigid academic productions to the wildest and most fantastic Cubist and Symbolist efforts. Over 1700 paintings were thus hung, with no arrangement except the alphabetical order—a truly bewildering affair.

Many "group" exhibitions, including those of

Modernists, Post Impressionists, Symbolists, Vorticists, were on view at the smaller galleries. Some of these were amusing in their display of widely different tendencies on the same walls. A Willard Metcalfe or a Dewing, for example, hung in juxtaposition with an abstract effort by Max Weber or a synthetic Jules Pascin, afforded contrasts of sufficient variety to satisfy the most jaded beholder.

In spite of wartime difficulties modern French art continued to be exhibited. Most noteworthy were the Renoir and Cézanne exhibitions. The latter, held at the Arden Galleries, and composed entirely of loans, offered a unique opportunity to study this pioneer of Post Impressionism.

Under the auspices of various war charities important loan collections were held. Most important was that of Italian Primitives at the Kleinberger Galleries, New York, in December, the largest and most representative ever held in America. An exhibition of sculpture at the Ritz Carlton, New York, under the auspices of the Allies of Sculpture, showed such wide diversity as the classic ideals of Herbert Adams, the purely American inspiration of Daniel Chester French, to the modern sensationalism of Brancusi.

The international art exhibition at Carnegie Institute, Pittsburgh, and the exhibition of contemporary American painting at the Corcoran Art Gallery, Washington, were omitted this year.

**MUSEUMS.** A noteworthy feature of museum activities during the past year was the great increase of educational work along art lines. Especially was this in evidence in the many museums of the Middle West, in which traveling exhibitions of many groups of selected artists' works were continually held. In the Metropolitan Museum of Art, New York, a new Department of Prints was organized, and a new wing, devoted to classical art, was opened. This beautiful addition to the museum, constructed according to the most approved modern requirements, consists of a main hall containing the principal pieces of sculpture, with adjoining side rooms devoted to the decorative arts, arranged in chronological order. The most important accession of the year was the donation of Mr. J. P. Morgan of an important part of the original famous Morgan Collection. It comprised certain paintings, examples of French Rococo sculpture, many objects of decorative art, principally of the French Gothic and Rococo periods, and a fine collection of Byzantine and Gothic enamels and ivories. Other accessions included the Whistler's portrait of Wm. A. Chase; a large portrait by Anders Zorn and "The Abbé," by Van Dyck, both the gift of Mrs. Edward R. Bacon. The Worcester Art Museum acquired Thomas Gainsborough's portrait of his two daughters; the valuable "Pembroke" Mantegna, "Judith with the Head of Holofernes," which had been sold to an American collector, and the "Girl with Turkeys," a beautiful example of the American painter, George Fuller. The Boston Museum was enriched by the gift of the important Quincy Shaw Collection of Millet's, comprising over twenty oil paintings and a like number of pastels. The "Oyster Gatherers," by J. S. Sargent, was acquired by the Corcoran Art Gallery. On November 24 occurred the dedication of the new Santa Fé (New Mexico) Museum,

tastefully built in the Pueblo Indian style and devoted especially to local antiquities.

But the most important event in the art chronicle of the year was the bequest of the collection of that rare and discriminating connoisseur, the late John G. Johnson, to the city of Philadelphia. Its most distinctive feature is the collection of priceless Italian and Flemish primitives, but there are also invaluable Dutch genre and landscape paintings, a number of old English masters, some Flemish of the 17th century, and modern masters of all schools.

**SALES.** A very important collection of American paintings belonging to Dr. A. P. Humphreys, president of Stevens Institute, Hoboken, was dispersed at auction. Other American collections sold included that of the late J. F. (Diamond Jim) Brady, and the late H. W. Ranger, the latter consisting mostly of American paintings. A second sale of early Italian art objects belonging to Professor Volpi's collection took place. Important sales held in London were those of the Earl of Pembroke's collection of old masters, the famous "Hop" Collection and the important Lawton Buns collection of old masters. A number of these valuable paintings were acquired by American art dealers and private collectors. One of the "Denbigh" Van Dycks, exhibited in New York last year, was added to the collection of Henry Clay Frick.

**PALAU.** See **CHEMISTRY, INDUSTRIAL.**

**PALESTINE.** A small portion of Asiatic Turkey, in the southwestern part of Syria. The area is estimated at 9800 square miles (about 6000 square miles west, and 3800 square miles east, of the Jordan River). The estimated population is 720,000, consisting of about 500,000 Mohammedans (mostly Arabs), 120,000 Jews, and 100,000 Christians. Estimated populations of the chief towns: Jerusalem, 100,000 (including 65,000 Jews); Jaffa, 50,000 (12,000 Jews); Gaza, 40,000; Nablus, 28,000; Haifa, 20,000 (2000 Jews); Hebron, 20,000 (1000 Jews); Safed, 18,000 (10,000 Jews); Bethlehem, 16,000; Nazareth, 15,000. The country produces grapes, citrus fruits, figs, dates, and olives. The chief manufactures are olive oil, wine, and soap. In 1914 there were about 500 miles of railway: Jaffa-Jerusalem, 54 miles; Haifa-Deraa, 105 miles; Damascus-Deraa, 75 miles; Deraa-Maan, 208 miles; Damascus-M'zerib, 62 miles. See **WAR OF THE NATIONS.**

**PANAMA.** A republic situated between Costa Rica and Colombia. The city of Panama is the capital.

**AREA, POPULATION, ETC.** Panama consists of eight provinces, having a total estimated area of 33,776 square miles. The population of the republic (exclusive of the Canal Zone, which belongs to the United States) is probably about 375,000. According to a 1917 enumeration, the city of Panama has 60,761 inhabitants (30,793 males, 29,968 females). Colón has about 30,000 inhabitants; other important towns are David and Bocar del Toro. Movement of the population in 1915 and 1916 respectively: births, 12,040 (of which, 8077 illegitimate) and 9849; deaths, 7359 and 5036; marriages in 1916, 682. In October, 1917, a law became effective requiring civil registration of marriages; without such registration a marriage is invalid. Government schools in 1916 numbered 398, with 24,150 pupils enrolled.

**PRODUCTION, COMMERCE, ETC.** The resources of the country, both agricultural and mineral, are developed only to a small extent. The chief crop is bananas; other products are corn, sugar cane, cacao, tobacco, yams, coffee, coconuts, and rubber.

Imports (exclusive of non-dutiable supplies for the Panama Canal) and exports have been valued as follows:

	1913	1914	1915	1916
Imps. \$	11,397,000	9,885,447	9,037,200	9,197,454
Exps. .	5,383,028	3,800,517	3,422,755	5,506,725

The chief export is bananas, valued in 1915 at \$2,197,250. In 1916, about 72 per cent of the imports were from, and about 98 per cent of the exports were to, the United States.

There are over 200 miles of railway in operation, including the Panama Railway (48 miles, across the Isthmus), which is owned by the United States.

There are about 1000 miles of telegraph line,

the question of civil marriage. The president and members of the National Assembly were excommunicated by decree of the Bishop of Panama, they having voted a law making civil marriage the only legal marriage. In May Panama asked of the United States government an advance of \$10,000,000 for railway and road construction for the defense of the canal. Panama followed the United States in declaring war on Germany on April 7, the day after the American declaration. See *WAR OF THE NATIONS, Diplomacy of the War*.

**PANAMA CANAL.** The total number of ships passing through the canal during the fiscal year ending June 30, 1917, was 1876, compared with 787 in the fiscal year of 1916. The aggregate gross and net tonnages of the ships passing through in 1917 was 8,530,121 and 6,900,358 respectively. The cargo carried through the canal amounted to 7,229,255 tons of 2240 pounds each. The following table shows the traffic through the canal over the principal trade routes.

with over 3600 miles of wire and 96 offices; post offices, 37.

**FINANCE.** The standard of value is gold. The monetary unit is the balboa, equivalent to the American dollar. The budget for the biennial period 1915 and 1916 showed estimated revenue of \$10,622,000 and estimated expenditure of \$11,646,000. For the biennial period 1917 and 1918, the budget balanced at \$7,189,170. Estimated expenditure for the latter period included: government and justice, \$2,658,468; finance and treasury, \$1,715,302; public instruction, \$1,442,912; fomento and public works, \$1,187,804.

**GOVERNMENT.** The legislative power is exercised by the National Assembly, a single chamber of 33 members, elected for four years by direct vote. The president is elected for four years by direct vote and is ineligible for the next term. President for the term beginning October 1, 1916, Ramón M. Valdez. The constitution, which bears date of February 13, 1904, was amended in 1917; among the new provisions are one prohibiting capital punishment and another making the provincial governors (now appointive) elective from 1920.

**HISTORY.** Owing to the bad financial condition of the country a broad measure of fiscal reform was passed by the National Assembly in February. Trouble with the church arose over

On January 3, Lieut. Col. Chester Harding was named by the president to be governor of the Canal Zone, succeeding Maj. Gen. Goethals.

**PAPER.** The year 1917 was one of great importance and interest in the paper industry. The conditions rising from the war affected the paper trade, as it did other trades, but in some respects, more acutely. During the year suit was brought by the government against the manufacturers of newsprint paper for disregard of the agreement previously made as to the prices to be charged. An account of this will be found below. The total production of newsprint paper in the United States in 1917 was 1,349,729 tons, compared with 1,314,740 in 1916. If the entire production of all kinds turned out by these mills for both years be taken into account, a falling off in 1917 is shown. The production came in 1917, from 59 mills. The Canadian mills in 1917 showed a total production of 635,000 tons, compared with 580,000 in 1916. The imports from Canada were much larger in 1917 than in 1916. They amounted to approximately 954,000, compared with 475,000 tons in 1916. The growth of the newsprint industry in Canada since the removal of the United States Tariff in 1916 has been remarkable. Imports from Newfoundland were made possible by an ar-

rangement entered into by printers and the Northcliff Mills in Grand Falls, in July, 1917. Lord Northcliff was unable to send any of the paper from his mills to England in 1916. He was therefore very ready to furnish American publishers. About 9200 tons were obtained from this source to the end of November. The great increase in the consumption of newsprint in 1916, amounting to nearly 15 per cent over the previous total, caused a stringency which obtained in the early months of 1917. This produced a raise in prices. Conditions improved during the year, until at the end, the stock on hand was about the same as at the end of 1916. The price on newsprint paper on contract remained fairly steady during the year at 3 cents f. o. b. mills. Contracts for 1918 have been made on this basis until April 1; thereafter, prices are to be fixed by the Trade Commission. An unusual amount of newsprint paper was exported during the year, the total exports being 92,000,000 tons, against 70,457 tons in 1916. The price obtained for export paper was \$8 to \$10 higher than the home market. South America, South Africa, and Australasia are obliged to depend entirely upon the United States and Canada for newsprint paper.

**GOVERNMENT ACTIVITIES.** On February 16, 1917, the principal newsprint manufacturers of the country submitted to the Federal Trade Commission a plan proposing that the commission fix a fair and reasonable maximum price for newsprint paper for six months beginning March 1, 1916. They also proposed to act with the advice of the commission in bringing about equitable distribution of their product. In accordance with this request, the Trade Commission began investigations with the plan of entering into such an agreement. On March 5, the commission submitted to the president a report on the newsprint investigations, announcing that \$2.50 per 100 pounds f. o. b. mills was a fair and reasonable price for newsprint paper. The report stated that the increase in price of the newsprint in 1917 in most cases was greater than could be justified by the increase in production costs to the manufacturer. The commission declared that there was enough newsprint to meet all necessary demands during 1917, but that there was a close margin between supply and demand.

In April, seven newsprint manufacturers who had been indicted by the Grand Jury for alleged violation of the Sherman Anti-Trust Law pleaded not guilty. With the privilege of changing their pleas, on April 30, the men were released under bail for \$3000 each. The trial of these men was set in May for October 8, 1917. The Federal Trade Commission in June reported to the United States Senate the result of its investigations into the high cost of the newsprint paper. The commission suggested that government control of all mills producing newsprint paper, book paper, ground paper, and chemical pulp, was absolutely necessary to bring about the sale of this paper at a reasonable price and to secure equitable distribution. The commission declared that the price of book paper had greatly increased since 1915, ranging from 65 to 84 per cent higher for various grades. The commission declared that there had been concerted action on the part of book paper manufacturers to increase prices. Follow-

ing a discussion of this report in the Senate, a resolution was passed directing the Trade Commission to inform the Senate why it had not issued orders commanding manufacturers and distributors of newsprint paper to desist from the alleged illegal practice of fixing prices. In a report submitted to the Senate on its investigation of the book paper business in the United States, the commission in July attributed the advance in prices of the book paper, in part, to the activities of the manufacturers and secretary of the Book Paper Manufacturers' Bureau of Statistics. The charge was made that this advance in price was excessive and not justified by the increase in cost. The commission repeated its recommendation that the paper mills should be taken over by the government. It also called attention to the necessity for the enactment of legislation regulating the activities of the trade associations. Several days later, the commission filed an order to the book paper manufacturers and the Bureau of Statistics of the book paper manufacturers to cease making alleged violations of the law. The complaint alleged a violation of Section 5 of the act of Congress, approved September 26, 1914, which is the act creating the Federal Trade Commission. Under executive order the Federal government fixed the price of newsprint paper at 2½ cents. The International Paper Company, under protest, agreed to furnish the government with two car loads a day at this figure.

The trial of the seven newsprint manufacturers who were indicted on April 12 for alleged violation of the Anti-Trust Law, was postponed until November 12. In October, Senator Smith of Arizona submitted a detailed report on the newsprint situation. The report advocated the adoption of a resolution directing the Federal Trade Commission to supervise, control, and regulate the production and distribution of print paper and mechanical and chemical pulp in the United States.

Early in November the complaint lodged previously by the Federal Trade Commission against the book paper manufacturers, was withdrawn, and the manufacturers agreed to desist from further operations complained of by the commission. The case against the indicted manufacturers of paper was compromised. An agreement was entered into whereby the maximum price of newsprint paper at the mills, both in rolls and car load lots, is to be \$3 per 100 pounds, until April, 1918, after which a maximum price will be determined by the Federal Trade Commission, this to go into effect to prevail for the duration of the war, and for three months thereafter. Before signing this decree, five of the seven indicted persons pleaded *noto contedere*. Indictments against the others were dismissed.

**CANADA.** The exports of paper pulp from Canada in 1917 were valued at \$26,077,646. The chemical pulp was valued at \$14,332,920. In the fiscal year 1917, 976,617 cords of wood valued at \$6,441,896 were shipped to the United States. This was sufficient to produce 450,000 tons of sulphite pulp, with a market value of \$22,500,000.

**PAPPATACI FEVER.** (SAND-FLY FEVER.) Often erroneously called Three-day Fever. According to Shattuck, pappataci fever lasts from one to five days or even seven days. The onset

is abrupt, with frontal headache, chilliness, nausea, muscular pains, and somnolence. The temperature varies from 101° to 102° F., but the pulse seldom exceeds 80. The blood picture shows a decrease in the white blood cells and particularly of the polymorphonuclear cells. The diagnosis is made by excluding malaria and other fevers, and by the circumstance that the disease occurs in the summer time in regions where the sand-fly abounds.

**PAPUA, TERRITORY OF.** Formerly British New Guinea. The southeasterly part of the Island of New Guinea; forming, with numerous small islands lying mostly to the southeast, a dependency of the commonwealth of Australia. The area of the dependency is stated at 90,540 square miles. The native population has been variously estimated at from 250,000 to 400,000. Population, June 30, 1916: Europeans, 992, colored (other than Papuan), 341. Port Moresby is the capital. The local industries are not numerous, but they are becoming more diversified. The soil is favorable to agriculture. June 30, 1916, plantations aggregated 47,506 acres. There were 34,016 acres under coconuts, 7671 under rubber, and 4812 under sisal hemp. About 350,000 acres are estimated to be under native-owned coconuts; a British ordinance obliges the natives to plant coconuts for food supply. Gold mining is an important industry, and copper mining shows rapid increase.

Financial and commercial statistics are given below:

	1913	1914	1915	1916

**PARAFFIN.** Several clinicians have reported their experiences with paraffin dressings for superficial wounds and burns, and their conclusions may be illustrated by the report of Dr. J. R. Beiter, surgeon to the United Alloy Steel Corporation, Canton, Ohio, who records a series of over 4000 paraffin dressings, principally in burns of all kinds. Beiter experimented with various formulas containing varying proportions of wax, olive oil, scarlet-red, and other healing antiseptics, but finally discarded all drugs, using only a commercial product called "Paro-wax." The method of applying a paraffin dressing is as follows: The wound is first cleaned and dried. The wax being heated to the melting point in a water bath, over the burned area the preparation is applied with a brush, care being taken that the healthy skin edges are covered with wax, which adheres firmly, making an impermeable but flexible dressing under which the ordinary secretions of the wound collect as under a natural scab. Over this a thin layer of cotton or wadding is placed, and a second film of wax applied, sealing the edges to the skin. Over all a heavier cotton dressing is bandaged. The wound must be thoroughly dried or the dressing will not adhere. Applying the wax to the raw surface was found to be extremely painful in many cases, but this disadvantage was met by first painting the wound with liquid petrolatum. Beiter sums up the advantages and disadvantages of paraffin dressing somewhat as follows: The method is inexpensive; it is comfortable, because firm and

smooth and granulations cannot grow into it as in the case of gauze; it is clean, because the wound discharges are retained under the impermeable wax film; the outer dressing remains clean and odorless. He says he found that superficial burns heal quickly, but that deep burns do not undergo repair any more rapidly than with other methods, and moreover scarring is just as marked and the time of healing just as long. The method requires time, care, and patience.

Torald Sollmann finds that the addition of other substances to paraffin are not helpful and are sometimes disadvantageous. He advises that paraffin for use on burns should be solid, but possess more ductility and pliability than the official preparations, and should have a relatively low melting point; i. e., it should be liquid at or below 50°C.

**AMBRINE.** A French secret preparation of paraffin, to which is added some substance to make it plastic and adhesive. It is used as a dressing for superficial wounds and burns. Although ambrine has been on the market for some years, it has recently been exploited as a marvelous dressing for war wounds. Many other preparations of similar nature have been brought forward under proprietary names during the past year, such as Stanalind surgical.

**PARAGUAY.** An inland South American republic. The capital is Asunción.

**AREA, POPULATION, ETC.** Paraguay proper, lying between the Paraguay and Alto Paraná rivers, has an estimated area of about 97,700 square miles. A nearly equal area, between the Paraguay and Pilcomayo rivers, is claimed by both Paraguay and Bolivia, but is usually regarded as Paraguayan. The population of Paraguay proper has been estimated at 800,000; the people are largely a mixture of Spanish, Guaraní, and negro blood, but there are many pure, or nearly pure, Guaranís. The disputed region, the Chaco, has a sparse Indian population, numbering perhaps 50,000. Asunción has probably about 100,000 inhabitants; Villa Rica, 30,000; Concepción, 25,000.

Elementary instruction is free and nominally compulsory. The reported enrollment in elementary schools in 1916 was 80,142 (44,623 males, 35,519 females). There are a few institutions for secondary and special instruction.

**PRODUCTION, COMMERCE, ETC.** The principal crops are yerba maté, corn, beans, alfalfa, manioc, tobacco, and various fruits, especially oranges; other products include cotton, peanuts, sugar cane, sweet potatoes, and rice. The production of yerba maté in 1915 was 70,495, and in 1916 81,821 metric quintals; sugar, 15,360 and 7880; tobacco, 90,000 and 90,000; peanuts, 9000 and 11,000. The output of tannin in 1915 was 153,590 and in 1916 284,210 metric quintals. Reported number of cattle in 1915, 5,249,043; sheep, 600,000.

The table below shows import and export values in pesos (peso = 96.47 cents). As the figures are based on the fixed valuations specified in the tariff of 1909, the actual values are greater, for 1916 probably 50 per cent greater, than the values given.

	1913	1914	1915	1916
Imports .	8,119,997	5,149,465	2,405,888	4,679,033
Exports .	5,630,929	4,584,358	5,636,172	4,861,677

Leading imports in 1915 and 1916 respectively, in thousands of pesos: textiles (chiefly cotton goods), 797 and 1927; provisions, 658 and 1069; hardware and machinery, 321 and 774; haberdashery and dry goods, 101 and 202; chemicals and drugs, 118 and 165; ready-made clothing, 96 and 158; beverages, 81 and 147. The principal exports are quebracho extract, cattle hides, cattle, beef products, woods, tobacco, and oranges. The export of yerba maté in 1915 was 47,093 and in 1916 32,658 metric quintals; cattle, 29,509 and 28,455 head. Trade by countries, in thousands of pesos:

	Imports		Exports	
	1915	1916	1915	1916
United Kingdom .....	795	1,799	197	80
Argentina .....	789	1,001	3,637	3,575
United States .....	217	582	303	284
Italy .....	175	264	39	146
Spain .....	117	181	85	373
Uruguay .....	31	52	574	229
Germany .....	167	82	4	...
T'l, including others.	2,406	4,679	5,636	4,862

In 1913 and 1914 respectively, imports from Germany were valued at 2,243,924 and 1,398,002 pesos; exports to Germany, 1,235,758 and 810,493.

**COMMUNICATIONS.** Asunción and Concepción, on the Paraguay River, have steamer communication with Argentina. From Asunción a railway extends (234 miles) to Encarnación, on the Alto Paraná, whence a train ferry connects with the Argentine railway system. Telegraphs, 2485 miles, with about 70 offices. Post offices, 386.

**FINANCE.** The gold peso, used as a monetary unit, is that of Argentina, which is equivalent to 96.47 cents. The actual peso in circulation is paper, of fluctuating and greatly depreciated value; in 1917 it was worth about 2½ cents. The budget authorized by the Congress for the year ending June 30, 1918, placed the estimated revenue at 911,113 pesos gold and 59,690,700 pesos paper; expenditure, 1,016,835 pesos gold and 65,486,657 pesos paper. The chief sources of revenue are import and export duties and direct taxes. Reported outstanding foreign debt, December 31, 1916, £716,450; acknowledged internal debt, 1,518,997 pesos gold and 16,448,562 pesos paper; in addition, there was outstanding paper currency amounting to 115,000,000 pesos.

**GOVERNMENT.** The legislative power is exercised by a congress of two houses, the Senate and the Chamber of Deputies. Senators (13 in number) are elected for six years, deputies (26) for four years, all by direct vote. The president and vice-president are elected for four years by indirect vote. The president in 1917 was Manuel Franco, who was inaugurated August 15, 1916, in succession to Eduardo Schaerer. Vice-president, José P. Montero.

**PARALYSIS, INFANTILE.** See POLIOMYELITIS.

**PARINAUD'S CONJUNCTIVITIS.** This disease of the eyelids, which is characterized by the formation of granulations, is chiefly of interest because it is frequently mistaken for trachoma. Collins, in the United States Public Health Reports, reminds the health officer that he should keep in mind this form of conjunctivitis when searching for trachoma. \* The granulations are found at the nasal side of the upper lid and in the upper retrotareal fold,

have a peculiar, yellowish, semi-translucent appearance, and secrete mucus, but not pus. There may be slight constitutional disturbances. The disease disappears in two or three weeks under simple treatment.

**PARK COLLEGE.** A co-educational institution, under the auspices of the Presbyterian Church, at Parkville, Mo. In the fall of 1917 there were 405 students and 20 members of the faculty; one member of the faculty and 60 students left to enter government service. During the year Copley-Thaw Hall, the president's residence, was erected and permanent improvements were made costing upwards of \$25,000. Endowment was increased by \$170,000, making the total of productive funds about \$676,000 and the income therefrom about \$32,000. Volumes in the library numbered 25,000. The college was founded in 1875. President, Frederick William Hawley, D.D.

**PABRESINE.** A mixture composed of paraffin, 94 to 96 per cent; gum elemi, 0.20 to 0.25 per cent; Japan wax 0.40 to 0.50 per cent; asphalt, 0.20 to 0.25 per cent, and eucalyptol, 2 per cent; with some coloring matter (gentian violet and alkanin). See PARAFFIN.

**PARRY, WILL H.** An American trade official died in Washington, D. C., April 21, 1917. He was born in New York in 1864, and studied at the College of the City of New York and at Columbia. For ten years after 1884 he was editor and publisher of papers in Washington, becoming managing editor of the *Seattle Post-Intelligencer*. As city comptroller of Seattle from 1894 to 1900 he revised the city's finances and brought about municipal improvements. For two years he was an alderman and then for four years president of the City Council. From 1904 till his appointment in 1915 as member of the Federal Trade Commission, Mr. Parry was treasurer and manager of the Moran Shipbuilding Company, which during this period built the battleship *Nebraska*. He had much to do with the success of the Alaska-Yukon-Pacific Exposition, as chairman of the ways and means committee and of the executive committee. Since he had been on the Trade Commission he had become its vice-chairman and had directed important economic investigations, the last of which was the newsprint inquiry. In politics he was a Progressive Republican.

**PATENTS.** See UNITED STATES.

**PAVEMENTS.** See ROADS AND PAVEMENTS.

**PAYNE, OLIVER HAZARD.** An American capitalist, the benefactor of Cornell Medical School and other institutions. He was born in Cleveland, Ohio., in 1842, and died June 27, 1917. He served in the Civil War, entering the 124th Ohio Infantry as a lieutenant. In 1865 he was brevetted a brigadier general of volunteers for meritorious services. After the war he engaged in the iron and oil businesses in Ohio and New York. Payne gave \$500,000 for the establishment and maintenance of the Cornell Medical School. This was the first of many gifts to that institution, culminating in an endowment fund of \$4,500,000 in 1913. He also gave \$100,000 each to the University of Virginia and to Western Reserve University. By his will he left \$5,000,000 to educational and charitable institutions. The chief beneficiaries were: Lakeside Hospital, Cleveland, \$1,000,000; Yale University, \$1,000,000; New York Public Library, \$1,000,000; Phillips Andover Academy, \$500,000; St.

Vincent's Charity Hospital, Cleveland, \$500,000; Cleveland Jewish Orphan Asylum, \$200,000; Hamilton College, \$200,000; University of Virginia, \$200,000; Cornell Medical College, as an endowment fund, \$500,000.

**PEABODY MUSEUM.** The Central American Expedition, under the charge of Mr. Samuel K. Lothrop, continued its work during the year, the centre of operations being Tegucigalpa, Honduras. Several large groups of ruins have been discovered in Honduras and Guatemala. Field work has been carried on in the cliff-house region of northeastern Arizona, where several burial caves were explored and a considerable collection obtained. The expedition to the remote villages of the Kwakuitl Indians of British Columbia resulted in much new material relating to their ceremonies and domestic life. During his expedition to the upper Amazon, Dr. A. Hamilton Rice secured a valuable ethnological collection from tribes of the Rio Negro region. The Harvard Peruvian Expedition explored various burial caves in the vicinity of Huancabamba, northern Peru. A number of mummified human bodies were secured, which were wrapped in cotton shawls or blankets woven in stripes or decorated with painted designs. These have been added to the museum's collection. The first volume of the *Harvard African Studies*, a quarto of some 300 pages and 60 plates, containing papers on African archaeology and ethnology, has been published by the African department of the Museum; and the seventh volume of the *Museum Papers*, bearing the title *History of the Spanish Conquest of Yucatan and the Itzas*, has been issued. Two of the five large exhibition halls in the new section of the Museum have been opened to the public, one of which is devoted to the archaeology and ethnology of Middle America. In the other are shown the collections from South America.

**PEACE MOVEMENT.** See INTERNATIONAL PEACE AND ARBITRATION.

**PEACE PROPOSALS.** See UNITED STATES AND THE WAR; WAR OF THE NATIONS.

**PEAT.** See CHEMISTRY, INDUSTRIAL.

**PELLAGRA.** The question as to whether pellagra is a communicable disease; whether it is due to a specific organism or perverted diet, appears to be no nearer solution than heretofore. Sambon has maintained for eleven years that the disease is infectious, possibly due to a protozoön, and transmitted by the sting of some winged insect. He finds his theories sustained by his recent studies in the various foci of pellagra in Europe, United States, and West Indies, and he has proved its presence in several parts of France, British Guiana, and Great Britain itself. He maintains that the history of the disease through the centuries shows that it occurs constantly in certain regions, like sleeping sickness, and that these localities are permanent endemic foci. Outside of these foci the disease is not contracted nor transmitted. It does not spread in hospitals or asylums to the medical or nursing forces or other inmates, or from a pellagrins to her nursing infant. The disease recurs like malaria; the flare-up may occur in March, or the new case may develop within the following three months.

Tizzoni has described a germ which he believes to cause pellagra and which he found in the blood of all insane pellagrins examined at the Mombello Asylum. In a case showing skin le-

sions the germ was cultivated from the cerebrospinal fluid, from the spleen, and from the scales of the skin lesions. He believes that the organism passes through three phases in its cycle of evolution. It is first a bacillus, then a streptococcus, and finally a staphylococcus, changing from one phase to the other irregularly. The blood may contain the organism when patients are apparently free from the disease and the passage from one phase to another seems to correspond with changes in the manifestations of the malady. The streptococcus form seems to be the most toxic, the staphylococcus being next in severity. The bacillary phase seems to be non-toxic.

Attempts by members of the U. S. Public Health Service to transmit pellagra from one individual to another were made at four widely separated localities: Washington, D. C., Columbia, S. C., Spartanburg, S. C., and New Orleans. Sixteen volunteers, mostly members of the Public Health Service, were subjected to various procedures intended to afford evidence for or against the infectiveness of pellagra. The materials used were blood, nasopharyngeal secretions, epidermal scales from the skin of pellagrous lesions, urine, and feces. Blood was administered by intramuscular or subcutaneous injection; the nasopharyngeal secretions were applied to the mucous membrane of the nose and pharynx; scales and excreta were given by mouth. None of the subjects had developed pellagra symptoms, although an interval between five and seven months had elapsed since the experiment was made. The results seem to show that pellagra is not a communicable disease.

Petersen has made a statistical study of the mortality from pellagra in the United States during 1915 and 1916. The States are divided into groups with their mortality for 1916 as follows:

North Atlantic States: Maine, 15; New Hampshire, 10; Vermont, 3; Massachusetts, 37; Connecticut, 1; Rhode Island, 7; New York, 27; Pennsylvania (no statistics available); New Jersey, 4.

South Atlantic States: Delaware, 0; Maryland, 3; District of Columbia, 9; West Virginia (complete statistics not available); Virginia, 249; North Carolina, 476; South Carolina, 672; Georgia, 958 (estimated); Florida, 202 (statistics incomplete).

South Central States: Alabama, 677; Mississippi, 840; Louisiana, 295; Texas, 452; Oklahoma, 71; Arkansas, 500 (estimated); Tennessee, 607; Kentucky, 120.

North Central States: Ohio, 6; Indiana, 4; Michigan, 4; Illinois and Nebraska (statistics not available); Wisconsin, 0; Minnesota, 1; Iowa, 4; Missouri, 39; North Dakota and South Dakota, 0; Kansas, 10.

Western States: Oregon, 3; California, 25; Colorado, 3; Washington, Idaho, Utah, Wyoming, Nevada, Montana, 0; New Mexico and Arizona (statistics not available), although deaths from pellagra occur in these States.

The comparison of the death rate among the white and colored races, based on the mortality per hundred thousand population, is shown as follows: Oklahoma, white, 2.6; colored, 6.6; Tennessee, white, 20.0; colored, 49.0; Florida, white, 13.2; colored, 38.0; North Carolina, white, 14.6; colored, 30.0; District of Columbia, white,

3.0; colored, 1.0; Alabama, white, 19.0; colored, 44.0; Louisiana, white, 7.0, colored, 28.0; Maryland, white, 0.17, colored, 0.4; Mississippi, white, 19.0, colored, 61.0; Kentucky, white, 5.3, colored, 2.6.

In the colored race the mortality has seen a greater decrease than among the white. As to the mortality from pellagra, health authorities in the Southern States estimate that about 0.5 per cent of the population are pellagrins. This would mean, therefore, that of 32,500,000 people in the pellagrous area, there are about 165,000 pellagrins, and that for each death there are about fifteen living pellagrins. A review of the statistics shows that the mortality decreased in 1916, the total for 1915 being 10,663, while that for 1916 was 6289. The reduction was most marked in the South Atlantic States, where the mortality dropped from 42 to 21 per hundred thousand population.

**PENANG.** One of the Straits Settlements (q.v.).

**PENNSYLVANIA. POPULATION.** The population of the State in 1910 was 7,665,111, and on July 1, 1917, it was estimated to be 8,660,042.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17 were as follows:

		Acreage	Prod. Bu.	Value
Corn ....	1917	1,575,000	62,212,000	\$95,184,000
	1916	1,450,000	56,560,000	54,854,000
Wheat ...	1917	1,399,000	24,482,000	50,188,000
	1916	1,375,000	26,125,000	42,322,000
Oats ....	1917	1,175,000	41,125,000	30,021,000
	1916	1,130,000	35,030,000	19,967,000
Potatoes ..	1917	321,000	29,532,000	39,808,000
	1916	272,000	19,040,000	28,179,000
Hay .....	1917	3,092,000	a 4,329,000	75,758,000
	1916	3,255,000	5,208,000	71,870,000
Tobacco ..	1917	41,500 b	58,100,000	12,201,000
	1916	36,100	49,096,000	6,972,000

a Tons. b Pounds.

**MINERAL PRODUCTION.** The production of bituminous coal in the State in 1916 was 170,295,424 net tons, valued at \$221,685,175, an increase compared with 1915 of 12,340,287 net tons, or nearly 8 per cent in quantity, and of \$54,265,470 or 32 per cent in value. The largest factor in this increase was the activity of the iron and steel business, which resulted in the tremendous demand for coke. Coke made in both beehive and by-product ovens in the State was 5,656,833 tons more in 1916, than in the previous year. Railroad and general industrial demands broke all records for coal. Car shortage, insufficient labor supply, labor disturbances, and a lowering of the efficiency of the labor, all restricted the production to such an extent that at times the mines of the State were not able to supply even the most urgent demands of their normal markets. Coal from Ohio, Indiana, and Illinois was shipped into Pennsylvania. A lack of transportation from mine to market was the most potent check on output. In the last quarter of 1915 and the first months of 1916 there was a marked shortage of cars. A temporary lull in demand in April relieved conditions somewhat, and from May to August the supply of cars was more nearly normal. From September to the end of the year, as the demand for coal increased, the car shortage became worse. Scarcity of labor

was most apparent during the summer when cars were more readily to be had, but there was in reality no improvement in the supply of men as the year progressed. Central Pennsylvania was more seriously affected by the scarcity of labor and the labor troubles than the other bituminous fields of the State. The number of men engaged in the mining of bituminous coal in the State in 1916 was 168,212, compared with 174,593 in 1915.

The production of anthracite in 1916 was 87,578,493 net tons, valued at \$202,009,561, compared with 88,995,061 in 1915, valued at \$184,653,498.

The production of petroleum in the State in 1916 was 7,592,394 barrels, valued at \$19,149,885, compared with 7,838,705 barrels in 1915, valued at \$12,431,353, or a decrease of 3 per cent in quantity, but an increase of 54 per cent in value.

The iron ore mined in the State in 1916 amounted to 559,431 tons, compared with 363,309 tons in 1915. The value of the ore shipped from the mines in 1916 was \$702,633, compared with a value in 1915 of \$333,697.

Natural gas in 1916 was valued at \$24,344,324, compared with a value of \$21,139,605 in 1915.

**TRANSPORTATION.** The total number of miles operated in the State in 1915, the latest for which figures are available, was 12,954. The lines having the longest mileage were: The Pennsylvania, 4527; the Delaware, Lackawanna, and Western, 958; the Delaware and Hudson, 885; the Central R. R. of New Jersey, 680; the Erie, 987; the New York Central, 919.

**FINANCE.** The total receipts for 1917 were \$31,700,489. The total expenditures were \$20,360,493. The balance at the beginning of the year was \$5,790,687, and at the end, \$8,130,684. The bonded debt of the State amounted to \$651,110.

**EDUCATION.** The total enrollment in the public schools was, in 1917, 1,506,821, with the average daily attendance of 1,234,000. The number of female teachers was 33,935, and that of male teachers 8728. The average monthly salary of male teachers was \$70.30, and that of female teachers, \$50.46. The total expenditure for school purposes was \$60,833,782.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Pennsylvania State Lunatic Asylum at Harrisburg, the State Hospital for the Insane at Warren, State Hospital of the northeastern district of Pennsylvania at Norristown, State Asylum for the Chronic Insane at Wernersville, Homeopathic State Hospital for the Insane at Allentown, State Hospital for the Criminal Insane at Fairview, State Institution for the Feeble-Minded of Western Pennsylvania at Polk, State Institution for the Feeble-Minded in Eastern Pennsylvania at Pennherst, Pennsylvania Village for the Feeble-Minded at Glen Iron, State Hospital for Injured Persons at Fountain Springs. There are hospitals maintained in all the mining districts of the State. The Pennsylvania Soldiers' and Sailors' Home at Erie is also under the supervision of the Board of Public Charities. The penal institutions include the Western Penitentiary at Pittsburgh and Bellefonte, Eastern Penitentiary at Philadelphia, the Pennsylvania Training School at Morgantown, the Pennsylvania Industrial Reformatory at Huntingdon, the State Industrial

Training Home for Women at Muncie Station.

**POLITICS AND GOVERNMENT.** No State officers were elected in 1917, but Henry Houck, secretary of internal affairs, having died, his son, Paul W. Houck, was appointed by the governor to the vacancy. Charles A. Snyder and Harmon M. Kephart took office as auditor general and State treasurer, respectively. One representative in Congress, E. H. Beshlin, Democrat, of the 28th district, was chosen to fill the vacancy caused by the resignation of O. D. Bleakley, Republican, elected in 1916, but who did not take his seat, resigning, in consequence of charges of violation of the Corrupt Practices Act.

Municipal elections in Philadelphia and Pittsburgh were distinguished by more than the customary factional bitterness. At the primary election on September 19, in Philadelphia, Policeman George Eppley was shot to death while protecting the Fifth Ward leader of the Penrose faction of the Republican party from assault. "Gunmen" had been imported from New York to influence the election by intimidation in favor of the Vares faction. The mayor of Philadelphia, Thomas B. Smith, half a dozen policemen, several ward politicians, a number of private detectives, a dozen or more New York "gunmen" were indicted after an investigation, the charges ranging from conspiracy to murder. Jacob Maschia, who killed Eppley, was convicted of murder in the second degree. In consequence of the disclosures public indignation rose high, the Town Meeting Party was hastily organized and placed a ticket in the field. At the November election that ticket was defeated and the councilmanic seats were divided between Penrose and Vares partisans.

In Pittsburgh, municipal election non-partisan, Edward V. Babcock, a representative business man and millionaire, Dr. James P. Kerr, president of City Council, and William A. Magee, public service commissioner and former mayor, all Republicans, were the principal candidates at the primary. Kerr was eliminated. Babcock had the support of the Penrose State Republican faction; Magee was supported by the Vares and Governor Martin G. Brumbaugh. Babcock was elected, but four of five councilmen elected adhere to his opponent's leadership, giving the Magee faction a majority in the council of nine members.

The session of the legislature was distinguished for factional maneuvering and little legislation of importance, except the enactment of a direct inheritance tax law. Bitterness engendered in the political campaign of 1916 was injected into the organization of the House. Threats to impeach Governor Brumbaugh on charges of making a false return of his election expenses in 1914 and of misuse of the executive's extraordinary expense fund of \$30,000 came to nothing. At the end of the session he sent to the Senate a long list of nominations for important State positions. Several of them were not confirmed and as soon as the legislature had adjourned the governor reappointed his men. Their right to hold office was questioned by the auditor general; the cases were pending in the highest court at the close of the year.

In the latter part of July, race riots occurred in Chester. The trouble arose from the murder of a white by several negroes. A mob

of 500 men, in revenge, forced their way through the police into the part of the city inhabited by the negroes. One of them shot the leader of the mob and killed him. This so infuriated the people, that the city authorities were not able to handle the situation. The mob raided a street car on which were two negroes, and shot one of them. Several hours later a policeman was killed by a negro when trying to quell the outbreak.

A State Council of Defense was provided for and an appropriation of \$5,000,000 granted to it. A factional dispute arising over the control of the expenditure of this money, practically nothing was attempted toward carrying out the purposes of the act. In spite of the discouraging official example, Pennsylvania rose splendidly to all demands for support of the nation's war programme. See **STRIKES**.

**LEGISLATION.** Among the more important measures passed by the legislative session of 1917 are those noted below.

The laws pertaining to civil and criminal procedure were amended in important details. Provision was made that any person sentenced to pay a fine, or to pay the cost of any criminal procedure against him, may, in the discretion of the court, be permitted to pay in installments during a period of not more than twelve months. Cities of the second class are authorized, whenever an emergency arises, to purchase food, coal, and necessities of life and resell the same to residents. A State Council of Defense was created to cooperate with the National Council. Provision was made for the payment, by the State, of the difference, not exceeding \$2000 a year, between the amount paid by the Federal government, and the amount received in civil employment, by those entering the military service. This amount is paid to dependents. The city manager plan for cities was approved. It was made a misdemeanor to carry on business under an assumed or fictitious name without having first filed with the proper officials a certificate stating both the assumed and the business name. The trade in opium, cocoa leaves, or any derivatives was regulated by statute. A commission was created to study health insurance. The banking laws were amended in important details. All trading by banks on Saturday after twelve o'clock noon was made valid, but banks are not required to keep open after that hour.

**STATE OFFICERS.** Governor, Martin G. Brumbaugh; Lieutenant-Governor, Frank B. McClain; Secretary of the Commonwealth, Cyrus E. Woods; Treasurer, Harman M. Kephart; Auditor, Chas. A. Snyder; Adjutant-General, Frank D. Beary; Attorney-General, Francis S. Brown; Superintendent of Education, N. C. Schaeffer; Commissioner of Insurance, Chas. A. Ambler; Secretary of Agriculture, Charles E. Patton—all Republicans except Nathan C. Schaeffer, Democrat.

**JUDICIARY.** Supreme Court: Chief Justice, J. Hay Brown; Associate Justices, S. Leslie Mestrezat, Wm. P. Potter, John Stewart, Robert von Moschzisker, Robert S. Frazer, Emory A. Walling; Clerk, Wm. Pearson.

**PENNSYLVANIA, UNIVERSITY OF.** A non-sectarian institution of learning located at Philadelphia, Pa. In the fall of 1917 there were 6620 students and upwards of 700 members of the faculty. There were 450,000 volumes in

the library. Productive funds in 1917 amounted to \$7,544,083, net assets in addition to \$22,479,540, and income from all sources to \$2,544,215. Gifts to the university for the year ending June 30, 1917, amounted to \$620,668, in addition to gifts to the University Hospital and to the University Museum, which totaled respectively \$143,334 and \$326,324. The university was founded in 1740. Provost, Edgar Fahs Smith, LL.D.

**PENNSYLVANIA STATE COLLEGE.** A co-educational State institution at State College, Pa. In the fall of 1917 there were 2074 students and 285 members of the faculty. In the library there were 60,538 bound volumes and 40,000 pamphlets. D. A. Anderson was made professor of education and E. L. Nixon professor of plant pathology during the year. Productive funds in 1917 amounted to \$618,795 and the income therefrom to \$31,020. The college was founded in 1855. President, Edwin Erle Sparks, LL.D.

**PENOLOGY.** New features of social philosophy are nowhere better reflected than in the changing attitude of society toward law breakers and their punishment. Modern theories of criminology lay stress upon heredity and environmental factors in the creation of the criminal, over which the latter himself has no control. Consequently the ultimate responsibility for the existence of criminals rests largely with society. Similarly modern educational and psychological studies have shown the necessity of more individual treatment and the importance of appeals to self-respect and the latent manhood of the prisoner, while at the same time medical and sanitary sciences have shown evils of close confinement, idleness, and the inhumane punishments of ignorant prison authorities. With a view to rehabilitating the convict modern penology demands the education of prisoners in the rudiments of learning, their training for economic independence and usefulness, and the cultivation of their own sense of civic and moral worth.

**NEW YORK STATE.** For a number of years prison affairs in New York State have seen rapid developments. Among these has been the construction of a new prison at Wingdale in Dutchess County to replace Sing Sing. The latter was built in 1825-30 according to medieval ideas; the demolition of its cell block was ceremoniously begun on November 9 when Governor Whitman lowered the first stone. The new prison will combine farming and industrial activities and be composed of groups of detached or semi-detached small buildings. For its construction \$1,250,000 was appropriated; oversight was placed in the hands of the Commission on New Prisons which began excavation in the fall. It was planned to utilize Sing Sing, which represented an investment of \$1,000,000, as a central receiving and distributing station for all New York prisoners. Law breakers would remain there from three to six months during which they would receive thorough mental and physical examinations. This would permit scientific classification and their subsequent distribution to appropriate institutions.

While the method of self-government by a league of the prisoners introduced by Thomas M. Osborne when warden of Sing Sing was not viewed with equal enthusiasm by the new Superintendent of State Prisons, James M. Car-

ter, the idea was introduced in the new Westchester County penitentiary at East View by the warden, Calvin Derrick. Here the league was formed also by the prisoners but its constitution differed from that in operation at Sing Sing and at Ione, Cal., in that the prisoners' court was given no punitive powers. The only penalty permitted was the expulsion of any individual who refused to meet conditions necessary for the "establishment of good relationship" from the league for an indefinite period. The league is called the Effort League, with "struggle for better citizenship, noble character, and higher morals" as its motto. This prison was one of three institutions consolidated under the management of D. Everit Macy, Commissioner of Charities and Corrections of the county. An appropriation of \$650,000 was made for its construction. The general plan included also a county hospital for which \$300,000 was authorized and the almshouse for which also an adequate sum was provided. The psychiatrist of Sing Sing was to spend three and one-half days per week at the Westchester penitentiary starting a clinic. In other ways most advanced methods were put into operation. Westchester County prisoners incarcerated on Blackwell's Island were to be removed.

**NEW JERSEY.** In January articles appeared in the New York *Evening Post* and the *New Republic*, by Frederick Boyd and Patrick Quinlan, respectively, who had been convicted for I. W. W. disturbances at Paterson, setting forth evil conditions in the Trenton prison. It was claimed that this prison was bad in structure, in influence and in management; that men were chained to walls underground; that as many as four men were confined in the same cell; that women were confined with men; that there was no dining hall, men being fed in cells and corridors; that recreation was limited to half an hour a week; that consumptives mingled with the sound, and first offenders with hardened criminals; that contract labor was carried on in violation of the law. Thereafter a commission of five members was appointed by the State legislature to investigate the prison and at the same time Governor Edge removed the warden, Richard P. Hughes. This Commission substantiated most of the charges made. It laid special stress upon the prevalence of tuberculosis; said that a person committed for two years or more "is practically sentenced to death by disease." It made numerous recommendations including adequate physical and mental examination and classification, the establishment of a prison school, and the abolition of prison contractors. Another investigation by the State Department of Health showed that tuberculosis was not recognized until far advanced; that food, ventilation, and sanitation were all very bad. An appropriation was made to carry out recommendations for improvement.

**CONNECTICUT.** One of the most astounding exposures of the year resulted from an investigation of the county jail at New Haven, Conn., by the civic federation of that city. Investigation was made by O. F. Lewis of the New York Prison Association and Hastings H. Hart of the Russell Sage Foundation for the federation. It was found that the control of the labor and of the discipline of 200 men was turned over to manufacturers in return for stipulated fees. Under the contracts made between the

county and the manufacturer prisoners were required to work 10 hours for 5 days and 9 hours on Saturday each week. Prisoners not showing respect and industry were subjected to solitary confinement for 6 days. The receipts were only \$7000 per year or about 10 cents per day for the labor of each inmate. Following this agitation steps were taken to secure a State commission to investigate all jails, and laws prohibiting such evils in the future.

**NAVAL PRISONS.** In connection with the voluntary imprisonment of Thomas M. Osborne on the Naval Prison Ship *Southey* at Portsmouth, N. H., Secretary Daniels stated that within 3 years the number of naval prisoners had decreased from 1835 to 620. This decrease was largely due to the extension of the principles of probation and suspended and indeterminate sentences introduced in 1915. It was his opinion that these modern methods had proved distinctly beneficial to naval discipline; had made possible the permanent discontinuance of disciplinary barracks at Port Royal and of the prisons on the U. S. S. *Philadelphia*. The saving in money was substantial. The Naval Prison system cost in 1913 \$1,190,000; in 1915, \$643,000; and in 1916 and 1917 about \$350,000.

**STERILIZATION.** A Committee of the American Institute of Criminal Law and Criminology of eleven members was appointed to investigate and report on the question of sterilization of criminals. After investigation and considerable deliberation the committee asked for its dismissal on the ground that there was such a lack of scientific information as made sound judgment impossible. It described the problem as very complex, because involving "questions of humanity, of surgery, of law, of morals, religion, and sociology," concerning which opinions differed not only among the general public but among scientists. While some did not believe criminality to be inherited, others believed that it may be a combination of unit traits such as wanderlust, feeble-mindedness, and lack of control, which are inherited.

**THE NATIONAL PROBATION ASSOCIATION** held its 9th annual meeting at Pittsburgh June 5-7. The most important feature of the session was the report of the committee appointed in 1916 with Judge Charles W. Hoffman of the Board of Domestic Relations of Cincinnati as chairman. This committee recommended that a new court to be known as the "Family Court" should be organized to take over the work of existing juvenile courts and courts of domestic relations with a view to coordinating their investigations and probation work. The report said, "the unit of society is not the individual but the family. The cause of juvenile delinquency, dependency of children, desertion, and non-support, pauperism, alcoholism, divorce, and marital desertion are inter-related. All these in a measure can be traced to some defect in the family. It is apparent that to deal with the family effectively some court must have power to deal with it as a unit." The report recommended that such a court have a single judge and that it be amply equipped with probation, medical, and psychological experts. The chief probation officer of the Philadelphia Municipal Court, Miss Jane D. Rippin, stated that that court was in many respects already a family court, having achieved a high degree of coordination of the different aspects of its work. The Committee on

Juvenile Courts reported that with the coordination of the Federal Children's Bureau a national study of juvenile courts was to be made and published. Mrs. Benjamin J. West, chief probation officer of the Juvenile Court at Memphis, was chosen president for 1917.

**CONVICT LABOR.** As the result of experiments in various Western and Southern States in the use of convict labor for road-building a widespread demand for a thorough investigation led the United States Department of Agriculture through its office of Public Roads and Rural Engineering, in cooperation with the Public Health Service, to make an exhaustive investigation. The inquiry was carried out during 1914 and 1915 and the results published on December 15, 1916, in *Bulletin* 414 of the Department of Agriculture. The investigation showed that there are six systems of convict labor in operation: 1. The lease system whereby convicts are hired to private employers who thus obtain complete control of the labor, food, shelter, and discipline; 2. the contract system whereby the State sells the labor of convicts for use on farms, in lumbering or quarrying, but retains care or control; 3. the piece price system whereby convict labor is utilized by contractors, usually within prisons, under State supervision at stipulated prices per article or amount of product; 4. the public account system under which the State carries on industries itself by means of convict labor and either uses or sells the product; 5. the State use system, similar to the foregoing, except that the products are used exclusively by the State; 6. the public works and ways system whereby convict labor is used on public construction rather than in manufacturing. Road building is an illustration of the last named system.

In 1914-15 only one State still used the lease system, having 950 convicts leased; 18 had 6981 convicts under the contract system; 4 had 1193 convicts under the piece price system; 19 had 11,807 convicts under the public account system; 35 employed 33,805 on the State use system; and 27 employed 11,063 convicts on public works and ways. Thus the last 3 systems which represent the newer systems for the utilization of convict labor included 86.2 per cent of the 65,799 convicts included in the study.

Among the advantages of road building were the following: More healthful than indoor work; most prisoners had previously been outdoor rather than shop laborers; road work has no degenerative mental effects; neither does it compete with free labor; it is highly valuable to the public and also benefits the convict himself; the freedom of outdoor life cultivates self-control and prepares the convict for discharge; and it is otherwise a useful factor in penal discipline.

Among disadvantages enumerated were the facts that it exposes the convict to public curiosity and may harden public feeling; congregation in road camps exposes all convicts to demoralization by the worst; many prisoners are not suited to hard physical labor; opportunity for escape is afforded; road building cannot be carried on in the winter; expense of maintaining prisoners in camps is large; frequently such labor is therefore more expensive than free labor under contract. This latter point was magnified by the fact that as a class convicts "undoubtedly possess a lower order of intelli-

gence and less initiative, ability, and willingness in the performance of honest work than free laborers."

**PENSIONS.** See OLD AGE PENSIONS; PENSIONS FOR MOTHERS; UNITED STATES.

**PENSIONS FOR MOTHERS.** During the five years 1912-16 so-called widows' pension laws were enacted in twenty-eight States. While even social workers deemed much of this legislation hasty and likely to foster a spirit of dependence, its widespread enactment revealed clearly not only the initiative suggestibility of American legislatures but also the existence of a real social problem. The main purpose of the movement was originally to enable widows with minor children to maintain their own homes on the theory that small children would be better reared by their own mothers than in institutions or other families. Humanitarian sentiment resulted not only in the broadening of the scope of such laws but in liberalizing the provisions made. Thus, while a number of States have granted allowances for minor children to widows, as in California, New Jersey, and New York, others have granted them to widows or mothers with husband in prison or asylum or wholly incapacitated, as Idaho, Iowa, Kansas, Missouri, Montana, and many others. But certain States, including Massachusetts, North Dakota, New Hampshire, and Utah grant allowances to any needy mother, while still others, as Colorado, Nebraska, Nevada, and Wisconsin go to the full limit by granting allowances to any parent (or grandparent or guardian) unable to care for a minor child.

PENNSYLVANIA grants pensions to widows or deserted wives with minor children. The legislature appropriates a sum to be distributed among counties according to population; counties must duplicate their allotment. Previous to 1917 the annual State appropriation was \$125,000; in 1917 this was raised to \$200,000 besides \$18,000 for supervision and investigation. With balances on hand and county appropriations, the plan will have nearly \$900,000 for the two years 1918-19.

PHILADELPHIA'S experience with four years' operation of the pension plan was one of the few extensive inductive evidences of the success of the plan. It is a part of the theory of such pensions that the State will in any case be compelled to assume support of a large proportion of orphan children. Some of these drift into delinquency at once; others may be cared for in institutions but afterwards become delinquent. A test of the efficacy of mothers' pensions therefore is the relative amounts of juvenile delinquency before and after their adoption. In Philadelphia in four years this form of aid was extended to 722 children, not one of whom had been brought before the juvenile court. They represented various races and conditions. An additional social gain was not only the misery and vice escaped, but the better education, better start in life, and higher standards of living and conduct.

**PEOPLE'S COUNCIL.** See INTERNATIONAL PEACE AND ARBITRATION.

**PERAK.** A state (the most northerly) of the Federated Malay States (q.v.).

**PERLECHE.** A highly contagious affection of the lips, appearing at the corners of the mouth, always bilateral and seen most frequent-

ly in children. A study of the disease was first published by Lemaistre of Limoges, but it has long been known in France, Germany, and Italy, under various popular names. The disease was believed to be very rare in this country, but it is now thought that cases have been unrecognized. In the beginning the epithelium is smooth and whitish, with a mother-of-pearl tinge. Later the epithelium becomes thickened and macerated, small fissures having a red base appear, and in some cases there is slight erosion, not amounting to real ulceration. Ordinarily there is a spontaneous cure in a month, while under appropriate treatment it disappears in two or three weeks. Lemaistre isolated a germ which he named *Streptococcus-plicatilis*. Late investigators have always found a streptococcus present in the lesions. The disease is spread by the use of common drinking utensils, pencils, handkerchiefs, and towels and by kissing. Perleche is apt to be confounded with the mucous patch of secondary syphilis. The treatment consists in painting the lesions with a weak solution of silver nitrate, diluted tincture of iodine, copper sulphate, or the alum pencil. Spirits of camphor and alcohol are also recommended. Prevention is secured by forbidding the use of common towels, drinking utensils, etc.

**PERONNE.** A city in France. See WAR OF THE NATIONS, *Military Operations* (5).

**PERSHING, JOHN J.** The first American army officer to command American troops on the battlefields of Europe. Pershing is a graduate of West Point, and entered the regular army as a second lieutenant of cavalry in 1886. In the first years of his service Pershing fought in the Indian wars in the early nineties against the Apaches, on the Arizona border, and the Sioux. He was engaged in the brief war with Spain in Cuba, and after peace was declared he was immediately ordered to the Philippines. He then had the rank of captain. He fought with great bravery against the Moros and was awarded the rank of brigadier general in 1906. In order to reward Pershing, President Roosevelt jumped him over 862 officers who were his seniors in rank. The Moro fanatics were not finally subdued until 1913, when Gen. Pershing won the battle of Bagsag from the Sultan of Jolo. In January Pershing returned to the United States and was given command of the Eighth Brigade of the regular army, with headquarters at El Paso, Tex. There he remained until the Villa raid on Columbus, N. M., after which President Wilson ordered a punitive raid into Mexico and placed Pershing in command. He carried out this task to the entire satisfaction of the president. On the death of Maj. Gen. Funston, who was Gen. Pershing's immediate superior, President Wilson nominated Gen. Pershing to succeed him, and assigned him to the command of all the troops on the Mexican border. He held that post until he was assigned to the command of the American Expeditionary Force to Europe. He preceded this force to Europe in order to make arrangements for their coming. In the army he is known as "Black Jack." See UNITED STATES AND THE WAR; WAR OF THE NATIONS, *Military Operations*.

**PERSIA.** A constitutional Asiatic monarchy extending from the Caspian Sea to the Gulf of Oman. Capital, Teheran.

**AREA AND POPULATION.** The area is estimated

at 1,645,000 square kilometres (635,135 square miles). The number of inhabitants is unknown, but a commonly accepted figure is 9,000,000, of whom about 2,500,000 are nomads. Population of Teheran, about 280,000; Tabriz, 200,000; Meshed, 130,000; Isfahan, 70,000; Kerman, 60,000; Yazd, 45,000; Resht, 42,000. The great majority of people are Mohammedans of the Shiah sect. Persia is for the most part an infertile plateau, mountain-bound on three sides. A salt desert occupies the central and eastern portions. The Karun is the only navigable river. To the north and west are heavy forests.

**PRODUCTION AND COMMERCE.** The agricultural products include cereals, cotton, sugar, opium, and tobacco. The country possesses valuable mineral resources—petroleum, coal, iron, copper, and lead; but exploitation on a considerable commercial scale is hindered by lack of transportation facilities. Silk and carpets are manufactured. The chief products for export, together with the imports for consumption, are shown in the table below with values in 1914-15 trade in thousands of krans:

Imports	1000 kr.	Exports	1000 kr.
Cottons	142,000	Fruits	51,645
Sugar	127,210	Carpets	25,762
Tea	23,159	Cotton	73,485
Gold and silver bars	22,704	Fish	7,550
Gold and silver coins	8,919	Rice	21,875
Petroleum	18,088	Gold and silver coins	13,530
Cotton yarn	10,522	Gums	5,660
Flour	8,905	Opium	41,448
Woolens	8,672	Wool	12,207
Indigo, etc.	1,116	Cocoons	6,525
Haberdashery	7,400	Skins	7,354
Rice	7,021	Animals	9,698
Spices	3,285	Silk stuffs	3,205
Wool	1,340	Cottons	2,450
Animals	2,694	Hides	12,897
Iron and steel	10,457	Silk	1,079
mfra.	8,746	Wheat and barley	7,409
Silks	1,666	Pearls	372
Tin, zinc, & lead.			

The trade by countries is shown below in thousands of pounds sterling:

	Imports		Exports	
	1913-14	1914-15	1913-14	1914-15
Russia .....	6,471	4,669	5,492	4,874
U. K. ....	3,236	2,468	1,088	1,472

U. S. ....	4	7	186	74
Other .....	...	...	...	...
Total .....	11,767	8,332	8,288	6,601

The trade for 1915-16 is reported at £7,735,000 imports and £6,285,577 exports.

Vessels entered at Persian Gulf ports in 1914-15 trade totaled 1,591,080 tons (1,399,006 tons British); at Caspian ports (all Russian), 725,617 tons.

Trade is carried on over the great caravan routes. These are infested with brigands, with whom the Persian government is powerless to deal adequately.

A light railway (6 miles) runs from Teheran to Shah Ab dul Azim, and a Russian company has constructed a regular line from Julfa to Tabriz, opened March 7, 1916.

**FINANCE AND GOVERNMENT.** The customs office, as well as the postoffice, has been managed since 1900 by Europeans, native officials being represented as dishonest and oppressive. The revenue (about half of which is derived from taxes levied in kind or in cash upon the laboring classes) fluctuates between 70,000,000 at 100,000,000 krans; no statement of expenditure can be made, except that it regularly exceeds the revenue. The Russian debt of 1900 amounts to 22,500,000 rubles at 5 per cent, payable in 75 years and guaranteed upon the customs receipts other than those of the province of Fars and of the Persian Gulf ports; debt of 1902, 10,000,000 rubles at 5 per cent; debt of 1913, 2,000,000 rubles at 7 per cent. British loans of 1910 and 1911 £2,675,181 at 5 per cent; loans of 1912, 1913, and 1914, £490,000,000 at 7 per cent. Floating debt, 104,870,000 krans; annuities, 14,000,000 krans. The exchange value of the krân is about 8.75 cents.

Persia is a constitutional monarchy, hereditary in the Shiah dynasty of the Kajars since 1794. The country is divided into 33 provinces administered by governors-general appointed by the Shah, but the nomad tribes are ruled by their own chiefs, so far recognized by the central government as to be held responsible for the collection of revenue. Persia became a party in 1912 to the Anglo-Russian Convention of August 31, 1907, by which each of the two contending powers agreed to confine its political and commercial operations to definite regions not overlapping; Persia agreed to respect these rights and to reorganize her army to suit the two powers. Ruling sovereign, Ahmed Shah Kajar (born 1896), son and successor of Mohammed Ali Shah, who abdicated July 16, 1909.

Upon the inquiry in the House of Commons on February 26, whether a new agreement had been reached between Great Britain and Russia as to the spheres of influence in Persia as arranged by the treaty of 1907, Mr. Balfour, Secretary for Foreign Affairs, said that the old convention was still in force. He added that no change would be made in it that would affect the integrity or independence of Persia.

**PERU.** A South American republic. The capital is Lima.

**AREA AND POPULATION.** The area of Peru is estimated at 1,769,804 square kilometres (683,335 square miles), which is about 22.6 per cent of the area of the United States. The number of inhabitants is not known, but is supposed to be about 4,500,000. Probably more than one-half are Indians; most of the remainder are mestizos. The estimated population of Lima is about 150,000; Arequipa, over 40,000; Callao (the chief port), 35,000; Cuzco, Ayacucho, and Iquitos, each 20,000; Iquitos (the Amazon port), 12,000 to 30,000, according to season.

**EDUCATION.** Elementary instruction is nominally but not actually compulsory. In 1916, there were 2296 primary schools, with 3304 teachers and 166,002 pupils enrolled; 3 normal schools, with 277 students; 54 colleges (secondary schools), of which 27 were national institutions, with 5202 students; university matriculates, 1791. The universities are situated at Lima, Cuzco, Arequipa, and Trujillo. The state religion is Roman Catholicism. Since November 11, 1915, the public exercise of other religious forms has been lawful.

**PRODUCTION AND COMMERCE.** The leading

crops are sugar cane, cotton, and rice. Other important products of the soil are rubber (in the northeast), corn, coffee, wheat, cacao, tobacco, and coca. The reported sugar output in 1915 was 2,628,410 metric quintals. Area under cotton in 1916, 55,635 hectares, producing 773,300 metric quintals. Rice production in 1915, 372,508 metric quintals; in 1916, 359,791; in 1917, about 462,000. Production of dried peas, beans, lentils, etc., in 1915, 197,141 metric quintals; in 1916, 191,564; in 1917, about 218,000. Alpaca, sheep, and llama wools are exported. Peru has rich mineral deposits, which have been its principal source of wealth. The chief metals mined are copper and silver. Among Latin-American countries, Peru ranks second to Mexico in the production of petroleum; the output in 1915 was 2,487,251 barrels and in 1916 2,550,645 barrels.

**COMMERCE.** Imports and exports have been valued as follows in libras (the Peruvian libra is equivalent to the pound sterling, which has a par value of \$4.86656):

	1913	1914	1915	1916
Imports	6,088,777	4,827,930	3,095,545	8,683,150
Exports	9,187,780	8,767,790	14,128,072	16,541,063

In 1916, exports of agricultural products were valued at 6,787,635 libras; mineral products, 7,996,901 libras, including petroleum and mineral-oil products, amounting to 1,387,745 libras.

Imports and exports by principal countries, in thousands of dollars:

	Imports		Exports	
	1914	1915	1914	1915
United States	7,684	7,233	14,808	31,057
United Kingdom	6,503	3,220	15,912	17,601
Hongkong	628	884	....	....
Italy	980	767	50	93
Germany	3,144	465	1,599	....
Chile	436	459	6,499	14,852
France	758	433	743	398
British India	271	425	....	....
Netherlands	113	222	105	....
Spain	304	219	....	....
Belgium	1,385	147	397	....
Bolivia	....	....	402	911
Brazil	8	24	15	591
Panama	....	....	46	587
Total, incl. others	23,464	15,044	42,611	68,638

**COMMUNICATIONS.** Railway in operation, 2766 kilometres (1718 miles). For details, see 1916 YEAR BOOK. During 1917, a proposed railway from Payta to Maranon was before the Congress of Peru, and a group of capitalists visited the United States during the year to obtain capital for the enterprise.

Telegraphs: about 10,500 miles of line, with over 80,000 miles of wire and about 340 offices. Post offices, about 800. The inauguration of a wireless telegraph station at Cachendo December 8, 1917, completed wireless communication between the capital of the republic and the department of Ica, and Moquegua and the mountainous regions of Loreto and Madre de Dios; Lima now has wireless communication with Bolivia, Chile, Argentina, Paraguay, and Brazil, as well as with an extensive zone in the Pacific.

**FINANCE.** The legal standard of value is gold. The monetary unit is the libra (pound), equivalent to the pound sterling, the par value

of which is \$4.86656. Often the sol, one-tenth of the libra, is used as the unit of value. In 1916, revenue amounted to 3,942,384 libras, and expenditure to 3,193,609 libras. For 1917, estimated revenue and expenditure balanced at 3,412,237 libras. Estimated receipts in 1917 included: Import customs, 918,680 libras; direct taxes, 812,587; government monopolies, 774,500; export taxes, 296,890. Estimated expenditure in 1918, as submitted by the president to the Congress, 3,975,616 libras.

**GOVERNMENT.** The legislative power is exercised by a congress of two chambers, the Senate and the House of Representatives. Senators (52 in number) and representatives (116) are elected by direct vote for six years. The president, according to the constitution, is elected by direct vote for four years and is ineligible for the next term. The president in 1917 was José Pardo. He was elected August 10, 1915, by the Congress and was inaugurated August 18 to succeed the provisional president, Col. Oscar R. Benavides.

**PETAIN, HENRI P.** Chief of Staff of the French Ministry of War. Petain was born sixty-one years ago near Calais, and is a graduate of the St. Cyr military school. He is acknowledged as an expert tactician and strategist. By 1890 he was a captain in the élite Chasseurs à Pied. When the war started he was a colonel, but was almost immediately made a brigadier general and by September, 1914, he was made a general of a division. Seven months later he was in command of the 23rd Army Corps and took part in the Allied offensive in Artois. As a reward for meritorious service he was placed at the head of the Second Army, which he commanded during the Champagne offensive. He was in command of the French army at Verdun during the critical stages of the German drive in February and March, 1916. When Joffre retired it was thought by many military experts that Petain would succeed him. It is reported that the position was actually offered to him but that he demanded such sweeping authority that the politicians at Paris offered it to Gen. Nivelle instead. After the failure of the offensive along the Aisne and in Champagne, the French people's disappointment was registered in the removal of Gen. Nivelle and the appointment of Gen. Petain.

**PETROLEUM.** Preliminary estimates by the United States Geological Survey indicate that the quantity of petroleum produced and marketed in the oil fields of the United States in 1917 reached the record-breaking total of 241,800,000 barrels, a quantity nearly 14 per cent greater than the former record output of 300,767,158 barrels, established in 1916. The production is apportioned among the major fields as follows:

Field	1916 Barrels	1917 Barrels
Appalachian	23,009,455	24,600,000
Lima-Indiana	3,905,003	3,500,000
Illinois	17,714,235	15,900,000
Oklahoma-Kansas	115,808,792	147,000,000
Central and North Texas	9,303,005	11,000,000
North Louisiana	11,821,642	8,700,000
Gulf Coast	21,768,096	24,900,000
Rocky Mountain	6,476,289	9,200,000
California	90,951,836	97,000,000
Other fields	7,705	....
	300,767,158	341,800,000

The salient features of the industry in 1917 were the record levels reached and firmly maintained by prices of crude oil at the wells and the enormous demand, which absorbed not only the current output of the wells, but necessitated a net draft of about 21,000,000 barrels on oil in storage, principally in California and Illinois. The surface reserve of crude oil in the United States at the end of 1917 is estimated at 153,000,000 barrels. The principal sources of new production in 1917 were Estill County, Ky., Butler County, Kan., Carter County, Okla., Wichita and Harris Counties, Tex., Converse County, Wyo., and Los Angeles County, Cal.

During 1917, the United States made new high records in export of various mineral oils for fulfilling the needs of the war. The gain in volume over 1916 was but 1½ per cent, but the value increase amounted to 25 per cent, showing the higher cost of gasoline, naphtha, and lubricating oils. There was a decrease for the year in the amount of illuminating oil and in the export of crude oil, the former being due to the loss of the German and Belgian trade, but the slight decrease in the crude oil export was more than compensated by the increased value. The shipment of various mineral oil products was under more direct control of the government as the oil tankers were operated directly by the government. The exports of mineral oils in 1917, as compared with other years, is given in detail below.

EXPORTS OF MINERAL OILS

	Illuminating Oil	Lubricating Oil	Gasoline	Other Naphthas	Gas & Fuel Oil	Other Residuum Products	Crude Oil
<b>1917</b>							
Gallons ..	652,729,138	280,984,891	242,488,286	173,770,628	1,121,451,576	688,240	171,258,309
Value ....	\$48,548,224	\$57,623,668	\$58,512,466	\$39,644,492	\$46,014,951	\$47,059	\$7,680,368
<b>1916</b>							
Gallons ..	854,408,813	260,779,127	167,928,262	188,288,863	957,518,417	543,324	172,329,903
Value ....	\$55,845,108	\$43,022,468	\$33,814,957	\$35,055,589	\$27,002,087	\$161,486	\$7,030,923
<b>1915</b>							
Gallons ..	886,998,781	239,719,488	112,560,475	169,770,999	799,646,143	2,616,712	158,263,069
Value ....	\$49,947,273	\$32,441,794	\$13,162,990	\$20,762,599	\$22,010,458	\$364,381	\$4,282,827
<b>1914</b>							
Gallons ..	1,010,449,253	191,647,570	162,669,038	47,023,017	634,298,844	69,209,777	124,735,553
Value ....	\$64,112,722	\$26,316,313	\$19,897,618	\$5,390,801	\$18,019,333	\$1,204,917	\$4,958,836

The total exports of mineral oils, as given in the above table, were as follows: for 1917, 2,645,362,368 gallons, valued at \$253,027,075; 1916, 2,607,491,209 gallons, \$201,732,563; 1915, 2,328,725,749 gallons, \$142,941,069; 1914, 2,240,033,652 gallons, \$139,900,587.

In normal times, the United States, Russia, and Mexico together produced nearly 90 per cent of the world's output of petroleum, the United States ordinarily being responsible for about 65 per cent. The Russian and Mexican oils, however, figure more extensively for fuel, being not of the class known as the "refinable crude petroleum," so that in the production of gasoline and naphtha by ordinary refinery methods, the oil from the United States is generally employed.

The British authorities during 1917 placed a tax of twenty-five cents a gallon on gasoline to be used in motor vehicles. The tax before the war was six cents per gallon. To use gasoline for private purposes, a permit from the proper authorities was required, and every effort was being made to restrict the consumption of gasoline in non-essential activities. It was reported that \$2.50 a gallon was not an unusual price for gasoline.

See GEOLOGY, *Economic Geology*.

**PHILIPPINES. AREA AND POPULATION.** The total area of the islands is 115,026 square miles. The latest official census was taken in 1903, when the population was 8,265,348. The estimated population in 1917 was about 9,000,000.

**AGRICULTURE AND COMMERCE.** The industries of the country have their foundation upon agriculture, and the United States government, since its occupation of the islands, has endeavored to stimulate and foster agricultural development. The chief agricultural products are sugar, copra, hemp, tobacco, and rice. War conditions have seriously affected the foreign trade of the Philippines. This is shown chiefly in reduced imports. On the other hand, under the stimulus of war prices, which tended to increase production, exports continued larger than before. For the year ending December 31, 1916, the imports amounted to \$45,496,338, which was nearly \$4,000,000 less than the figure of the previous year, and was the smallest recorded since 1909. Even these figures do not fully measure the actual reductions in imports, when the general value of all kinds of imports is considered. The effect of the war and the increased local production of foodstuffs are shown in a steady annual decline in the general import trade from \$53,000,000 in 1913 to \$45,000,000 in 1916. On the whole the reduction in imports is to the economic advantage of the country. An exception to this is the reduction in the importation of iron and steel. This indicates a slowing

down of the industrial development of the islands, and means especially a failure to import sugar machinery, which is essential to the development of the industry.

The export total of \$69,937,183 for the year ending December 31, 1916, was by far the largest in the history of the islands. It is an increase of over \$16,000,000 over the exports of 1915. This great increase, however, is due more to the increase in price than to the increase in production, although there was a decided increase in the production of sugar and tobacco during the year. There was no increase in hemp, while there was a decrease in the production of copra. On the whole the exports do not make a favorable showing for the agricultural development of the islands. The most favorable feature of the export trade was the increase in coconut oil, and the increased exportation of articles representing the smaller industries. The failure, largely, to increase the production of export staples,—sugar, hemp, copra, and tobacco,—is due to the lack of capital, and with increased capital there will develop an inadequate supply of labor, which in some manner, must be made up.

The total foreign trade of the islands for the first six months of 1917 exceeded by nearly \$8,500,000 that of the corresponding months of

the preceding year. The exports amounted to \$38,441,818. Of this the sugar exports were valued at \$6,148,528, coconut oil at \$4,013,001, copra at \$2,839,532. The hemp exports amounted to about \$15,000,000. The exports to the United States amounted to \$24,450,544. The total imports for the first six months of 1917 amounted to \$27,012,211, compared with \$20,525,271 for the corresponding period of 1916. The manufactures of cotton form the largest items of imports, and were valued at \$7,425,644. The rice imports were valued at \$2,370,797, and the manufactures of iron and steel at \$2,062,540.

**EDUCATION.** There are about 5000 schools in the islands, with an average daily attendance of 480,000. A large proportion of the attendance is in the primary schools, but the intermediate or secondary schools have also made striking increases in recent years. Education is greatly on the increase among the non-Christians in the islands, and the legislature annually makes appropriations for the carrying on of this work. In this class of education, particular importance is attached to industrial or technical studies. In 1917 there were enrolled 300 teachers engaged among these tribes. Of these, only 14 were Americans. The legislature made an appropriation of about 5,000,000 pesos for schools. The University of the Philippines is an important institution for higher education. It has an enrollment of about 2000 pupils.

**FINANCE.** At the beginning of the fiscal year ending December 31, 1916, there was a balance in the treasury of \$5,117,058. The total revenue amounted to \$15,388,480, and the expenditures to \$14,361,272, leaving a surplus at the end of the year of \$6,532,130. The bonded indebtedness of the government, including the cities of Manila and Cebu, on June 30, 1917, was \$20,125,000. Provision has been made for the return of these bonds on or before maturity. In January, 1917, negotiations were made for the purchase by the Philippine government of the Manila Railroad. By this transaction the government became the owner of all the stock of the railroad company, for which it paid \$3,990,000. The bonds of the railroads guaranteed, as to interest, by the Philippine government, are the bonds of the Manila Railroad Company, \$13,714,000, and the Philippine Railroad Company, \$8,549,000.

**HEALTH AND SANITATION.** The Philippine health service continued efficient work in 1917. In 1915 there was created a council of hygiene with advisory functions, by which the health service is brought into closer consultation with the representatives of the people. During recent years there has been continued improvement in the general attitude of the people toward sanitation. Manila has been brought to the position of a modern city as far as sanitation and health are concerned, and serious effort has been made to improve sanitary conditions throughout the provinces.

**CHARITIES AND CORRECTIONS.** In 1916 a prison court was established at Bilibid Prison, for the trial of offenses against prison regulations and discipline. All the members of the court are prisoners.

**POLITICS AND GOVERNMENT.** There was little of political importance during the year. The legislature met and the chief and most important measures are noted in the section *Legislation* below. A decision, in relation to the

status of the Filipinos in regard to American citizenship, was given by Judge Horace W. Vaughan of Hawaii, in January. The case was that of a Filipino resident of Hawaii who applied for American citizenship. This was denied on the ground that under the existing naturalization laws of the United States, no Filipino is eligible for American citizenship. This decision was directly contrary to the one made by Charles F. Clemons, who, in 1916, ruled that natives of the Philippines might become citizens of the United States. This decision induced many Filipinos in Hawaii to apply for citizenship, and, three were naturalized before Judge Vaughan's decision had made such a step impossible. The reason given by Judge Vaughan for the rejection of the application was that of race. The naturalization laws were devised to prevent the naturalization of Asiatics, but while referring especially to Chinese and Japanese, it included, in his opinion, the Filipinos as well. In accordance with this decision, only aliens of the white race and those of African birth or descent could become American citizens.

Henderson S. Martin, vice-governor, and secretary of public instruction resigned on June 28, 1917, and was succeeded by Charles E. Yeater. Associate Judges Grant T. Trent and Sherman Moreland, of the Philippine Supreme Court, resigned on April 23, 1917, and were succeeded by Thomas A. Street and George A. Malcolm. The Philippine legislature provided for two additional judges in the Supreme Court, and the positions thus created were filled by Frederick E. Fisher and Ramon Avancena.

**LEGISLATION.** The National Congress did not consider any legislation exclusively affecting the Philippines in 1917. The Immigration Act applied to the Philippine Islands, but by a provision therein only until superseded by an act of the Philippine legislature on the subject. One of the important changes in the form of the Philippine government, made by the new organic law approved August 29, 1916, was the creation of an elective Senate to replace the Philippine Commission as the upper house of the legislature. The first election of senators was held on the first Tuesday of October, 1917, and on October 16, the new legislature met in its first session, whereupon the Philippine Commission ceased to exist. Among the measures enacted was one fixing the salaries of the more important officers and employees of the government. Divorce was also authorized in the island. The Militia Law was enacted, which followed in general the United States National Defense Act of 1916.

**GOVERNMENT OFFICERS.** Governor, Gen. Francis Burton Harrison, \$18,000; Vice-Governor, Charles E. Yeater, \$10,000; Secretary of Justice, Victorino Mapa, \$6000; Secretary of Finance, Alberto Barretto, \$6000; Secretary of Commerce, Dionisio Jakosalem, \$6000; Secretary of Interior, Rafael Palma, \$6000.

**JUDICIARY.** Chief Justice, Cayetano Arrelano, \$8000; Associates: Florentino Torres, E. Finley Johnson, Adam C. Carson, Manuel Araullo, Geo. A. Malcolm, Thomas A. Street, Frederick E. Fisher, Ramon Avancena, \$7500 each.

**PHILLIPS, FORBES ALEXANDER.** An English clergyman and author who wrote under the pen name of Athol Forbes, died May 29, 1917. He was born in 1866 and was educated at Durham University. Mr. Phillips held sev-

eral livings, being vicar of Gorleston, Great Yarmouth, from 1893. He was also chaplain of several organizations. In 1895 he was a speaker at the Church Congress of that year. Among his writings, including the titles of several novels, are *Gorleston and its Parish Church*, *Some Mysteries of the Passion*, *Cassock and Comedy*, *A Son of Rimmon*, *Odd Fish*, *If Love Were All*, *The Romance of Smuggling*, *What Was the Resurrection?*, *Is Death the End?* His plays include *Her First Proposal*, *Church or Stage?*, *Lord Danby's Affair*, *A Maid of France*, *The Last Toast*, and *When it Was Dark*.

**PHILOLOGY, CLASSICAL.** For reasons noted in the YEAR BOOK for 1916, reasons which held with even greater force during 1917, this article will be confined almost wholly to American and English work in classical philology.

To the *Loeb Classical Library* (see YEAR BOOKS for 1911, 1912, 1913, 1914, 1915, 1916) were added, on the Greek side, translations of Achilles Tatius, by S. Gaselee; of the *Greek Anthology* (the second of five volumes), by W. R. Paton; of Dio Cassius (the fifth of nine volumes), by E. Cary; of Strabo (the first of eight volumes), by H. L. Jones. On the Latin side, there were added versions of Cæsar, *Gallie War*, by H. J. Edwards; of Seneca, *Tragedies*, in two volumes, by F. J. Miller; of Seneca, *Epistulae Morales* (the first of three volumes), by R. M. Gummere. To the *Oxford Library of Translations* were added versions of Epictetus, *Discourses and Manual*, in 2 vols., by P. E. Matheson, and of Plutarch, *Selected Essays from the Moralia*, by A. O. Prickard.

It is a pleasure to note here a work entitled *Theophrastus and the Greek Physiological Psychology before Aristotle*, by George Malcolm Stratton, professor of psychology in the University of California. This contains an essay on "Theophrastus as Psychologist of Sense Perception, and as Reporter and Critic of Other Psychologists," the text and translation of Theophrastus' brief work, *On the Senses* (the first complete translation in English), and, finally, notes on the translation and the text.

In vol. xxxviii of the *American Journal of Philology*, edited by Professors B. L. Gildersleeve and C. W. E. Miller, were published "Pompeius Trogus and Justinus," R. B. Steele (an effort to prove that Trogus' history was not written until after Livy had published Books 80-96 of his great work, and that Justinus made his epitome of Trogus' work at Rome, in 144 or 145 A. D.); "Paulus Silenitarius," B. L. Gildersleeve, an abstract, with running commentary, of a book on Paulus by an Italian scholar, Alessandro Veniero; "The Pronunciation of a Final Consonant When Followed by an Initial Consonant in a Latin Word-Group," F. F. Abbott; "Rhetorical Elements in Livy's Direct Speeches," H. V. Canter; "The Prosecution of Lifeless Things and Animals in Greek Law," W. W. Hyde; "Religious Burlesque in Aristophanes and Elsewhere," J. W. Hewitt; "On the Disposition of Spoil in the Homeric Poems," A. T. Murray; *Molle atque Facetum*, C. Knapp (an attempt to supply a simple explanation of Horace's famous dictum, in *Sermones* 1.10. 44, concerning Virgil); "The Plot of the Epidicus" (of Plautus), A. L. Wheeler; "Apophony and Rhyme Words in Vulgar Latin Onomatopoeias," A. J. Carnoy. Reviews of special importance in

this volume are those of W. S. Fox, *Greek and Roman Mythology*, by F. G. Allinson; M. Edouard Cuq, *Une Statistique de locaux affectés à l'habitation dans la Rome impériale* (a study of the Roman *insulae*, or apartment houses), by R. V. D. Magoffin; J. G. Winter, *The Prodomus of Nicolaus Steno's Dissertation Concerning a Solid Body Enclosed by a Process of Nature Within a Solid* (referred to in YEAR BOOK for 1916), by M. W. Humphreys; L. Cooper, *A Concordance to the Works of Horace*, by C. W. E. Miller. In the department known as "Brief Mention," Professor Gildersleeve wrote, as usual, on a wide variety of topics. Useful summaries, again, were given of the contents of several foreign classical periodicals: of *Revue de philologie*, xxxviii-xxxix, by R. V. D. Magoffin; of *Rheinisches Museum*, lxx, No. 4, by C. W. E. Miller; of *Hermes*, xlviii, by H. L. Ebeling; of *Rivista di Filologia*, xlv (1916), Nos. 1-3, by K. F. Smith.

From *Classical Philology*, xii, edited by Paul Shorey, may be named "Notes on the Delphic Oracle and Greek Colonization," A. S. Pease; "Studies in Greek Noun-Formation: Dental Terminations," C. D. Buck; "The Campaign of Plataiai," R. J. Clark; "Latin Diminution of Adjectives," W. Petersen; "ὑψιπρότης ἢ τὸ ψυχρόν," L. Van Hook (the author holds that by *ψυχρόν* the Greek rhetoricians and literary critics meant what we call "fustian," by *frigus* and *frigidum* the Latin critics meant what we characterize as "frigid," "frigidity"); "Horace and Valerius Cato, ii-iii," G. L. Hendrickson (see YEAR BOOK for 1916: in the later parts of this paper the author tries to identify with the grammarian Valerius Cato the critic with whom Horace, in *Sermones* 1.10, was in fact or in fancy carrying on a controversy about Lucilius); "Kroll on the Independent Latin Subjunctive," C. E. Bennett (the author combats a paper by Kroll, in *Glotta*, vii, in which Kroll assailed the prevailing view that the Latin subjunctive had a true optative or wish use as distinct from the volitive use, or expression of will); "Beati Possidentes Ithakistæ," A. Shewan (a vigorous attack on Dörpfeld's identification of the Homeric Ithaca with the island of Leucas); "References to Painting in Plautus and Terence," C. Knapp; "Petronius and the Greek Romance," C. W. Mendell (an argument that Petronius' novel is not a realistic novel, but an erotic romance); "Hesiod's Description of Winter," A. J. Carnoy; "Ælius Gallus and the Reorganization of the Irrigation System of Egypt Under Augustus," W. L. Westermann; "On a Venetian Codex of Pliny's Letters," E. T. Merrill; "Demosthenes' Avoidance of *Breves*," C. D. Adams (a discussion of a "law," laid down in 1893 by F. Blass, that Demosthenes avoided a succession of three or more short syllables: the author finds that the avoidance of *breves*, thus defined, is in fact a real characteristic of Demosthenes' style); "Etymology and the Golden Age," G. Norlin; "The Sources and Extent of Petarch's Knowledge of the Life of Vergil," D. R. Stuart; "The Antecedents of Hellenistic Comedy," H. W. Prescott (of value to students of Plautus and Terence); "Land Reclamation in the Fayum," W. L. Westermann. Professor Shorey's contributions, in notes and reviews, are most varied and valuable.

From the *Classical Journal*, xii-xiii, edited by F. J. Miller, we mention "Concerning Cæsar's

Appearance," M. E. Deutsch; "The Messenger in Greek Tragedy," Julia H. Caverno; "An Apologetic for Xenophon's *Memorabilia*," W. W. Baker; "The Birthday as a Commonplace of Roman Elegy," Helen C. Bowerman; "Virgil: An Interpretation," M. S. Slaughter; "The Position of Women in the Late Roman Republic," Helen E. Wiegand; "The Close of the Odyssey," John A. Scott; "The Leaf-Ramsay Theory of the Trojan War," C. A. Maury (with replies by Dr. Leaf and Professor Ramsay); "An Alleged Blemish in the Antigone of Sophocles," H. D. Brackett; "Wit and Humor in Xenophon," S. E. Bassett; "Titus Labienus," F. F. Abbott (the paper deals with the career of Caesar's famous *legatus*); "The Present Status of the Problem of Races in the Prehistoric Aegean Basin," A. E. R. Boak; "Cicero's Religious Beliefs," W. D. Hooper; and "Roman Knowledge of Jewish Literature," M. Radin.

From the *Classical Weekly*, ix-x, edited by C. Knapp, may be mentioned "Primitive Wooden Statues Which Pausanias Saw in Greece," Florence Bennett; "The Itineraries," T. A. Buenger; "Caesar as Seen in His Works," G. Lodge; "Notes on Meters," M. W. Humphreys; "More Modern Versions of the Harmodius Hymn," D. M. Robinson; "The Consular Speeches of Cicero," Catharine Saunders; "Caesar, *De Bello Gallico*," T. Rice Holmes, A. R. Wightman, and C. Knapp (see *YEAR BOOK* for 1916); "Caesar, B. G. 2.8," C. Knapp; "The Plebs Urbana in Rome," E. A. Schnabel; "The Profits of Literature in Ancient Rome," E. T. Sage; "Determined Futurity in Greek," F. H. Fowler; "Vergil and Nature," Mabel Root; "Chronology of the Reigns of the Caesars," R. W. Husband; "The Boy Ascanius," H. O. Ryder (a study of the rôle played by Ascanius in the *Aeneid*); "Roman Factories," F. W. Wright; "Epithets of the Tiber in the Roman Poets," V. J. Warner; "Literature and Liberalism," N. G. McCrea; "The Economic Interpretation of Roman History," T. Frank; "Professionalism in Greek Athletics," C. A. Manning. Important reviews in this periodical were those of J. W. White, "The Scholia on the Aves of Aristophanes," by G. E. Howes; C. C. Conrad, "The Technique of Continuous Action in Roman Comedy," by R. C. Flickinger; L. Bloomfield, "An Introduction to the Study of Language," by G. M. Bolling; W. M. Lindsay, "A Short Historical Latin Grammar," by R. G. Kent; C. W. Mendel, "Latin Sentence Connection," by H. C. Nutting.

In vol. xlvii of the *Transactions of the American Philological Association* we find, besides other papers, these: "Suetonius and Caesar's German Campaigns," M. E. Deutsch; "Municipia Fundana," J. Elmore, an inquiry, connected with Cicero's oration *Pro Balbo*, into the nature of certain municipia; "On the Virgilian *Catalepton II*," H. R. Fairclough (the author sees in this piece an elaborate *double entendre*, girding at T. Annii Cimber for his love of archaic words and old spells); "Plot and Character in Greek Tragedy," A. T. Murray; "Comparative Philology and the Classics," C. D. Buck; "Ἡ ὁλοθυγία—What was it?," S. G. Oliphant (the author seeks to trace the semantic history of the Greek word *ὁλοθυγία* and to show the essential unity of meaning underlying all instances of its occurrence); "The Monophthongization of Latin *æ*," E. H. Sturtevant (an argument against certain recent papers by vari-

ous scholars which attack the view, long held, that in standard that *æ* was a diphthong; the author holds that *æ* was pronounced as *ai* is in English *aisle* down at least to the latter half of the second Christian Century); "Three as a Magic Number in Latin Literature," E. Tavenner; "Compound Adjectives in Early Latin Poetry," Cornelia C. Coulter; "The Origin of Greek Tragedy in the Light of Dramatic Technique," D. R. Stuart; "Illogical Idiom," Paul Shorey.

*Harvard Studies*, xxviii, contained three papers: "On the Second Book of Aristotle's *Poetics* and the Source of Theophrastus' Definition of Tragedy," A. P. McMahon (an attempt to explain away the ancient statements to the effect that there was a second book of Aristotle's *Poetics*, and to show that Theophrastus derived his definition of tragedy from Aristotle's dialogue *On Poets*, one of the lost "exoteric" works of Aristotle); "A History of Exposition in Greek Tragedy," Evelyn Spring; and "Chaucer's Lollius," G. L. Kittredge (an argument that Chaucer believed, perhaps on the basis of Horace, *Epistles* 1.2.1-2, that a Roman named Lollius was author of a lost work on the Trojan War, and that he pretended to be translating this Lollius in his *Troilus*, expecting his readers, however, to see through this transparent literary device, and to realize his indebtedness to Boccaccio).

In the *Bulletins* published under the auspices of various universities appear, from time to time, papers that fall within the field of classical philology. We name here "Gaius Verres: an Historical Study," F. H. Cowles, in *Cornell Studies in Classical Philology*, xx; "The Struttlax Scene in Plautus' *Truculentus*," E. W. Fay, in *University of Texas Bulletin, Memorial Volume to Shakespeare and Harvey*; "St. Severinus and the Closing Years of the Province of Noricum," C. C. Mierow, in *Colorado College Publication, Language Series*, ii; "Reflections on Re-reading Vergil," E. H. Dutton, *Bulletin of Tennessee College*; "Horatian Criticism of Life," N. G. McCrea, and "Archæology as a Liberal Study," T. L. Shear, in *Columbia University Quarterly*; "Studies in Polyptoton in the Hexameters of Ovid, Lucretius, and Vergil," Elizabeth Breazeale, "Polyptoton in Tibullus and Propertius," George Howe, and "The Constitutional Position of the Roman Dictatorship," C. W. Keyes, in *The University of North Carolina Studies in Philology*.

In Volume xiii of the *University of Michigan Studies, Humanistic Series*, appeared an account of "The Old Testament Manuscripts in the Freer Collection, Part II: The Washington Manuscript of the Psalms," by Henry A. Sanders. This is one of the four Biblical manuscripts purchased, in 1906, by Mr. Charles L. Freer, of Detroit, from an Arab dealer in Gizeh near Cairo. Professor Sanders had previously published, as parts of this volume of the *University of Michigan Studies*, "Old Testament Manuscripts in the Freer Collection, Part I: The Washington Manuscripts of Deuteronomy and Joshua" (1912), and "The New Testament Manuscripts in the Freer Collection, Part I: The Washington Manuscripts of the Four Gospels" (1912).

If space permitted, a wide array of papers could be named from periodicals which are in no sense especially devoted to the cause of the classics. Some hint of the richness of this ma-

terial can be gained by a study of the contributions to the *Classical Weekly* labeled "Classical Articles in Non-Classical Periodicals," by H. H. Yeames and W. S. Messer, and of the contributions to the *Classical Journal*, under the caption "General Comment," by G. C. Scoggin. Mention may be made here of "Greek Ideas of an Afterworld," O. O. Norris, in *The Monist*; "Virgil and the New Patriotism," Anne C. E. Allinson, in the *Yale Review*; "Propertius: A Modern Lover in the Augustan Age," K. F. Smith, in *Sevconee Review*; "The Assault on Humanism," Paul Shorey, originally printed in the *Atlantic Monthly*, but later issued as a separate pamphlet; "Climatic Change and Agricultural Exhaustion as Elements in the Fall of Rome," E. Huntington, in *Quarterly Journal of Economics*; "The Trades of Antiquity as a Field of Investigation," W. L. Westermann, in *American Historical Review*.

How sadly the great war has interfered with scholarly activity in England may be seen by an examination of such leading English classical periodicals as the *Classical Quarterly* and the *Classical Review*, especially by noting how meagre the "Summaries of Periodicals," in the former periodical, now are as compared with those published there in 1914 and earlier. The volume known as *The Year's Work in Classical Studies* (see YEAR BOOK for 1913) gives similar testimony.

From the *Classical Quarterly*, ix, we may mention "Adnotanda in Latin Prosody," J. P. Postgate; "Notes on Seneca *Epistulae Morales*," R. L. Dunbabin; "The Affatim Glossary and Others," W. M. Lindsay; "The Kingship of Agamemnon," A. Shewan; "Some Passages of Greek Tragedy," A. C. Pearson; "Codex Cantabrigiensis of Livy," Florence Whitehead; "On the Date of the Trial of Anaxagoras," A. E. Taylor; "The Fates, the Gods, and the Freedom of Man's Will in the *Aeneid*," L. E. Matthaei; "The *Thyestes* of Varius," A. E. Housman. From the *Classical Review*, xxxi, we name "Consular Provinces between 67 and 52 B. C.," E. G. Hardy; "The Poet of Italy," R. S. Conway (observations on Virgil, approving and supplementing points made by W. Warde Fowler, in his essay *Virgil's 'Gathering of the Clans,' being Observations on Aeneid vii. 601-817*); "The Homeric Hymns," T. L. Agar; "Dogmatic Diviners and Propertius," J. S. Phillimore (notes on Propertius); "Duplicated Altars and Offerings in Virgil," W. Warde Fowler.

Interesting indications of the classical interests of younger scholars, as well as of their instructors in various universities, can be gained from the following list of dissertations published within the year: Emily H. Dutton, *Studies in Greek Prepositional Phrases*; J. L. Hancock, *Studies in Stichomythia*; Emily L. Shields, *The Cults of Lesbos*; Eliza G. Wilkins, "Know Thyself" in *Greek and Latin Literature*; Mary E. Armstrong, *The Significance of Certain Colors in Roman Ritual*; Ethel H. Brewster, *Roman Craftsmen and Tradesmen of the Early Empire*; W. J. Keller, *Goethe's Estimate of the Greek and Latin Writers*; R. H. Lacey, *The Equestrian Officials of Trajan and Hadrian: Their Careers, with Some Notes on Trajan's Reforms*; K. Preston, *Studies in the Diction of the Sermo Amatorius in Roman Comedy*; E. Tavenner, *Studies in Magic from Latin Literature*; and Mary R. Thayer, *The Influence of Horace on*

*the Chief English Poets of the Nineteenth Century*.

It remains now to set down the names of some books that have come to the writer's attention. The *Apologeticus* of Tertullian, hitherto not readily accessible to students, has been edited, with introduction, notes, and a translation, by J. E. B. Mayor and A. Souter. A valuable work is an edition, in three volumes, of the fragments of Sophocles, by A. C. Pearson: see reviews of the work, by G. C. Richards, in the *Classical Review*, and by P. Shorey in *Classical Philology*. Other works are A. Piganiol, *Les Origines de Rome* (No. 110 of the *Bibliothèque des Ecoles Françaises de Rome et d'Athènes*); E. S. Bouchier, *Sardinia in Ancient Times*; C. Delisle Burns, *Greek Ideals: A Study of Social Life*; L. Cooper, *The Greek Genius and Its Influence*, a collection of select essays and abstracts, "meant to supply a part of the necessary background for the study of Greek and Latin masterpieces in standard English translations, and to stimulate and rectify the comparison of ancient with modern literature"; C. E. Robinson, *The Days of Alkibiades*; J. R. Harris, *The Ascent to Olympus*, speculations as to the earliest forms from which four of the Olympian deities, Dionysus, Apollo, Artemis, and Aphrodite, were derived; W. Warde Fowler, *Aeneas at the Site of Rome*; J. F. D'Alton, *Horace and His Age: A Study in Historical Background*; G. De Sanctis, *Storia dei Romani*, iii, dealing with the age of the Punic Wars (reviewed by F. F. Abbott, in *The American Historical Review*); F. W. Parker, *Historical Introduction to the Roman Law*; J. C. Hoppin, *Euthymides and His Fellows*; E. H. Sturtevant, *Linguistic Change*; C. W. Mendell, *Latin Sentence Connexion* (reviewed by H. C. Nutting, in the *Classical Weekly*); H. I. Bell, *Catalogue of Greek Papyri in the British Museum*, v; James Loeb, *The New Greek Comedy*, a translation of the fine work by Ph. E. Legrand, called *Daos*, a general account of the New Attic Comedy (see YEAR BOOK for 1910). The final volume, covering T—Z, with Indexes, of Daremberg and Saglio, *Dictionnaire des Antiquités Grecques et Romaines* appeared.

Finally, we may go a little further afield by mentioning W. W. Jackson, *Ingram Bywater: The Memoir of an Oxford Scholar*; H. Browne, *Our Renaissance: Essays on the Reform and Revival of Classical Studies*; R. W. Livingstone, *A Defense of Classical Education* (1916). The Society for American Fellowships in French Universities brought out a most interesting volume entitled *Science and Learning in France, With a Survey of Opportunities for American Students in French Universities*. The primary purpose of the volume was "to put before the American public the contributions of France in all fields of scientific knowledge, and to show her status in the forefront of the world's progress." Of special interest to readers of this article will be the sections dealing with "Archæology," by G. H. Chase, H. N. Fowler, A. L. Frothingham, J. R. Wheeler; and the sections treating "Classical Philology," by W. G. Hale, E. K. Rand, and John A. Scott. But in many other fields treated in the book the lover of classical studies will find much to interest him, in the evidence presented of the abiding interest of Frenchmen in all the varied fields of classical philology and of the substantial contributions made by them within those fields.

**PHILOLOGY, MODERN.** The study of philology sustained a severe loss during 1917 in the death of Paul Meyer, who, in collaboration with Gaston Paris, founded *Romania*, the leading review devoted to Romance studies. Meyer exerted a powerful influence on the development of the study of philology in France during his long and active career. With him, according to Professor Raymond Weeks, author of his obituary in the *Romanic Review* (vol. viii, p. 352), "commences for France the glorious period of the application of scientific principles to Romance philology and to the early history of the Romance literatures." Without the sound method he imparted to his pupils, the remarkable progress of the new school, with which, however, he was not entirely in sympathy, would not have been possible.

In our review of last year we called attention to the importance of *La Science française* to which many of the leading scholars of France contributed brief sketches. During the past summer the Society for American Fellowships in French Universities issued a work of similar nature entitled *Science and Learning in France*, including a survey of opportunities for American students in French universities. This beautiful volume, dedicated to the "scholars of France-worthy custodians of their country's intellectual greatness," was prepared under the general direction of Dean John H. Wigmore of the Faculty of Law of Northwestern University. Among the numerous subjects discussed therein ample space is reserved for philology under which we find the following subdivisions: *Classical, Romance, Oriental, Semitic, and English*. The section devoted to Romance philology was drafted by Professors C. H. Grandgent of Harvard University, H. R. Lang of Yale University, Kenneth McKenzie of the University of Illinois, and Raymond Weeks of Columbia University. After a brief sketch of the history of Romance philology in France, there is given much needed information relating to instruction at Paris as well as at the various provincial universities. Along with the names of the most distinguished professors in these institutions is supplied a brief bibliography of their leading publications. The same is true of Oriental Philology, the outline of which was drafted by Professors F. Edgerton of the University of Pennsylvania, E. W. Hopkins of Yale University, and C. R. Lanman of Harvard University; and English Philology of which the drafting committee consisted of Professors A. C. L. Brown of Northwestern University, R. W. Brown of Wabash College, and J. L. Lowes of Washington University. The volume closes with three appendices, the first of which is devoted to the educational advantages for American students in France, by Professor J. Geddes, Jr., of Boston University, the second to institutions of higher learning, their organization, degrees, requirements, fees, etc., by Professor C. H. Vibbert of the University of Michigan, and the last to practical suggestions to the intending graduate student, by the same. Unfortunately these appendices are not brought entirely up to date. The work contains numerous illustrations consisting principally of portraits of well-known scholars. In a word, this volume is not only a fitting tribute to French science whose great value is beginning to be tardily recognized, but should prove of incalculable service to all those

who will be seeking instruction in foreign lands after the close of the great war.

The entrance of the United States into the world conflict has perforce drawn our attention to the practical study of the French language. In order to meet the needs of our soldiers and others engaged in war-work in France a large number of language manuals have appeared. Before discussing these publications, it behooves us to note the remarkable growth of the French military technical language during the past three years. Already in 1899 Col. C. De W. Willcox called attention, in the preface to his *French-English Military Technical Dictionary*—of which a new edition with a supplement has recently been published (Washington, Gov't Printing Office, 1917)—to the fact that "with French alone an officer can keep abreast of his profession almost as well as though he had at his command all the other foreign languages whose military literatures are important in a professional point of view." But notwithstanding its excellence for that time, this thoroughly scientific work is naturally deficient with regard to the terminology now in vogue. The language has kept so closely in touch with new inventions and departures in military science that though at that date the above-mentioned author emphasized "the extremely detailed nature of technical French nomenclature," to-day it is in many respects almost wholly neologistic. Thus the terminology relating to aviation contained in his dictionary is limited to *aviateur, aviation*, and the archaic *avire*, meaning "flying machine." In 1917 V. W. Pagé, and P. Montariol issued a *Glossary of Aviation Terms* (N. Y.), consisting of ninety-four pages. The same is almost as true of certain other subjects. In view, therefore, of the above considerations, it may be of interest to the general reader to list some of the manuals that are most widely used. Among the first to be placed on sale in the United States was the official French manual of the British army, the *L'ade-Mecum* by E. Plumon (London, 1917). It is almost needless to say that this is one of the most complete, from the technical point of view, now in use. Probably the first work of this nature to be published in America is the semi-official manual of the Anzacs, entitled *Soldiers' Spoken French*, by Hélène Cross (N. Y.). The great advantage of this little publication lies in the clear and attractive way in which the subject is approached, and also in the fact that the binding is waterproof and of such a size that it will fit the pocket of a uniform. Unfortunately publishers have often overlooked these last two important details. Its greatest defect consists in the peculiar phonetic-method used for indicating pronunciation. The *English-French Hand Book*, issued by the National Security League (N. Y.), is very useful, notwithstanding inexplicable errors and lack of system in its preparation. What may be called the best manual published in America is *War French* by Col. C. De W. Willcox (N. Y.), in which the elements of French are presented in such a way that the reader can speedily acquire a working knowledge of the language. It is divided into three parts, namely, the French language, the French army, and passages for translation with serviceable vocabularies. Thanks to the experience of the author, this comprehensive manual attains to an accuracy in the matter of scientific and military

terms in use in France that is not characteristic of most works of this nature. Special mention should be made also of four publications of the Univ. of Chicago Press entitled *First Lessons in Spoken French for Men in Military Service*, by Wilkins, Coleman, and Huse; *First Lessons in Spoken French for Doctors and Nurses*, by Wilkins, Coleman, and Preston; *Le Soldat Américain en France*, by Coleman and La Meslée; and *Army French*, by Wilkins and Coleman (1918). The last mentioned is of especial interest, as it is probably the best and most serviceable introductory manual yet issued. The writer of these lines used *Le Soldat Américain en France*, which is entirely in French, with success last summer at the U. S. Aviation Camp at Mineola, L. I. The *Cortina French-English Military Manual*, by J. A. Picard (N. Y.) is a pretentious work, though not always accurate. It contains a good map of France and much detailed information. Among other manuals that should be noted are the *Cortina French-English Red Cross Instructor*, by the same author; *Oxford English and French Conversation Book for Army and Navy Men*, by R. S. Kidd and Lieut. C. L. Cabot (Boston), containing good word-lists and a strange and inaccurate method of phonetic notation; *The Soldiers' English and French Conversation Book*, by W. M. Gallichan (Phila.), unsystematic and often inaccurate, with a method of indicating pronunciation that would cause a Frenchman to marvel at his own tongue; *Rapid-Fire English, French, German*, containing a large number of slang words, most of which are archaic, and a brief sketch of the last hundred years of French history; *What You Want to Say and How to Say It*, by W. J. Hernan (N. Y.), a useful manual marred by an unpronounceable method of phonetic notation; *Hospital French*, by E. Perrin (N. Y.); *Parley 'oo'll*, by Col. F. N. Maude and F. Scudamore (New Haven, Conn.); *International Conversation Book, English, French, German* (Phila.), with a barbarous method of indicating pronunciation; *French for Soldiers*, by A. F. Whittem and P. W. Long (Cambridge), with the collaboration of officers of the French Military Mission; *Simplest Spoken French*, by W. F. Giese and B. Cerf (N. Y., 1918), a very complete general manual; *Handbook of English and French Terms*, by G. Chinard and E. R. Hedrick (Berkeley, Cal.), intended for the use of relief workers in France; *Conversational French*, by F. R. Le Roux, issued by the Camp Dodge Y. M. C. A.; and a manual of artillery terms announced by Yale University. The *Soldier's Service Dictionary*, by F. H. Vizetelly (N. Y.), contains a well-edited selection of some ten thousand words, while the *Dictionary of Aviation*, by R. N. Pierce, is said to include 4276 title-words and phrases.

In general from the philological point of view the year has not been very productive. Although there are several works which deserve our serious consideration, lack of space forbids us from going further into detail than to mention the most important titles with a word of commendation or criticism here and there. Where no date is given the reader will understand that the work appeared in 1917.

GENERAL. E. H. Sturtevant's *Linguistic Change* (Chicago) is an excellent general introduction to the historical study of language. G. Maspero's *Introduction à l'étude de la phonétique*

*égyptienne* (Paris) was in press at the time of the death of its famous author. (For his obituary, see NEW INTERNATIONAL YEAR BOOK, 1916, p. 407). A. Werner's *The Language-Families of Africa* (London) supplies all the most recent information relating to many of these little known tongues. In American-Indian we have two important contributions: *The Position of Yana in the Hokan Stock* (Berkeley, Cal.) by E. Sapir, an author of prodigious activity whose many valuable studies are generally noted in these columns, and *Siuslawian (Lower Umpqua)*, consisting of an illustrative sketch, by L. J. Frachtenberg (Washington). H. Beuchat's *Manuel d'Archéologie américaine* (Paris), devoted to extinct civilizations of pre-historic America, and Katharine B. Judson's *Myths and Legends of British North America* (Chicago) should not, however, be overlooked. Of a more practical nature are R. Blanchard's *La Mimophonie, son rôle dans la formation des langues* (Paris) and T. F. Cummings's *How to Learn a Language* (N. Y.).

INDO-IRANIAN. Of great value to the English-speaking student is the translation from the second German edition of A. Weber's *History of Indian Literature* (N. Y.) by John Mann and Th. Zachariae. A. A. Macdonell's *Vedic Grammar for Students* (Ib.) is intended especially for beginners, whereas his other work, issued in 1910, was prepared as a reference-grammar for advanced students. Two important additions to the extensive bibliography of Hindu religion are A. Coomaraswamy's *Buddha and the Gospel of Buddhism* (Ib.) and H. Whitehead's *The Village Gods of India* (Ib.). In Avestan we have F. A. Cannizzaro's *Il Vendidad reso italiano, sul testo zendico di C. F. Geldner* (Messina, 1916), a carefully prepared Italian translation.

SLAVIC. Of a general nature are J. M. Campbell's *Selected List of Russian Books* (Chicago, 1916), which was compiled for the Free Library Commission of Mass., and F. R. Livesay's *Songs of Ukraina* (N. Y., 1916). In our last review we called attention to a number of manuals of the Slavic languages of interest to soldiers. To that list may be added the following: Russian: Olga Klionoff, *Correspondance commerciale et mondaine russe* (Paris), E. Rochelle and W. Rosenstein, *Le Franco-Russe* (Bordeaux, 1916), F. Asnaourow, *Le Russe par vous-même* (Paris, 1916), J. H. Freese, *New Pocket Dictionary of the English and Russian Languages* (London, 1916), and O. Klionoff and L. Thomeret, *4000 verbes russes classés en 160 séries* (Paris). Serbian: D. Vékovitch, *Manuel de conversation serbe-français* (Ib.), and E. Rochelle and D. Tamindjitch, *Le Franco-Serbe* (Bordeaux, 1916). Polish: *Manuel de langue polonaise* (Paris, 1916), by Iza Zielińska. Bulgarian: *Vocabulaire bulgare-français* (Paris) and NEW INTERNATIONAL ENCYCLOPEDIA, vol. iv, pp. 141-2.

CELTIC. Works of general interest relating to this field are L. A. Fischer's *The Mystic Vision in the Grail Legend and in the Divine Comedy* (N. Y.), P. Foley's *Irish Historical, Curious Customs and Superstitions, County of Kerry, Corkaguiny* (Oakland, Cal., 1916), and P. Van Tieghem's *Ossian en France* (2 vols., Paris), which, though touching philology only indirectly, is an excellent example of the breadth of French erudition. The *Catalogue of the Bradshaw Collection of Irish Books in the Univ. Library Cambridge* (Cambridge, 3 vols., 1916)

is also important. A. L. Humphrey's *Handbook to County Bibliography* (London) is a most useful bibliography relating to counties and towns of Great Britain and Ireland.

**ENGLISH.** Of a purely philological nature are E. Einenkel, *Geschichte der englischen Sprache* (3rd ed., Strassburg, 1916), devoted to historical syntax, and J. M. Steadman, *The Origin of the Historical Present in English* (Chapel Hill, N. C.). In Anglo-Saxon was issued the fourth edition of J. W. Bright's popular *Anglo-Saxon Reader* (N. Y.), J. E. Wells's *Manual of the Writings in Middle English 1050-1400* (New Haven, 1916) deserves mention. An addition to the extensive bibliography on Chaucer is contained in B. F. Jefferson's *Chaucer and the Consolation of Philosophy of Boëthius* (Princeton). Eleanor H. Adams's *Old English Scholarship in England from 1566 to 1800* (New Haven) is likewise of general interest. A new anniversary edition of Crabb's *English Synonyms* (N. Y.) was issued. The following parts of the Oxford English Dictionary made their appearance: Vol. ix, *Supplement*, by C. T. Onions (January); vol. xi, *Verifactory-Visor*, by W. A. Craigie. Of the *Surnames of the United Kingdom*, by H. Harrison (London), parts 17 and 18 of vol. ii were published.

**SCANDINAVIAN.** The fourth fasciculus of the third part of A. Kock's *Svensk Ljudhistoria* (Lund, 1916) was an important contribution.

**GERMAN.** A. Meillet's *Caractères généraux des Langues germaniques* (Paris) is but another addition to the list of great works by this scholar (see our review of last year). Of an elementary nature is E. Prokosch's *The Sounds and History of the German Language* (N. Y.). The third edition of J. Wright's excellent textbook, *Middle High German Primer* (Ib.), is of use. Of a more special nature is R. M. Ihrig's *The Semantic Development of Words for "Walk, Run" in the Germanic Languages* (Chicago, 1916). R. Delcourt's *Expressions d'argot allemand et autrichien dans les tranchées* (Paris), and A. Fontaine and Th. Ioran's *Méthode rationnelle et pratique de langue allemande* (Ib.) are good manuals. Of importance for those engaged in censoring letters is J. Stadler and Ch. Amandruz, *Cours de correspondance commerciale allemande à l'usage des écoles de commerce* (Lausanne).

**FRENCH.** General works of great importance are L. Clédât's *Manuel de phonétique et de morphologie historique du français* (Paris), A. Blanchet and A. Dieudonné's *Manuel de numismatique française* (Ib.), of which volume ii is devoted to the history of the royal coinage from Hugh Capet to the Revolution, and H. Leveillé's *Dictionnaire inventoriel de la flore française* (Le Mans, 1916). A new edition of A. Haase's *Syntax française du dix-septième siècle*, translated by M. Obert, appeared at the close of 1916 (Paris). Technical studies include F. J. Tanqueray, *L'Evolution du verbe anglo-français aux XIII<sup>e</sup> et XIV<sup>e</sup> siècles* (Ib.), A. R. Rose, *Germanische Lehnwörter im Französischen* (Zwickau), and P. Lauer, *De la Signification du mot France aux époques mérovingienne et carolingienne* (Paris, 1916). C. Nyrop's beautiful tribute *France* (trans. by J. de Coussange, Paris, 1916) and Abbé Delfour's *La Culture latine* (Ib.), while not philological, are of the greatest interest. Among studies of dialects the most important are two works by O. Bloch, *Lexique fran-*

*çais-patois des Vosges méridionales* (Ib.) and *Les Parlers des Vosges méridionales (arrondissement de Remiremont)* (Ib.), and A. Putois, *Usages locaux du Mâconnais* (Mâcon). Mary M. Wood's *Spirit of Protest in Old French Literature* (N. Y.) is of especial interest at the present time. The following manuals may be noted: G. Derval, *Petite Grammaire française* (Paris), C. M. Marchand, *A Careful Selection of Modern Parisian Slang*, including the new argot des tranchées (Paris), Larousse, *Dictionnaire des Termes militaires et de l'argot poils* (ib.), and E. Levi, *Grammatica razionale della Lingua francese* (Leghorn, 1916). A good etymological and historical dictionary is the *Grand Dictionnaire français-italien et italien-français* of C. Ferrari and J. Caccia (Paris). While not within the scope of this review, attention should be called, nevertheless, to the great undertaking of the Public Library of Lyons, entitled *Contribution à une Bibliographie générale de la Guerre de 1914*, of which six fascicules (240 pp.) have appeared (Paris).

**SPANISH.** A most important contribution to the study of the old Spanish language and literature is F. de Onís's *Fray Luis de Leon* (Madrid, 2 vols., 1914-17). Other works of somewhat similar nature are V. Castañeda y Alcover, *Catálogo de los manuscritos lemosines ó de autores valencianos* (Madrid, 1916), MSS. contained in the Escorial Library, P. A. Pleye, *Santa María de Salas en el siglo XIII* (Bilbao, 1916), and L. Miner's *Modificaciones del Idioma castellano en Cuba* (Havana, 1916). J. V. Sanchez Bruno's *Gramática comparada anglo-española* (Valencia) and J. Goizveta y Dias's *Sea y Fuere, Fuera, Sería y Fuese* (Barcelona, 1916), relating to the use of these forms, are cited *à titre de curiosité*. The following two dictionaries may be included: J. Alemany y Bolufer, *Diccionario de la Lengua castellana* (Barcelona), which is said to contain many thousand more words than found in the dictionary of the Academy, and Noble's *Large Type Spanish-English and English-Spanish Dictionary* (N. Y., 1916). For commercial Spanish the student is referred to P. Lourtau, *Cours de Espagnol commercial* (Paris) and J. Laborde, *Nouveau Manuel de correspondance commerciale en français et en espagnol* (Ib.). A good introductory manual is *Spanish for Soldiers*, by J. A. Moss and J. W. Lang (Menasha, Wis.).

**CATALAN.** H. C. Heaton's *The Gloria d'Amor of Fra Rocaberti* (N. Y.) is an excellent edition of a famous Catalan vision-poem of the fifteenth century.

**ITALIAN.** General works are E. Monaci, *Studi romanzi* (Rome), G. Bertoni, *Poesie, Leggenda, Costumanze del Medio Evo* (Modena), G. Malagoli, *Crestomazia per Secoli della Letteratura italiana* (3 vols. Florence, 1916), and P. Ortiz, *Per la Storia della Cultura italiana in Rumania* (Bucarest, 1916). Among dictionaries we note G. Cappuccini, *Vocabolario della Lingua italiana* (Turin), M. Zingarelli, *Vocabolario della Lingua italiana* (Milan, 102 fasciculus), G. F. Lisanti, *Dizionario moderno italiano-inglese* (N. Y.), E. Webber, *Dizionario tecnico in Quattro Lingue: Inglese, Italiano, Tedesco, Francese* (2d ed., Milan), and M. Sforza and A. Cervati, *Il Piccolo Dizionario dell'Infermiera* (Milan, 1916). The following manuals are of interest: A. Prati, *L'Italiano e il Parlare della Valugana* (Rome, 1916), intended for teachers, Lina Merlo

and Ed. Paris, *L'Italiano e l'Italia* (Paris), and T. Vallesi, *Arma la Prora* (Palermo), a nautical text-book.

**PHONETICS.** Of a general nature are J. Chabert and Labernadie, *Les Vices de prononciation et leur correction* (Paris, 1916), with emphasis on the medical side, and G. de Parrel, *Précis d'anacousie vocale et de labiologie* (Ib.), an interesting introduction to auditive education. In English the leading publications are H. E. Palmer's *First Course of English Phonetics* (Cambridge), W. Rippmann's *Sounds of English* (London, 1916), thoroughly revised, W. A. Craigie's *Pronunciation of English* (Oxford), in which the pronunciation is reduced to rules by a system of marks applied to ordinary spelling, and D. Jones's *An English Pronouncing Dictionary* (N. Y.). To the French bibliography the following addition was made: A. W. Ballard and E. Tilly, *Phonetic French Reader* (Ib., 1916).

**PHILOSOPHY.\*** There are numerous and almost unmistakable signs that 1917 marks a turning point in the history of philosophy. It has been a critical year in many respects. In respect of the war it has marked a crisis, and coincident with, perhaps incident to this crisis, have come crises in our political, social, moral, and religious institutions, and these seem to be reflected to a marked degree in the ideas which these institutions embody.

The first two numbers of the *Philosophical Review* seem symbolical of this fact. The first number is devoted to a retrospect, the second contains Professor Lovejoy's presidential address before the American Philosophical Association, December, 1916, "On Some Conditions of Progress in Philosophical Inquiry." The retrospect was occasioned by the twenty-fifth anniversary of the *Review*, and consists of a "series of contributions to a survey of the progress of philosophy in some of its main departments since the foundation of the *Review*." These articles are contributed by Messrs. Bosanquet, Sabine, Tufts, and Miss Washburn. In this connection André Lalande's survey of "Philosophy in France, 1916" (*Phil. Rev.*) should be mentioned. Over against this retrospect stands Prof. Lovejoy's address, which is prospective. What is especially significant about it is that it presents progress as a problem, as a goal of conscious endeavor. He is conscious of the scientific impotence of most of our "modern" philosophy. Philosophising, because it has been largely undisciplined, is contentious rather than scientifically productive. Prof. Lovejoy pleads for the development of a technique of coöperative inquiry. There is a great deal of irony about the whole plea, for its immediate result was to call forth fresh contention, and not co-operation. The discussion which followed (*v. Phil. Rev.*), however, marks the conscious recognition of an important fact, viz., that philosophy to-day is a curious mixture of "the art of philosophising" and of a number of scientific (psychological, logical, metaphysical) problems for inquiry. To quote Prof. Lovejoy: "I can conceive of no rule of philosophic method more primary than that the philosopher should always be perfectly clear in his own mind when phi-

losophising, as to whether he is functioning as artist, or as man of science." The recognition of this is significant, because recent philosophy (at least that of 1917) has been (with a few notable exceptions) *inquiry* rather than *art*, science rather than philosophy in the narrower sense; and the conscious recognition of this and endeavor to develop scientific techniques is a genuine turning-point, or crisis, in philosophical thinking.

**SOCIAL AND POLITICAL PHILOSOPHY:** Prof. Lovejoy's address is symbolical of current tendencies in another respect, in that it emphasizes the conditions of progress. This is true of most of the social and political philosophy of the year. The war, of course, has been the great object around which social philosophy centres and from which it takes its point of departure. But whereas social philosophy in the last two years has been engaged chiefly with the causes of the war, its historical interpretation, and its philosophical background (typified by Dewey's "German Philosophy and Politics" and Santayana's "Egotism in German Philosophy") this year marks a definite face-about toward the future, towards the basis of peace, social reconstruction, international relations, etc. Typical of this attitude are Russell's *Principles of Social Reconstruction and Political Ideals*, J. A. Hobson's *Democracy After the War*, Gilbert Murray's *The Way Forward: Three Articles on Liberal Policy*, J. H. Tufts' *Our Democracy: Its Origin and Its Tasks*, *The Hope for Society: Essays on Social Reconstruction After the War*, edited by L. Gardner, the July number of the *International Journal of Ethics*, and numerous articles in leading periodicals. These all reflect the dominant tendency in social philosophy, the look forward, the concern for progress. It marks the turning toward a sobered and sound internationalism. The subject for the American Association, December, 1917, "Ethics and International Relations," bears further witness to this tendency. And in France especially the idea that the goal of French nationalism is internationalism has been gaining ground steadily. One of the last words of M. V. Delbos was: "Nous pouvons bien dire qu'elle n'a usé de notre esprit national que pour accomplir son œuvre dans un sens universel et sans préjugé national" ("Caractères de la philosophie française," *Rev. de Méta.*). And in a similar spirit M. Th. Ruyssen declares: "L'esprit français est universel et humain, ou il n'est pas" ("Une idée en péril," *Rev. de Méta.*).

Perhaps the most remarkable characteristic of the social and political philosophy of 1917 is that it has undertaken a thorough criticism and analysis of our current catch-words and "principles," instead of flaunting them as ultimate standards. Philosophers have made it their business to re-define, to give concrete meaning and definite content to such terms as democracy, humanity, liberty, etc. There are some exceptions to this. Rousseau's philosophy has been proclaimed by some writers (*v. H. B. Alexander in Jour. of Phil., Intern. Jour. of Ethics*, etc.) as the philosophy of democracy as over against that of autocracy, as representing liberty and reason as over against loyalty and divine right. Mr. Hugh Elliot sees in the war the triumph of Spencerism. M. T. Blauvelt's *Ultimate Ideals* and F. A. M. Spencer's *Human Ideals* also represent the tendency of philosophising the passions

\* On account of the war our knowledge of German philosophic activity during the year is so fragmentary, that it seems best to postpone any discussion of it.

and prejudices brought out by the war. But the great bulk of social philosophy has been critical, analytic, constructive. "It dawns on students of social problems, as it dawned long since on philosophers, that the beginning of their wisdom is a confession of their ignorance" (Will Durant: *Philosophy and the Social Problem*). Mr. Durant's book is valuable in this connection in emphasizing the social motive in back of the philosophies of Socrates, Plato, Francis Bacon, Spinoza, and Nietzsche; and Prof. Longwell has pointed out the limitations imposed on philosophy by social structure ("Philosophy as Handmaid of Society," *Phil. Rev.*). Of the long list of critical analyses of social concepts mentioned above only a few can be mentioned here: E. Bréhier in "Divers aspects de la notion d'humanité" (*Rev. de Mét.*) finds three distinct meanings of the term, humanity; Adrien Naville in "Quelques espèces de libertés" (*Rev. Phil'que*) undertakes a critique of the concept of liberty and its bearing on legislation; Emile Boutroux's "Liberty of Conscience" (*Inter. Jour. of Ethics*) is a careful analysis of that problem. John Dewey has also attacked the same and allied problems in several articles in the *New Republic*. The problem of internationalism has been dealt with critically by H. C. Brown (*Inter. Jour. of Ethics*), Maj. E. Crawshaw-Williams (*International Idea*), H. N. Brailsford (*A League of Nations*), "Cosmos" (*The Basis of a Durable Peace*), H. M. Kallen ("The Structures of a Lasting Peace," in the *Dial*). It is quite evident that here the line between social philosophy and sociology, economics, and politics has been made difficult to draw. The essays by Warner Fite, Davenport (*Jour. of Phil.*), and Stuart (in *Creative Intelligence*) are further evidence of philosophy's penetration into our economic activities; and those of Roscoe Pound (*Inter. Jour. of Ethics*) and M. R. Cohen (*Jour. of Phil.*) mark the beginnings of a philosophy of law.

We come now to social philosophy in general. Chief among such contributions are Russell's *Principles of Social Reconstruction* (American Edit., *Why Men Fight*) and *Political Ideas*, a collection of miscellaneous essays, and Bosanquet's *Social and International Ideals*, likewise a collection of essays. Russell's books are more valuable for their keen and wholesome criticism than for their constructive ideas. His basic ideas are that man's "impulses" can be classified according to their results, some being impulses of possession, others creative, etc. The "impulse towards force" must be weakened. The state has too much power; the value of the state is more limited than is usually assumed, and its existence is justified only in so far as the good of the state is the good of individuals severally. Russell's position has been characterized as a "combination of anarchism and guild socialism." A similar position is taken by G. Lowes Dickinson in *The Choice Before Us*, a book directed against "the religion of the God-state" in the interests of a refined individualism. Bosanquet, on the other hand, both in his *Social and International Ideals* and his address before the Aristotelian Society on "The Function of the State in Promoting the Unity of Mankind," magnifies and exalts the function and value of the state. An interesting contribution to political philosophy has been made by H. P. Farrell in *An Introduction to Political*

*Philosophy*. The first part of the book is an exposition of Plato and Aristotle; the second part is devoted to an analysis of "The Great Error": "The great error in political philosophy has been the confusion between the historical inquiry into the origin of the state among civilized peoples and the philosophical inquiry into the moral basis upon which the state rests." Other books which should at least be mentioned are: Sir Charles Waldstein, *Aristodemocracy from the Great War Back to Moses, Christ, and Plato* (1916); Ramiro de Maezter, *Authority, Liberty, and Function in the Light of the War*: a critique of Authority and Liberty as the Foundation of the Modern State and an attempt to base Societies on the Principle of Function (as in Plato and Aristotle); H. J. Laaki, *Studies in the Problem of Sovereignty* (a pluralistic theory of society); Charles A. Ellwood, *An Introduction to Social Psychology*; I. Maxwell, *La Philosophie Sociale et La Guerre Actuelle*; R. Anthony, *La force et le droit*. Of more general interest for Ethical Theory are: John Viscount Morley's *Recollections* (2 vols.), a work of tremendous scope, by an ardent liberal and of especial interest to students of the liberal movement. It is marred, however, by the fragmentary and dispersed character of its contents. Charles Werner, *Études de philosophie morale*; Alexandre Vinet, *Philosophie morale et sociale*.

**PHILOSOPHY AND PSYCHOLOGY OF RELIGION.** There has been almost a flood of books on the philosophical aspects of religion, particularly in England, an indirect, and in some cases direct, product of the war. Chief among these are H. G. Wells, *God, the Invisible King*; A. Seth Pringle-Pattison, *The Idea of God in the Light of Recent Philosophy*; and William Temple, *Mens Creatrix*. The second of the three constitutes the Gifford Lectures, 1912-13, and is a historical criticism. *Mens Creatrix* has for its theme man's search for Unity in Mind, where it is only partially satisfied, then successively in Art, Conduct, and finally in Religion, where alone it is completely satisfied, by the concept of a Universal Mind, or God. Other works, which limited space permits us merely to mention, are: E. H. Reeman, *Do We Need a New Idea of God?*; James Lindsay, *A Philosophical System of Theistic Idealism*; Geo. A. Barrow, *The Validity of the Religious Experience*; G. A. Coe, *A Social Theory of Religious Education* (cf. his *Psychology of Religion*, 1916); G. A. Barton, *The Religions of the World*, Vol. IX of the *Encyclopædia of Religion and Ethics*; Clodius Piat, *Idées directrices de la morale chrétienne*.

**OBJECTIVE STUDY OF INTELLIGENCE.** Another movement, belonging more strictly to psychology, but attaining increasing philosophical importance, and marking a genuine philosophical crisis, is the functional, behavioristic, objective study of intelligence, the attempt to learn the mechanics of mind. During 1917 the writings of Watson, Holt, and Warren in the United States, and of Bernheim, Grasset, le Dantec, and Philippe in France are of particular note. H. C. Brown in a review of Dewey's *Essays in Experimental Logic* (*Jour. of Phil.*) has pointed out the fundamental importance of this psychological approach for an understanding of experimental logic. And in general this method promises to be of increas-

ing significance for logic, ethics, and metaphysics.

**IDEALISM, REALISM, PRAGMATISM.** Turning now to "philosophy proper" we see the battle royal between these three -isms going on with unabated furor. The outstanding contribution to pragmatic literature this year has been *Creative Intelligence*, a series of essays by Dewey, A. W. Moore, Brown, Meade, Bode, Stuart, Tufts, and Kallen, in which the pragmatic method is applied to mathematics, logic, psychology, economics, ethics, and art. The essays have been characterized by Prof. Bush as a fine example of *constructive* intelligence, and by Prof. Fite as overemphasizing the future, robbing man of his past, and indulging in "appeals to the opaque." Prof. Sellars (*Jour. of Phil.*) charges pragmatism with the failure to analyze the terms "experience" and "situation," which analysis he supplies in his "critical realism." Prof. Lloyd (*Jour. of Phil.*) from the side of idealism charges pragmatism with attempting to get along without a metaphysics, and Prof. Hoernlé (*Phil. Rev.*) has attempted to sketch Dewey's growth (?) away from idealism. Prof. Boodin in his *Realistic Universe* has attempted a kind of pragmatic metaphysics in terms of Energy, Consciousness, Space, Time, and Form. In the idealistic camp the outstanding contribution is a volume of *Philosophical Essays in Honor of James Edwin Creighton* by former students. Several of the essays are historical critiques, and the others are metaphysical. Professor Creighton himself has made a valuable contribution by his article on "Two types of Idealism" (*Phil. Rev.*), in which he distinguishes "mentalism," "panpsychism," etc. (which he claims are fundamentally realistic) from genuine idealism, or "speculative philosophy," to use Bosanquet's term. May Sinclair's *A Defense of Idealism* also deserves mention, though it is epigrammatic, rather than scholarly.

The subject of psycho-physical dualism has been in the forefront of discussion in the United States. A large number of the papers on this subject read at the 1916 meeting of the American Association have been published in the leading periodicals. The chief contributors have been Hoernlé, Grace A. de Laguna, Pratt, Fite, Bode, Drake, Cohen, and Dewey. The discussion has been, of course, inconclusive, but several points have been emphasized especially: (1) that the physical and psychical are not mutually exclusive nor complementary terms, that neither is limited by the other (v. Miss de Laguna's paper); (2) that dualism does not necessarily imply that there are only two kinds of reality, but merely that there are at least two. It is evident that these points are negative, and that even these are contested. Relevant here is J. F. Dashiell's contention (*Jour. of Phil.*) that spiritual values must be kept relative to purposes as over against data (nature), and not reified into an ontological dualism.

In England, a logical discussion between Messrs. Mercier, Pickard-Cambridge, Bosanquet, Schiller, and Sheldon centring about the problem of the necessity of the universal in a fortiori reasoning, has attracted considerable attention. A valuable contribution has been made by P. Coffey in his two volumes, *Epistemology, or the Theory of Knowledge*, which attacks the

problem of knowledge from the scholastic point of view. The subtitle, however, "An Introduction to General Metaphysics," serves to illustrate how persistent is the confusion between the problem of knowledge and metaphysics.

**METAPHYSICS.** Metaphysical analysis has centred around the concepts of matter and energy and of time. H. C. Brown has attempted to show the instrumental value of atoms and the fruitlessness of the separation of matter and energy (*Jour. of Phil.*). F. J. E. Woodbridge has published a very suggestive paper on "Structure" (*Jour. of Phil.*), suggesting that this concept be identified with that of matter. In France le Dantec, Rougier, and Selme have discussed the metaphysical implications of "the degradation of energy." In the analysis of time, purpose, and the philosophy of history we have contributions by Boutroux, *The Contingency of the Laws of Nature*; R. B. Perry, several articles on Purpose (*Monist and Phil. Rev.*); Wordsworth, *Time as Succession*; F. Paulhan, *Le sens de l'évolution*; Benedetto Croce, *Teoria e Storia della Storiografia*, being Vol. IV of his *Filosofia dello Spirito* (presents a Hegelian philosophy of history: history is the most concrete and universal form in which the activity of mind is presented).

The problem of values has been discussed in the American periodicals by Urban, Perry, and Fisher, and in England by F. C. Bartlett in a paper on "Valuation and Existence," read before the Aristotelian Society; the discussion centring around the metaphysical status of values and value-judgments.

Other works of general philosophical interest are: J. B. Baillie, "On the Nature of Memory-Knowledge" (*Mind*); John Laird, *Problems of the Self* (a defense of the soul as substance); L. J. Henderson, *The Order of Nature*; Dewitt H. Parker, *The Self and Nature*.

**MATHEMATICAL LOGIC.** In this field several important contributions have been made during the year, notably those of Whitehead (*The Organization of Thought*), Couturat ("Sur les rapports logiques des concepts et des propositions," and "La logique algorithmique et le calcul des probabilités," both in *Rev. de Méta.*), F. Enriques ("Sur quelques questions soulevées par l'infini mathématique," in *Rev. de Méta.*), P. Richardson and E. H. Landis (*Fundamental Conceptions of Modern Mathematics*).

**ASSOCIATIONS AND NOTES.** The topics for discussion at the Western Philosophical Association meeting in April were: (1) In what sense does the human person possess independence of his physical environment and organism? (2) What reality has the history of the world as the physical and biological sciences present it? (3) Does any being exist that plays the part of God in Theism? The Gifford Lectures at Glasgow University are being given by Prof. Samuel Alexander on "Space, Time, and Deity." Emile Boutroux is Herbert Spencer lecturer at the University of Oxford.

**NECROLOGY.** Prof. John E. Russell of Williams College died February 25, 1917. His most memorable work, outside his great influence as a teacher, was his critical essays on pragmatism. The Rev. Brother Chrysostom (Joseph J. Conlen), Professor of Philosophy and Psychology at Manhattan College, died January 24, 1917. French philosophy lost one of its ablest exponents by the death of M. Theodule Ribot on

December 9, 1916. He was the founder of the *Revue Philosophique* in 1876 and was a leader in reestablishing psychology, especially pathological psychology, in France. In his last years he turned to more speculative interests (v. his last fragment in the *Revue Philosophique*). A further loss was sustained by the death of one of M. Ribot's associates, M. Félix le Dantec, June 6, 1917, chargé du cours de biologie générale à la Sorbonne. Several prominent young French philosophers were killed in action during the year, among them M. Augustin Guyau and M. Henri Dufumier.

**TEXTS.** R. W. Sellars: *The Essentials of Logic*, and by the same author, *The Essentials of Philosophy*. Both texts embody much of recent advances, but for the most part in an uncritical manner. M. T. Marvin: *The History of European Philosophy*. This book has an excellent and novel general plan, and marks a definite break with our traditional histories; but the author's handling of the subject matter leaves much to be desired.

**CRITICAL AND HISTORICAL RESEARCHES.** H. Wildon Carr, *The Philosophy of Benedetto Croce*: the problem of art and history; William M. Salter, *Nietzsche, the Thinker*; V. Delboe, Several essays on the history of philosophy in the *Rev. de Méta.*; P. Masson-Oursel, "Études de logique comparée," in *Rev. Philosophique*; F. Sartiaux, *Morale Kantienne et morale humaine*; Botsford and Sihler, *Hellenic Civilization*; G. M. Stratton, *Theophrastus and the Greek Physiological Psychology before Aristotle*; R. M. Wenley, *The Life and Work of George Sylvester Morris: A Chapter in the History of American Thought in the 19th Century*; Lynn Thorndyke, *The History of Medieval Europe*; J. F. D'Alton, *Horace and His Age*.

**TRANSLATIONS AND NEW EDITIONS.** B. Croce, *Logic as the Science of the Pure Concept*, trans. by D. Ainslie; Th. Flournoy, *The Philosophy of William James* (authorized translation by E. B. Holt and William James, Jr.); Mary W. Calkins, *The Persistent Problems of Philosophy*, 4th rev. ed.; *Seneca ad Lucillum Epistolæ Morales*, trans. by R. M. Gummere; *Lucretius: On the Nature of Things*, metrical translation by W. E. Leonard.

**PHOSPHATE.** See FERTILIZERS.

**PHOSPHORIC ACID.** See FERTILIZERS.

**PHOTOGRAPHY OF THE HEAVENS.** See ASTRONOMY.

**PHOTOTHERAPY.** The use of various forms of artificial light in the treatment of disease, particularly of tuberculosis, is apparently on the increase. The favorable influence of natural sunlight upon tuberculous processes is well known, and the closer the artificial light resembles sunlight the better the results. The advantage of artificial rays is that they can be employed in countries where sunlight is not always available, or the prevailing temperature is too low, and that the rays can be projected into cavities such as the mouth. Reyn, of Copenhagen, extols the advantages of exposure to the carbon arc light, particularly in lupus, which is a form of tuberculosis. Spitzer confirms the experiences of Reyn, and found that acute tuberculous ulcerations in the mouth, as well as the chronic granulating type, healed completely in the course of a month or two, even when the ulcerations burrowed deep into the tongue, with extensive involvement of the lips. In cases of

joint tuberculosis, better results were obtained with the quartz light. Schmidt of the Finsen Light Institute at Copenhagen, finds that Finsen's arrangement of the carbon arc lights give rays which approaches very nearly in chemical action to natural sunlight. He records the results of treating patients with pulmonary tuberculosis, and states that the curative effects were much less satisfactory than in surgical tuberculosis. There was no influence on fever, night sweats, expectoration, or the number of bacilli in the sputum.

The mercury vapor quartz lamp has been used by Haelebacher in goitre with excellent results in a certain proportion of cases. Cure or marked improvement was obtained in the majority of patients, the symptoms of stenosis disappearing and the goitre growing softer after two or three exposures. Large cystic goitres, however, resisted treatment entirely.

**PHYSICAL CHEMISTRY.** See CHEMISTRY.

**PHYSICS.** The war has mobilized science, and physics is solving major military problems on both sides. Aviation, sound ranging, signaling, gas pressures, submarine detection, radio communication, and many other problems are invading the physical laboratories of all countries. A harvest of research results may be anticipated when peace comes. The German Reichsanstalt, the National Physical Laboratory of England, and the National Bureau of Standards are all contributing not alone to the war, but to the industries and to science after the war. Not only in experimental physics is the activity being felt, but in the national and international organization of science, both institutional and individual. Our own research council is doing a work which will have far-reaching results in the closer coordination and coöperation in scientific research. Doubtless the output is mainly diverted into military lines at present and hence is not open for publication. However, enough of general interest has been done to make it necessary merely to illustrate the progress by a few selected examples of work accomplished in the several branches of physics.

In recent years physics has been taken up by astronomers while physicists are taking up astronomical problems in the laboratories. Extremes meet in the simultaneous solutions of cosmic and subatomic problems which are just at present in the foreground.

The finite velocity of propagation of gravitation, Gerber holds, explains the anomalous perihelion motion of the planet Mercury, finding on computation that it should equal the velocity of light, radiant heat, and electric waves. On Einstein's theory of gravitation light should be affected by gravitation and at the solar eclipse in May, 1919, this will be determined. A list of conjunction stars with their positions computed for that time is being prepared for this purpose. Lodge recalls that a wave front of light stimulates properties of matter, conveys momentum, and sustains and carries the light pressure until a target is struck. If the momentum inertia constitutes temporary matter, subject to gravity, the gravitative deflection of a ray could be easily detected. Einstein's theory of gravitation has important astronomical consequences on our ideas of the gravitational field of the fixed stars, the upper limit for total mass of the stars, irreality of coordinates, relativity of rotation, and the origin of

inertia (now held identical with gravitation). All of this shows the significance of his theory for cosmic unity. Nipher is reported to have succeeded in increasing or decreasing the gravitational pull between two small bodies, and of actually converting it into a negative repulsion. A discussion of the change of gravitation with temperature began with Shaw's definite statement of his experimental results. His view was opposed on theoretical grounds.

Bowie summarizes gravimetric surveys at 358 stations in India, Europe, Canada, and the United States, reducing the results by Hayford's isostatic method. A new formula permits a computation of the value of gravity within one part in 50,000. The compensation depth is found to be about 96 kilometres. This work aims to secure a more accurate value of the earth's flattening, to derive an accurate value of gravity for physical and chemical research, and to study the isostatic compensation movements of the earth's crust. For this purpose observations at sea are urgently needed as pointed out by Hayford. Good determinations have been made at three thousand widely scattered land stations, but on the three-quarters of the earth's surface covered by the sea no reliable observations have yet been made. These would be of more value for determining the depth below the surface at which abnormally dense masses are located. In Briggs' new method for measuring gravity at sea with an accuracy of 1 in 100,000, a change in gravity causes a corresponding change in the height of a mercury column in a barometer of the usual type, but with a sealed-in atmosphere of nitrogen below in place of free atmospheric exposure.

Jeanes described the results of increasing rotation in breaking up a cosmic mass—first, flattening, loss of symmetry, ellipsoid formation, pear shaping, and separation of smaller end as a satellite; or second, after flattening, the formation of a ring of matter which breaks up into satellites. The first is the usual binary star formation, the second the spiral nebula. It is of interest to note that Van Maanen has proved the rotation of nebulas M101 and M81, and Campbell and Moore have detected the rapid rotation of nebula N. G. C. 7026.

Hale and Ellerman have studied the structure of the solar atmosphere at various levels, comparing it with that of the low-lying photosphere and sun spots. Langley's rice grains (130 miles) are used for comparison. Calcium flocculi are noted less than 400 miles long. At higher levels the smallest flocculi are double this size, showing that the photosphere and gaseous atmosphere consist of rising hot gases. Larmore and Yamaga show that (except for one observer) an unbroken solar periodicity of about 11.125 years is firmly established. The periodicity graph shows equal areas above and below, the curve contour repeating as a reflected image.

Ellerman at Mt. Wilson describes the newly found solar phenomenon which he calls "solar hydrogen bombs." The first appearance in the spectrogram was so startling that the reality was doubted. Now that they have been seen visually as well, their existence is undoubted. The startling band displacement to either side of the spectrum line H $\alpha$  has been found as high as thirty Angstrom units, usually much less. In the explosion hydrogen seems to be the only element, and the short duration, one to three min-

utes usually (rarely ten), suggested the term hydrogen bombs. These are found among active sun spot groups; at times a number follow in the same place like the balls of a Roman candle at intervals varying from ten to twenty minutes." They must occur well below the reversing layer since the hydrogen absorption line is unaffected. Evershed describes a recent solar eruptive prominence which reached a height of 50,000 miles, and in parts showed a velocity of 450 kilometres per second. In this eruption all parts of the prominence shot out radially from a point in the chromosphere at the base of the column.

The electron as usual is the centre of interest to physicists, its value being now the basic physical constant. During the past year Millikan announced his recent redetermination of the electron. The new value is identical with that previously announced and is equal to  $(4.774 \pm 0.005 \times 10^{-10})$  a result dependable to one part in a thousand. Millikan's book *The Electron*, issued during the year, explains the latest view of the atomic structure of electricity, the properties of the elementary electric unit—the electron, and their bearing upon atomic structure and the nature of electromagnetic radiation. The increased interest in the electron is not surprising since it is now known to involve molecular and atomic magnitudes, the most significant radiation constants, Planck's  $h$ , Stefan-Boltzmann's constant  $\sigma$ , Wien's Constant  $C$ , and X-ray constants such as the wave lengths of characteristic X-rays.

An investigation led Debye to the conclusion that the first electron ring in all atoms consists of three electrons, basing his argument on the theoretical work of Bohr and Sommerfeld. A study of the atomic structure based on the disintegration theory assumes structural hysteresis in taking up new atomic formations with the successive loss of electrons in regular sequence from maximum atomic volume to maximum density. An adjustment gradually takes place between minimum density and minimum volume. The work suggests instability of structural formation and that permanent elements are rare.

Wigand during the year issued his summary of observations on the ionization of the earth's atmosphere during the presence of Halley's comet. Ramsay has devised an atomic model, using small bicycle balls floating in mercury. Motion is produced by sending a current into the mercury by a middle electrode, taking it out at four corners of the tray in which the mercury rotates in the vertical magnetic field. Interesting imitations are possible illustrating light radiation, X-ray production, photoelectric effect, ionization by hot bodies, gamma rays, etc.

Harkins further develops his atomic evolution hypothesis based on hydrogen and helium atoms. On the theory that the hydrogen atoms form the helium atom the elements fall into two series, one of even atomic number, the other of odd. This gives a "new periodic series" based on atomic structure—the Mendeléeff is presumably based on the group of free electrons associated with the atoms.

In a study of the kinetic theory of reaction-velocity, March demonstrates that for every compound a critical temperature exists above which no amount of pressure is sufficient to maintain the compound intact. Cohesion, as de-

fined by Chatley in his electrical theory of cohesion, is the net attraction between molecules chemically saturated, or relatively so, at distances approximating their molecular diameter. Adhesion he considers as a special case of cohesion for dissimilar molecules. Cohesive attraction merges into chemical affinity (electrostatic linkage) as proximity increases, and becomes Newtonian gravitation as the particles separate. Chatley's formula gives the bond at contact as 1 per cent of the electrostatic force, decreasing to ordinary Newtonian values at 10 molecular diameters' distance.

Langmuir's beautiful researches on the spread of films of oil on water are of special interest. He prefaces that all the forces involved in the structure of solids and liquids are similar in nature to those causing chemical combination. Oil spreads because a part of the oil molecule (e.g., the COOH group of oleic acid) is attracted by the water. If active groups are absent no spreading results (for example, with pure hydrocarbon oil). The oil required to affect surface tension corresponds to a layer 1 molecule deep. With limited oil, spreading stops when the available COOH groups are in contact with water. There is no transition layer below the contact layer. Gibbs's equation permits computation of the amount of solute required to form the non-molecular layer, and the length and cross sections of the molecules forming the surface may then be found.

Bridgeman's study of polymorphism showed that one out of three substances is polymorphic (reversibly so),—thirty-seven such substances having been found. Ninety-four other substances gave no result at 12,000 kilograms' pressure at 20° and at 200°. Chemical similarity and crystalline similarity are used as clues in locating probable isomorphous groups. There seems to be no simple type diagram toward which polymorphic substances tend at high pressure. He suggests that the shape of the atoms is a factor to be studied.

Johnstone finds that stretching increases the thermal conductivity of wires of copper, steel, nickel, aluminum, and zinc by .05 per cent at a tension of .7 of the elastic limit. Popplewell, both by theory and test, shows that high speed reversals in alternating stress tests enhance endurance, confirming previous results. Iron wires, according to Lautz, resist fracture by alternate bending with fair constancy up to 120° C., above which the resistance increases to 220°, when it falls abruptly. The maximum resistance is double that at ordinary temperatures. Hersey develops formulas for the frequency of vibration of elastic systems, including changes with temperature, and applies these to special cases such as the temperature compensation of a tuning fork, to the telephone diaphragm, and to the balance wheel of a watch.

Rayleigh's stimulating discussion of glass cutting awakened much illuminating discussion. He recalled that the only account of glass cutting by the diamond is a century old, and in suggesting renewed inquiry, asked a number of pertinent questions. Several writers took up the subject and discussed the hiss of the diamond at work, the beautiful scalloped border of the cut, the snapping rift, stress lines near a compressed area on the surface of an elastic solid, and the sinking of the diamond into the glass before the rift occurs.

Silberstein relates the molecular refractivity of an isotropic substance having two equal atoms, defining two constants of the atom independent of the free wave length. Refraction and dispersion are simple functions of these constants and of interatomic distance. For hydrogen the central distance between the atoms is nearly a semi-diameter of the hydrogen molecules. Hydrogen and nitrogen give the same results.

Mercury light is emitted when ions recombine to form atoms—not at the time the atoms break up, since the maximum intensity occurs after the current maximum, and when the current ceases the light continues. Beatty concludes that energy distribution in the spectrum does not depend on the energy of the striking electron or molecule. The luminous discharge follows the recombining of ionized atoms.

Buisson reports the visibility distance of a light of one candle power (not an actual candle) as 27 kilometres, much higher than heretofore accepted. This corresponds to a star of magnitude 8, the energy received by the eye being 10<sup>9</sup> ergs. Coblentz derives the mechanical equivalent of light of maximum illuminous efficiency, one watt equals 617 lumens, or 49.1 candles. Coblentz rates the radiant luminous efficiency of a vacuum tungsten lamp operating at 1.23 watts per candle as 1.42 per cent. Nutting gives graphic results showing eye adaptation to high and low illumination, effect of varying brightness of field on percentage brightness-change perceptible to the eye, action of pupil aperture in closing to counteract excess light, and relation to the problem of glare.

Ishiwara deduces a general series formula for spectral line series following Bohr's derivation of the Balmer formula from the quantum theory. Sanford finds a simple relation between convergence wave length of spectral series and the atomic radii. He derives the electronic radius in terms of wave lengths and finds Heydweiller's radii closely proportional to the square roots of the convergence wave lengths.

Crystalline liquids which reflect violet have feeble rotatory power, which increases as the reflected light has greater wave length, according to Gaubert. Pure cholesterine propionate rotates the yellow waves 100° or more through a thickness of one millimetre. Proceeding from the violet end, rotation is first laevo and then dextro, passing through zero when light of that wave length is reflected.

Miller's Lowell lectures on sound, with their wealth of illustrative material, appeared during the year, containing his interesting graphs of tone qualities, recorded with his own phonodeik. Stewart made a study of "binaural beats" from two tones slightly off pitch directed one to each ear. The war has given much opportunity for studying the audibility of distant bombarding and explosions, and much data was published during the year. The Doppler effect particularly was the subject of discussion. The case of a deaf soldier affected by distant explosions showed that distance transmission was through the earth. Two new precision sources of sound were described, one by Arnold and Crandall, the other by Wente. The former is a thermophone of simple design and easy to operate at any frequency or with known relative loudness at different frequencies throughout the acoustic range. Wente's transmitter, of the electrostatic

type, measures sound intensities over a wide range of frequencies and may be used to ascertain phase differences and relative intensities of components.

The equilibrium temperature of a body exposed to radiation results in a striking conclusion given by Fabry. From this it appears that a sphere having a single violet absorption band would be heated to the melting point of platinum if exposed to solar radiation at the outer limit of the earth's atmosphere. This is based on the fact that such a body could exchange energy only as violet radiation which is emitted appreciably only at high temperatures. Until then energy would be absorbed but not emitted and thus the temperature would rise.

The relationship discovered by Nernst between melting points of pure metals and their atomic weights led Kutter to plot the latter against volatility, finding the points to lie on a single curve which he derived. The volatility of gold in an atmosphere of hydrogen at 250° and above is ascribed by Mostowitsch and Pletneff to the formation of a volatile hydride,  $\text{Au}_2\text{H}_2$ , since gold is not volatile in other gases.

Fehr found that the magnetic critical point in carbon steels indicated without exception the proper annealing temperature to give the finest grain, maximum ductility, and maximum shock resistance. Careful control of temperature gives a high carbon steel the ductility of a low carbon and with a higher elastic limit.

Burgess discusses high temperature measurements in steel furnace practice, stating that pyrometric methods are impracticable on the Bessemer charge, but in open hearth practice pyrometric control is quite feasible.

Pomey would make specific inductive capacity a fundamental unit, since in the c. g. s. system the electrostatic and electromagnetic units are incompatible. Brylinaki suggests as fundamental the units of length, time, electric current, and electric resistance. Of the c. g. s. units, mass alone would change, becoming ten metric tons.

The call for more systematic quantities is voiced by Tolman, who believes physics must simplify and systematize its units, and suggests five classes corresponding to space, time, matter, electricity, and entropy (or degree of run-downness)—namely geometrical, kinematical (including time), mechanical, electrical, and thermodynamical. He would substitute quantity of electric charge and entropy respectively for permeability and temperature, and emphasizes that all fundamental quantities should have extensive magnitude.

Hall suggests that electric conduction may be due to the metal ion, and finds that one ion for each 170 atoms would maintain 1000 amperes per square centimetre in copper at 300° C. He shows that not far above absolute zero conductive contact between atoms is rare and the electrons would not go from one metal particle unless one is an atom and the other an ion.

Shaha discussing Maxwellian pressure considers the case that good electric conductors made good reflectors of radiant energy. The electric vector of the light ray gives a small charge on the surface and a current within the conductor. The former gives a negative surface pressure; the latter in the field of the magnetic vector of the ray gives a positive pressure. The average of the two gives the radiation pressure.

Rudge describes a self-recording electrometre for atmospheric electricity on the principle of a quadrant electrometre designed for cheapness and simplicity. The deflections of the needle show the variations in atmospheric potential gradient. A radium collector was used in connection with the electrometre.

Kennard shows that electromagnetic induction depends in part upon absolute rotation in the mechanical sense, requiring a stationary ether—a difficulty for relativists who reject the ether. Barnett produces magnetization by rotation, in iron, nickel, and cobalt, confirming his own equations, qualitatively and quantitatively, assuming that electrons alone have orbital motion in the molecule. Rood finds cast iron unaffected magnetically by tension, but that wrought iron and steel are greatly affected.

A number of magnetic storms are described in the journals of the year and Tarrada has studied the short period disturbances. The latter are shorter at noon, longer at night—the daily frequency being correlated with the sun's rotation period.

The year's work on X-rays included the determination of refractive index of X-rays as unity, certain to within five parts in a million. Davis develops a theory of "white" X-ray spectrum, concluding that the energy radiated is proportional to the square of the frequency. He derives an expression for the relation between radiated energy at constant wave length, and the voltage applied to the X-ray tube.

Rutherford finds the gamma rays from radium C have one-hundredth the wave length of the soft gamma rays from radium B, much shorter than any given at highest voltages in X-ray tubes. X-rays excited at 196,000 volts were found by Rutherford to penetrate ten millimetres of lead with intensity reduced to less than one-millionth the initial value.

Barkla shows X-rays to be emitted by electrons, groups of electrons or even atoms, often in quantities minute compared with the quantum. To him the quantum is "unit of atomic energy which must be absorbed to change the configuration of the atom and is radiated when that configuration returns to its original state." The cathode displaces electrons and produces vibration, some characteristic, others not, which emit primary radiation.

The rate of decay of brightness of radium luminous paints varies with the amount of radium present; a decline of 50 per cent in a year is quite common. In one case this occurred within twenty-four hours.

The radioactivity of stony meteors was found by Quirke and Finkelstein to be one-fourth that of igneous rocks. Metallic meteorites were nearly free of radioactivity. Twenty-two samples were studied. See also ASTRONOMY.

PIATT, JOHN JAMES. An American journalist and author, died in Cincinnati, Ohio, February 16, 1917. He was born at James' Mills, Ind., in 1835. His education was gained at Capital University, Columbus, Ohio, and at Kenyon College. While he was contributing verse and editorials to the Louisville (Ky.) *Journal* between 1857 and 1860, he was intimate with William Dean Howells, and in the latter year they published together *Poems of Two Friends*. Mr. Piatt went to Washington in 1867 to be a clerk in the Treasury Department. He returned to editorial work on the Cincinnati

*Chronicle*, and, for several years was correspondent of the *Cincinnati Commercial*. He was chosen librarian of the National House of Representatives in 1871. For ten years (1882-93) he served as a United States consul in Ireland at Cork, and for a few months at Dublin. Mr. Piatt published many volumes of verse, such as *Landmarks*, *Poems of House and Home*, and *Western Windows*, and others with his wife. A biographical sketch was written by G. D. Prentice for a collected edition in 1880.

**PIGGERY, MUNICIPAL.** See GARBAGE AND REFUSE DISPOSAL.

**PIG RAISING.** See STOCK RAISING.

**PILGRIM TERCENTENARY.** See EXPOSITIONS.

**PINES, ISLE OF.** An island south of the western end of Cuba, forming part of the Cuban province of Habana. Area, 986 square miles. There is a population of only a few thousands, but a considerable amount of capital, especially American, has been invested in the island. It is estimated that about 98 per cent of the entire island is owned by American investors. In 1917, it was reported that the total area under cultivation was 11,330 acres, of which 8349 acres were in citrus fruits, 468 in pineapples, 640 in vegetables, and 1873 in miscellaneous fruits and vegetables. A particularly fine quality of grapefruit is produced. The island has 16 American manufacturing plants, 26 fruit and vegetable packing houses, 6 sawmills, 26 nurseries, and an American bank with two branches.

**PINK BOLLWORM.** See COTTON; ENTOMOLOGY.

**PITTSBURGH, UNIVERSITY OF.** A non-sectarian co-educational institution at Pittsburgh, Pa. Until 1908 it was known as the Western University of Pennsylvania and had been founded under that name in 1819. In the fall of 1917 there were 3015 students and 450 members of the faculty; 470 students, 68 members of the faculty, and 263 alumni were in government service at the end of the year. Volumes in the library numbered 39,250. Productive funds in 1917 amounted to \$566,841, and the income therefrom to \$27,159. Chancellor, Samuel Black McCormick.

**PLANETS.** See ASTRONOMY.

**PLANT BREEDING.** See BOTANY; and HORTICULTURE.

**PLANT DISEASES.** See BOTANY.

**PLANT ECOLOGY.** See BOTANY.

**PLANT PHYSIOLOGY.** See BOTANY.

**PLANT QUARANTINE.** See BOTANY.

**PLATINUM.** The platinum situation in 1917 was very serious in the United States. At the beginning of the year, the actual supply was held to be fairly large although the production from Russia was smaller than before the war. In November, 1916, the Russian government had assumed the output of the mines through the agency of the State Bank, but with the revolution, the industry became thoroughly demoralized and in several instances the managers of mines were driven away and their operation was attempted by peasants. The production of platinum from the Ural Mountains was estimated by Russian authorities as 100,000 troy oz. in 1917, as compared with 166,778 oz. in 1916 and 113,090 oz. in 1915, and 155,838 oz. in 1914. Colombia, the only other substantial producer of platinum had an estimated production of 30,000 in 1917 and the remainder

of the world had an output estimated at 1500 troy oz., so that the total world's production was estimated at about 131,500 troy oz.

In 1917, there was a marked shortage of platinum which threatened the jewelry trade which had been a heavy purchaser and with the entrance of the United States into the war, the public were informed that platinum was required for technical purposes and not only were jewelers and others warned against its use for that purpose, but the general public was told that the metal itself might be required even from their own jewels. Late in the year about 21,000 troy oz. of platinum, which had been collected in Russia by various American engineers, the Russian-English Bank, of Petrograd, and U. S. Secretary of Commerce Redfield, was available for the technical purposes of the United States government. The price of platinum which at the beginning of the year was about \$80 per troy oz. rose to \$105 by the end of February and was maintained at about this figure with minor fluctuations during the rest of the year. A few deposits of platinum in Alaska were announced as being of prominence, but no large amount came on the market from this source. See CHEMISTRY, INDUSTRIAL.

**PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA.** The association was organized in Washington, D. C., in 1907. Since then there has been increasing activity in securing playgrounds and recreation centres for young and old, statistics showing that during 1917 at least 480 cities conducted playground and recreation centres under leadership. The cities reporting on expenditures stated that they had expended \$4,234,718. Many cities have been added through the field secretaries sent out by the association to establish on a permanent basis year-round systems of recreation headed by recreation secretaries or superintendents of recreation.

The association has an employment department, and through this has been able to select workers of training and experience. Communities in all parts of the United States and also many in foreign lands have been aided through correspondence. As a part of its educational and propaganda work the association publishes a monthly magazine, *The Playground*, and many pamphlets on all phases of recreation work. At the request of the War Department Commission on Training Camp Activities the association is now sending community organizers into each of the cities near the training camps to organize the social and recreational life of the communities for the benefit of the soldiers in their free time. This is known as War Camp Community Service. The officers of the association in 1917 were: President, Joseph Lee; first vice-president, H. P. Davison; secretary, H. S. Brancher; treasurer, Gustavus T. Kirby. Theodore Roosevelt is honorary president.

**PODOLIA.** A government of southwestern Russia, lying east of the Austrian crownland of Galicia and between the Russian governments of Volhynia, on the north, and Bessarabia on the south. The area is stated at 16,224 square miles, which is about twice the size of Massachusetts. Population, 4,127,600, according to the estimate of January 1, 1915. Agriculture is important, the soil resembling that of the State of Iowa and the chief products being cereals and beet sugar. Before the great war

Podolia exported many horses, cattle, and sheep to Austria-Hungary. The capital is Kamenets Podolsk; prior to the war it had an estimated population of 52,000, fully one-half being Jewish.

**POETRY.** See LITERATURE, ENGLISH AND AMERICAN, and articles on foreign literatures.

**POET SCOUT.** See CRAWFORD, JOHN.

**POISON GAS.** See GAS POISONING.

**POLA.** The Austrian naval base. See ISTRIA.

**POLAND.** Formerly a European kingdom; now a territory known sometimes as Russian Poland and belonging to Russia, but not included in Russia proper. At the time of its greatest extent, the kingdom embraced what is now Russian Poland, Livonia, Courland, West Russia, part of eastern Prussia, Galicia, and the western part of Little Russia.

Poland (that is, Russian Poland) has an area of 43,946 square miles, divided among the following nine governments: Kalisz, Kielce, Lomza, Lublin, Piotrków, Plock, Radom, Suwalki, and Warsaw. The estimated population, January 1, 1914, was 12,247,600 (9,226,300 rural, 3,021,300 urban). At the last Russian census (1897), 71.8 per cent of the population was Polish, 13.5 Jewish, 6.7 Russian, 4.3 Germanic, and 3.3 Lithuanian. About three-fourths of the people are Roman Catholic. Prior to the great war the population of Warsaw, the capital, was about 909,000; Lodz, about 40,000; Sosnowiec, nearly 100,000. See WAR OF THE NATIONS.

**POLAR RESEARCH.** The principal events connected with polar exploration during 1917 were the rescue of Shackleton's auxiliary party by the relief expedition to Ross Sea; the return after years of absence of the MacMillan expedition from its fruitless efforts to locate the mythical Crocker Land; definite information of the fate of the Russian attempt under Brusilof to make the Northeast Passage; and the safe return to the Arctic coast of America of the northern party of Stefansson's Canadian expedition. The proposed attempt of Amundsen to cross, by drift with the ice-floes, the Arctic Ocean from Bering Strait to Spitzbergen Sea, was postponed until the termination of the war.

**ARCTIC EXPLORATIONS.** The only Arctic work in the way of search for unknown islands was the continuation of explorations already in progress. The Canadian Arctic Expedition consisted of two parties, the northern under Stefansson personally, and the southern under Dr. R. M. Anderson. The last-named official returned in 1916, and his report on his important scientific work was published in the annual *Report of the Naval Service*, for 1917. Stefansson kept the field, his work being confined to the region to the northwest of Banks Land and Prince Patrick Island. Beyond the report that he had discovered several large islands in the sea to the north of Alaska, no definite information was available. Stefansson returned to the delta of the Mackenzie River, where he was to pass the winter of 1917-18.

**Baffin Land.** Belated reports of Munn's explorations of little-known Baffin Land, 1914-15, indicated decrease of the native population, and the absence of alluvial gold.

**Crocker Land Expedition.** This expedition under Prof. D. B. MacMillan was initiated in 1911 to explore the land reported by Peary as discovered by him in 1906. From their base at Etah, Greenland, MacMillan and Green reached

82° 30' N. latitude, 102° W. longitude, the charted location, whence no land was in sight: it was evidently non-existent. Green and other members returned via sledge to Upernivik and thence to the United States. MacMillan remained with the rest of the members at Etah awaiting a relief steamer. Two efforts to reach them failed, but in August, 1917, the *Neptune* brought the expeditionary force with its collections to Sydney, Cape Breton. In 1916 MacMillan made from Etah a sledge journey of fifty-six days, covering 1360 miles of travel. Crossing Ellesmere Land, and skirting the south shores of Heiberg and Ringnes Islands, he reached Finlay Island of McClintock's explorations, 1853. It is notable that MacMillan was then within less than 250 miles of the land discovered by Stefansson to the west. Renewing his field work in 1917, MacMillan made two journeys along the west shore of Ellesmere Land, surveying it from Cape Sabine southwards to Clarence Head, in about 76° 40' N. He confirms previous reports that this coastland is largely ice-covered, and adds details of enormous glaciers and several new islands. At Cape Isabella he found records of Nares and Young, 1875-76. Scientific collections of value were made during all his journeys.

**Brusilof Expedition.** The fate of this Russian expedition, which attempted the Northeast Passage, is now known. Its ship, *Saint Anne*, was beset in Kara Sea, whence she drifted for 524 days, a distance of 1540 nautical miles. Her course was from Yalmal Peninsula north, off the coast of Franz Josef archipelago, to 82° N., and then northwest to a point fifty miles north of Prince Rudolph Island. Part of the crew left her in April, 1914, when she was drifting northeast into the Arctic Ocean. Her soundings reveal the continental shelf much nearer Franz Josef Land than was anticipated.

**Bear Island.** The most important arctic research materially was that made on this desolate island, about 200 miles north of Norway. Norwegian scientists discovered coal veins of extensive quantity and of good quality, the strata on the north coast being nearly six feet in thickness, and easily mined. The exploitation of these deposits was commenced by a Norwegian company. A summer force of forty men, and a small permanent colony made progress. A wireless service was being installed, and the construction of harbor facilities was contemplated.

**ANTARCTIC.** The Shackleton expedition, which planned to cross the continent of Antarctica from Weddell Sea to South Victoria Land, completed its efforts in 1917. As before recorded, the main party endeavored to establish a base near Coats Land, Weddell Sea. The *Endurance* was beset, and after a drift of hundreds of miles in ten months was crushed in 69° S., 52° W. Meanwhile new land, Caird Coast, was discovered in about 77° S., 40° E., some 200 miles in extent and glacier-covered. By a journey beset with hazards the shipwrecked party reached Elephant Island, their boats nearly useless. Leaving twenty-three men on the island, Shackleton with five others made a desperate voyage in a whale boat, about 800 miles to South Georgia for help. After three failures, Shackleton was successful in the fourth attempt to rescue the imprisoned men. Meanwhile disaster threatened the safety of the auxiliary

party, which had reached Cape Crozier, Ross Sea, where it was to await Shackleton's coming across Antarctica. While discharging cargo the *Aurora* was driven from her moorings by a violent blizzard. Beaten in the pack she drifted helpless 1200 miles in ten months to the north, and returned to New Zealand for repairs. Capt. McIntosh and nine men were ashore when the ship was driven seaward, but fortunately there was food enough for the winter. In December, 1916, Shackleton sailed for Cape Crozier, whence he brought back the seven survivors in February, 1917. McIntosh and two others perished during the winter—two in a blizzard and one by disease.

**POLIOMYELITIS.** Efforts were made during the epidemic of infantile spinal paralysis in 1916 to develop a serum treatment of this disease. Serum from recovered patients was used with very indefinite results. The most promising immune serum appears to be that of Rosenow, who reports fifty-four patients treated with immune horse serum during an epidemic in Davenport, Iowa, with a mortality of only 8 per cent, as against twenty-three patients in the same epidemic untreated or treated in other ways, with a death rate of 35 per cent. Six of Rosenow's patients were moribund when the serum was injected, sixteen of the cases were in the preparalytic stage, and all of these recovered. Nuzum and Willy treated 159 patients with a mortality rate of 11.3 per cent. Of 100 untreated patients admitted during the same period of time into the hospital, 45 per cent died. The serum as prepared and given by Rosenow, was that of a horse which had been immunized by successive injections of streptococci, isolated from the central nervous system of monkeys infected with poliomyelitis by means of a virus. In treatment the routine procedure consists of making a spinal puncture for diagnostic tests and for the relief of intraspinal pressure, from 5 to 30 c.c. of spinal fluid being withdrawn slowly. If the tests were positive an injection of serum was given at once. The serum is activated with complement by adding one part of fresh guinea-pig serum to nine parts of immune serum and incubating at 37 degrees C. for one hour. It is then diluted with equal parts of 0.85 per cent salt solution. This preparation is injected slowly into a superficial vein within thirty-six hours after activation, 2 c.c. being injected per minute, and the dose varying according to the age of the patient and the severity of the symptoms, from 6 to 14 c.c. of the mixture in babies, up to 10 to 20 c.c. in older individuals. Repeated injections are given in from eight to twenty-four hours until a recession of the symptoms is noted.

**POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF.** In December, 1917, the membership of the academy was 6263, with a subscription list of 1052. The president of the academy is Dr. L. S. Rowe; the secretary, Dr. J. P. Lichtenberger; the editor, Dr. Clyde L. King. The twenty-second annual meeting will be held April 26-27, 1918. During the year the following bi-monthly publications (*The Annals*) were issued: January, "The Present Labor Situation;" January Supplement, "The Purposes and Ideals of the Mexican Revolution;" March, "Modern Insurance Problems;" May, "Stabilizing Industrial Employment;" May Supplement, "The Mexican Constitution of 1857 compared

with the Mexican Constitution of 1917;" July, "America's Relation to the World Conflict and the Coming Peace;" September, "Justice Through Simplified Legal Procedure;" November, "The World's Food."

**POLITICAL ECONOMY.** The *YEAR BOOK* contains numerous articles treating matters of economic import. Under *FINANCIAL REVIEW* is given a general survey of business and financial conditions in the United States, Great Britain, France, Germany, Russia, Japan, and Canada. Under *LABOR* will be found references to subjects treating various aspects of industry; and likewise *BANKS AND BANKING* includes information regarding banking developments at home and abroad and gives references to other related articles. See also *FOOD CONTROL*; *INSURANCE*; *OLD AGE PENSIONS*; *PRICES*; *SOCIAL ECONOMICS*; *SOCIOLOGY*; *TARIFF*; *TAXATION*; and *TRUSTS*.

The *AMERICAN ECONOMIC ASSOCIATION* held its thirtieth annual meeting at Philadelphia December 27-29. At the same time were held sessions of seven other associations, including the Political Science, Sociological, Statistical, Labor Legislation, Historical, Farm Management, and Accounting Instructors. The general topic of the Economic Association programme was "War and Reconstruction." At a joint meeting addresses were given by President John R. Connors of the Economic Association on "Economic Reconstruction"; by Munroe Smith of the Political Science Association on "The Nature and Future of International Law"; and by George E. Howard of the Sociological Society on "Ideals as a Factor in Future Control of International Society." Among other addresses were the following: "Federal Taxes upon Income and Excess Profits" by T. S. Adams; "Farm Management Investigations Relative to Utilization of Land" by W. J. Spillman of the United States Department of Agriculture; "Present Valuation of Railroads by the Interstate Commerce Commission" by John Bower of Princeton University. In a session devoted to problems of the employment of labor the following papers were read: "Federation of City, State, and Federal Systems of Employment Offices" by Henry R. Seager of Columbia University; "Lessons from English Labor Experiences during the War" by M. B. Hammond of Ohio State University; and "Plan of the Department of Agriculture and Its Operation" by E. B. Wilcox of that department. Papers of interest to members of the Sociological Society included "Social Control of the Accumulation and Distribution of Wealth" by E. C. Hayes of the University of Illinois; and "Motives of Economic Life" by Carleton H. Parker of the University of Washington. There were two papers by Professors Benjamin M. Anderson, Jr., of Harvard University and Irving Fisher of Yale University on problems relating to prices and the value of money. Another general topic considered was "Government Activity in War Time" with papers on "Coöperation with the States" by Arthur W. McMahon of the Council of National Defense; and "New Problems of Governmental Efficiency" by Arthur W. Holcombe of the Federal Bureau of Efficiency.

**Bibliography.** Below is given a classified list of some of the more important books published during the year. Additional bibliographies of interest will be found under *AGRICULTURAL CREDIT*; *ARBITRATION AND CONCILIATION*; *INDUSTRIAL*; *CHARITIES*; *CHILD LABOR*; *OCCUPA-*

TIONAL DISEASES; OLD AGE PENSIONS; PENSIONS FOR MOTHERS; SOCIAL ECONOMICS; SOCIOLOGY; WOMEN IN INDUSTRY; and WORKMEN'S COMPENSATION.

**TRANSPORTATION AND COMMERCE:** Homer B. Vanderblue, *Railroad Valuation*; *Official Proceedings of the Fourth National Foreign Trade Convention held at Pittsburgh, January 25-27, 1917*; W. M. Acworth, *Historical Sketch of Government Ownership of Railroads in Foreign Countries*; H. W. Blake and W. Jackson, *Electric Railway Transportation*; E. J. Clapp, *Railway Traffic*; M. Wymond, *Government Partnership in Railroads*; Library of Congress, *List of Publications Pertaining to Government Ownership of Railways*; C. E. Grunsky and C. E. Grunsky, Jr., *Valuation, Depreciation, and the Rate-base*.

**MONEY AND BANKING:** H. W. Wolff, *Co-operative Credit for the United States*. Second and third reports of British Departmental Committee on Increase of Prices of Commodities Since the Beginning of the War; Department of Commerce, *Wholesale Prices of Leading Articles in United States Markets, January, 1914, to December, 1916*; M. B. Foster, *Banking*.

**POPULATION:** Havelock Ellis, *Essays in War Time*; *Further Studies in the Task of Social Hygiene*; G. Bodard and V. L. Kellogg, *Losses of Life in Modern Wars: Austria-Hungary, France (1916)*; René Worms, *Natalité et régime successoral*; Grace Abbott, *The Immigrant and the Community*; W. J. Robinson, *Eugenics, Marriage, and Birth Control*; British Registrar-General, *Births, Deaths, and Marriages, England and Wales (1915)*; Bureau of the Census, *The Blind in the United States (1910)*.

**BUSINESS ORGANIZATION AND METHODS:** Charles W. Holman, *Marketing and Farm Credits*; Ralph S. Butler, Herbert F. DeBower, and John G. Jones, *Marketing Methods and Salesmanship*; Ralph S. Butler, *Marketing Methods*; John C. Jones, *Salesmanship and Sales Management*; W. H. Lough, *Business Finance*; F. A. Parkhurst, *Applied Methods of Scientific Management*, 2d ed.; P. P. Wahlstad, *Credit and the Credit Man*; W. H. Walker, *Corporation Finance*; Francis L. Stetson, James Byrne, Paul D. Cravath, George W. Wickersham, Gilbert H. Montague, George S. Coleman, and William D. Guthrie, *Some Legal Phases of Corporate Financing, Reorganization, and Regulation*; W. F. Gephart, *The Principles of Insurance, Vol. I. Life. Vol. II. Fire*; E. R. Hardy, *Insurance*; Boris Emmet, *Profit Sharing in the United States*; O. H. Benson and G. H. Betts, *Agriculture and the Farming Business*; A. W. Atwood, *How to Get Ahead*; *Saving Money and Making It Work*; J. T. Brand, *The Business of Trading in Stocks*; R. S. Butler, H. F. DeBower, and J. G. Jones, *Market Methods and Salesmanship*; A. H. Church, *Manufacturing Costs and Accounts*; J. H. Gray, *How Does Industrial Valuation Differ from Public-utility Valuation?*; W. F. Kemble, *Choosing Employees by Mental and Physical Tests*; P. D. Leakem, *Depreciation and Wasting Assets: and Their Treatment in Computing Annual Profit and Loss*; J. T. Madden, *Accounting Practice and Auditing*; T. W. Mitchell, *Accounting Principles*; P. H. Nyström, *Retail Store Management*; C. E. Woods, *Unified Accounting Methods for Industrials*; G. H. Montague, *Business Competition and the Law*; W. H. S. Stevens, *Unfair Competition*;

Melvin T. Copeland (Ed.), *Business Statistics*.

**ECONOMIC HISTORY:** Clarence W. Alvord, *The Mississippi Valley in British Politics*, 2 vols.; William Cunningham, *The Progress of Capitalism in England*; G. B. Dibblee, *Germany's Economic Position and England's Commercial and Industrial Policy After the War*; H. S. Furniss, *The Industrial Outlook; Being Essays on Construction by Various Authors*; Yves Guyot, *Les causes et les conséquences de la guerre*; F. A. Ogg, *Economic Development of Modern Europe*; R. Peret, *La population, le budget, la fortune et la dette publique de la France, de ses allies et de ses ennemis avant la guerre*; A. D. Smith, *Rates of Postage. An Historical and Analytical Study*; H. Hauser, *Germany's Commercial Grip of the World*; E. G. Strutt and others, *British Agriculture. The Nation's Opportunity*; Charles J. Brand, *Meat Situation in the United States. Part I, Statistics of Live Stock, Meat Production, and Consumption, Prices and International Trade. Part II, Live Stock Production in the Eleven Far Western Range States. Part III, Methods and Cost of Growing Beef Cattle in the Corn Belt. Part IV, Utilization and Efficiency of Available American Feed Stuffs. Part V, Methods and Cost of Marketing Live Stock and Meats*; R. M. Tryon, *Household Manufactures in the United States, 1640-1860*; J. S. Davis, *Essays in the Earlier History of American Corporations*; L. Dominian, *The Frontiers of Language and Nationality in Europe*, published for the American Geographical Society of New York; Ernst Freund, *Standards of American Legislation. An Estimate of Restrictive and Constructive Factors*; H. R. Hodges, *Economic Conditions, 1815 and 1914*; Margaret Pease, Jean Jaurès, *Socialist and Humanitarian*.

**POLITICAL PARTIES.** See UNITED STATES.

**POLO.** The American Polo Association cancelled all its championship tournaments for 1917 because of the war, which called a majority of the star players into the army. The game was played, however, at the various camps and matches were held at the Rockaway Hunt and Rumson Country clubs for the benefit of the Red Cross. A tournament held in July at the Rockaway Club netted \$7000 for this cause.

**POOL.** See BILLIARDS AND POOL.

**PORCELAIN.** See ANTHROPOLOGY.

**PORK.** See STOCK RAISING AND MEAT PRODUCTION.

**PORTER, ROBERT PERCIVAL.** An American journalist, industrial expert, and author, died in London, England, February 28, 1917. He was an Englishman, having been born in Norwich in 1852, and although later naturalized as an American citizen, before his death he took out papers to regain his original allegiance. At twenty he was in the United States and beginning newspaper work on the *Chicago Inter-Ocean*. In 1880-81, as expert on the United States Census, he reported on wealth, debt, taxation, and transportation, and in 1882 he was tariff commissioner. After four years on the editorial staffs of the *New York Tribune* and the *Philadelphia Press*, he, with Frank Hatton, founded the *New York Press* in 1887. Again in 1890-94 he was connected with the census, this time as director. President McKinley appointed him special fiscal and tariff commissioner to Cuba and Porto Rico in 1898 and the next year he arranged with Gen. Gomez for disband-

ing the Cuban army. Since 1904 Mr. Porter had been on the staff of the *London Times*, for which he edited the first edition of an *Engineering Supplement* and many other supplements on countries, industries, and the great war. From 1906 to 1909 he was correspondent of the *Times* at Washington. He traveled widely, and wrote much on economic and other subjects, publishing, besides many articles, *The West in 1880*, *Breadwinners Abroad*, *Free Trade Folly*, *The Commerce and Industry of Japan*, *Life of William McKinley*, *Industrial Cuba*, *Lectures and Addresses on Municipal Ownership*, *Dangers of Municipal Ownership*, *The Full Recognition of Japan*, and *The Ten Republics*.

**PORTO RICO. AREA AND POPULATION.** The area of the island is 3435 square miles. The population in 1910 was 1,118,012, and the estimated population in 1917 was 1,300,000.

**AGRICULTURE.** All the industries of the country have their basis in agriculture. The chief products are sugar, tobacco, and fruits. The board of commissioners of agriculture have carried on effective work for several years in the stimulation of agriculture throughout the island, and in introducing advanced methods of cultivation. A new department of agricultural labor, made possible by the approval of the new organic law, was begun on March 2, 1917, and the work of the Board of Commissioners of Agriculture, including the insular experiment station and the Bureau of Labor were at once assigned to the new department.

**COMMERCE.** The economic prosperity of Porto Rico, which began in 1915, was continued through 1916 and still existed in 1917. There was a general though varying increase in wages, and there were less unemployed than had existed in any time in recent years. The external trade in 1917 reached a total value of \$134,516,141, which is about \$29,000,000 more than the figures for 1916, which in turn surpassed those of any previous year. The increase was about evenly distributed between the exports and imports. The increase in the sugar exports was very marked, both in quantity and value. The increase in value was more than \$8,000,000, or about 18 per cent, and in quantity, 63,988 tons or about 15 per cent. In the exportation of articles other than sugar, there was an increase of about \$6,000,000. About \$4,000,000 of this was for the items of tobacco and coffee, and cigarettes. The exportation of cigarettes and tobacco recovered from the decline of 1916, and reached the highest level ever recorded. Coffee only partially recovered from the decline in 1916, due in part, at least, to a decline in prices. The imports in 1917 reached a total value of \$53,545,244, or \$14,594,068, more than the value in 1916. The imports from the United States gained in value \$13,646,734, and amounted to \$49,539,249. Over 91 per cent of all the external trade was carried on with the United States. While internal business showed every evidence of increased activities during the year, there was no sign of inflation or overexpansion due to wild speculation. During the year there were organized twenty new domestic corporations and nine foreign corporations. Of the domestic corporations over one-half were for agricultural and mercantile purposes.

**EDUCATION.** Special emphasis was laid, during the year, upon increasing the efficiency of the educational system as a whole, rather than

attempting to concentrate attention upon the increase of the number of pupils enrolled. To this end much time and effort were devoted to the better grading of pupils, closer supervision of instruction, raising the standard of teachers, and better adaptation of the courses of study to the needs and abilities of the pupils. The total number of pupils enrolled during the year were 152,063. The teachers numbered 2676. Much greater stress was placed upon the rural schools, which had hitherto been relatively neglected, and the enrollment in these schools showed a greater relative number than that in the urban schools. Of the total number of pupils enrolled 85,715 were male and 64,637 were females. The white pupils numbered 119,119 and the colored 31,233. There were 1675 female and 1001 male teachers. All but 193 of these teachers were natives. The schools were carried on in 1666 different buildings of all sorts and sizes. The total expenditures for school purposes during the year were \$2,106,389, an increase of \$266,373 over the expenditures of 1916.

**HEALTH AND SANITATION.** In 1917 a new Department of Health was formed to care for the sanitation of the island. During the year there was an unusually widespread and virulent epidemic of measles. The increased mortality rate for the year caused much alarm. It was 28.5 per 1000, the highest rate in seven years. This was partly due to the general high cost of foodstuffs, and the condition was aggravated by the destruction by cyclone of the plantain and banana trees, the source of a large part of the food of the poor throughout the island. The investigations of the Tropical Medical and Hygiene Institution continued along the same lines as in former years and valuable results were obtained.

**FINANCE.** The total receipts of the treasury for the fiscal year amounted to \$10,937,947. There was a balance at the beginning of the year of \$2,001,648. The total expenditures were \$10,356,471, leaving a balance at the end of the year of \$581,476. The total bonded indebtedness of the government was increased during the year by \$1,000,000. The increase was for irrigation purposes and for refunded bonds under on act of the school board at San Juan. The total outstanding debt on June 30, 1917, was \$9,280,000.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the Girls' Charity Schools, the Boys' Charity School, the Reform School, the penitentiary, and jails. There were in the Girls' Charity School at the end of 1917, 175 inmates, and in the Boys' Charity School, 270. The District Court disposed during the year of 1800 criminal cases.

**POLITICS AND GOVERNMENT.** On March 2, 1917, the president approved the new organic act for Porto Rico. It was received everywhere with great satisfaction and many celebrations were held in various municipalities. The people were especially pleased in the granting of American citizenship. The new government was promptly put into effect. By the terms of the law the legislative power in Porto Rico is vested in a Legislature consisting of two houses. The Senate consists of nineteen members elected for four years. The House of Representatives consists of thirty-nine members elected for a term of four years. The members of the Senate and House of Representatives receive \$7.00 per day

for ninety days of each session. Sessions are held biennially. The next session will be held the second Monday in February, 1919. The designation of the qualifications for suffrage is left to the Porto Rican legislature. Both branches of the legislature are to be elected by the voters, but its action must be approved by Congress and by the governor, who is appointed by the president. A commissioner to represent the island in Congress is appointed by the people.

The entrance of the United States into the war brought to Porto Rico many new problems and difficulties. Among the most serious of these was the peril of interrupted communication with the continents, and the loss of ships engaged in trade. This possibly tended to increase the price of foodstuffs, which was already abnormally high. In view of these conditions a law was passed creating a food commission with wide powers and with authority to borrow, with the approval of the governor, as much as \$1,000,000 if necessary, to provide food for the people. The commission so effectively carried out its duties, that speculation in food products was practically eliminated, and prices were held at reasonably low levels. After the enactment of the compulsory military service law, the Porto Rican people showed a commendable spirit of patriotism and loyalty to their new citizenship. After the full time allowed for the renunciation of citizenship was passed, it was found that not over 290 people in the whole island had made this renunciation, while over 800 persons born in Porto Rico of alien parents voluntarily made a sworn declaration of allegiance to the United States, and accepted American citizenship. Soon after the declaration of war, a Porto Rican chapter of the American Red Cross was organized. The people willingly joined in the activities of this great organization. They were also quick to subscribe to the Liberty Loan issues, and in other ways indicated their devotion and loyalty to the United States.

**LEGISLATION.** The third session of the eighth legislative assembly convened on February 12, and adjourned on April 2, 1917. After March 2, when the new Organic Act was approved, the legislature decided to postpone many important matters for the action of the new legislature, which under the citizenship bill, was to be elected in July and to meet in August. The joint resolution was passed providing for the holding of general elections and to provide for the nomination of candidates. Most of the other measures enacted were of local importance and interest.

**GOVERNMENT OFFICERS.** Governor, Arthur Yager; Secretary, Ramon Pacheco; Treasurer, Jose E. Benedicto; Auditor, J. W. Bonner; Attorney-General, Howard L. Kern; Commissioner of Education, Paul G. Miller; Commissioner of Interior, Manuel V. Domenech; Commissioner of Agriculture and Labor, Manuel Camarunas.

**JUDICIARY.** Chief Justice, Jose C. Hernandez; Justices, Emilio del Toro, Adolph G. Wolf, Pedro de Aldrey, and Harvey M. Hutchison; U. S. District Judge, Peter J. Hamilton; U. S. District Attorney, Miles M. Martin.

**PORTUGAL.** A European republic occupying the western coast of the Iberian Peninsula; the most westerly country in Europe. Capital, Lisbon.

**AREA AND POPULATION.** The following table

shows the area by provinces, with the population according to the census of December 1, 1900, and the census of December 1, 1911:

Provinces	Area in sq. miles	Population	
		1900	1911
Entre-Douro-e-Minho ..	2,790	1,170,361	1,289,066
Tras-os-Montes .....	4,164	427,358	487,571
Beira Alta .....	4,511	1,087,596	1,112,374
Beira Baixa .....	4,699	478,238	512,800
Estremadura .....	6,939	1,231,418	1,440,761
Alentejo .....	9,222	416,105	482,275
Algarve (Faro) .....	1,938	255,191	272,861
Total continent .....	34,263	5,016,267	5,547,708
Total islands .....	1,237	406,865	412,348
Grand total .....	35,500	5,423,132	5,960,056

Population of principal towns will be found in the 1916 YEAR BOOK.

**PRODUCTION AND SUPPLIES.** A new department, attached provisionally to the Ministry of Labor under the designation, department of agricultural mobilization, was created at the end of 1917, to continue in force during the war and for two years after its cessation, for the purpose of encouraging and increasing production. Cattle, motor machinery, and implements will be furnished on credit. Loans and gratuitous technical assistance will be furnished those who cultivate new land and land rented or requisitioned by the government. Cattle breeding is to be encouraged. In order to meet payments for orders immediately necessary, resulting from the operations and services to which the decree refers, there is a permanent fund of 100,000 escudos at the disposition of the Ministry of Labor, which will be empowered to dispense with formalities prescribed by the laws and regulations of public accounting.

Owing to the difficulty of securing supplies of foreign coal, anthracite mines in the vicinity of Oporto have been put in operation. Before the war, coal was sold at about 28s. per ton c. i. f. Cardiff coal was selling in February, 1917, at 150s. (\$37). The fuel scarcity was a serious problem. Thousands of tons of wood were used by the railways, factories, and lighting establishments. All the fast-train services were cancelled, with the exception of the train to Madrid three times a week and one between Oporto and Lisbon. New regulations with respect to public lighting, theatres, etc., reduced the fuel famine somewhat. Some thousands of tons of Pocahontas coal were imported during the year. The price was higher than Cardiff, owing to excessive freights, which reached \$14 a ton in American schooners, and these were discontinued.

Portugal's most profitable exports are corkwood, wine, and sardines. The exceptional demand, especially in the United States, accounted for extra shipments which otherwise might have been left in the hands of the producers. Freights to New York did not reach the unusually high rates prevailing for eastbound merchandise, and shippers were able to obtain sufficient cargo space at comparatively low rates.

The wine industry prospered. Owing to the demand from France, prices advanced to a high level and old stocks were practically cleared out. The wine production for the last five years is as follows: 1912, 117,380,423 gallons; 1913, 103,620,678; 1914, 126,011,678; 1915, 90,200,343, and 1916, 144,410,280 gallons.

Portuguese sardines were in demand by the Allies and the United States at prices double those of the previous year. Profits to the packers were lessened by the increased cost of raw material, such as tin plate, wire for keys, solder, etc. About 262,000 cases of tin plate were imported and sold as high as 56 escudos a case (before the war 9 escudos). Even at the high price little tin plate was to be had at the end of the year owing to the British export restrictions. Although the run of fish was normal, packers were handicapped by lack of ships and fishing material.

An unofficial source gives the 1916 production of important agricultural production as follows: 7,115,790 bushels wheat, 2,876,107 bu. rye, 3,189,078 bu. oats, 1,158,461 bu. barley, 1,102,400 bu. beans, 1,709,527 cwts. potatoes.

COMMERCE. The export from Portugal and adjacent islands of cereals and foodstuffs of all descriptions, linseed, and raw cotton is prohibited; and the reexportation, transit, and transhipment of such articles is also prohibited when the consignments on arrival in Portugal or adjacent islands are unaccompanied by a clear indication of the final destination, duly provided at the port of departure. In the following table are given A imports, B exports, C1 colonial reexports, and C2 foreign reexports for two years in escudos:

	A	B	C1	C2
1915	44,463,000	15,004,000	15,000,000	6,891,000
1916	65,384,000	20,571,000	16,806,000	7,875,000

The depression caused by a falling off in the tonnage of shipping calling at the principal ports of Portugal during 1916 was offset by the demand for the products of the country, which sold in foreign markets at greatly increased prices. The value of the over-sea import and export trade of the port of Lisbon for 1916 was 119,636,000 escudos, compared with 81,158,000 escudos in 1915.

The principal articles exported from Lisbon, values in escudos, were as follows:

	1915	1916
Beverages	127,204	186,132
Copper ore	212,778	128,995
Cork plugs	465,501	621,993
Cork shavings	268,301	357,845
Cork wood	1,796,124	1,750,191
Cotton, raw	709,878	852,893
Cotton goods	189,541	288,640
Flour	879,603	488,686
Lumber	417,879	457,113
Olive oil	634,284	641,803
Potatoes	51,003	32,500
Salt	51,424	86,000
Vegetables	288,477	276,436
Vinegar	31,908	39,384
Wine	2,639,406	10,202,170

The United States in 1916 took from Lisbon goods valued at \$7,513,694, as compared with \$5,139,766 in 1915. The increases, as shown in the declared export returns, were in cocoa (from the Portuguese colonies), corkwood, sardines, chestnuts, figs, and goatskins. There was a falling off in the exports of crude rubber (from the colonies). Shipments of figs increased from 2,590,141 pounds, valued at \$112,918, in 1915, to 15,303,436 pounds, valued at \$614,978, in 1916. The German market, usually supplied through Holland, was not available, and the shortage of Turkish figs in the American market

was made up by the fruit of the Algarve and Alemtejo. The total exports of wine show an increase of nearly 9,000,000 gallons, compared with 1915, the total shipments being 22,456,143 gallons, against 13,532,889 gallons in 1915. With the high freights and insurance, and low exchange, importers experienced great difficulties. In addition to the extensive purchase of motor trucks and automobiles for the use of the government, local importers brought in American drugs and chemicals, soaps and toilet articles, machinery, typewriters, leather, hardware, piece goods, pianos, etc., in unusual quantities. Imports of raw materials and foodstuffs have always constituted a large per cent of the imports from the United States and the volume of this business was about normal. Many makes of American motor cars appeared on the market and were in good demand despite the fact that freights reached \$600 to \$800 a vehicle. Importations of the Vacuum Oil Co. for the year were as follows: Refined oil, 96,782 barrels; naphtha, 38,069 barrels; lubricants, 31,100 barrels. These figures show a decrease in refined oil and naphtha, as compared with 1915, due to two factors: (1) high freight rates which forced the company to make an average increase of 1.50 escudos per case in refined oil, and 2 escudos per case in naphtha, resulting in the curtailment of purchases by customers; and (2) the daylight-saving system, which proved a great economy of illuminants.

FINANCE. In 1915 the value of the escudo fluctuated around \$0.70 American currency; at the beginning of 1917 it was about \$0.62. The great increase in the issue of paper money had its effect in the reduced purchasing power in foreign exchange of the paper escudo. At the end of the year a draft on New York cost approximately 1.60 escudos per dollar. Exchange on London was quoted at the end of March, 1916, at 34s. 7-8d.; at the end of June, 35s. 3-16d.; and at the end of December, 31s. 7-16d. Owing to the difficulty of importing gold, the Bank of Portugal strengthened its reserve by depositing £100,000 in the Bank of England. Drafts to the number of 81,375, valued at 61,951,000 escudos, were discounted. Deposits were 582,735,785 escudos. The fiduciary circulation was 140,377,915 escudos on December 30, 1916, or an increase of 25,375,966 escudos over 1915. The annual report of the Bank of Portugal shows increase in financial transactions for 1916 as compared with 1915. The total movement of the main and branch offices was 1,899,932,674 escudos, compared with 1,359,847,748 escudos in 1915.

The table below gives from a British source revenue and expenditure for comparative years (budget estimate):

	1915-16	1916-17	1917-18
Revenue	£17,344,140	£17,220,047	£15,466,444
Expenditure	18,776,878	17,623,467	15,452,774

The same authority states the debt, June 30, 1916, as follows: £38,511,461 external, £134,654,306 internal.

GOVERNMENT AND HISTORY. The president, elected for four years, is the executive. The legislative power is exercised by a Congress composed of a chamber of deputies (164 members) and a senate (71 members). Bernardino Machado was elected president August 6, 1915. The

prime minister, Antonio J. Almeida, who had been in power since March, 1916, resigned with his entire cabinet on April 21 on account of the adverse vote of the Chamber of Deputies on a government measure. A new ministry succeeded on April 25 under Dr. Alfonso Costa. On December 5 there occurred a military revolution whose causes at the time were not known. Three days of fighting followed in the course of which seventy to ninety persons were reported killed and between 350 and 400 wounded. Finally in order to avoid further bloodshed both parties agreed to desist. On December 8 the revolutionaries published the following manifesto: "The revolutionary forces comprising almost the entire garrison of Lisbon have fought for three days entrenched in the King Edward the Seventh Park for the salvation of the Fatherland and the republic menaced by a miserable government composed almost entirely of monarchists. The revolutionaries will now form a cabinet of serious-minded and capable men who will seek to administer the country with a régime of equality, liberty, and tolerance under which all can live. We solemnly affirm that we shall continue to stand by the side of our ancient ally, Great Britain, and all our other allies, undertaking for our part to fulfill all the international obligations entered into in the name of the Portuguese nation." By December 9 it was reported that order had been restored. The leader of the revolutionary force was Major Sidonio Paes, former minister at Berlin and in 1911 commander of public works. The programme which was under discussion for the new government involved the following points: Keeping faith with the Allies in regard to the Portuguese part in the war; formation of a constitutional ministry; reestablishment of public order; and early constitutional reform. Major Sidonio Paes became president pending an election.

**PORTUGUESE EAST AFRICA** (Mozambique). A Portuguese colony on the east coast of Africa. Area, 293,860 square miles; population about 3,120,000. Capital, Lourenço Marques, with about 10,000 inhabitants, nearly half Europeans. Lourenço Marques is also one of the principal ports; other ports are Mozambique, Beira, Inhambane, and Chinde. The leading products are rubber, sugar, coconuts, beeswax, and minerals. Coal and gold occur. A considerable part of the trade of British South Africa passes through Beira and Lourenço Marques and thence by the Beira or the Delagoa Bay Railway (the former 204 miles, the latter 57 miles, within the colony). The Beira railway connects with the British line from Salisbury, and the Delagoa Bay Railway with the line from Pretoria. A line from Lourenço Marques to the Swaziland border is under construction. The Gaza line from Chai-Chai to Manjacase has 32 miles in operation, and that from Mutamba to Inharrime 25 miles. Work on the proposed Mozambique-Nyassaland line was begun in 1914; the total distance is estimated at 342 miles. Arrangements have been made by working agreements between the Portuguese Railway administration and the South African Railways whereby the facilities for transporting coal from the Transvaal collieries to Lourenço Marques will be increased about double the amount of present tonnage. This will be brought about by pooling the engine power of the two

1917—19

railways systems and by reserving certain trucks for coal traffic only. Imports in 1914, 10,511,251 escudos; exports, 4,353,917; reexports, 8,933,868; transit, 23,798,410. Trade is divided among the state territories, the Mozambique Company, and the Nyassa Company.

**PORTUGUESE GUINEA.** A Portuguese colony on the west coast of Africa, including the adjacent archipelago of Bijagoz, with the island of Bolama, in which the capital (Bolama) is situated. Area, 13,490 square miles; population, about 820,000. Imports 1914, 1,403,150 and exports, 1,054,890 escudos. The budget for 1916-17 estimated revenue and expenditure to balance at 665,290 escudos. A governor administers the colony.

**POSTAL SAVINGS BANKS.** See SAVINGS BANKS.

**POST OFFICE.** See UNITED STATES.

**POTASH.** See CHEMISTRY, INDUSTRIAL; and FERTILIZERS.

**POTASSIUM.** See CHEMISTRY, INDUSTRIAL.

**POTATOES.** The average annual potato crop of the world was estimated at about 5,300,000,000 bushels, over 85 per cent of which was produced in normal times by Germany, Russia, Austria-Hungary, France, the United States, and the United Kingdom, mentioned in the decreasing order of yield. The crop of 1916 was generally low. Complete statistics for the world's crops of 1916 and 1917 were not available at the end of 1917, but from those received it was estimated that Germany, France, the United States, and the United Kingdom, which normally produce about 53 per cent of the world's supply, produced in 1916 only 30 per cent of the world's average crop. In 1917 the yields of most countries were greater than those of the preceding year. Statistics received by the International Institute of Agriculture at Rome, from six countries, including the United States, showed a production 34.8 per cent greater than that of 1916.

The production of the United States, as estimated by the Department of Agriculture, was 442,536,000 bushels and the area 4,390,000 acres, as compared with 286,953,000 bushels and 3,565,000 acres in the preceding year. The average yield per acre was 100.8 bushels or 20.3 bushels higher than in 1916. The average farm value on December 1, 1917, was 122.9 cents per bushel, as against 146.1 cents on December 1, 1916, and the total value of the crop at this rate was \$543,865,000. The acreage, yield, bushel value, and total value were all higher than ever had been recorded, but the average yield per acre had been surpassed a number of times. The area planted to early potatoes in Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, and Texas was reported as 189,000 acres in 1917 and 112,000 acres in 1916. The larger portion of this crop in these States is harvested in May and June, but in Florida and Texas the principal harvesting season is in April and May, although the harvest begins in January and the quantity of tubers dug increases from month to month. The commercial acreage of early potatoes for the whole United States was estimated at 281,700 acres and the production provisionally at 33,516,000 bushels. In the spring of 1917 seed potatoes in the United States sold as high as from \$4 to \$5 per bushel.

The Canadian crop for the year was a little less than 80,000,000 bushels, as compared with

63,000,000 bushels for each of the two preceding years. During the year ending June 30, 1917, the United States exported 2,489,000 bushels, and during the preceding fiscal year 4,017,760 bushels. Owing to the limited supply and to the unsettled political conditions the international trade in potatoes in many countries was subject to governmental regulation. As an instance may be cited a royal order in Spain which permitted the exportation of 5000 tons with an export tax of 41 cents per 100 pounds. In the United States all large handlers were under license to the Food Administration and agreed to make monthly reports including a statement of their fixed charges and to do business at a reasonable profit. See **HORTICULTURE**.

**POWELL, MAUD.** See **MUSIC, Artists, Instrumentalists**.

**PRAGMATISM.** See **PHILOSOPHY**.

**PRAIRIE PROVINCES.** The provinces of Manitoba, Saskatchewan, and Alberta, Canada. On the south, the provinces are bounded by the United States, at the 49th parallel; on the north, by the Northwest Territories, at the 60th parallel. The easternmost point of Manitoba is on the shore of Hudson Bay in about 89° W.; Alberta extends west to long. 120° W., about half of its western boundary coinciding with that meridian. The gross area of the Prairie Provinces is estimated at 758,817 square miles, which is equivalent to about 25 per cent of the gross area of the United States. The land area is estimated at 728,233 square miles. The census taken for June 1, 1916, returned a population of 1,698,220 (935,652 males, 762,568 females), as compared with 1,328,725 in 1911, 808,863 in 1906, and 419,512 in 1901. Thus from 1901 to 1916 the population increased by 305 per cent, from 1906 to 1916 by 110 per cent, and from 1911 to 1916 by 28 per cent. See articles on each province and **CANADA**.

**PRATT, BELA LYON.** An American sculptor, died in Boston, May 19, 1917. He was born at Norwich, Conn., in 1867. His art education was gained at the Yale School of Fine Arts, at the Art Students' League in New York, and in Paris under Chapu and Falguière and at the Ecole des Beaux-Arts. Among his early teachers was Augustus Saint-Gaudens, whose assistant he was for a time. After winning two medals and two prizes in Paris, Mr. Pratt returned to the United States in 1892 and the next year was appointed to a post he held until his death—that of instructor in modeling at the Boston Museum of Fine Arts. He attracted early notice by two colossal groups on the Water Gate of the Peristyle at the World's Fair, Chicago, and thereafter was constantly engaged in filling commissions. Among medals designed by him were the Eliot medal for Harvard, the Yale Bicentennial medal, and a Longfellow medal. In the Library of Congress he is represented by several figures and medallions and his "Science" and "Art" are placed in front of the Boston Public Library. His recumbent figure of Dr. Coit, for St. Paul's School, Concord, N. H., brought him honorable mention in the Paris salon of 1897. He designed statues of Bishop Brooks, Governor John Winthrop, Jr., Rev. John Cotton, Gen. Stevenson, Nathan Hale, and Edward Everett Hale, busts of Gen. C. J. Paine, Bishop Huntington, Rev. Dr. Herrick, Dr. Richard Hodgson, and others, and memorial monuments at Andersonville, Ga., Harvard Uni-

versity, Malden, New Bedford, Boston, and elsewhere, besides many other works. Mr. Pratt was elected Associate of the National Academy in 1910 and received various awards, including a gold medal at the Panama-Pacific Exposition, in 1915. He was also a member of the Massachusetts Art Commission and of the National Institute of Arts and Letters, and other societies. Harvard conferred on him an honorary M.A. He lived in Jamaica Plain, Mass., and had a studio in Boston.

**PRATT INSTITUTE.** A non-sectarian co-educational institution in Brooklyn, N. Y. In the fall of 1917 there were 13,173 students and 195 members of the faculty. The students' enrollment was classified as follows: Fine and applied arts, 888; household science and arts, 695; science and technology, 1504; library science, 24; gymnasium, 62. Volumes in the library numbered 114,781. The institute was founded in 1887. President of the trustees, Charles M. Pratt; secretary of the trustees and executive head of the institute, Frederick B. Pratt.

**PRESBYTERIAN CHURCH.** The total number of Presbyterian Church members in the United States in 1917 was 2,778,624, as compared with 2,708,968 in 1916. The adherents were about 5,000,000. The members and adherents of the Presbyterian and Reformed Churches in the world, all holding the Presbyterian system, number about 35,000,000, not including the 5,000,000 of the Reformed in the Lutheran Church. In the United States there are four larger and several smaller denominations under the Presbyterian system. The largest is the Presbyterian Church of the United States of America, known as the Northern Presbyterians, with 1,604,045 communicants in 1917 (an increase of 44,036 over 1916), 9968 churches, and 9751 ministers. The Presbyterian Church of the United States, known as the Southern Presbyterians, in 1917 had 359,335 communicants. Other Presbyterian churches, which are treated under their own titles, are the Cumberland Presbyterian Church, the United Presbyterian Church, and the Reformed Presbyterians, including several branches in the North and South. A very small body is the Associated Presbyterian denomination, numbering in 1917 about 500 communicants, 14 churches, and 9 ministers.

The Presbyterian Church in Canada in 1917 had 336,822 communicants; the Church of Scotland in Canada in 1917 had 10,000 communicants. The total Presbyterian adherents in Canada were about 600,000. The various Presbyterian Churches in England and Wales in 1917 had 293,166 communicants and about 600,000 adherents. In Ireland in 1917 the Presbyterian communicants numbered 109,760 and the adherents 200,000. In Scotland in 1917 the Church of Scotland had 721,137 communicants, the United Free Church of Scotland 516,075, the Free Church of Scotland 10,000, other Presbyterian churches 10,000. The total number of adherents in Scotland in 1917 was 2,500,000.

The Presbyterian Church of the United States of America is divided into 40 synods, with 291 presbyteries. The Sunday school scholars in 1917 numbered 1,455,466, an increase of 28,258 over 1916. The total contributions for all purposes in 1917 amounted to \$31,236,297. Of this

amount \$21,468,345 were for congregational purposes; \$2,194,147 for home missions; \$2055 for foreign missions; \$626,916 for colleges; and \$426,125 for relief and sustentation. The General Assembly is the chief governing body of the church. The missionary work is carried on under the control of the Board of Foreign Missions and the Board of Home Missions. In 1917 there were 27 foreign missions, 170 stations, 1353 missionaries, 6242 native helpers, 940 fully organized churches, 161,470 communicants, 2063 schools, 74,420 pupils, 238,094 pupils in Sabbath schools, 176 hospitals and dispensaries, and 753,911 patients treated annually. The number of pupils, schools, and hospital patients is given as fully as is compatible with war conditions. The board of education controls the educational work of the denomination and provides pastoral care and religious instruction for students in State universities and State colleges. The denomination has 12 theological seminaries, with 87 professors and 44 instructors and lecturers. In 1917 their students numbered 873, of whom 215 graduated. There were in 1917 62 colleges and universities in the United States (connected with or approved by the denomination), with 1659 professors and teachers and 26,385 students. Other important boards are the board of publication and Sunday school work, the board of church erection, and the board of ministerial relief and sustentation.

During the sessions of the General Assembly of 1917, of which Rev. W. J. Wilbur Chapman was moderator; Samuel F. Irwin, vice-moderator; and Rev. Dr. W. H. Roberts, stated clerk, some of the acts passed were the following: Entrusting to the Committee the negotiations for union with the Welsh Presbyterian Church and the Presbyterian Church in the United States; strongly disapproving the use of intoxicating beverages; reaffirming the church deliverances upon marriage and divorce; approving negotiations for organic union with the Presbyterian Church in the United States; extending hearty greetings to evangelical Christians of Russia; disapproving the use of tobacco; resolution asserting belief in the justice, wisdom, and righteousness of the immediate enfranchisement of women. See also RELIGIOUS DENOMINATIONS AND MOVEMENTS.

**PRESIDENTS OF COLLEGES, NEW.** See UNIVERSITIES AND COLLEGES.

**PRICES.** One of the most fundamental economic changes of the year was the sharp upward movement of commodity prices and especially the prices of foods and other prime necessities. Affecting every country, this movement was accompanied everywhere by the action of governments to check it. Early in the war Germany had shown the way by the creation of a "food dictator." She was followed by a similar organization in all the Central Powers and later by France and Great Britain; and one of the first steps taken by the Federal Government after the declaration of war was the creation of a Department of Food and Fuel Administration under Herbert C. Hoover. Its activities in price fixing are described below. For a more complete account see FOOD CONTROL. One of the most important causes of the advance in prices in the United States, Japan, Canada, and various neutral countries was the increase in the amounts of gold held by them. See paragraph *Gold Movements* under FINANCIAL RE-

VIEW. Another large factor in all warring nations, and in some neutrals as well, was the issue of enormous quantities of government bonds, treasury notes, and other instruments of credit. It was generally recognized that these became the basis of an even greater expansion of industrial and banking credits and consequent advances in price levels. For some important commodities also the increases were due to relative scarcity in view of unprecedented demand.

**UNITED STATES.** According to the Bureau of Labor Statistics the average advance of food prices in August, 1917, as compared with the year before the war was 47 per cent. Flour had advanced 130 per cent; it was two and one-quarter times as expensive as in August, 1913; corn meal had advanced about the same; potatoes had advanced 87 per cent; sugar, 77 per cent; lard, 72 per cent; and pork chops, 58 per cent. If the prices of August, 1916, be taken as a basis for comparison the average increase in prices of 27 principal articles of food was in August, 1917, 31 per cent. During this year onions was the only article to decrease in price, while corn meal advanced 98 per cent, flour 70 per cent, beans 59 per cent.

According to *The Annalist* "the average wholesale prices of 25 food commodities selected and arranged to represent a theoretical family's food budget" advanced from a level of 205 at the opening of 1917 to a maximum of 292 late in May; it thereafter dropped until the latter part of July, then rose until the middle of October when it stood at 282; it fluctuated about 280 to the close of the year. These levels may be compared with yearly averages of 80 for 1896, 146 for 1914, 148 for 1915, and 175.7 for 1916. The yearly average for 1917 up to December was 260.

**District of Columbia.** Following a joint resolution of Congress the Department of Labor made an inquiry into the cost of living in the District of Columbia. The results were summarized in the *Monthly Review* of the Bureau of Labor Statistics for October. Schedules were obtained from 1481 white families and 629 colored, or a total of 2110 families. In all of these the principal bread winner received not over \$1800 a year. The average size of family was 4.9 members, including boarders or lodgers; and the average size excluding these latter was 3.7 members. It was found that the incomes of these families were distributed as follows: 245, of whom 65 were white, received under \$600; 562, of whom 270 were white, received from \$600 to \$900; 488, of whom 375 were white, received from \$900 to \$1200; and 815, of whom 771 were white, received from \$1200 to \$1800. The report declared that from \$900 to \$1000 was needed in order to secure "mere creature necessities," while the "American standard of living" would require much more. Nevertheless, it found that 38 per cent of these families had incomes of less than \$900 and 61 per cent had incomes of less than \$1200. These families averaged 3.4 and 3.5 exclusive of boarders and lodgers. Negro incomes were much lower than white. Thus 29 per cent of the negro families received less than \$600 a year, while 75 per cent of them lived on less than \$900. Of the white families 23 per cent lived on less than \$900 and nearly half of them on less than \$1200 a year. In 268 of the families (145 white and 123 negro) there was no male head; in 597 families

(30 per cent white) the wife worked out of the home; in 297 families (two-thirds of them white) one or more children were at work; and in 1112 families (756 of them white) boarders and lodgers were kept. Of all of the families 24.6 per cent showed a surplus of income over expenses; 45.7 per cent came out even; while 29.7 per cent spent more than they received.

**STOCKHOLM AND COPENHAGEN.** A report of the Swedish labor office showed increases for 22 articles of common consumption in Stockholm, Christiania, and Copenhagen. If prices in July, 1914, be taken as equal to 100 then the average prices for these 22 commodities for Stockholm, Christiania, and Copenhagen were in March, 1917, respectively 195, 202, and 183. For whole milk the prices for the three cities in March, 1917, were respectively 153, 142, and 158; for potatoes, 260, 88, and 196; for yellow peas, 327, 283, and 230; for wheat flour, 128, 206, and 192; for soup beef, 178, 206, and 155; for fresh pork, 188, 249, and 109; for loaf sugar, 106, 196, and 121; for coal, 272, 319, and 409.

**NORWAY.** The Norwegian statistical office estimated the increase in general wages from July, 1914, to April, 1917, at between 50 and 60 per cent; while the Norwegian Labor Department estimated the increase in the cost of food, fuel, and lighting for an ordinary family at 108 per cent for the same period. If rent and other expenses be included the increase in the cost was only 82 per cent. For specific articles, if the cost in July, 1914, be represented by 100, the following were the prices in May, 1917: meat, 224; fish, 206; fats, 175; bread, 200; flour and cereals, vegetables, 238; coffee, 139; sugar, 210; fuel, 462; clothing, 190; increases in rents and taxes were slight. In consequence of higher prices the consumption of important articles had declined. For meat this decline was 58 per cent; for butter, 56 per cent; for flour and other cereals, 62 per cent; for cheese, 83 per cent; for eggs, 92 per cent; and for potatoes, 95 per cent. These decreases were offset in part by increases in the consumption of pork, fish products, raw and skim milk, oleo-margarine, and bread.

**UNITED KINGDOM.** Between July, 1914, and October 1, 1917, the general increase in the prices of an extensive group of food articles was 97 per cent. For large towns over 50,000 population the increase was 102 per cent and for smaller places 93 per cent. The general average increase for September 1 had been 106 per cent, the drop to 97 per cent showing the effect of various orders of the new Ministry of Food Control (see **FOOD CONTROL**). The price of bread was on October 1, 55 per cent higher than in July, 1914, but had been reduced from 77 per cent higher on September 1. The percentage increases on October 1, as compared with July, 1914, for some other articles were as follows: beef of various grades averaged about 110; British mutton 90 and frozen mutton 153; bacon, 110; fish, 156; tea, 84; granulated sugar, 190; milk, 78; butter, 99; cheese, 91; fresh eggs, 160; and potatoes, 40. The increase in the cost of living for the items entering into the budget of the working class family, including food, rent, clothing, fuel, and light, was about 80 per cent.

**FRANCE.** The index number showing the level of retail food prices in French towns with

over 10,000 population, excepting Paris, was 53 per cent higher in the first quarter of 1917 than in the third quarter of 1914. For Paris the advance was 47 per cent.

**HOLLAND.** The increase in the cost of living for rural working class families between 1914 and 1917 was, according to the director-general of labor, about 110 per cent. The items included were food, clothing, rent, and various miscellaneous articles, such as soap, salt, tobacco, matches, starch, petroleum, and candles.

**AUSTRALIA.** The index number representing the average retail price of food in thirty principal towns of the commonwealth showed an increase of only 26.5 per cent in May, 1917, as compared with July, 1914.

**VIENNA.** The British *Labor Gazette*, computing from official sources, showed that the general level of food prices was about 212 per cent higher in June, 1917, than in July, 1914. The greatest increases were in the following articles: lard, 636 per cent; bacon, 500; margarine, 500; butter, 469; eggs, 328; beef, 282; pork, 232; potatoes showed no advance; sugar had advanced only 37 per cent; rye bread, 69 per cent; and milk, 80 per cent.

**JAPAN.** A report of the Bank of Japan indicated that the advance of the general level of commodity prices in July, 1917, was 41 per cent over the level of one year earlier and 66 per cent over July, 1914. Included were 56 commodities, of which 41 had advanced, 4 had fallen, and 11 had remained unchanged. Meanwhile wages had advanced very slightly; in many cases there had been no advance, while the greatest advance reported was for forging factory hands from 60 cents per day in 1913 to 80 cents in 1917. For unskilled labor the advance was from 31 cents (Yo. 62) to 43 cents (Yo. 85) in these four years.

**PRICE REGULATION.** The remarkable advances in prices above indicated brought into existence throughout western nations an irresistible demand for government regulation of prices. Such regulation began in the Central Powers early in 1915 when maximum prices were established for various fundamental articles. In many cases local communities adopted a similar policy. By the close of 1917 price regulation of fundamental goods, metals, and fuels had become a characteristic governmental activity. As applied to food products the main features of this regulation are indicated under **FOOD CONTROL**. Such regulation, however, did not stop with wheat, bread, sugar, and other essential foods, but in the Central Powers was extended to the greatest variety of commodities, especially raw materials. In 1917 the coal shortage in every nation at war had become so great that price fixing and rationing were characteristic. In France the issuance of coal cards was begun in the fall, the allotment for each family up to four persons being 264 pounds a month. In Italy the control of coal distribution including prices was taken over by the government. Even in England from which great quantities of coal were being supplied to France and Italy the Government fixed prices and set up a system of rationing for private consumers. This ration allowed 200-weight per month for a four-room house during each of the six winter months with larger allowances up to 2700 weight for nine and ten rooms.

The act of August 10 entitled "An Act to

Provide Further for the National Security of Defense by Encouraging the Production, Conserving the Supply, and Controlling the Distribution of Food Products and Fuel" under which the Food Administration was created also conferred upon the president extensive powers of price regulation. Under this authority the price of copper was fixed at twenty-three cents a pound. A committee under the chairmanship of President Harry A. Garfield of Williams College was given extensive powers over the entire industry of coal and coke production and distribution, including the fixing of prices for various grades and considerable responsibility in the adjustment of wages.

Mr. Hoover in outlining the basic principles of the price regulation policy stated that commodities could be divided for this purpose into four classes: first, such articles as potatoes, onions, and apples, of which there is little importation or exportation, and for which consequently the price is best fixed by home competition; second, such articles as wheat and flour, for which the export demand dominates the price; commodities for which the internal demand exceeds the supply, and where there is also some export business, as in the case of coal; and finally, commodities such as coffee, where our imports control the price. Only articles of the second and third group were believed to require price regulation by the government. In December the Federal Trade Commission came out strongly in favor of an extension of the price regulating policy to many other articles, especially iron, steel, and metals.

**PRINCE EDWARD ISLAND.** One of the maritime provinces, and the smallest province of Canada. The island is separated by Northumberland Strait from New Brunswick, on the west, and Nova Scotia, on the south. The area is 2184 square miles, which is about twice the land area of Rhode Island. The population decreased from 109,078 in 1891 to 103,259 in 1901 and to 93,728 in 1911. Charlottetown, the capital and largest town, had 11,198 inhabitants in 1911.

The provincial government is administered by a lieutenant-governor, appointed for five years by the governor-general of Canada; he acts through an executive council, or responsible ministry. The legislative power is exercised by a unicameral assembly of thirty members, elected for four years. In the House of Commons of the 13th Canadian Parliament, elected December 17, 1917, Prince Edward Island is represented by three members. The lieutenant-governor in 1917 was Augustine Colin Macdonald, appointed June 2, 1915, in succession to Benjamin Rogers. Premier, John A. Mathieson.

**PRINCETON UNIVERSITY.** A non-sectarian educational institution for the education of men, at Princeton, N. J. In the fall of 1917 there were 972 students, and 189 members of the faculty. The enrollment was classified as follows: Graduate school, 74; undergraduates—seniors, 94; juniors, 161; sophomores, 252; freshmen, 347. Volumes in the library number 397,126. Productive funds in 1917 amounted to \$6,242,060 and the income to \$296,031. Princeton University was founded in 1746. President, John Grier Hibben, LL.D., Litt.D.

**PROHIBITION.** See LIQUORS; LIQUOR REGULATION.

**PROSTITUTION.** The crusade against prostitution and the attendant venereal diseases was never more effective or widespread than in 1917. Among all European belligerents experience had shown that indiscriminate sex relations were more dangerous to the health and vigor of troops than enemy bullets. Strenuous efforts were therefore made to keep areas filled with soldiers free of prostitutes, and otherwise to reduce the morbidity due to venereal infections. Upon entrance of the United States into the war similar steps were taken. At the same time the repressive measures that have been adopted in one American city after another were extended; new investigations were carried out; and the numerous social hygiene organizations continued their programmes of education and publicity.

**INVESTIGATIONS.** Among the numerous surveys of the year was that at Columbus, Ohio, made by the New York Bureau of Municipal Research by request of the Columbus Civic League. While not bearing directly on prostitution the report condemned the policy of maintaining a segregated district, and the lack of any system of registration or medical examination of prostitutes. It found that the number of women soliciting on the streets was very excessive in view of the city's size; that the State abatement and injunction law was not enforced. It recommended the adoption and enforcement of a policy of suppression; the use of plain clothes policemen against street solicitors; and extension of supervision of commercial amusements.

The Chicago dance halls were investigated by the Juvenile Protective Association of that city in 1910-11 and again in 1916-17. Little change was found in this period: about half of the 213 studied last were badly ventilated; more than half permitted immoral dancing; two-thirds sold liquor; nine-tenths had no sanitary provision for drinking water. The association with the Committee of Fifteen of Chicago and other societies sought a legislative prohibition of the sale of liquor in any place of amusement or recreation as one of the most effective ways of reducing sex vice and the recruiting of prostitutes.

**WAR DEPARTMENT.** Investigations of conditions among American troops on the Mexican border as well as European experience had shown the necessity of protecting soldiers in training from sex diseases. Consequently Secretary of War Baker in April, 1917, appointed a Commission on Training Camp Activities with Raymond B. Fosdick of New York chairman and including prominent physicians and social workers. This commission had the twofold function of supplying normal recreations of every sort and of keeping camps clean and wholesome. The first function was carried out largely through the Y. M. C. A., the Knights of Columbus, the American Library Association, and specialists in athletic sports, dramatics, and music. In the second the coöperation of such organizations as the Committee of Fourteen of New York, the Watch and Ward Society of New England, the Committee of Fifteen of Chicago, the Bureau of Social Hygiene of New York, and the American Social Hygiene Association was sought. Local police and sheriffs also aided. On the other hand the Y. W. C. A. and a Committee of Protective Work formed by the Commission with Maude E. Miner of New York as

chairman sought to safeguard girls near training camps. The control of alcohol being also necessary all saloons and houses of prostitution within five miles of camps were ordered closed by Secretary Baker in a letter to city mayors on August 14. The red light districts were closed in Deming, N. M.; El Paso, Waco, San Antonio, Fort Worth, and Houston, Tex.; Hattiesburg, Miss.; Norfolk and Petersburg, Va.; Jacksonville, Fla.; Alexandria, La.; Macon, Augusta, and Savannah, Ga.; Charleston, Columbia, Greenville, and Spartanburg, S. C.; Douglas Ariz.; Louisville, Ky.; and Montgomery, Ala. Many other cities, including San Francisco and St. Louis, took measures to suppress open houses of prostitution; some passed special ordinances of suppression. A number of States took official action to aid in vice restriction. The Army Medical Department organized divisions of Sanitation, Training Camps, and Infectious Diseases, and similar coöperative activities were begun by the United States Public Health Service. The Council of National Defense through its Committee for Civilian Cooperation in Combating Venereal Diseases secured the aid of State Councils of Defense and of numerous societies and the officials of cities within fifty miles of the thirty-two cantonments. In September the Commission on Training Camp Activities extended its work to American troops in France. It secured policing rights from the French government and sought to safeguard troops when on leave even outside army-controlled areas.

**NAVY DEPARTMENT.** Similar activities to the foregoing were inaugurated by Secretary Daniels in July. He also appointed a Commission on Training Camp Activities for the navy, and of this also Mr. Fosdick was chairman. The secretary pointed out that 114,000 young men were then in training and that experience had amply demonstrated the necessity of protecting them from sex vice.

**CALIFORNIA.** A State-wide drive against prostitution was stimulated by the policies of the War Department. Governor Stevens appointed a commission to carry out approved policies. The State Board of Health sought the aid of city, town, and county officials in a programme including the suppression of commercialized vice, instruction of young men and women regarding venereal diseases, provision of adequate public facilities for diagnosis of infections including free laboratory tests, and securing the reporting of venereal infections and the cure of infected persons. In January San Francisco was thoroughly aroused on the question of tolerated bawdy houses by the public utterances of Rev. Paul Smith, who with others had made a private investigation, supplementing one by the Law Enforcement League in 1916. Much newspaper publicity was given; mass meetings were held, at one of which 7000 persons were present and 20,000 turned away. Dr. Smith held a conference with 300 prostitutes in his church at their request; they made a plea for toleration, alleging that they were forced into vice by poverty. However, they laughed derisively at his suggestion of honest work at \$8 to \$10 per week as inadequate wages. This lost them public sympathy. The mayor appointed a vice commission; the police closed 200 houses, but the women were only scattered, as it was expected that with changed

public attention new districts could be established.

**SOCIAL HYGIENE.** The very extensive activities of the numerous societies for the education of the public as to the evils of prostitution and venereal diseases have within the past few years reached nearly every nook and corner of this country. The most important organization is the American Social Hygiene Association and its numerous affiliated State societies. It publishes quarterly *Social Hygiene* and issues monthly a *Bulletin* giving information of activities throughout the world. The Oregon, Massachusetts, Illinois, Maryland, Missouri, and other State social hygiene associations have promoted the enactment of injunction and abatement laws restricting quack advertisements and practitioners, and laws securing the reporting, diagnosis, and treatment of infections. They have been most valuable, however, as centres of continuous educational campaigns by means of lectures, pamphlets, newspaper, and magazine articles.

Much attention was given to the subject of social hygiene in war time by various social organizations, including the National Conference of Social Work at its annual meeting (see CHARITIES), the American Medical Association, the Association of American Colleges, the General Federation of Women's Clubs, and the American Association for the Control of Syphilis. City health departments were never more active than in 1917, showing the increased consciousness of the public of the dangers of sex infections.

**ABROAD.** Great Britain took many steps toward the control of prostitution and venereal disease. The entire subject was extensively investigated by the Royal Commission on Venereal Disease, which reported in 1915. Thereafter the British National Council for Combating Venereal Diseases was brought into existence and the British Local Government Board issued regulations requiring County Councils to establish facilities for diagnosis and treatment and authorizing educational campaigns for which the board would bear 75 per cent of expenses. In March, 1917, the board reported to Parliament that 140 hospitals in England and Wales had agreed to aid local authorities; that 86 of 145 Councils covering 23,500,000 people had formulated programmes for free treatment of venereal diseases, mostly at hospitals, and for the assistance of medical practitioners in diagnosis and laboratory analysis. Similar policies were carried out by the Local Government Board for Scotland and Ireland.

The conditions in the larger cities, especially London, due to the presence of great numbers of soldiers on leave and Colonial troops in transit to France, were extremely difficult to control. Recreation and lodging centres were provided for soldiers and other efforts were made to provide for their recreation and entertainment, especially at London. At a meeting in London June 27 on "The Moral Conditions of the Streets of London," presided over by the Lord Bishop of that city, and in statements by police and military authorities it seemed agreed that while conditions were sufficiently alarming they were no worse than in pre-war times. While the restriction of treating and other control of public houses had actually reduced street drunkenness, the number of prostitutes, especially of

women, from various Continental centres, was greatly increased. The Chief Commissioner of Police, Sir Edward Henry, reported in June that 13,000 girls had been taken up from London streets, but that not much effect was observable.

Italian army officials carried out a rigorous programme of prophylaxis. Clandestine prostitution was opposed by severe measures. All women, whether married or not, who by soldiers' testimony were sources of contagion were arrested and segregated during treatment. In two months 232 out of 277 women arrested were found liable to transmit infection. Brothels installed near the front were inspected four times weekly, once by an army medical officer. The houses were well fitted out and supplied with "preventives." No men but soldiers were admitted to these army houses. Soldiers were given frequent sanitary examinations, especially those returning from furlough. Cabinets for disinfection post coitum were installed under the direction of a physician. At the same time educational measures as to the dangers of infection and methods of avoidance were carried out with system. These various plans were believed by army medical experts to be effective in reducing venereal morbidity.

Numerous reports indicated an increase in venereal diseases in the French army and civilian population. These infections had spread, according to reports, to elements presumably safeguarded, including wives of men at the front, indicating that clandestine prostitution was largely responsible. The army officials took added measures of protection by creating special organizations for diagnosis and treatment. These consisted of centres with departments of (1) urology and (2) dermatology and syphilology for each army region. Every effort was made to secure an early and thorough diagnosis of every suspicious case of infection, and intensive treatment of all cases. Lectures as to the nature and dangers of venereal diseases were periodically given and pamphlets distributed. Coöperation of these army authorities with civil authorities was effected to control disease in both sexes. There was considerable agitation in favor of quarantining infected women.

The Prussian Medical Commission formulated an elaborate programme for controlling sex diseases. These included: improvement of the economic status of the population so as to permit earlier marriages; improved housing; instruction on sexual life and the dangers of infection; increased attention to sports, games, and athletics for youth; instruction as to evils of abuse of alcohol; improved diagnosis and treatment; campaign against quackery; cheaper supply of effective specifics; increased supervision of prostitutes by the medical profession; and the segregation of prostitutes from streets and public places for both moral and police reasons.

**PROTESTANT EPISCOPAL CHURCH.** The total number of communicants in this denomination in 1917 was 1,071,000, an increase of 14,831 over 1916. In the Sunday schools in the United States were enrolled 54,388 school officers and teachers, and 455,997 Sunday school scholars. The total number of the clergy in the United States was 5622. The church maintained the following educational institutions: Theological Seminaries: Berkeley Divinity School, Middletown, Conn.; Nashotah House, Nashotah, Wis.; Episcopal Theological School, Cambridge, Mass.; Virginia Theological Seminary, Va.; Seabury Divinity School, Faribault, Minn.; Divinity School of the Protestant Episcopal Church, Philadelphia, Pa.; Western Theological Seminary, Chicago, Ill.; Church Divinity School of the Pacific, Cal.; Bishop Payne Divinity School (Negroes), Petersburg, Va.; General Theological Seminary, New York City; Divinity Department, University of the South, Sewanee, Tenn.; Bexley Hall, Kenyon College, Gambier, Ohio; Kansas Theological School, Topeka, Kans.; DeLancey Divinity School, Geneva, N. Y. Colleges and Universities: University of the South, Sewanee, Tenn.; Kenyon College, Gambier, Ohio, St. Stephen's College, Annandale, N. Y. The following are non-sectarian, but have a churchly character: Columbia University, Hobart College, Geneva, N. Y.; Trinity College, Hartford, Conn.; Lehigh University, So. Bethlehem, Pa.

Chief among the organizations of men is the Brotherhood of St. Andrew, with its 1143 chapters and about 12,000 members. The organizations among the boys are the Knights of St. Paul, with 160 chapters in various dioceses, and the Knights of St. John. Among the special organizations for mission work are the Church Mission to Deaf Mutes; Society for the Promotion for Church Work Among the Deaf Mutes; the Mid-Western Deaf Mute Mission; Conference of Church Workers Among the Deaf; the Seabury Society of New York. Among the national organizations for women and girls are the Girls' Friendly Society in America; The Order of the Daughters of the King; Organizations for the Increase, Aid, and Better Sustenance of the Ministry; Society for the Increase of the Ministry; Clergymen's Mutual Insurance League; the Clergymen's Retiring Fund; and the Church Pension Fund. Organizations for educational purposes, church defense, and propagation—The Protestant Episcopal Society for Promotion of Evangelical Knowledge; the Clerical Union for the Maintenance and Defense of Catholic Principles; The American Church Union; Albany Cathedral Summer School; Society for the Home Study of Holy Scripture and Church History; Cambridge Conference; The Church Periodical Club; New York Bible and Common Prayer Book Society; The Church Historical Society; The Church Missions Publishing Co.; American Soci-

ety of Church Literature; and the Joint Diocesan Lesson Board. Organizations for social amelioration and advance—The Church Association for the Advancement of the Interests of Labor; The Church Socialist League; the Church Temperance Society; The Church Mission of Help; and the Society for Social Advance. There are many other similar organizations established for promoting church unity, various guilds for devotional purposes, and religious orders both for men and women. In addition to all these general organizations of the church there is a large number of diocesan and parochial societies that are very active in all the various departments of church activity—social, moral, intellectual. The philanthropic work of the church is represented by 79 hospitals, 44 orphan asylums, 77 homes, and 83 other institutions.

In addition to the foregoing home work, the church is carrying on similar work—evangelical, educational, and medical—in Africa (Liberia), China, Japan, Brazil, Cuba, Mexico, Haiti, and Santo Domingo. The missions in Honolulu, Porto Rico, and the Philippine Islands and Canal Zone are classed with domestic missions and are not included in this foreign work. In this distant field are ten separate and distinct jurisdictions under the leadership of eight bishops, assisted by 325 clerical and lay American workers, and 1187 clerical and lay native workers. There are 489 stations where regular services are established; 230 day and 42 boarding schools with about 13,000 children under religious and moral training. In addition are 364 Sunday schools having an attendance of 21,639 pupils. There are also seven hospitals and ten dispensaries ministering daily to the sick and afflicted, numbering about 200,000 per annum.

The Protestant Episcopal Church in the United States of America now numbers over one million communicants, with probably an additional three millions of baptized members and adherents, employs the use of endowments aggregating \$55,000,000, and material structures and equipment of very great value, controlling numerous educational and charitable institutions, with an average income of more than \$20,000,000 to expend each year for the furtherance of the building up of the Kingdom of God upon the earth.

**PRUSSIA.** A European kingdom, the dominant state of the German Empire. The capital is Berlin. The table below shows by provinces the area and the population according to the census of December 1, 1910, as compared with that of December 1, 1890:

	Sq. miles	Population	
		1890	1910
East Prussia .....	14,284.5	1,958,663	2,064,175
West Prussia .....	9,868.7	1,438,681	1,708,474
Berlin (city) .....	24.5	1,578,794	2,071,257
Brandenburg .....	15,383.1	2,541,783	4,092,616
Pomerania .....	11,686.7	1,520,889	1,716,921

Prussia covers about 64.5 per cent of the area of the German Empire and had in 1910 about 61.9 per cent of the population. Its area is nearly equal to the combined area of Ohio, Indiana, and Michigan. The 1910 population of these three states was 10,278,170, as compared with Prussia's 40,165,219. In 1816 Prussia had 13,709,000 inhabitants; in 1864, 23,582,000; in 1871, 24,689,252; in 1880, 27,279,111; in 1900, 34,472,509. The average annual increase from 1816 to 1910 was 1.14 per cent; from 1900 to 1910, 1.53 per cent. In 1910, communes having 2000 inhabitants or more aggregated a population of 24,887,490; communes with 2000 to 5000, 4,086,006; communes with 5000 to 20,000, 5,682,779; communes with 20,000 to 100,000, 5,900,672; communes with upwards of 100,000, 9,018,033. Of the inhabitants in 1910, Evangelicals composed 61.82 per cent; Roman Catholics, 36.31 per cent; other Christians, 0.47 per cent; Jews, 1.04 per cent.

Prussia has a bicameral parliament. The lower house (443 members) is elected by indirect vote. The ministry is appointed by and responsible to the king. The King of Prussia is German Emperor (q.v.).

**PSYCHICAL RESEARCH.** For some reason (the war is doubtless partially responsible) there is a decided increase in the number of books devoted to "psychical" phenomena. The most important are: E. Boirac, *Our Hidden Forces*, tr. by W. de Kerlor, which received a prize from the Académie des Sciences for "the best book on hypnotism, suggestion, and the physiological forces which one human organism may exert upon another at a distance"; P. Joire, *Psychical and Supernormal Phenomena*, tr. by D. Wright, which consists of a general, and often uncritical, discussion of the various types of "psychical" phenomena; Sir W. F. Barrett, *On the Threshold of the Unseen*, practically a new and much enlarged edition of his earlier work (1908), and J. A. Hill, *Psychical Investigations*, which reports sittings with mediums and discusses methods and results of investigation.

R. J. Thompson's *Proofs of Life After Death* has reached a fifth, and H. Frank's *Psychic Phenomena*, a second edition. Other books are: B. Fuller, *Man as He Is*; C. B. Newland, *What is Instinct?*; E. C. Randall, *The Dead Have Never Died*; W. E. Forbes, *Cycles of Personal Belief*; J. H. McKensie, *Spirit Intercourse*; E. B. Warman, *Psychic Sciences made Plain*; and J. H. Skrine, *Survival of Jesus*. Patience Worth (see YEAR BOOK, 1916) has communicated *The Sorry Tale*, a story of Rome and Palestine in the time of Tiberius.

In his presidential address (*Proc. S. P. R.* xxix, 46), Gilbert Murray explains telepathic experiments of his own on the basis of reactions to meanings of which he was not aware. Mrs. A. W. Verrall, however, who analyzes 100 of Murray's cases (*Ib.*, 64), thinks there is some evidence for "telepathy in the sense of a transference of thought, as distinct from spoken words, from one person to another." Sir O. Lodge (*Ib.*, 111) presents evidence of a warning of impending trouble received before, and of information concerning unknown photographs received after Raymond's death (see YEAR BOOK, 1916). J. G. Piddington (*Ib.*, 1) cites simple instances of "cross correspondences," and G. W. Balfour (*Ib.*, 147), further scripts af-

fording evidences of personal survival. J. H. Hyslop (*Proc. A. S. P. R.*, xi) brings to an end the data and discussion of the Doris Fischer case of multiple personality. He concludes, largely from "cross correspondences," that at least one, and perhaps others, of the personalities were "obsessions" of the "instigative" type; the personality is due to a spirit acting as stimulus to the unconscious without transmitting its own identity. P. F. Swindle (*Amer. J. Ps.*, xxviii, 349) states the conditions under which visual, cutaneous, and kinæsthetic after-images of long duration may appear as ghosts.

**PSYCHOLOGY.** The review of the year in psychology must of necessity be restricted mainly to the United States. Practically no psychological literature has been received from Germany and Austria, and the output of France, England, and Italy has been curtailed. In America, on the other hand, not only have all established journals been issued regularly, but two new ones, *Psychobiology*, a bi-monthly devoted to the field common to psychology and to the biological sciences, and the *Journal of Applied Psychology*, a quarterly published in the interest of psychotechnology, have also appeared. We have, farther, a volume entitled *Studies in Psychology*, consisting of eighteen papers by colleagues and former students of E. B. Titchener; while a similar volume, *Philosophical Essays*, by former students of J. E. Creighton, contains some articles of psychological import.

**PSYCHOLOGY AND THE WAR.** Aside from the decreasing effect of the war on scientific research in Europe, G. S. Hall (3, 1)\* has pointed out that the present tendency of research in America is from pure to applied science, and that American psychology will be expected to make a direct contribution to the emergency of the war. The nature of this contribution was the subject-matter of President Yerkes' address at the 26th annual meeting of the American Psychological Association, held in Pittsburg, December 27-29. A committee on psychology was early organized by the National Research Council, and twelve committees were later appointed by the A. P. A. for research in the mental examination of recruits and officers, the selection of men for tasks requiring special skill, and the incapacity and emotional instability of men in service, and for work upon special problems in aviation, audition, and vision, in recreation and motivation, and in pedagogical and psychological aspects of military training and discipline. At the close of the year these committees were at work either in laboratories or in the field. The mental examinations of recruits were first undertaken in four cantonments, and later extended to all cantonments under the direction of psychologists regularly commissioned as officers in the Sanitary Corps.

**APPLIED PSYCHOLOGY.** The trend of psychological publications during the year has been toward application. The concept of applied psychology, however, is by no means clear; the single text-book (H. L. Hollingworth and A. T. Poffenberger, *Applied Psychology*) defines it as the "applications of the findings of psychology to the affairs of everyday life." L. R. Geisler, in *What is Applied Psychology?* (3, 49), states that its point of view is the "in-

vestigation of concrete situations for the sake of utility." Münsterberg and Titchener have earlier shown that a more adequate term for such activities would be Psychotechnics or Psychotechnology. The emergence of applied psychology can be traced to the proved practical utility, after two decades of experimentation, of mental tests: tests for general intelligence, for educational accomplishment, and for vocational selection and guidance. As regards measures of intelligence, there are at present two types of tests. The one is represented by the Binet scale, which has passed through revisions by Binet himself, H. H. Goddard, and F. Kuhlman, and which has reached its highest stage of development in the "Stanford Revision" by L. M. Terman (*The Measurement of Intelligence*, 1916). The other, a point scale, was originated by R. M. Yerkes, J. W. Bridges, and R. S. Hardwick (*A Point Scale for Measuring Mental Ability*, 1915). The differences between these two types, as described by Yerkes (3, 111), are that the Binet is an age-scale, based upon the assumption of appearing functions, whereas the point scale is a functional scale, based upon developing functions. The Binet scale selects tests according to percentage of passes, and groups according to age; it is, therefore, an inflexible scale suitable only for the race, social status, or sex for which it was constructed. The point scale, on the other hand, selects and arranges tests without regard to norms; new norms must be discovered for different races, sexes, ages, and for individuals of different social status. Finally, the Binet scale demands judgment of success or failure, all or none, whereas the point scale requires judgments of more or less. J. W. Bridges and L. E. Coler (16, 1) have found that sociological condition has, in fact, a considerable influence upon the intelligence-ranking of the child by the Binet scale; and, although Terman asserts that there is no break in the distribution of grades of intelligence ranging from idiocy to genius, E. A. Doll (7, 74) insists that the feeble-minded test over a wider range than the normal group, C. C. Brigham (17, No. 102) reports that some tests easy for the normal are difficult for abnormal individuals, and F. Mateer (7, 74) finds differences between normals and defectives revealed by examination-grades and clinical studies which are not shown by intelligence-tests. J. E. W. Wallin (11, 179), however, does not corroborate the view that feeble-minded show greater variation in development than normal children. The point scale, in its turn, has been criticized by F. N. Freeman (16, 484) and A. S. Otis (12, 129). The latter shows that there is no system in the assigning of points to increments of mental ability, and that coefficients of intelligence of the same value do not represent the same degree of intelligence for different ages. The first fault has, however, been corrected by R. S. Hardwick (12, 416), who undertook a more accurate weighting of the tests on the basis of correlation between scores of every test and total scores; while Yerkes and C. S. Rossy have met in part the second point by devising a new scale for adolescent and adult individuals (*Boston Med. Surg. Jour.*, April, 1917). A general criticism of both scales has been offered by W. F. Dearborn (7, 221), and certain mathematical aspects of intelligence-testing have been discussed by A. S. Otis (16, xxiii, 1916, 129, 165) and

\* These numbers refer to publications listed in bibliography.

B. Ruml (18, 633). Annotated bibliographies of the intelligence-scales have been published by S. C. Kohs (12, v, 1914, 215, 279, 335; viii, 1917, 428, 488).

In addition to tests of general intelligence, attempts have been made to formulate others which will either supplement the general tests, or measure special abilities and thereby afford a more reliable diagnosis of mental defectives and deficients. The most important are: J. E. W. Wallin, *Psycho-Motor Norms for Practical Diagnosis* (17, xxii, No. 2), based on the Seguin Form-Board; R. Pintner and D. G. Paterson, *A Scale of Performance Tests*, which aims to avoid language responses; H. C. Stevens, *A Revision of the Rossolimo Tests* (24, 128), which have proved successful in the diagnosis of Dementia Præcox; and J. N. Curtis, *Tactual Discrimination and Susceptibility to the Müller-Lyer Illusion*, a report of tests by the method of single stimulation (24, 308).

In a study of the relation between character and intelligence by the method of correlation, E. Webb (9, iii) discovers evidence in support not only of the common factor of general ability, but also of a second, independent factor, which he calls "persistence." Forecasts of this factor are seen in Müller's "perseveration" as applied to character, in Heymans' and Wiersma's "secondary functions," in Culler's "interference and adaptability," and in Ach's "will."

For educational purposes, intelligence-scales have been amplified by measures of accomplishment in most, if not all, school subjects. The tests have been standardized, and the year has brought a number of books designed for the instruction and guidance of public school teachers. H. O. Rugg has written *Statistical Methods Applied to Education*, a handbook explaining the principal statistical devices in non-technical language, and W. S. Munroe, J. C. De Voss, and F. J. Kelly have published *Educational Tests and Measurements*, furnishing tests of ability in the common school subjects, with directions for application, scoring, and evaluation of results. A similar book is J. C. Chapman and G. P. Rush, *The Scientific Measurement of Classroom Products*; broader in its scope is F. N. Freeman, *Experimental Education*. W. H. Pyle offers a *Manual for the Mental and Physical Examination of School Children*, and N. J. Melville a *Standard Method of Testing Juvenile Mentality by the Binet-Simon Scale*.

The mental testing of college students presents some special problems, the nature of which has been discussed by W. V. Bingham (3, 38) and H. D. Kitson (23, vi, 412). D. Sunne (12, 193) finds that the scores of students in tests vary widely from class standing; he suggests an index of vocational capacity based upon physical examination, college grades and activities, and tests of intelligence. M. F. Washburn (*Vassar Quarterly*, 1916, ii, 15) and S. D. White, S. May, and M. F. Washburn (2, 151) report studies of college freshmen; M. E. Haggerty and J. M. Thomas have tested in particular the reading attainments of college freshmen (23, vi, 230). The most extended study of the college student, however, is that of H. D. Kitson (17, No. 98) who since 1914 has successfully employed mental tests for the classification of students, for checking their scholastic work, and for vocational guidance, in a college of the University of Chicago.

Tests for vocational selection, vocational guidance, salesmanship, and business efficiency are in the early stages of development. The most recent book (H. L. Hollingworth, *Vocational Psychology*, 1916) does little more than trace their history and indicate the general phases of the problem. Vocational selection, characterized by W. D. Scott (3, 61) as the "selection for a particular position of that one of the applicants who is most likely to succeed in it," lends itself more readily to experimental method than does vocational guidance, the selection of the best vocation for a particular individual. Scott has indicated four means of checking the results of vocational selection; H. E. Burr (3, 201) has published a number of tests invented by Münsterberg; and H. W. Rogers (3, 268), tests for stenographers. L. M. Terman (3, 17) has shown that, for certain vocations, tests of general intelligence together with some educational tests, are sufficient for the selection of the best applicant. The methods for vocational guidance are for the most part still to come. C. E. Seashore's measurements for musicians (*U. of Iowa Monographs*, Series 1, No. 2) point in this direction; and J. K. Folsom (3, 252) has taken a further step by an analysis of the motives which determine the choice of a vocation. J. M. Brewer (23, v, 541) pleads for a broader view of the problem than is customary.

Tests of efficiency usually consist in the measurement of the amount and quality of work accomplished in the unit of time. E. L. Thorndike and P. J. Krause (23, v, 657) find that mental work is not affected by degree of humidity; J. C. Chapman (13, 165) that half-minute alternations of certain kinds of work, such as cancellation and addition, result in a gain of efficiency; J. W. Baird (3, 30), that greater legibility in the printing of a telephone-directory may be gained by inserting leads between the lines of type; E. L. Thorndike (3, 265), that quantity and quality of product may, from extrinsic motives, remain the same while the satisfaction of the worker steadily decreases; A. I. Gates (10, i, No. 5; ii, No. 1), that the curve of daily efficiency rises steadily during the morning hours, falls at noon, and again reaches a maximum in the afternoon; motor efficiency, however, does not fall during the noon hours, and there is a slight loss in mental accuracy in the afternoon. The common notion that the work-decrement is a measure of fatigue has been shown by R. Dodge (16, 89) to be erroneous. Work-decrement may be due to a number of factors. True fatigue is always relative, resulting from the variability of inner and outer stimuli, and from the interaction of competing paths.

D. Sunne (3, 71) corroborates the findings of earlier investigators that, on the basis of Binet tests, negro children are mentally younger than white children, are inferior in kinesthetic discrimination and motor control, and in capacity for logical analysis, but are more suggestible, and have a more fertile imagination and a greater facility in control of words than white children of approximately the same social status. It has also been found again that women are more suggestible than men (W. Brown, 10, ii, No. 6), and that they slightly excel in memory-tests, particularly in those involving verbal memory, but that they are slightly surpassed by

men in reasoning (A. I. Gates, 10, i, No. 6; 16, 139). Deaf children have a smaller memory span with visual learning of digits than normal children (R. Pintner and D. G. Patterson, 13, 76). There are marked individual differences in judgments of the beauty of simple geometrical forms, and there is great diversity among judgments whose average favors the "golden section" (E. L. Thorndike, 16, 147). Eighteen pairs of brothers and sisters show resemblances of mental traits approximately as great as physical traits; it would appear, therefore, that mental make-up is inheritable (D. Starch, 13, 235). Further evidence for the inheritance of mental traits is found in the fact that the relative abilities of a child in the four simple arithmetical processes show high correlation with similar abilities of one parent (M. V. Cobb, 12, 1).

**GENERAL PSYCHOLOGY.** Notwithstanding the unusual trend toward application, there has been a decided advance at most points of the front of scientific psychology. J. Jastrow (16, 249) in general, and R. Dodge (16, 89) in a particular instance, have warned against the pursuit of application at the expense of theoretical knowledge. The warning is timely; but thus far psychology is holding her own. The books of the year fall into three groups. The first contains H. Maudsley's *Organic to Human: Psychological and Social*, a series of essays in which the author emphasizes the dependence of psychological phenomena upon nervous structure, and J. Loeb's *The Organism as a Whole from the Physico-chemical Viewpoint*, a companion volume to the earlier *Comparative Physiology of the Brain*. The second comprises three books written for popular reading: H. L. Hollingworth and A. T. Poffenberger, *The Sense of Taste*, and H. T. Moore, *The Sense of Pain and Pleasure*, both of which are written from analytic, genetic, and æsthetic points of view, and R. F. Richardson, *Psychology and Pedagogy of Anger*, a study in genetic psychology. The unifying aim of the third group is the explanation of human conduct. The explanation may be in terms of a conflict of dispositions (F. L. Wells, *Mental Adjustments*; W. Healy, *Mental Conflicts and Misconduct*), or by way of Freudian concepts (W. Lay, *Man's Unconscious Conflict*). The English contributions to Freudian psychology have been enlarged by translations of O. Pfister, *The Psychoanalytic Method* (C. R. Payne) and A. Adler, *The Neurotic Constitution* (G. Glueck). In this connection three papers call for notice: C. G. Jung, *La structure de l'inconscient* (5, 152); R. S. Woodworth, *Some Criticisms of the Freudian Psychology* (1, 174); and W. A. White, *The Adlerian Concept of the Neuroses* (1, 168).

On the systematic side, M. W. Calkins further explains the self of her system in *The Case of Self against the Soul* (16, 278), and *Purposing Self vs. Potent Soul*. Here the conscious, purposing self is distinguished from the metaphysical or vitalistic soul. From the point of view of the "act" psychology, R. M. Ogden (19, 290), following Westphal and Stumpf, makes out three stages of consciousness: simple presentation, awareness, and cognition; to which there are related, as principal functions, association, attention, and relation. J. B. Watson (16, 329) and A. P. Weiss (16, 301, 353) distinguish behaviorism from physiology and from

psychology as usually understood, but fail to show how it differs from biology. R. M. Yerkes (18, 154) states why he is unable to identify behaviorism with genetic psychology; and S. E. Jelliffe defends the concept of "mental disease," which Watson had assailed as standing for something which behaviorism does not reach and to which speech as motor habit gives expression. B. H. Bode (18, 288) finds the basis of distinction between conscious and reflex behavior in awareness of meaning; and H. Carr (16, 181) thinks that the difficulty in which we are placed by subjectivism and behaviorism is avoided if we define mental process as psychophysical. As regards principles of explanation, E. S. Abbott (18, 41) argues that content (meaning) enters dynamically into the causal series, and that the psychophysical relationship consists therefore of a triple instead of a dual series. H. C. Warren (20, 602), on the other hand, makes out as good a case for a purely physical explanation of all human activity and thinking. W. B. Pillsbury (24, 18) despairs of ultimate agreement upon principles of explanation in the causal sense, and thinks that the present problem is one of correlation. In this connection T. G. Brown's *Speculations on the Working of the Brain* (14, 53), which formulates present-day physiological theories, is of interest. From the behavioristic point of view, S. B. Russell, in *Compound Substitution in Behavior* (16, 62) and *Advance Adaptation in Behavior* (16, 413), offers explanations of reactions to a complex of stimuli, and of purpose. W. S. Hunter (16, 74), reporting experiments on "delayed reactions" in an infant, concludes similarly that they are due to some non-observable but probably intra-organic (kinæsthetic) factor. In the interest of genetic psychology H. W. Chase (2, 175) finds the conditioned reflex to be a type of process which, providing widespread bodily resonances are involved, might well be inherited.

In experimental psychology the most notable book of the year is H. J. Watt's *The Psychology of Sound*, which is based on the author's well known theories of the uniformity of sensory attributes and of their integration in perception. The volume is a companion to Parsons' book on Color (see YEAR BOOK, 1915) and to H. Henning's work on smell, the last installment of which has now appeared (26, 1: see YEAR BOOK, 1916). In the sphere of vision, L. T. Troland (13, 1) has brought together a number of investigations in illuminating engineering which are of interest to psychologists. The problem has been to measure the intensity of the visual stimulus. Two methods have been proposed; the one, radiometric, advocated by C. E. Ferree and G. Rand (18, 457), seeks to measure the physical stimulus; the other, photometric, preferred by most investigators, measures the physiological stimulus. For the latter purpose the flicker-method seems to be the most adequate. Troland (2, 497) has also published the results of experiments on *The Influence of Changes of Illumination on After-Images*, which promise to be of theoretical importance. H. D. Cook and F. M. Kunkel (17, No. 96) have questioned Kirschmann's law that simultaneous color contrast is best when brightness contrast is eliminated. R. L. Crane (2597) finds, however, that the law holds if the saturation of the induced color is taken, in Hering's sense, as

the ratio of color valence to white valence. Finally, S. Dawson (8, 510) has made a first attempt to determine the laws of binocular color mixture. Hering's results are confirmed, and the relative saturations and brightnesses of the stimuli that allow of mixture are determined.

If we may judge by the number of articles, the dominant interest in experimental psychology lies still in the problem of perception. Studies limited to the conditions of perception are: L. Enjalran, *Autour de l'expérience de Wheatstone* (21, 401), in which the attempt is made to explain results of Wheatstone, Wundt, and Helmholtz in favor of the law of corresponding points, and C. A. Ruckmich, *Visual Rhythm* (24, 231), in which it is found that the conditions (quality, intensity, and duration) under which visual stimuli set up a visual rhythm are similar to those under which auditory stimuli evoke an auditory rhythm. H. E. Burr, *Auditory Illusions of Movement* (13, 63) and *Tactual Illusions of Movement* (13, 371), finds similarly that the conditions for the auditory and cutaneous perception of movement, where no objective movement takes place, are similar to those for the visual illusion as reported by Wertheimer and Korte. J. Peterson (2, 476) states the conditions for *Some Striking Illusions of Movement of a Single Light on Mountains*. The most thoroughgoing attempt yet made to describe completely a perceptive pattern, as regards constituent processes, the nature of their integration, their temporal course and their relative clearness, is that of A. S. Rogers, *An Analytic Study of Visual Perception* (2, 519). A similar study by S. C. Fisher, *An Analysis of a Phase of the Process of Classifying* (2, 57), shows that the important feature of the perception was the character of the course of attention.

The context-theory of meaning in perception, which had been attacked by T. V. Moore (see *YEAR BOOK*, 1915), with results that seemed to tell against it, has been the subject of investigation in several quarters. E. C. Tolman (16, 114) repeated Moore's experiment, and could only partially confirm earlier findings. Moore (16, 318), nevertheless, accepts the outcome as a "confirmation of the fact that meaning and imagery are not identical." R. M. Ogden (24, 78), so far substantiated Moore that he found meanings without imaginal contexts. H. P. Weld (24, 181), believing that the theory required relatively unfamiliar instead of the highly familiar stimuli thus far employed, not only found imaginal contexts but was able, in a fashion, to trace their decay as was to be expected under the theory. He also discovered that the attitudes set up by the instructions to react to meaning and to process are not the same, and that the reaction-method is therefore inadequate to the problem as Moore conceived it. E. G. Boring and A. Luce (2, 443) do not agree with Carlson that appetite is conditioned upon a particular quality of sensation; appetite is rather a gross attitudinal meaning which may be carried by a number of processes.

The ability to judge the time upon awakening from sleep has been made an object of investigation by R. Weber (5, 180) and by L. D. Boring and E. G. Boring (24, 255). The former was able to estimate with an error of 5 minutes in 1.7 of 386 cases, but found no

clues; the latter, with four observers, were correct within one-half the accuracy of chance, and important criteria were found in the general bodily state. E. L. Thorndike, from the results of two experimental studies (16, 220; 12, 323), concludes that incorrect reading is due to wrong connections, to over- and under-potency of words, and to failure to test the meanings that arise.

R. Baerwald, *Zur Psychologie der Vorstellungstypen* (1916), discusses principally motor and musical imagery; American and English investigations of ideational types are for the most part ignored. E. L. Thorndike finds that the ability to visualize is no help in the estimation of relative distance and in simple mental multiplication. K. M. Dallenbach, on the other hand, reports a wealth of visual, verbal-motor, verbal-auditory, and kinesthetic imagery in playing blindfold chess. The partial inhibition by visual perception of the ideas involved in reproducing simple forms, visually presented, has been demonstrated by G. R. Wells (16, 322).

E. A. McC. Gamble and L. Wilson (17, No. 96) have studied the importance of spatial localization in learning and recall; a paper on the subject by W. Jacobs came from G. E. Müller's laboratory in 1907. The results show that, as Jacobs also concluded, the presentation of the material in such fashion as to foster the formation of place associations does in fact facilitate recall. From another study by Gamble it appears that the effect of a given rate of repetition is not the same for all observers; slow rates are the more adequate for visualizers, but do not permit of maximal attention on the part of those who employ a more rapid method of learning. H. B. Reed (13, 315) failed experimentally to confirm a view credited to Meumann that there is a general memorial function which may be improved by special training of a single function. A. S. Edwards (24, 209) likewise disputes Meumann's opinion that Jost's law is not operative for small amounts of material. J. Peterson (13, 178), who has repeated Swift's experiments in ball-tossing, questions the familiar "learning curve," which results from plotting errors and successes in absolute instead of in the more accurate relative amounts. W. S. Hunter (16, 188) suggests that statements of the law of association should be broadened to include arousal in sensory as well as in imaginal terms.

J. W. Baird (24, 43), who tested a number of observers with memory for absolute pitch by means of various instruments, concludes that the recognition of tones by their absolute pitch-names is conditioned upon the recognition of some attribute (like Köhler's vocality or Révész's tonality) which is unobserved by most individuals.

E. B. Titchener (16, 43) has done systematic psychology a service by a genetic study of the Wundtian concepts of *Bewusstheit* and *Grad des Bewusstseins*. The former he characterizes as "conscious status," the latter as degree of organization. Two experiments concerning the effect of distraction upon reaction-time give equivocal results: J. E. Evans (4, No. 37) finds that the distractor always increases, whereas J. J. B. Morgan (4, No. 35) reports that, after initial practice, it decreases the reaction-time. Further work is needed. Since its discovery in

the Würzburg experiments the attitude, or intent, or "set" of the observer has assumed increasing importance in psychology. Its rôle in mental functioning is the subject of a paper by J. W. Baird (19, 307), its significance in memory is dismissed by L. Leclère (21, 105), and its consequences for the psychophysical judgment by S. S. George (2, 1); and it has finally been made the subject of experimentation in its own right by M. A. May (4, No. 39). The last-named author distinguishes between the "task-notion," the understanding of the meaning of the instruction, and the "task-set," the "process of getting specifically ready to do a specific task or, in Ach's terms, the setting up of determining tendencies."

In feeling, E. B. Titchener has made a critical study of Stumpf's affective psychology (2, 263); and A. Wohlgenuth (8, 423) has inquired into the nature of the feelings and their neural correlates. He concludes that pain is a sensation which may be pleasant, unpleasant, or indifferent; that pleasantness and unpleasantness are frequently localizable; and that pathological evidence goes to show that the "feeling centre" lies in the lateral zone of the optic thalamus. L. R. Geissler, in *The Affective Tone of Color Combinations* (24, 150), finds that the greater the pleasantness of the individual constituents, the greater is the pleasantness of the combination. J. B. Watson and J. J. B. Morgan (2, 163) have undertaken to find the principal situations which arouse fear, anger, and love in new-born infants, and to describe the reactions. They believe that these typical responses may, like other conditioned reflexes, be attached to novel stimuli by "transference." M. G. Blanton, *The Behavior of the Human Infant During the First Thirty Days of Life* (16, 456), reports observations made in a maternity hospital, which are a distinct contribution to child study.

**SOCIAL PSYCHOLOGY.** C. A. Ellwood has written *An Introduction to Social Psychology*, a systematization and simplification of the theories presented in his earlier work, *Sociology in its Psychological Aspects*. J. Dewey (16, 266) and H. W. Chase (2, 216) plead in the interest of social control for a social psychology based on behavior-psychology. M. F. Washburn (24, 11) finds the most striking difference between the social psychology of man and that of the lower animals to be an "ejective consciousness," an awareness of thoughts and feelings as belonging to other minds than our own. R. H. Gault employs a similar, if not the same, principle to explain the "sense of social unity" (24, 121). To the psychology of religion, G. S. Hall contributes *Jesus, the Christ in the Light of Psychology*, from the point of view of Christology and genetic psychology; J. H. Leuba, *The Belief in God and Immortality*, an historical and statistical study; S. Brown, *New Worship and Symbolism of Primitive Races*; and G. A. Coe, *The Psychology of Religion*. C. G. Shaw (24, 30) discusses *The Content of Religion and Psychological Analysis*; E. L. Schaub (19, 328) writes a critique of functional interpretations of religion; and J. H. Leuba (2, 578) presents a new view of the place of ecstatic intoxication in religion.

**PUGILISM.** See **BOXING.**

**PULP.** See **FORESTRY.**

**PUMPS.** A notable duty record by a turbine centrifugal pump was made at the John Street Station of the Toronto Ontario Waterworks. Here a 24-in. steam turbine driven centrifugal pumping unit was a duty record of 137,000,000 ft.-lbs. per 1000 lbs. of steam. This test was made by Professor R. W. Angus of the University of Toronto and dealt with one of two similar units of 24,000,000 gallons capacity, which were installed as part of an equipment of five large centrifugal pumps. The two 24-in. pumps were single stage, double suction type connected in series and were guaranteed to give not less than 24,000,000 gallons per day against a pressure of 107 pounds per square inch, measured between suction and discharge mains, and were to have a duty of 141.5 million foot-pounds per 1000 pounds of steam including that used by jackets and auxiliaries. The performance of these pumps exceeded that of the Montreal turbine unit which hitherto had held a record in this field. An important paper on air-lift pumps was presented before the British Institution of Mechanical Engineers, November 16, 1917, and a discussion of a series of tests made by the author, A. W. Purchas was given. This paper discussed the low efficiency of most insulations and showed how this could be increased by the proper consideration of the theory and the improvement of the equipment and operation. A full resumé was printed in *Engineering* (London) for November 23, 1917.

**PURDUE UNIVERSITY.** A co-educational State institution at Lafayette, Ind. In the fall of 1917 there were 1620 students and 183 members of the faculty. Volumes in the library numbered 50,000. T. G. Alford, professor of mathematics, and M. J. Goldin, professor of practical mechanics, retired in 1917. The university received a gift of 385 acres of land to establish a forestry reserve in Randolph County to be known as the Herbert Davis Forest Reserve. Productive funds in 1917 amounted to \$445,000 and the income therefrom to about \$22,000. The income of the university is derived chiefly from Federal and State appropriations. The university was founded in 1869. President, Winthrop Ellsworth Stone, LL.D.

**QUAKERS.** See **FRIENDS.**

**QUEBEC.** The largest province of Canada. It extends from Ontario, the United States, and New Brunswick northward to Hudson Strait and includes most of the Labrador peninsula. The city of Quebec is the capital. The estimated area is 706,834 square miles, of which

15,969 water; the gross area amounts to about 23 per cent of the gross area of the United States. The population at the 1911 census was 2,003,232, the increase over 1901 being 21.49 per cent. The estimated population of Montreal, the largest city of Canada, was 650,000 in 1915, as compared with 470,480 in 1911 (it is not unlikely that the 1915 estimate is too large); Quebec, 100,000 (78,710); Maisonneuve, 34,856 (18,684); Verdun, 25,000 (11,629); Hull, 20,257 (18,222).

The provincial government is administered by a lieutenant-governor, appointed for five years by the governor-general of Canada; he acts through an executive council, or responsible ministry. The legislative power is exercised by the Legislative Council (24 members, appointed for life) and the Legislative Assembly (81 members, elected for five years). Quebec has a constant representation of 65 members in the Canadian House of Commons; the representation of the other provinces is proportionate to this number, on the basis of population as ascertained at the regular decennial census. The lieutenant-governor in 1915 was Sir Pierre Evariste Leblanc, K.C.M.G., appointed February 9, 1915, to succeed Sir François Langelier. Premier, Sir Lomer Gouin, K.C.M.G. See CANADA; also BRIDGES.

**QUEENSLAND.** The northeastern State of the Commonwealth of Australia. It lies north of New South Wales and South Australia and east of South Australia and the Northern Territory. Queensland is the second largest of the Australian States, having an estimated area of 670,500 square miles, which is about 22.5 per cent of the area of the Commonwealth or about four and one-quarter times as large as California. Capital, Brisbane. Estimated population June 30, 1916, 687,471, as compared with 689,078 in 1915 and 605,813 at the 1911 census (these figures being exclusive of full-blooded aboriginals). In 1915 the estimated population of Brisbane and suburbs, within a ten-mile radius, was about 161,900.

The legislative power is vested in a parliament of two houses, the Legislative Council and the Legislative Assembly. The Council consists of 38 members (but the number is not limited) appointed by the Crown for life; the Assembly consists of 72 members elected for three years by universal suffrage. The executive authority rests with a governor, who is appointed by the Crown and acts through a responsible ministry. The governor in 1917 was Maj. Sir Hamilton John Goold-Adams, G.C.M.G., C.B., who assumed office in 1914. Premier and attorney-general, T. J. Ryan. See AUSTRALIA.

**QUETZALTEPEQUE VOLCANO.** See VOLCANOES.

**QUICKSILVER.** The demand for quicksilver has been stimulated owing to the large consumption of the metal in the manufacture of war supplies, and the generally prevailing high prices resulting from the great demand. The total output in 1916 was 29,932 flasks of 75 pounds each, compared with 21,033 flasks in 1915. The production in California increased from 14,283 flasks in 1915, valued at \$1,174,881, to 21,045 flasks, valued at \$1,811,554 in 1916. The exports of quicksilver in 1915 amounted to 3372 flasks, valued at \$225,509, compared with 8880 flasks, valued at \$670,475 in 1916. The imports

amounted to 5659 flasks, valued at \$515,919 in 1916.

The domestic output of quicksilver in 1917, according to preliminary estimates made by the United States Geological Survey, amounted to 36,351 flasks of 75 pounds each, valued at about \$3,867,000. This is reckoned on the average quoted market price at San Francisco. This was the largest output in quantity since 1883, and the greatest in value since 1875. The States producing are California, Texas, Nevada, Oregon, and Arizona. The output for California in 1917 was 24,251 flasks, compared with 21,045 flasks in 1916. The output of Texas was 10,759 flasks, against 6306 flasks in 1916. The production of Nevada decreased from 2198 flasks in 1916 to 919 flasks in 1917. In Arizona and Oregon combined the production was 422 flasks in 1917, against 383 flasks for these States and Washington combined in 1916.

The average San Francisco market price for the year was \$106.12, the lowest average monthly price being \$81.00 a flask in January, and the highest \$126.25 in February. The high prices were due to greatly increased explosives, anti-fouling paint for ship bottoms, etc., but also to excess of exports over imports. The exports for the first ten months of 1917 were 10,222 flasks, against 8880 flasks for the entire year 1916, and the imports were 4491 flasks for the first nine months of 1917, against 5659 flasks for all of 1916.

**RABIES.** During the year 1916, 1391 persons received treatment for rabies at the Institut Pasteur at Paris, of which number 6 or 0.43 per cent died of the disease. Two patients were seized during the course of antirabic treatment and one died within two weeks after the end of the treatment. Eliminating these three cases the correct statistics as given by the Institut are: 1388 cases treated; 3 deaths; mortality, 0.21 per cent. The percentage of deaths is slightly higher than before the war, and the number of persons bitten is considerably larger. In years preceding the war, it was usual to have no deaths from hydrophobia in Paris.

The Department of Health, New York City, has been making an elaborate study and classification of patients and of infected dogs. During 1916 the total bites reported were 3247, 403 less than the previous year; dogs biting while leashed, 358; dogs biting while muzzled (some of them ineffectually), 263; dogs biting while leashed and muzzled, 120; not leashed or muzzled, 2333; condition of control not known, 163; licensed dogs biting, 1254; ownerless dogs biting, 247; vicious dogs destroyed, 796; dogs found rabid by laboratory examination, 24. There was only one case of human rabies reported, which was fatal. There were 24 cases of rabies in dogs.

Levy of Baltimore reports a case of facial paralysis following Pasteur antirabic treatment. The paralysis involved both sides of the face and began 73 days after starting prophylactic inoculations. There are on record 150 cases of paralysis following the use of serum, a very small number compared with the hundreds of thousands of persons who have received inoculations. Of the 150 cases of paralysis, 25 died. Levy's patient was a neurotic subject and a heavy smoker. The brain of the dog which scratched him showed no evidence of rabies, but he insisted on having prophylactic injections.

The exact etiology of these paralyzes is not understood. J. C. Geiger of the California State Board of Health, asserts that the neuritis and paralysis are most probably due to the intensive form of Pasteur treatment.

**RACING.** Thoroughbred racing had one of the most prosperous years of its history in 1917. Large crowds attended the meetings at the tracks near New York City, while the interest shown in the sport at Saratoga was greater than in a decade. In Maryland all records were broken in the class of horses competing and number of spectators.

Willis Sharpe Kilmer, practically a newcomer to the sport, headed the list of winning owners on the Eastern tracks during 1917, with a total of \$63,902. Of this amount his sterling two-year-old, Sun Briar, contributed \$58,505. Second on the list comes August Belmont with winnings of more than \$57,000. Other leaders were: George W. Loft, \$55,000; Wilfred Viau, \$52,000; A. K. Macomber, \$47,000; R. T. Wilson, Jr., \$45,000; H. P. Whitney, \$42,000; James Butler, \$41,000; Joseph E. Widener, \$38,000; Brighton Stables, \$35,000; Andrew Miller, \$35,000; John Sanford, \$25,000.

The leading horses in the various divisions were: 2-year-old colts, Sun Briar; 2-year-old fillies, Rosie O'Grady; 3-year-old colts, Omar Khayyam and Hourless; 3-year-old fillies, Sun Bonnet; older horses, Old Rosebud, Borrow, Boots, and Pan Zareta; jumpers, St. Charlcote.

The winners of the more important stakes in 1917 were: Metropolitan Handicap, R. T. Wilson, Jr.'s Ormesdale; Futurity, George W. Loft's Papp; Brooklyn Handicap, H. P. Whitney's Borrow; Excelsior Handicap, Andrew Miller's Roamer; Carter Handicap, H. C. Applegate's Old Rosebud; Suburban Handicap, A. K. Macomber's Boots; Saratoga Handicap, Andrew Miller's Roamer; Kentucky Handicap, R. L. Baker's King Gorin; Kentucky Derby, C. K. G. Billings's Omar Khayyam; Latonia Derby, A. K. Macomber's Liberty Loan; Lawrence Realization, Wilfred Viau's Omar Khayyam; Keene Memorial, A. K. Macomber's Tracksend; Breeders' Futurity, K. D. Alexander's Escoba.

W. Crump was the premier jockey of the year, riding in more than 650 races and finishing first 137 times and second, 116. F. Robinson rode 104 winners and captured 93 second places.

The year was notable for the top prices thoroughbreds brought. Cudgel went for \$30,000; Omar Khayyam, \$26,600; Tippet Witchet, \$20,500; Liberty Loan, \$20,000; Westy Hogan, \$20,000; Kashmir, \$20,000; North Star III, \$20,000.

One world's record was established, two horses sharing in the honor. H. P. Whitney's Borrow ran the mile and a furlong of the Brooklyn Handicap in 1.49  $\frac{1}{2}$  with 117 pounds up when he defeated his stable mate, Regret, by a head. A few days later A. K. Macomber's Boots, carrying 127 pounds, equaled the mark in winning the Brookdale Handicap.

The tracks in Canada closed at the end of July because of war measures, although up to that time the sport had been well patronized. Racing was further curtailed in England, only a few of the feature events being contested. Gay Crusader, owned by Mr. Fairie, proved to be the best English horse of the year. He won the New Derby, the Two Thousand Guineas, and the September Stakes.

Trotting and pacing activities flourished in

the United States and Canada during 1917, although the Dominion found it necessary to curtail some of the fall meetings. There were 1100 separate meetings held in the two countries, a total of \$448,217 being distributed to winning horses on the Grand Circuit alone in a period of fourteen weeks. Early Dreams was the biggest money winner with \$22,210.

St. Frisco was the champion trotter of the year, covering a mile in 2:01 $\frac{1}{4}$ . The leading pacer was Miss Harris M., which went a mile in 2:00, the fastest time ever made by a mare. The former record, 2:00 $\frac{1}{4}$ , was made by Dariel in 1903. Sixty-four trotters entered the 2:10 list in 1917 and 102 pacers. The leading driver of the year was Walter R. Cox, who won forty races.

**RACQUETS AND COURT TENNIS.** Clarence C. Pell attained the highest honors in racquets during the 1917 season. He won the national amateur racquet championship singles by defeating S. G. Mortimer, the title holder, in the final round by the score of 15-11, 15-1, 15-5 and also won from the same rival in the contest for the gold racquet trophy, the scores being 13-15, 13-15, 15-11, 15-8, 15-10. The doubles racquet championship went to G. H. Brooke and J. W. Wear, who defeated C. C. Pell and S. G. Mortimer 15-12, 15-7, 13-15, 18-14.

Jay Gould retained his supremacy in court tennis, defeating Joshua Crane in the singles championship by a score of 6-2, 6-0, 6-3. An effort to arrange a match between Gould and Walter A. Kinsella, who claimed the open court tennis title, failed.

The squash tennis championship was won by Eric S. Winston of the Harvard Club, New York City. In the class B competition Allen Corey of the Yale Club, New York City, gained the victory. The Harvard Club team captured the Metropolitan League laurels in Class A, while the Yale Club was triumphant in Class B.

**RADCLIFFE COLLEGE.** A non-sectarian institution for the education of women, at Cambridge, Mass. It is affiliated with Harvard University. In the fall of 1917 there were 87 graduate, 39 special, and 480 undergraduate students—a total of 606, and 147 members of the faculty. Volumes in the library number 35,500. A bequest of \$250,000 from Mrs. Abigail W. Howe was received in 1917 to establish two funds, the income of one to be used for fellowships and of the other for general purposes. In 1917 the productive funds amounted to \$1,045,000, and the income to \$62,000. The college was founded in 1879. President, LeBaron Russell Briggs, LL.D., Litt.D.

**RADIATION.** See ASTRONOMY.

**RADIOACTIVITY.** See PHYSICS.

**RADIO-TELEGRAPHY.** See WIRELESS TELEGRAPHY AND TELEPHONY.

**RADIUM THERAPY.** The employment of radium for the cure or palliation of various types of malignant tumors, as well as other diseases, was more extensive during 1917 than during the years immediately preceding, possibly on account of the development of a more exact technic and increasing knowledge as to the dosage of this element. The reports of the Radium Institute of London, for the past two years, were published. Here careful records are kept of the results of radium treatment in a large number of cases. A brief statistical summary of the results achieved may be of interest. In

epitheliomas of the mouth and pharynx and laryngeal mucous membranes, while temporary improvement was frequently noted, ultimate results were disappointing. Of 58 such cases, 16 were dead at the time of the report, 13 were not improved, 25 were improved, 4 were apparently cured. Isolated nodules in the tongue were treated by burying in them a tiny, powerful emanation tube of 50 mg. or more initial activity, screened with 1 mm. of silver or 3 mm. of platinum, for from 18 to 24 hours, arrest of the disease, followed by fibrous changes, taking place. Of 6 patients with vaginal epithelioma, 4 were apparently cured, 1 improved, 1 not improved. Treatment here consisted in prolonged exposures with powerful applicators heavily screened. In inoperable cancer of the uterus, symptomatic improvement was the general rule, there was arrest of pain, hemorrhage, and discharge, healing of ulcerations, and diminution in the rate of growth. Some inoperable cases were transformed into the operable class. The dosage had to be heavy, and the exposures varied from 30 to 60 hours spaced over a period of from 5 to 10 days. In carcinoma of the rectum, out of 51 cases treated, 33 were improved, 10 not improved, 8 died, and 14 abandoned treatment. In various types of cancer of the breast, of 111 patients treated, 6 were apparently cured, 67 were improved, 24 not improved, and 14 died. Favorable cases of rodent ulcer which did not affect the mucous membrane, bone, or cartilage, and did not exceed 3 cm. in diameter, were almost invariably cured by one treatment, a full strength unscreened applicator being employed. Rodent ulcer patients treated numbered 169; of which 122 were apparently cured, 37 improved, 8 unimproved, 2 died, and 6 abandoned treatment. In lymphosarcoma the effects were remarkably favorable and prompt, the growth beginning to shrink in a few days after treatment and soon entirely disappearing. Other diseases responding favorably were fibroid disease of the uterus, lupus vulgaris, obstinate pruritis (associated with skin lesions, but not in the purely neurotic type), and arthritis deformans.

Barringer, of New York, reports a number of remarkable cures of cancer of the bladder and prostate. His technic consists in thrusting a needle into the growth and leaving it there for about 12 hours. The radium is placed in the end of the needle and extends from the point from one to one and a half inches along the shaft. These are now made of gold and are from four to six inches long. Local anesthesia only is needed, the perineum being injected with novocain in 0.5 per cent solution. The treatment is described as nearly painless and the patient is in the hospital only one day. There is a period of reaction lasting from a few days to several weeks. Treatment may be repeated in two or three months.

It is the opinion of all observers, however, that in spite of the favorable results obtained in many cases of malignancy by radium therapy, frankly operative cases should not be treated by radium, but prompt recourse should be had to the more certain promise of surgery. Ewing states the case as follows:

"Since radium has accomplished a clinical cure in certain advanced cases of cancer, why should it not be employed in operable conditions? The objections to this policy must be frankly

stated and clearly recognized. They are, mainly, that all new methods of cancer therapy have inevitably failed, and only the knife has proved reliable; that certain so-called clinically cured cases have relapsed within a few months, and that it is morally unjustifiable to sacrifice the patient's chance from operation for an experiment by any new method."

As indicated above, in the report of the London Institute, radium emanations are beneficial in many other forms of disease. Ordway, of Albany, says that in his experiences with leukemia, surface applications of radium produced striking improvement in the blood, which becomes nearly normal; in the enlarged spleen and lymphatic glands, which are reduced almost to their natural dimensions; and in the general condition of the patient, whose weakened and emaciated appearance may change to one of plumpness and strength. The improvement may last for months or years. Ordway's patients had been previously subjected, without benefit, to the roentgen ray and the administration of benzol. Knudson and Erdos, also of Albany, found that there was an enormous increase in the excretion of nitrogen, urea, and phosphates immediately after exposure to radium. The surface application of radium over the spleen promotes the disintegration of nuclein tissue, which explains the increased excretion of the above substances.

**RAILROAD WAB BOARD.** See RAILWAYS.

**RAILS.** See CHEMISTRY, INDUSTRIAL.

**RAILWAY ACCIDENTS.** The Interstate Commerce Commission in its report of the year ending June 30, 1917, investigated eighty train accidents, comprising fifty-four collisions and twenty-six derailments. These accidents resulted in the death of 174 persons and injuries to 827 persons; the collisions being responsible for the death of 132 persons and the injury of 638 persons; and the derailments for 42 persons killed and 189 injured.

Eleven of the collisions occurred in territory operated by automatic block signals and ten where there were non-automatic block signals, while thirty-three of the collisions occurred on lines operated by the train order and time interval system. Of the eleven collisions in automatic block signal territory, eight were due to failure of enginemen to obey signal directions, and this in the opinion of the commission emphasizes the necessity for the development of some form of automatic train control device to supplement existing block signal apparatus. Such devices have been used on various underground rapid transit and other lines, and have figured in recommendations to Congress by the commission. One of the three collisions in automatic block signal territory was caused by the failure of a switch tender to note the position of the switch indicator, and the other two were caused by improper practices employed in the special territory where the accidents occurred. Most of the collisions in non-automatic block signal territory were due to lax observance or enforcement of rules, and indicated inefficient discipline.

The Interstate Commerce Commission recommended Federal legislation to standardize railroads operating rules which should be easily understood and applied, and not liable to misunderstanding. The report states in reference to twelve of the twenty-six derailments investigated that

they were due to defective conditions of tracks and track equipment, and three were due to defective car and locomotive equipment. In nine of the derailments, speed was the direct cause or a contributing factor; one was caused by failure to obey a signal indication; and one to a runaway on a mountain grade, due to neglect of the train crew to make proper test of the brakes. A large percentage of the derailments that occur on American rails are due to defective equipment and defects of roadway. The annual statistical report for January 1, 1917, showed that 98,407.9 miles were operated by the block system and a net increase during the year 1916 of 1832.3 miles.

In the 1917 record, 227 of the accidents in which ten persons were killed and 252 injured were caused by failures of some part of the locomotives or tender other than the boiler. In 1916, there were 537 accidents resulting in 38 deaths and 599 injuries.

It was shown at a hearing that on January 1, 1917, there were 296,033 cars which did not fully conform to the prescribed standards respecting appliances required by the law. On April 12, 1917, the commission entered an order further extending the time to comply with certain paragraphs of the original order for a period of eight months from July 1, 1917. This was due to various causes, such as the shortage of cars, scarcity of labor, inability to obtain new equipment, and congested traffic conditions.

The House of Service Act was vigorously enforced by the commission during the year and 113 cases involving 1197 counts were transmitted to the United States district attorneys. Cases involving 811 counts were confessed and 444 counts were tried, of which 125 were decided in favor of the government and 198 in favor of the carriers. The remaining at the end of the year were still pending decision either in the district courts or in the circuit courts of appeal. Cases involving 878 counts were dismissed, 841 of which were based upon the carriers' failure to report all instances of excess service as required by an order of the commission.

On December 6, in a head-on collision between a freight and a passenger train at Susquehanna, Pa., on the Erie R. R., four employees were killed and two injured.

In a derailment which occurred at Sharon, Ky., on the Chesapeake and Ohio on December 8, the two engines of an eastbound passenger train were thrown from the track and struck the caboose of a freight train on a side track. Four employees of the railroad were killed and three employees and one mail clerk were injured. One of the most serious accidents of the year occurred at Pittsburgh, Pa., on December 24, when a runaway electric car met with an accident which caused the death of twenty passengers and the injury of a large number.

At Houston, Tex., on December 25, three persons were killed and five injured by a locomotive running into a street car.

On December 29, a collision of two passenger trains on the Baltimore and Ohio occurred near North Vernon, Ind., in which seven trainmen and one passenger were killed and twenty others injured. A railway investigation developed the fact, according to the officials, that the conductor and engineer of train No. 2 bound from St. Louis to New York disregarded an order

to wait at North Vernon for train No. 23, bound from Cincinnati to St. Louis. Furthermore, an automatic signal was passed by the westbound train, while the caution signal was in the stop position and apparently working properly. This collision had not been investigated by the government at the end of the year.

On December 20, a rear end collision of southbound passenger trains on the Louisville and Nashville at Shepherdsville, Ky., eighteen miles south of Louisville occurred at about 6 p. m.; forty-five passengers and two employees were killed and forty or more passengers were injured. Among those killed were the conductor and flagman of the forward train, who at the time of the accident were said to be responsible for the collision, inasmuch as they had not protected their train at the rear while they were losing time. The train which caused the collision was about two hours late and was going at full speed at the time of impact. The rear car of the local train and the one next to it, both wooden coaches, were split open and completely wrecked by the express, which consisted of one of the heaviest locomotives and nine steel cars. The greater part of the damage was confined to the local train. In addition to the blame attached to those in charge of No. 9, it was also said that the express, which was proceeding at full speed, should have been under control, as the line was being operated on the train-order system. An interesting development of this accident came a few days later when the president, Milton H. Smith, issued a statement to the public proposing that the governor appoint an arbitrary committee to pass on all claims in connection with the accident which could not be settled by direct negotiation between the company and the claimants. Mr. Smith proposed that the decision of this board should be final. He said, "This will save the claimants the delay and expense of litigation, will insure a certain and just determination of their rights, and will guarantee their receiving the full amount awarded instead of dividing it with others. The proposition is not dependent upon acceptance by all claimants, but is open for three months to all who may desire to avail themselves of it."

**RAILWAY SIGNALING.** During the year further progress towards increased safety was made by the installation of block signals over a total of 2809 miles of road, an amount of about 700 miles greater than the record for 1916. Of this 2785 miles were in the United States and 24 miles in Canada. Of the new block signaling under construction, there was a total of 1653, of which 1647 were in the United States and 6 in Canada; 1240 miles was proposed for installation in the following year. In 1917, 187 interlocking plants were completed, as compared with 98 in 1916, and there were under construction 164 such plants, as compared with 119 in the previous year; 108 new plants were proposed for 1918, a number 31 less than for the previous year, although this figure was hardly dependable, as important projects being considered by the various lines were not announced. An important work of safety involving several millions of dollars was an extension of the block signals on the New York City elevated and subway lines and the elaborate plans that were being made for the equip-

ment of the new subways. Thus the Brooklyn Rapid Transit Company proposed to install 523 signals with apparatus for operation of automatic block signals, some of which was to be available in either direction.

Electric pneumatic interlocking was installed on the D. L. and W. at Buffalo terminal and by the Interborough Rapid Transit Company on the new subway and elevated lines. The New York Central at Berea, Ohio, also installed interlocking and has 56 working levers, of which 23 were added in 1917.

**GREAT BRITAIN.** In Great Britain, during 1917, a fairly successful record for safety was maintained, with but one fatal accident to a passenger train. This occurred on January 3 at Ratho on the North British Railway, and resulted in the deaths of twelve passengers. It was a collision between a light engine and an Edinburgh express, and was due to a misunderstanding of instructions from a signalman to an engine driver. Several accidents to troop trains occurred during the year, one on September 15 on the military railway in North Yorkshire, in which three soldiers were killed. In connection with the investigation of various railway collisions, a recommendation was made that an investigation should be held to determine a standard type of detonator as a fog signal. In the investigations, testimony brought out that under certain conditions the engine drivers and firemen could not hear the explosion of these fog signals, so that their improvement and standardization was considered essential.

**RAILWAYS.** Immediately on the outbreak of the war in August, 1914, the English Government appointed a Railway Executive Committee consisting of the general managers of the principal railways, to operate all the roads as a single system. With the entrance of the United States into the war a similar situation had to be met. The American government, however, took two successive steps in dealing with the situation; one on April 11, 1917, when it sanctioned the creation of the so-called Railroad War Board, consisting of five railway presidents, and permitted the elimination of some of the existing competition; and the second, when President Wilson on December 26, 1917, acting under a paragraph in the law of August 29, 1916, appointed William G. McAdoo as director general of railroads in addition to being secretary of the treasury. In making this appointment the president promised to, and later did, ask Congress to guarantee to each railroad company a net operating income equal to the average yearly net operating income in three years prior to June 30, 1917. Net operating income is the amount which is left from a railroad's total revenue from freight and passenger business after operating expenses and taxes are paid. Net operating income therefore is the amount which the railroad company has available for paying interest on its bonds and for dividends on its stock. In other words, Congress was to guarantee that no matter how expenses mount up and no matter how large or how small a part of the business is carried by any one road, each company will have an amount equal to the average in the last three years available to pay interest charges and dividends on stock.

A concrete instance will make this plainer:

Atchison, Topeka & Santa Fé			
	1915	1916	1917
Total Oper. Revenues	\$117,865,587	\$133,762,392	\$156,179,121
Oper. Exp...	76,091,554	83,730,960	96,333,569
Taxes .....	5,522,622	6,251,439	9,593,877
Oper. Inc..	\$36,051,401	\$43,779,993	\$49,951,675

The government therefore would guarantee this company \$43,261,023 operating income. The interest on the company's bonds amounted to \$12,112,844 in 1917, leaving, if the government guarantee had been in operation, about \$31,000,000 surplus. The rate of 5 per cent on the preferred and 6 per cent on the common stock maintained in 1917 called for about \$19,250,000.

This average net operating income, \$43,261,023 in the case of the Atchison, was called the standard return and any amount earned above it was to go to the government. The government thus could use an excess earned by one road to make up a deficit of another road, while if the total excess was greater than the sum of the deficits the government would make a profit. If the deficits were the greater the government would have to stand the loss.

The government bill also provided that the companies might make additions and betterments and pay for them with their own funds, in which case their standard return would be increased by an amount equal to interest at a rate to be fixed by the president on the amount so spent. The companies were forbidden to pay a higher dividend than the average rate for the three years ended June 30, 1917, without the consent of the president, but the president might authorize a company which had not been paying any dividends to pay dividends at a rate to be determined by him. It was planned that Congress would appropriate \$500,000,000 as a "revolving fund from which the president could make up a deficit and pay for additions and betterments, new cars, and locomotives, etc. The government was to receive interest on such expenditures. The companies might sell their own securities to raise new capital and the president was authorized to buy and sell railroad company securities.

The bill provided that the president might exercise the powers granted him through whatever agencies he sees fit and fix reasonable compensation for service. The president was authorized to extend the Federal Workingmen's Law to railroad employees. Suits can be brought against the roads as common carriers as heretofore but without the president's written consent no attachment or execution can be obtained against common carrier property.

The bill provided that any person or corporation employed by or acting for any road or any shipper or other person who shall fail to observe the provisions of the law or interfere with or impede the use or operation of any transportation system taken over by the president shall be liable to a maximum fine of \$5000 or imprisonment for not more than two years. It was under this provision, of course, that the president could prevent or punish strikes and deal with the railroad labor unions.

The last section of the bill provided that "The Federal control of transportation systems herein and heretofore provided for shall continue for and during the period of the war and until Congress shall thereafter order otherwise."

#### DIRECTOR GENERAL WILLIAM G. MCADOO AND THE NATIONAL RAILWAY BOARD

From Left to Right, Julius Kruttschnitt, Chairman of the Executive Committee Southern Pacific; Mr. McAdoo; Judge John B. Payne, of Chicago, General Counsel of the Emergency Fleet Corporation and acting in the railroad conference as Mr. McAdoo's Legal Adviser; Samuel Rea, President of the Pennsylvania; and Hale Helden, President of the Chicago, Burlington & Quincy. Fairfax Harrison, President of the Southern and a member of the board, is not in the picture.

The extent of the change in the entire economics of American railroading was so great as to make adequate description somewhat difficult. Competition was the driving force back of the development of railroad service as the railroads were rendering it before 1917. After rate cutting was abandoned in 1906 it became necessary to compete by means of giving the shipper something in addition to the actual transportation of his freight, and of giving the passenger something more than transportation from one point to another. It was difficult for any one who had not been actually in railroad service to realize how keen this competition had been. The necessity for it was ground into every railroad man, high or low, until he saw his business only through the colored lenses of competition. So compelling a force was it, that men with the strength of character and ability to work up from employees to the position of president, and with personal convictions founded on years of experience as to the utter wastefulness of literally hundreds of practices in both freight and passenger service, were unable to stand out against their own subordinate traffic officers when it came to cutting off practices that were used as a means of competition.

When the railroad heads got together to ask for the rate increases in 1910, the foundation was laid for coöperation, but until the beginning of the war and the formation of the Railroad War Board, coöperation existed only to the extent of trying to present a united front to the Interstate Commerce Commission. The authority under which the War Board was formed was really in its last analysis, a personal pledge on the part of each of the presidents who were present at the memorable meeting in Washington on April 11, 1917. This pledge was comprehensive. A president in the operation of his own road had no more authority, even in theory, than was voluntarily given to the War Board. The executives who were present at this meeting returned to their offices and presumably nearly all of them held meetings of their board of directors at which the pledge given by the president was confirmed by the directors. The formation of the War Board was a recognition of the necessity for coöperation as a guiding force, in place of competition. As in every other business, the personal equation entered strongly into the methods of obtaining the desired result. The War Board under the leadership of Fairfax Harrison, at first went somewhat slowly. Every one of the five men composing the board (Fairfax Harrison, president of the Southern Railway; Samuel Rea, president of the Pennsylvania; Julius Kruttschnitt, chairman of the executive committee of the Southern Pacific; Hale Holden, president of the Chicago, Burlington, and Quincy, and Howard Elliott, formerly president of the New York, New Haven, and Hartford) could have named off-hand fifty or one hundred practices which were wasteful and ought to be discontinued. To have discontinued many of these practices by mutual agreement would have been unlawful and subjected the "conspirators" to liability to a jail sentence. Moreover, the board was dealing with men whose life work had been the exercising of authority, not the taking of orders. Without the help of patriotism and the change which patriotism brought about in the business ethics of railroading, the work which the War Board accom-

plished would have been quite impossible. In the first place, patriotism on the part of the people and of State commissions permitted coöperation in the elimination of useless service that would have been inconceivable except under the new stimulus.

The change in attitude of the railroad managers permitted arbitrary settlement of questions of competitive practices, more especially in the use of freight cars, that would have caused endless friction had not this change in ethics taken place. There was superimposed on the duty which railroad managers owed their stockholders, a new, and what was recognized by most of them a paramount duty, that to their country. Of course, all railroad men were not equally quick to step forward and to give in spirit as well as in letter the coöperation which often necessitated sacrifices of stockholders' interests, and an analogous situation existed among shippers and State commissions. It would be fatuous to say that the War Board accomplished all that could have been accomplished by a change from competitive methods to co-operative methods. Competitive and wasteful passenger service between cities like Chicago and St. Louis and New York and Chicago still existed when the president appointed Mr. McAdoo railroad director.

Shortly after the formation of the War Board, President Wilson appointed Judge Robert S. Lovett, Chairman of the Executive Committee of the Union Pacific, and a staunch political supporter of Mr. Wilson, as director of priority. Furthermore, Daniel Willard, president of the Baltimore and Ohio, had already been made chairman of the Advisory Committee of the Council of National Defense. The railroad people themselves still had the Railway Executives Advisory Committee, described in the 1916 YEAR BOOK, of which Frank Trumbull was chairman. The activities of this latter committee were confined largely to trying to place before the Joint Committee of Congress which was investigating the railroad question, the desirability of Federal regulation to the exclusion of State regulation. In addition to these various committees there was still the Interstate Commerce Commission, which had absolute control of the rates which railroads could charge for freight and passenger service.

In a very general way the superstructure placed above the railroad companies was: the Interstate Commerce Commission (a Federal government body) with jurisdiction over rates and therefore controlling railroad revenues; the State Commissions (State government bodies), also with jurisdiction over rates and with the additional jurisdiction over the sale of stocks or bonds of railroads; Daniel Willard of the Advisory Committee of the Council of National Defense (a government official) representing the president and the Executive Department of the government in its dealings with the railroads; Judge Lovett, director of priority (a government official), charged with designating what kinds of freight should be given precedence over other kinds; The War Board (a voluntary association of railroad officers) dealing with the actual operation of the railroads and particularly with the distribution of empty freight cars; and finally the Railway Executives Advisory Committee (a voluntary association of railroad officers) dealing with Congress.

Distribution of empty freight cars and precedence in the movement of freight are so intimately related that the attempted separation of these two functions tended to defeat the very end aimed at by both the War Board and Judge Lovett. Furthermore, the army issued its own priority orders, the fuel administrator tried to do likewise, as did also the food administrator. The really remarkable thing was that very real accomplishments were made despite this superstructure and the explanation was probably that notwithstanding the overlapping and conflicts in authority, all concerned were actuated by desire to do the best possible for the country at war.

On December 31, the Railroad War Board tendered its resignation to Mr. McAdoo, at the same time turning over to him its subcommittees and the organization that had been built up to do its work. Mr. McAdoo then appointed a temporary advisory committee to assist him. This corps of assistants consisted of John Skelton Williams, controller of the currency as advisor on financial matters; Hale Holden, president of the Chicago, Burlington, and Quincy Railroad and member of the former War Board, as supervisor of the organization turned over to Mr. McAdoo by the War Board; Henry Walters, capitalist and chairman of the Board of Directors of the Atlantic Coast Line Railroad, as advisor on operating matters; Edward Chambers, vice-president in charge of traffic of the Atchison, Topeka, and Santa Fé Railroad, as advisor on traffic matters; Walker D. Hines, a lawyer and chairman of the Executive Committee of the Atchison, Topeka, and Santa Fé, as advisor on legal matters, and A. H. Smith, president of the New York Central, given charge of operation in the territory east of Chicago and north of the Ohio and Potomac rivers.

The reason given by the War Board for its resignation was that its members were needed in the service of their individual roads, but the real reason appeared to be a decision on the part of the board to clear the way for Mr. McAdoo to build up an organization with a personnel entirely of his own choosing. This assumption was borne out by the retention of Hale Holden of the Burlington and the substitution of the president of the New York Central for the president of the Pennsylvania, the reasons for which substitution were not obvious from a railroad point of view.

The other part of the president's solution of the railroad problem—the government guarantee of net operating income—was of the greatest importance. Some such thing was a necessity if railroad securities market values were to be kept from utter collapse. These securities held by all classes of investors, but by savings banks and insurance companies more largely than by any other class, were one of the most fundamental forms of American investment. It was therefore an economic paradox that at the very time when the physical wealth—the railroad net of the country—which these securities represented had the greatest value in its history, because more used and more necessary than ever before, the securities themselves were selling in the market at their lowest prices.

While the immediate and plainly discernible causes for the government taking control of railroad operation are easily enumerated—freight congestion, inability to pool facilities

without also pooling earnings, extremely shortsighted and repressive regulation contradicting priority orders, etc.—there are other deeper lying causes not so easily definable. Before attempting this, a brief outline of the year's development in regulation is of importance.

**PROGRESS OF REGULATION.** All of the roads had joined together in asking for permission to raise freight rates 15 per cent. The Interstate Commerce Commission again refused to grant any substantial increase in an opinion handed down in June, allowing, however, what amounted to about a 6 per cent increase to the Eastern roads in rates, but announced that the Commission stood ready to reopen the case if circumstances demanded it. On the commission's own initiative, the case was reopened on November 5, with so much "speeding up" that the request of the railroad lawyers for sixty days in which to prepare their case was refused. Notwithstanding this sudden and wholly unprecedented quickness of action, no decision was handed down before the president's action taking over the roads. Instead, on December 5, the commission made a special report to Congress declaring that absolute unification of the railroads during the war was indispensable. The majority of the commission were of the opinion that if Congress would pass the necessary laws permitting pooling this unification could take place under private ownership and operation. Commissioner McChord, however, in a minority opinion held that government operation was essential.

At the beginning of the year the Interstate Commerce Commission consisted of seven members. On August 9, 1917, Congress passed a law increasing the number to nine and on September 29 President Wilson appointed George W. Anderson, United States district attorney for Massachusetts, and Clyde B. Aitchison secretary for the valuation committee of the National Association of Railway Commissioners (State commissions) as the two new members of the Interstate Commerce Commission, with terms ending in 1922 and 1921 respectively. At the same time the president appointed Robert W. Woolley, formerly director of the mint, to succeed Judson C. Clements, who had recently died. As the commission was constituted at the end of 1917 the Southwest was the only part of the United States not represented on the commission. Commissioner Anderson came from New England, Commissioner Aitchison from the Pacific Coast, Commissioner Woolley from Virginia, Commissioner Harlan from Illinois, Commissioner Clark from Iowa, Commissioner Meyer from Wisconsin, Commissioner Hall from Colorado, Commissioner Daniels from New Jersey, and Commissioner McChord from Kentucky. The law of August 9 authorized a reorganization of the commission into divisions each with jurisdiction over various departments of the commission's work, with full powers of the commission subject to its review.

**VALUATION.** The work of valuation of the railroads under the direction of Charles A. Prouty, head of the division of valuation of the Interstate Commerce Commission proceeded slowly but the significant event in connection therewith was the filing of a memorandum with Congress in which Director Prouty implied that no final value would be arrived at by his division and under the present valuation act. In

the course of this memorandum Director Prouty said:

"As a member of the Interstate Commerce Commission I several times joined with my associates in recommending to Congress that it provide for a valuation of railroad property, and in so doing I for one understood that a valuation in dollars of the property as a whole was called for. There can be little doubt that a majority of the members of the Congress which enacted this measure understood that it provided for a statement of the value of the railroad properties dealt with in money and that the act was so accepted by the country at large.

"It is still my own conviction that an ultimate value for rate-making purposes should be stated and that the full benefit of this valuation can not be realized unless this be done. . . . This does not, however, at all mean that any part of the work now being done or of the money now being expended is thrown away because the commission is not required to establish at this time such ultimate value. Before such a value can be named the facts which the commission is collecting and reporting to Congress should be before the tribunal which fixes it. The facts are being prepared under the present act and a final value can be quickly stated when Congress has determined by whom and possibly by what rule such value shall be determined."

The valuation which, however, would not fix a value was supposed to be completed in 1920. If government ownership were to follow this new experiment in government operation even the incomplete and inconclusive results of the department of valuation would be of great importance.

The hearings begun in 1916 before the joint congressional committee investigating the railway situation, of which Senator Newlands of Nevada was chairman, were continued in 1917. Senator Newlands died suddenly on December 24 and the committee had not up to the time the YEAR BOOK went to press made any report to Congress.

**WAGE INCREASES.** The Adamson Law which compelled the railroads to pay train and engineers overtime after eight hours' work passed by Congress in 1916 and described in the 1916 YEAR BOOK was taken to the United States Supreme Court on a test case. The railroads continued to pay the old schedule of wages, but kept a record of each man's work over eight hours with the understanding that if the law was held constitutional the companies would immediately pay the extra wages accrued under this law.

By March the decision of the Supreme Court not having as yet been handed down in this case—the leaders of the four brotherhoods (engineers, conductors, firemen, and trainmen) renewed their efforts to compel the managers to pay the increased wages whether or not the court held the Adamson Law constitutional. Up to the time of the meeting between the brotherhood leaders and the National Conference Committee of Managers on March 15 the labor leaders made no threat to strike. The managers committee again offered to put the whole question to arbitration as they had offered to do before the law was passed but the labor leaders refused. President Wilson held a cabinet meeting on Friday the 16th and then held a

conference with various labor leaders and telegraphed to the managers' committee urging that no strike be allowed to occur. The urgency of this message was indicated in the last sentence which was as follows: "The safety of the country against manifest perils affecting its own peace and the peace of the whole world makes accommodation absolutely imperative and seems to me to render any other choice of action inconceivable."

The strike was set by the brotherhood leaders for Saturday evening but was postponed for forty-eight hours. Almost continuous conferences were held up to 2.30 o'clock Monday morning, when it was announced that the managers had in view of the national crisis—news had just come of the sinking of three U. S. vessels by German submarines—decided to grant any and all demands necessary to prevent a strike, and left it to the Committee of the Council of National Defense to fix the terms which would suit the labor leaders. This committee which consisted of Franklin K. Lane, William B. Wilson, Daniel Willard, and Samuel Gompers gave the brotherhoods what they demanded in full. This amounted to paying for a full eight-hour day if a train made a run of 100 miles even if the time consumed was only three or four hours and paying overtime for each additional mile run. If, however, less than 100 miles was made in eight hours, overtime would be paid for each additional fraction of an hour. This award was made early Monday morning. On Monday afternoon the Supreme Court handed down its decision holding the Adamson Law constitutional. The basic principal established in this notable decision was that Congress had the right to regulate wages in the interests of the public.

**EARNINGS AND EXPENSES.** A new high record was made in railway earnings the total operating revenue for the 231,047 miles of railroad (including all the larger railroad companies of the country) which had reported to the Interstate Commerce Commission at the time the YEAR BOOK went to press for the ten months, January to October, 1917, was \$3,350,721,651. This compares with \$2,991,462,057 for the corresponding ten months of 1916—previously the largest total for ten months in the history of the country. The earnings per mile of line for the ten months of 1917 averaged \$14,502, an increase of 11.8 per cent over the ten months of 1916. Expenses mounted up, however, even faster than earnings. Total operating expenses in the ten months of 1917 were \$2,341,081,625 and in the ten months of 1916 were 1,969,970,384. Per mile of line expenses averaged \$10,132 in 1917 (ten months) and \$8502 in 1916 (ten months), an increase of 19.2 per cent.

The increase in revenue resulted from the movement of a much larger quantity of freight and a greater number of passengers. The movement of the first draft of the National Army to cantonments and of the National Guard to points of embarkation was in itself a large passenger movement and there was also a large amount of travel connected with the placing of government contracts and other government war activities. Government business added to an already extraordinarily active general business accounts for the increased amount of freight shipped. A railroad, which is an intricately

complicated machine manufacturing transportation, has a certain limited capacity like any other machine and if an attempt is made to exceed this limit manufacturing costs run up disproportionally. The great increase in business therefore was a gain to those roads which were not theretofore using their tracks, locomotives, and terminals to the fullest capacity. To roads like the Pennsylvania, however, which were already handling all the business that they could economically, the added strain increased cost of operation out of all proportion to the increase in earnings. Expenses of course increased on all roads but the eastern trunk lines were much the hardest hit. The working of the Adamson Law also increased expenses and added to this were big increases in cost of coal. Fuel and trainmen's wages together make up about half of "transportation" expenses on most roads. It can readily be seen therefore how seriously the railway expenses were affected by being compelled to pay overtime after eight hours instead of ten and having to pay 30 to 80 per cent more for coal.

**NEW CONSTRUCTION AND RAILWAY CREDIT.** Even before the entrance of the United States into the war there was almost no market for steam railway securities. There was only a small public demand for them and even this was discouraged by banking and bond houses. Public utility and industrial bond issues were more profitable to the bankers and they were therefore given preference in bankers' offerings. The uncertainties of the railway situation were so great as to disincline conservative institutions like savings banks and insurance companies from further investing in railway bonds. The prices of materials were so high that not only were capital expenditures held down to a minimum but upkeep was deferred on a considerable scale. Maintenance of way expenses increased in 1917 over 1916 (nine months in each case) 6.2 per cent.

Wage rates, however, had risen steadily and they were accompanied by decreased efficiency on the part of the men so that the labor return per dollar of expenditure fell sharply. As a result, the increase in maintenance of way expenditures of 6.2 per cent measured in dollars was in reality an actual decrease of no mean proportions, measured in terms of productive work on the property. This occurred at a time when the facilities were being taxed to their utmost to handle the traffic and when the wear and tear on them was correspondingly great. This condition necessarily led to an accumulation of deferred maintenance which it would be necessary to take up in the near future if the railways were to continue to perform the efficient service which the country was demanding of them.

The outstanding feature of the year's work in the maintenance of way department was the constantly increasing scarcity of labor. The cessation of European immigration, the shutting off of the Mexican supply through the enactment of the alien labor law, the transfer of over 1,000,000 men from industrial to military service, and the widespread activity in industrial work all served to increase the shortage of men throughout the country.

Figures compiled by the *Railway Age* showed that during 1916 a total of 962 miles of new line was completed in the United States and

207 miles in Canada. The construction of new railways in the United States during the last three years, which had very nearly equaled the round figure of 1000 miles per annum, was far below any corresponding three years since the Civil War; even during the panic period of the middle nineties, the mileage constructed during 1894, 1895, and 1896 exceeded that of the three years ended by 1917 by 62 per cent.

In second-track construction the showing of the year 1917 was somewhat better, 613.41 miles having been completed as compared with 312.31 for 1916, 356.28 for 1915, and 565.58 for 1914. It was small, however, as compared with 1263 miles of second track completed in 1913 and 1072 miles in 1912. Of third track 35.78 miles were completed, and of fourth or more main tracks 28.37 miles. No second or multiple track construction was reported for Canada during the year.

California led the United States in railway construction with the completion of 108.89 miles of new line, Alaska was second with 108 miles completed on the Government Railway, Montana was third with 94.4 miles, followed by Utah, with 67.20 miles, Texas with 63.50 miles, and Pennsylvania with 61.89 miles. The geographic distribution of these five leading States was indicative of the scattered location of the new mileage which permits of no precise statement other than that the increased mileage was less than 10 miles in each of 20 States and that all of New England, New York, New Jersey, Delaware, and Maryland, were included in this group.

The longest continuous piece of railroad completed in 1917 was 60 miles of main line on the United States Government Railway from Matanuska, Alaska, to Montana Creek. The next longest piece was on the Hetch Hetchy in California, 52 miles. Of the second track work, that done by the Union Pacific in Wyoming, 95.11 miles, and by the Southern Railway in South Carolina, 76.6 miles, were projects far surpassing anything else of the kind done in the United States during the year.

In 1917 for the first time since the first railroad in the United States was built in 1831, there was considerable mileage of road voluntarily abandoned by its owners or taken up and sold as junk. In 1917 there were 523 miles of railroad actually taken up or in the process of being taken up and sold for junk. In addition there were 509 miles of road on which operation was abandoned and 395 miles of road which the owners had asked permission from State commissions or legislatures to abandon; and, as a matter of fact, this latter figure did not represent all of the road which would be taken up and sold as junk if the owners could get permission so to do. State commissions have in the past almost invariably refused to permit the abandonment and actual taking up of railroad mileage. It was necessary to go to court but the courts apparently had definitely established the rule that owners of an unprofitable railroad might discontinue the operation of it and dispose of the rails, bridges, etc., as junk.

Although the owners of many of the roads abandoned would probably offhand ascribe their difficulties to pernicious regulation by State commissions, a study of individual cases will show that this was not the direct cause. There

was quite a world of romance and pathos surrounding many of these railroad ventures which had at last proved failures. Hopes, sacrifices, great expectations, rebellion against the laws of economics—this was the stuff of which most of these failures were made. It is not difficult now to see the mistakes, to recognize that the ventures were foredoomed to failure. In most cases it was bad business judgment, not bad regulation, which caused the failure, but it was highly significant that the projects should be given up. The high price of old rails, scrap iron, etc., was a contributing factor, but only in a superficial sense. It was no real underlying cause of the final abandonment of hope.

The Farmville and Powhatan, the predecessor of the Tidewater and Western, was built and merged with the Bright Hope Railway in 1889-90. The development of Powhatan and Chesterfield counties, Va., during more than twenty-five years failed to make the Tidewater and Western a paying railroad. Some of the roads abandoned were built with the money and labor of farmers. The Chicago, Anamosa, and Northern, and the Creston, Winterset, and Des Moines, both in Iowa, were built in this way. Both of these roads were the result of a desire for transportation facilities—the farmers wanted railroad facilities and assessed themselves to pay for building the roads. In the case of the Denver, Laramie, and Northern, however, the money to build the road was raised not in the territory served—central Colorado—but from Kansas farmers' savings. The list is pretty surely incomplete even for all roads that have actually been abandoned; neither does it show some very important roads which the owners wish they could abandon. It is probable that many holders of Kansas City, Mexico, and Orient securities would be glad to see that road torn up and sold for junk. Raising the money to build it was one of the most remarkable feats of promotion in American railroad history. It was an example of how deeply fixed was the investor's faith in the future of American railroads.

The significance of this abandonment of some hundreds of miles of railroad was that it showed that the faith which made possible the building of the Kansas City, Mexico, and Orient was not merely shaken but was actually destroyed. The abandonment of railroads in 1917 marked a very important stage in the economic development of the United States.

**CAR AND LOCOMOTIVE SITUATION.** There were built during 1917 119,363 freight cars for domestic use but only 79,367 freight cars were ordered. There was a material shortage of new freight car equipment even for ordinary conditions and particularly so for such extremely busy times. Prices, labor, material, deliveries, and lack of funds all contributed to keep the railroads out of the market. The number of freight cars ordered for domestic use during the year 1917 was the smallest number since 1908; it was less than half of those ordered the previous year and was about 58 per cent of the average number ordered per year during the previous ten years. Of about 80,000 cars over 21,000, or about 27 per cent, were ordered from railway company shops in contrast to 19,322 or 11.7 per cent the previous year. This was accounted for by the poor deliveries the car builders were giving during the early part of the year; but with that situation much im-

proved the railroads would be able to devote their facilities to car repairs, leaving the new work for the builders.

The proportion of all-steel, wooden, and other kinds of equipment to the total number of cars ordered remained practically the same as the previous year. There was a decrease in the percentage of box and hopper cars ordered and an increase in the percentage of refrigerator, gondola, flat, and tank cars ordered.

There were more wooden cars built in 1917 than the year before. Of the 119,363 cars built for domestic use, 12,273 were of wooden construction and 61,115 all-steel. Over 11 per cent, or 13,488 cars, were built by the railroad companies themselves. This was a much larger percentage than usually obtained.

Figures compiled by the *Railway Age* show that the number of locomotives ordered in 1917 was the largest for seventeen years, 7642 locomotives, for domestic or foreign use, having been placed on the books between January 1 and December 31. The output of locomotives, as distinguished from orders placed, during the same period, namely, 5446, represented a production that had been exceeded but three times since 1899—in 1905, in 1906, and in 1907.

The orders for locomotives in 1917 were divided as follows: Domestic, 2704; for the United States government for service in France, 2057, and for foreign countries, 2881.

**LOCOMOTIVE DESIGN.** There had been developed quite a number of mechanical devices which, applied to a steam locomotive, would add greatly to its hauling capacity with the same or less fuel consumption. Furthermore, the design of a locomotive for the particular work which it had to do had been studied much more carefully than ever before. The Pennsylvania Railroad was a pioneer in this work and had studied and tested out designs in a thoroughly scientific way. The inability of railroads to get new locomotives because of the high price of material and demands of the war on locomotive builders had given extraordinary importance to devices which would increase capacity of existing locomotives and while therefore some of the devices mentioned below have been developed during the few years prior to 1917 it is proper to describe them in an account of the 1917 railway year. The most important of these devices are the superheater, the brick arch, the feed water heater, the mechanical stoker, automatic fire door, and power reverse switches.

The superheater is a combination of tubes and chambers, by means of which the steam, after it has been generated in the locomotive boiler, is conducted back through the flues in the boiler before being let into the cylinders. In this way the steam is charged with additional heat so that when it is admitted into the comparatively cold cylinder much less condensation takes place than would occur were the steam saturated—that is, not superheated. Since a considerable part of the heat which passes through the flues is wasted through the smoke-stack, the utilization of this heat to charge steam gives the locomotive additional power. Tests have shown that a locomotive equipped with a superheater will haul 20 per cent more than an exactly similar locomotive without a superheater.

The brick arch is a set of fire bricks supported on tubes extending from near the bottom of the

front of the fire-box upward and backward over the surface of the fire for a certain distance. It converts an open fire into a furnace and thus increases the heat per ton of fuel consumed.

The feed water heater is a device by which the water drawn from the tender tank is heated before it is injected into the boiler. The heat used is that which is on its way to the smoke-stack and would otherwise be wasted. Like the superheater therefore it gives additional power per ton of coal consumed.

There are various types of mechanical stokers but the result obtained is the feeding by mechanical means of coal from the tender into the fire-box. The coal is conveyed from the tender through a large tube and shot by means of a pump or other device into the fire-box. There is no fuel economy but this device permits the firing of a locomotive beyond the physical capacity of one man.

The automatic fire-door is a device by which the fire-door is opened when the fireman steps on a pedal as he is about to toss a shovelful of coal into the fire-box and automatically closes when the fireman turns to get another shovelful. It conserves both the energy of the fireman and fuel because the fire-door is open a smaller part of the time.

The power reverse switcher is a pump with attachments which operate the reverse lever which controls the length of stroke of the piston in the cylinder. With the very heavy engines now being used it would be impossible for a man to operate the reverse lever to shorten the piston stroke when the engine was working at anything but a very low speed.

**RAILROAD BANKRUPTCY AND REORGANIZATIONS.** The reorganizations of railroad properties effected in 1917 were important. The receiverships that took place were quite unimportant. Three large railroad systems were reorganized during the calendar year, two—the Missouri Pacific and the Pere Marquette—by means of foreclosure sales and one—the Chicago, Rock Island, and Pacific—by means of a voluntary exchange of debentures for preferred stock and a subscription on the part of a syndicate of bankers to approximately \$30,000,000 preferred stock, and on the part of former directors, to \$5,000,000 preferred stock.

If the Chicago, Rock Island, and Pacific organization had been an immediate and unquestioned success it would have proved a striking example of the exception to the general inability of railroads to do any financing in recent years through the issue of stock. As a matter of fact, however, the reorganization had not up to the end of 1917 by any means demonstrated itself a success and the purchasers of the new preferred stock were faced with the possibility of a heavy loss. When the road went into the hands of receivers there were various individuals and financial institutions with conflicting interests in it. There were the Reid-Moore people, including D. G. Reid and Judge W. H. Moore, who were in control prior to the receivership. There were also various Chicago capitalists and estates representing conservative, legitimate investment interests, and, of course, in addition, a great number of individual bondholders, including large financial institutions in the East. Superimposed on this, or rather inserted in this complication, were

the followers of N. L. Amster, a Boston banker, who himself had comparatively a small investment interest in the property. Most of the eastern capitalists and financial institutions with the exception of the followers of Mr. Amster, favored a foreclosure sale and thorough reorganization. Amster's followers held out for a reorganization without foreclosure and they were rather surprisingly aided by the unprecedented prosperity which the Rock Island enjoyed in 1916. Whereas in the previous three years total net income had averaged less than \$15,500,000, the total net income in 1916 was \$23,429,000. It was this fact, probably, which had a good deal to do with persuading the conservative Chicago investment interests to side with the Amster faction. The fact that there was \$23,429,000 available for interest in 1916 and that interest charges without foreclosure sale and scaling down of outstanding securities was only \$15,350,000, was an argument for reorganization without foreclosure that proved too strong for eastern capitalists who had advocated a thorough reorganization.

Combined with this exceptional prosperity was the fact that there was a bitter fight on among the directors of the old company for control. The sale of over \$35,000,000 of railroad stock, therefore, could hardly be ascribed to the desire on the part of the capitalists to make this particular investment.

The Missouri Pacific reorganization, while it required \$41,000,000 of cash, was put through because it was backed by the great banking house of Kuhn, Loeb, and Co. For years this banking house had been opposing Gould methods of railroad finance and had been acquiring control of the Gould properties, and the Missouri Pacific reorganization, with its subsequent effect on control of the Denver and Rio Grande, was a continuation of a financial policy so broad and backed by such great resources as to overcome the obstacles of raising \$41,000,000 new railroad capital, which obstacles would have been insurmountable otherwise.

The Pere Marquette reorganization was the end of a long and exhausting conflict between different financial interests. It has been commented on many times before in earlier YEAR BOOKS.

Looking back on the three important reorganizations of 1917, therefore, we find one, the product of an exceptional and lucky year in earnings for the Rock Island; the second, a consummation of a long sought-after victory for an immensely wealthy banking house; and the third, an acceptance on the part of investors of drastic losses.

The new receiverships are negligible, and of the roads which in previous years went into the hands of receivers and which still had to be reorganized the most important was the Missouri, Kansas, and Texas. If this road was to be soundly reorganized its security holders would have to follow the example of the security holders of the Pere Marquette and accept a very drastic scaling down of the face amount of their holdings. Second in importance was the Boston and Maine. Apparently a sounder system of railroad regulation and a better and higher rate structure for New England would have to be precedent to any acceptable reorganization. There remained among the larger roads the Chicago and Eastern Illinois.

for which plans had already been worked out for reorganization, and the International and Great Northern, and the Texas and Pacific, the two latter being Gould properties, which might be reorganized under Gould auspices or might, like the other Gould properties, pass under the control of some strong banking house. See **ARBITRATION AND CONCILIATION, INDUSTRIAL; FINANCIAL REVIEW; UNITED STATES AND THE WAR. RAINBOW DIVISION. See MILITARY PROGRESS.**

**RAINFALL.** See **METEOROLOGY.**

**RAPID TRANSIT.** **NEW YORK.** During the year 1917 work progressed actively on the construction of the new subway lines in the City of New York and at the end of the year, contracts had been awarded for city-owned lines of the dual system aggregating more than \$22,000,000, in addition to real estate purchases amounting to \$15,000,000. Exclusive of other expenditures for real estate, the Interborough Rapid Transit Company and the New York Municipal Railway Corporation, the two operating companies of the dual system, had closed or were shortly to enter into contracts of construction of company-owned lines and equipment on both city-owned and company-owned lines, involving a total of almost \$2,000,000 in addition. The heaviest construction on the New York subways was accomplished in 1916, so that the actual work in 1917 involved a reduction in the numbers of the working forces and of the contracts. It was estimated that about 11,000 men at the end of the year were employed or about one-half the largest number at any time since the contracts had been signed.

In 1917, the new facilities open to the traveling public of New York included the Broadway subway from Flatbush Avenue Extension, Brooklyn, to Fourteenth Street, Manhattan, by way of the Canal Street subway; the Seventh Avenue subway from Times Square to Pennsylvania station; the Astoria elevated branch of the Queensboro Bridge line from the Second Avenue elevated railroad in Manhattan to a connection with the Queens line at Bridge Plaza station; operation of the Jamaica Avenue extension to the Broadway elevated line, in Brooklyn, from Cypress Hills to Richmond Hill; White Plains Road extension of the first subway to 219th Street and later to 238th Street; Jerome Avenue branch of the Lexington Avenue subway from a connection with the first subway at 149th Street to Kingsbridge road; extension of the New Utrecht Avenue (West End Line) service from 25th Avenue to Coney Island, Brooklyn; rebuilt operation of Brighton Beach line from Sheepshead Bay to Coney Island; Bergen Avenue connection between first subway and Second and Third Avenue elevated lines. At the end of the year, the Broadway subway in Manhattan from Rector Street to Forty-second Street was practically completed, while the west side elevated lines were to be extended and a connection made to the Sedgwick Avenue branch at 162nd Street. The lines completed in 1917 and those to be placed in service early in 1918 aggregated eighty-two track miles, while there had been previously placed in service new lines of the dual system, enough to make a total of 174 track miles. In other words, there were 345 track miles of new lines and 296 track miles of old lines in the dual system, or a grand total of 641 track miles in operation

practically completed at the end of 1917, and an estimated total of 304 track miles of new lines were to be in operation by the end of 1918, or 88 per cent of the total track mileage of the system as projected. Among notable features of construction of the year was the connection of the Lexington Avenue with the original subway at Forty-second Street, and also the two-track tunnel from Old Slip Manhattan to Clark Street, Brooklyn, connecting the Park Place, Beekman, and William Street branch of the Seventh Avenue subway with the first subway at Borough Hall and thence through Fulton Street. The Montague Street tunnel, which was one of the two connections between the Fourth Avenue subway, Brooklyn, and the Broadway subway in Manhattan, was nearing completion. Various stations were built or were well advanced, including a large terminal at Coney Island. The original estimate of an outlay of \$300,000,000 for the dual system was likely to be exceeded by \$50,000,000 or more.

**PHILADELPHIA.** During the year construction was active on the Philadelphia subway, and a novel feature was the construction of a station beneath the massive City Hall. The foundation walls of this structure were being flanked with pairs of steel or concrete girders carrying the ends of needles passing through the walls and transferring the weight of the building permanently to the new subway structure itself. These girders and the rebuilt basement floor of the City Hall were to form the roof of the subway station. This new underpinning process was a work of exceeding difficulty and involved the excavation alongside of the old rubble-masonry footing walls, and replacing them where necessary with concrete or brick work. This section of the subway also involved the construction of crossings beneath the present Market Street subway on both sides of the street by building new subway walls in sections, replacing the floor of the old subway with the roof of the new and completing the work in the same way as under the City Hall proper.

An important operating partnership between the city of Philadelphia and the Philadelphia Rapid Transit Company was agreed upon towards the end of the year for formal enactment in 1918, and was remarkable for the existence of community of interest between the municipality and the operating company. This new agreement was to embrace all existing street car and other transit lines, and the new lines which the city was constructing, the aim being that all existing traffic facilities should be mobilized immediately for efficient lowest-fare operation, and with the completion of the Frankford elevated railway, a rapid transit system would be developed by combination with the old Market Street line. The new arrangement sought to settle the various differences and to assure to the investors 5 per cent returns on the capital. There was to be a supervisory board of engineers, and it was believed that a most efficient working plan for municipal transportation was being secured.

**CHICAGO.** In connection with the improvement at the new Union Station owned by the Pennsylvania Company, an important construction was involved in raising the grade and changing the structure of the Metropolitan elevated line where it crosses the site of the new station. This was a four-track line carrying very heavy

traffic and with the exception of closing one track at a time for short periods, the work was done without interference with the normal traffic. The work involved raising the elevated line about three feet at Canal Street, and east of this two truss spans were raised so as to give a change of grade from the old elevation at the river to the new elevation at Canal Street. West of this span, the girder structure including the elevated railway structure was raised to give a grade of 404 feet from the old elevation at Clinton Street to the new elevation at Canal Street.

The Board of Local Improvements in Chicago during the year suggested the building of underground streets, thus making the proposed rapid transit subways unnecessary. The work would be paid for partly by special assessments and partly by drawing upon the city's traction fund for such appropriations of the fund as would represent special public benefit. The subway streets would extend between the property lines, and the selection of those to be built would be left until after a public hearing.

**PITTSBURGH.** In Pittsburgh, a report made by E. K. Morse, the city transit commissioner, to the Municipal Council, advocated the consideration of two rapid transit lines. The first was to connect the South Hills district with the East End, extending from the South End of the present Mt. Washington tunnel across the Monongahela River, at Smithfield Street, along Water Street, Grant Street, and Frankstown Avenue, to Dallas Avenue, a distance of 7.23 miles, and largely elevated, at an estimated cost of \$7,000,000. The second project was a line connecting the North End with Schenley Park and was by way of West Diamond Street, Dasher Street, and the bridge over the Allegheny River, Stanwix Street, Diamond Street, Forbes Street, and Fifth Avenue, being mostly in subway and tunnel, and naturally costing considerably more. The construction of this second line was postponed for consideration until a later date.

**RAT-BITE FEVER.** New light has been thrown on the character of this infection by the Japanese pathologist Futaki and his associates, who fortify their belief that the fever is due to a protozoan—a spirochete. Five more cases have been studied and the spirochetes have been found in the local eruption of the skin and in the swollen lymph nodes and the blood. The Japanese investigators proposed the name *Spirochaeta morsumuris* for what they consider the specific organism. In harmony with the spirochetal theory is the fact that salvarsan, which is well known to have a curative effect in all spirochete infections, has also a marked effect in rat-bite fever. This spirochete is not present in the blood of all rats, but can be detected in about 3 per cent of house rats in Japan.

**RATIONING.** See **FOOD CONTROL.**

**RECEIVERSHIPS.** See **RAILWAYS.**

**RECLAMATION.** By the strengthening and deepening of the channel of the Kankakee River in Indiana for twenty-eight miles, it was estimated at a cost of about \$310,000, there would be reclaimed a large area of swamp or other land which would be valuable for truck and general farming. The strengthening and deepening of the river was to form a channel of a bottom width of 70 feet for 16 miles and 100 feet for the last 12 miles, with an average depth

of 10 miles. The banks were to have a slope of 1.1 and the grade of 0.02 per cent, which afforded a velocity of about 3 feet per second, while the capacity of the channel was to be about 2400 feet per second at the upper end and 3370 feet per second at the lower end. The channel was to be crossed by four railways and five public highways with plate-girder bridges 120 feet long on concrete piers and abutments. The work was being done by dipper-dredges, three machines of this kind, varying from 3½ yards to 1½ yards capacity, being employed. See **DRAINAGE; IRRIGATION.**

**RED CROSS, AMERICAN NATIONAL.** The activities of the American National Red Cross during 1917 were carried on by a more compact organization and on a far greater scale than ever before. The coming of the United States into the war, as one of the Entente Allies, required an increased concentration of all the forces of administration and relief, and the placing of the entire work upon a war basis. A Central Committee was formed, of which Ex-President William Howard Taft was made chairman. Part of the committee was appointed by the president of the United States, part was elected by the Board of Incorporators, and part was elected by the delegates. The Central Committee elected an Executive Council. The most important change, however, was the appointment of a War Council of the Red Cross by President Wilson. Of the War Council, Henry P. Davison, of the firm of J. P. Morgan and Co., was made chairman. The other members were Charles D. Norton, Cornelius N. Bliss, Jr., Major Grayson Murphy, Edward N. Hurley, William Howard Taft, and Elliot Wadsworth. Mr. Hurley afterward resigned and John D. Ryan was appointed in his place.

The result of the reorganization was to broaden the scope of the American National Red Cross so as to include the United States and the Allies. The Red Cross War Council during its activities in 1917 proceeded upon clearly marked lines. Its aim, broadly speaking, was threefold: to be ready to care for American soldiers and sailors on duty wherever and whenever that care might be needed; to shorten the war by strengthening the morale of the Allied peoples and their armies by aiding them in every possible way until the American army becomes fully effective; and to lay foundations for an enduring peace by giving practical relief to the civilian population among the Allies of the United States. The last mentioned aim has been diligently pursued, and constitutes the outstanding activities of the Red Cross in this war. Particularly impressive is the magnitude of the relief work in France.

The report of the War Council summarizes the work of the American National Red Cross from May 10, 1917, the date of the appointment of the council by President Wilson, until November 1, 1917. The War Council's report has two main divisions, the work in America and the work in Europe. Under the former heading are found reports on the following subdivisions: The war fund; the national organization; Red Cross salaries; chapters and members; the coordination of relief work; work for the American army and navy; civilians; and women's work. Under the latter heading, the leading features are: Red Cross activities in France, including military and civilian relief; and the

relief afforded Belgium, England, Italy, Russia, Rumania, Serbia, Armenia, and the care of American prisoners in Germany.

Immediately after the organization of the council, a National War Finance Committee, headed by Cleveland H. Dodge, of New York, was appointed by President Wilson to undertake a financial campaign to raise the \$100,000,000 asked of the American people, the amount being carefully apportioned among the States, cities, and towns throughout the country. More than \$100,000,000 was soon pledged, and at the date of issue of the War Council's report, approximately \$85,000,000 in cash had been collected for the war fund, of which \$40,000,000 had been appropriated, the greater part for expenditure prior to January 1, 1918. During May 10-November 1, 1917, \$3,310,216 had been appropriated from the war fund to Red Cross work in the United States; \$7,659,000 was advanced from the same fund for the purpose of materials for use by the chapters, which amount was to be returned to the war fund; \$20,601,240 was appropriated for use in France; and \$7,284,576 was for use in other countries abroad.

According to official statistics received from the Red Cross headquarters considerably later than the date of issue of the War Council's report, the following is a statement of the appropriations made for relief work since the United States entered the war, and covering the budgets of the commissions abroad to April 20, 1918: *For Relief Work in Foreign Countries*, \$44,588,995, of which the sum of \$30,519,259 was for relief work in France; \$1,999,631 for Belgium; \$751,940 for Russia; \$2,817,398 for Rumania; \$3,146,016 for Italy; \$871,180 for Serbia; \$1,703,642 for Great Britain; \$2,536,300 for other foreign countries; \$343,627 for care of prisoners, etc.; *For Work in the United States*, \$2,612,532, of which the sum of \$54,000 was for army base hospitals; \$32,000 for navy base hospitals; \$503,000 for medical and hospital work; \$364,500 for sanitary service; \$996,715 for camp service; \$662,317 for miscellaneous work; *For Supplies Bought in the United States*, and additional to the appropriations included under the heading, "For Relief Work in Foreign Countries," \$24,323,181, of which the sum of \$7,063,649 for supplies for shipment to France; \$1,497,964 for supplies for shipment to Italy; \$41,137 for supplies for shipment to Great Britain; \$4,432,014 for supplies for distribution in the United States and abroad; \$11,288,417 for supplies for resale to chapters.

The membership roll, which was over 5,000,000 at the date of issue of the report of the War Council, was increased by the Christmas membership drive to approximately 22,000,000. A movement was also inaugurated among the school children of the country to induce them to join a junior branch of the Red Cross. Quick relief was given after the Halifax disaster (q.v.) of December 6, 1917. Special trains carrying doctors and nurses, food and clothing, medical and other supplies, were rushed from Boston and New York, and other supplies were sent by boat. Money was cabled to a committee of Red Cross representatives in Guatemala for immediate relief of the loss and suffering caused by the earthquake, and a few days later a shipload of medical and other supplies was sent to Guatemala from New Orleans.

The officers of the American National Red

Cross in 1917 were as follows: President, Woodrow Wilson; vice-president, Robert W. de Forest; treasurer, John Skelton Williams; counselor, John W. Davis; secretary-general, F. W. M. Cutcheon; general manager, Harvey D. Gibson; comptroller, Charles C. DuBois.

See RELIEF FOR WAR VICTIMS; UNITED STATES AND THE WAR; WAR OF THE NATIONS.

**REED, ALLEN VISSCHER.** An American naval officer, died in Washington, D. C., January 14, 1917. He was born at Oak Hill, N. Y., in 1838, and in 1858 graduated from the United States Naval Academy at the head of a class that included Admiral Dewey. He was promoted through the various grades to captain in 1884 and was retired in 1896 at his own request. Ten years later he was advanced to the rank of rear admiral, retired. During the first three years of the Civil War he served on various vessels assigned to blockading duty in the Gulf of Mexico, and later, while with the North Atlantic Blockading Squadron, he participated in the attacks on Fort Fisher and in other operations. Subsequently at different times he was in command of the *Kansas*, the *Alliance* (engaged in the Nicaragua Canal survey), the training ship *Minnesota*, the flagship *Richmond* of the South Atlantic Station, and of the *Pensacola* and Portsmouth navy yards. For five years (1875-80) he was assistant hydrographer of the United States Hydrographic Office. When commanding the *Kansas* in 1873, Rear Admiral Reed acted as convoy to the *Virginus*, a vessel flying the American flag, when she was threatened by the Spanish steamer *Bazan*. It later appeared that the *Virginus* was engaged in carrying arms to Cuban insurgents. Her final capture and the execution of her crew gave rise to a case that is famous in international law.

**REED COLLEGE.** A non-sectarian co-educational institution at Portland, Ore. In the fall of 1917 there were 240 students and 20 members of the faculty. Volumes in the library numbered 14,000. President, William Trufant Foster, LL.D.

**REFORMED CHURCH IN AMERICA (DUTCH REFORMED).** The denomination in 1917 had 132,172 communicants, an increase of 1229 over 1916; 731 churches, an increase of seven over 1916; and 759 ministers, an increase of fourteen over 1916. For administrative purposes the denomination is divided into four particular synods and thirty-five classes corresponding to the presbyteries in the Presbyterian Church. In 1917 there were 800 Sunday schools, with an enrollment of 132,748. The denomination contributed in 1917 for benevolent and missionary purposes and other benevolent objects, \$692,644; and for congregational purposes, \$1,830,883. The missionary work is in charge of the board of foreign missions, the women's foreign mission board, and the domestic missionary board. The board of education and board of publication regulate educational and publishing interests. The General Synod of 1917 was held at Asbury Park, N. J. Rev. Dr. J. P. Searle was elected president and Rev. Dr. J. Addison Jones, vice-president. The General Synod of 1918 meets at Asbury Park.

**REFORMED CHURCH IN THE UNITED STATES**, known also as the **GERMAN REFORMED CHURCH**. This denomination had on January 1, 1917, 326,112 communicants, 1773 churches, and 1245 ministers. The Sunday schools in 1917

had over \$18,500 pupils. For administrative purposes there are 9 district synods and 61 classes. The missions of the church are carried on in almost all of the United States and in Canada. Theological seminaries are maintained at Lancaster, Pa., and Dayton, Ohio. The colleges include Franklin and Marshall College, Lancaster, Pa.; Heidelberg College, Tiffin, Ohio; Ursinus, Collegeville, Pa.; Mission House, Sheboygan, Wis.; and Catawba College, Newton, N. C. Colleges for women are maintained at Frederick, Md., and Allentown, Pa. The headquarters of the publication and Sunday school and mission boards are in Philadelphia, Pa.

**REFORMED EPISCOPAL CHURCH.** The administrative affairs of this denomination are under the control of six bishops. Foreign missions are carried on in India, and among the colored people of South Carolina domestic missions are maintained. There is a theological seminary in Philadelphia, where the denominational organ, the *Episcopal Recorder* is published. In 1917 the denomination had 82 ministers, 80 churches, and 11,405 communicants.

**REFORMED PRESBYTERIANS.** There are five branches included under this title: the Associated Reformed, South; the Reformed (Synod); the Reformed (General Synod); the Reformed (Covenanted); and the Reformed in the United States and Canada. The Associate Reformed, South, is the largest branch. In 1917 it had 112 ministers, 156 churches, and 14,282 communicants. The Reformed (Synod) had 128 ministers, 113 churches, and 8,481 communicants. The Reformed (General Synod) had 16 ministers, 17 churches, and 3,300 communicants. The Reformed (Covenanted) had 1 church and 40 communicants. The Reformed in the United States and Canada had 1 minister, 1 church, and 325 communicants. The Reformed (General Synod) maintains two churches in India, and a theological seminary in Ohio, and a college at Cedarville, Ohio.

**REFORESTING.** See **WATER WORKS AND WATER PURIFICATION.**

**REFRIGERATION.** In the field of refrigerating machinery, the most significant development during the year 1917 was the extended use of high-speed compressors in most of the specifications for new machines ordered or supplied. The electric drive was also increasingly used particularly for compressors employed in ice-making. A notable refrigerating plant completed during the year was that of the Merchant's Refrigerating Company of New York. In this, synchronous motors of special design with an efficiency of from 90 to 94 per cent and York three-cylinder, single-acting piston-valve compressors were used. There were four units in the installation, namely, one of fifty tons, operating at 234 revolutions per minute, a 100-ton and two 200-ton units, the three latter running at 209 revolutions per minute. The plant operated at three pounds' back pressure and 155 pounds' condenser pressure. The general process of operation was for two cylinders of each machine to take in low pressure gas and the other cylinder to boost it to the condenser pressure. After leaving the receivers, the liquid was to pass to a double-pipe cooler and be cooled to 1 degree F. of the initial water temperature. It would then pass to accumulators and the temperature would be reduced to the boiling point of intermediate ammonia pres-

sure. A booster compressor of new and interesting type was installed in the Ninth Street Terminal, Chicago, while a low temperature compression system of a new design was placed at the plants of the Consumers Ice Company, Chicago. The number of accidents and the desire for standard practice led the Municipal Regulations Committee of the American Society of Refrigerating Engineers to formulate a safety code for refrigerating plants and it was expected that by the end of 1918, a finished code would be submitted to the society. In the city of Troy, N. Y., a safety code is in force which was prepared with the assistance of this committee. See **HORTICULTURE.**

**REINDEER.** See **ALASKA;** and **ANTHROPOLOGY.**

**RELIEF FOR WAR VICTIMS.** Very shortly after the outbreak of the European war various organizations sprang into existence in the United States having for their purpose the relief of different classes of persons more or less innocent victims of the war. The ravages of the German forces in Belgium excited both the indignation and the sympathy of millions of persons who at once saw the necessity from an international point of view of saving the remnant of the Belgian nation. Likewise the devastation of Poland, Galicia, Serbia, Armenia, and Syria made an especial appeal to former citizens of those countries and their friends in the United States. By far the most important of these relief organizations was the Commission for Relief in Belgium (see below), but the Rockefeller Foundation (see **ROCKEFELLER PHILANTHROPIC BOARDS**) extended its relief activities over a wider range of persons and territory. The activities of the Red Cross (q.v.) the world's most important and extensive agency for the alleviation of war suffering are described elsewhere. Neither is there included here an extended statement of the civilian relief work of the Red Cross or of numerous other organizations in the United States, Canada, England, France, and other Allied nations. This civilian relief, for which the Red Cross organized extensive activities in 1917, largely in coöperation with local charity organizations, was made necessary by the drafting of men to the colors. This meant that even in the United States, where an effort was made to restrict the recruiting of married men, that many families were placed under the necessity of receiving public aid because the chief wage-earner of the family had joined the military forces. There were many cases of desertion for this purpose, and many other cases where husbands and fathers after recruiting neglected their families. Moreover, there were numerous nationals of England, France, Italy, Belgium, and Serbia in the United States for whom relief was being provided by their own governments, husbands having left America to join their respective colors. Such relief was distributed through ambassadors, ministers, and consuls in coöperation with local philanthropic and social bodies.

Still another important line of relief work necessitated by the war, but which for lack of space cannot be extensively described here, were the plans developed in Canada, England, and France for the rehabilitation of injured soldiers and sailors. In all of these countries, as

no doubt also in Italy and the Central Powers, plans were elaborated both by governmental and private agencies for the cure or treatment and the reeducation for economic efficiency of the injured. The vast importance of this came to be more and more clearly recognized as the number of disabled soldiers increased from a few thousands to many hundreds of thousands. In solving this problem there were necessarily brought into existence not only hospitals and other means of curative treatment, and equipment for the numerous kinds of industrial training for the blind, the deaf, and those who had lost fingers, hands, arms, legs, or other bodily parts, but also various plans of pensioning and insuring soldiers and sailors and otherwise providing whole or partial support to meet the deficit of reduced earning capacity (see **INSURANCE**; and **WORKMEN'S COMPENSATION**). So immense were these problems that they transcended the scope and power of private philanthropy and required the most careful attention of the national governments themselves.

**COMMISSION FOR RELIEF IN BELGIUM.** By far the most important relief organization designed to care for civilians rendered homeless or destitute within war areas was this commission which was organized on October 22, 1914, by the American and Spanish Ambassadors at London, the American and Spanish ministers at Brussels, the American Ambassador at Berlin, and the American minister at The Hague. Its headquarters were in London at No. 3 London Wall Buildings, E. C., and its other principal offices at New York, Buenos Ayres, Brussels, Rotterdam, and Paris, but there were national organizations also in Spain, Italy, China, Japan, and elsewhere. There was affiliated with it a woman's section which did great service in making and collecting numerous kinds of food and clothing. It carried out its distribution of supplies in Belgium through the Comité National de Secours et d'Alimentation. It had extended its activities to Northern France in 1915 where it worked through the Comité d'Alimentation du Nord de la France. Its headquarters in the United States were at 165 Broadway, but it had assembling depots in every State in the Union and in every principal city and port of the world. The commission itself supplied free transportation through vessels owned or chartered by it, special protection for its vessels having been accorded by the belligerent powers. The entire personnel of the commission was American, until the entrance of the United States into the war; thereafter, although Mr. Herbert C. Hoover continued as chairman, the principal direction of affairs in Belgium and France was taken over by Spanish and Dutch citizens appointed by their governments and known as the Committee of Protection. Mr. William L. Honnold was the American director.

There were three main departments in the commission's organization: Provisioning; financial relief, exchange, and accounts; and benevolent. The function of the Provisioning Department was to feed the 7,000,000 in the devastated areas of France and Belgium, of whom 2,000,000 were wholly dependent on the commission. Most of its food was purchased in the United States but large supplies came also from Argentina: after reaching Rotterdam foods were distributed first to terminal warehouses and then to nearly 5000 communal warehouses.

The actual distribution of food was carried out through local authorities, which were organized first into some 2500 communal committees. These were grouped into 126 "regional," ten "provincial," and the two "national" committees above mentioned. The Accounting Department assisted not only in keeping the financial records of the commission, but also in transferring funds from friends outside of Belgium to people within. The Benevolent Department undertook the relief of wholly or partially destitute persons. These comprised nearly one-half of the entire population and included about 1,600,000 destitute children in Belgium alone. The receipts of the Provisioning Department were used in part to finance the activities of the Benevolent Department, while immense sums were provided directly by the Belgian, French, and English governments. There were special committees in this department for children, farmers, lace-workers, refugees, artists, doctors, and pharmacists, dispossessed Belgian prisoners of war, war cripples, the tubercular, destitute young mothers, Cardinal Mercier's clergymen's fund, and a score of similar purposes. Altogether in all departments there were over 7000 local committees. Through the commission also were paid subsidies to families who had lost their bread-winners, to the families of officers, to loan societies, to educational institutions, to saving banks, and to communal governments. The commission also sought to combat the ravages of tuberculosis and other diseases due largely to the reduced vitality of the half-starved population.

Upon the breaking off of diplomatic relations between the United States and Germany in February the commission ordered all its vessels to remain in port until further notice. Nevertheless, German submarines attacked and sank two of its ships which were then in or approaching the war zone and could not be recalled. On February 12 Germany ordered all Americans to leave the occupied territory in Belgium and France and for some days the commission contemplated complete withdrawal. On February 15, after a conference of the German Civil Governor of Brussels, the American and Spanish ministers, and representatives of the commission and the Belgian National Committee, the German authorities gave permission for the work to continue. On February 24 it was announced that a route for the C. B. R. ships through the German submarines to Rotterdam had been agreed upon. Meanwhile many of these ships which had collected in British ports were unloaded and their cargoes stored awaiting reliable guarantees of safe conduct.

It was estimated that the total requirements for the commission in 1917 approached \$19,000,000 per month. Up to June 1, 1917, the commission had spent nearly \$300,000,000. This was provided mainly by the French and British governments, on behalf of the Belgian government and nearly all of the remainder had come from Belgian and French citizens. Contributions had, however, come from nearly every nook and corner of the globe, including remote towns in China, Madagascar, Solomon Islands, Greenland, Liberia, and Tasmania. The latter led the world in per capita contributions with \$6.53. The United States came near the bottom of the list in per capita contributions with only 9 cents per capita or a total of \$9,000,000 up to

the close of 1916. About 60 per cent of the entire expenditures of the commission were spent in the United States for food and other supplies giving Americans an estimated profit of \$30,000,000. In the early part of the year Mr. Hoover sought to impress upon Americans the idea that the moral grandeur of which they boasted and with which they were credited in Belgium and France would disappear unless they gave some real financial support to this relief work. One response to this appeal was the appropriation by the Rocky Mountain Club of its building fund of \$500,000 to the commission's work. Of the requirements for the first half of 1917 the Allied governments and French citizens pledged \$14,000,000 monthly. In 1915 the English Government pledged an advance of \$2,500,000 per month and the French government an equal amount on behalf of the Belgian government. These advances were afterwards increased by 50 per cent owing to higher prices and greater demands. In addition, organizations in France raised \$5,000,000 per month for relief of devastated French territory, and this was afterwards increased to nearly \$7,000,000 per month. Of the receipts up to June, 1917, the British Government had supplied \$89,500,000 and the French government \$66,000,000 for relief in Belgium. From the French for relief of Northern France had come \$108,000,000. The world's charity amounted to over \$30,000,000: from the British Empire, \$16,000,000; United States, \$11,500,000; rest of the world, \$3,000,000. In June the government of the United States assumed financial responsibility by means of loans of \$7,500,000 to Belgium and \$5,000,000 to France.

**VARIETY AND IRRESPONSIBILITY.** There was a vast array of relief organizations making their appeals in all principal cities. The Bureau of Advice and Information of the New York Charity Organization Society investigated and approved as worthy over eighty relief organizations operating in that city. Most of these aimed to supply prime necessities such as food, clothing, and medical supplies, and to care for babies and children, leaving the problems of rehabilitation to be dealt with by governmental agencies. Many of these organizations advertised that funds secured by them were devoted wholly or almost wholly to relief work. The investigation showed, however, that administrative expenses amounted to nearly 15 per cent of receipts, these expenses being paid by special contributions from wealthy patrons. The great numbers of these bodies and the diverse nature of their interests prevented the proper degree of coöperation as well as a full degree of public responsibility. Financial responsibility was difficult to secure and was not approached in many cases. There were throughout the country hundreds of entertainments, concerts, and bazaars, the receipts of which were divided between the management and relief funds. The basis of division was frequently unknown to the public and accounting frequently inadequate. Several fake chain letters were brought to public attention. In November Mr. Charles N. Johnson, secretary of the New York State Board of Charities, declared that irresponsible and mismanaged war relief organizations deprived soldiers and civilians of millions of dollars contributed for relief work.

One of the best examples of efficient co-

operation was that secured by the Emergency Aid of Pennsylvania. Its membership, spread throughout the State, included a federation of three types of activities: (1) committees raising money for special nationalities; (2) representatives of analogous organizations; (3) persons and organizations interested primarily in home relief. During the year the realization that many relief solicitations were false or irresponsible led one city after another to insist upon coöperation, financial responsibility, and authorization by some such public body as a chamber of commerce or charity organization society.

**THE FEDERAL COUNCIL OF ALLIED WAR CHARITIES** comprised some seventy-five organizations of varied interest and national in scope. It was created as a part of the movement to co-ordinate activities, decrease duplication, and increase financial responsibility and efficiency. It served also as a medium for effecting concerted action of its constituents with the Red Cross. The latter's Committee on Coöperation extended an invitation to the war relief bodies to become auxiliaries of the Red Cross and this was accomplished to some extent. The individual organizations, however, were loathe to surrender their independence either in the collection of funds or in the machinery, methods, and area of the distribution of benefits. The aggregate membership of the bodies in the Federal Council was over 2,000,000. Up to September, 1917, its members had sent a total of \$3,000,000 in cash and goods for relief work in Europe since the war began.

**THE AMERICAN AMBULANCE** was one of the most important American relief activities. It organized ambulance sections for work in different parts of France, and Italy, and at Saloniki. Ambulance drivers were secured primarily from American colleges, considerably more than 1000 such men having been recruited by the middle of 1917. The American Ambulance Field Service had in July, 1917, eighteen sections of ambulances serving the French army with staffs totaling 700 volunteers. In all it was maintaining more than 700 ambulances at the front, in reserve, or under construction. A branch of this service, ammunition transport, had nearly 80,000 auto-trucks at work. This latter branch was long handicapped for lack of capable drivers, but by mid-summer this was overcome, three reserve groups of forty men each being under training. The American Ambulance Hospital at Paris was at first run entirely by voluntary workers; it was afterwards turned over to the Red Cross. It then became the American Military Hospital, run by American money, with its staff drawn from various countries, partly volunteer and partly paid professional physicians and surgeons. It had 600 beds, excellent surgical equipment, 250 motor ambulances, a hospital train fitted to accommodate 264 wounded and having operating room, sterilizing plant, diet kitchen, and a staff of doctors, surgeons, and nurses. Another feature was the Mobile Field Hospital with 108 beds; and still another the Advanced Hospital near the front at Juilly-sur-Marne. It organized the War Relief Clearing House for France and her Allies with its American headquarters in New York and its Paris headquarters in the house of the former ambassadors of the United States to France. This body was officially recognized

by the French government as the agency for the distribution of American charity in France. It was given free transportation by the French government for all of its supplies on French liners and over all French railways.

**AMERICAN POETS, ARTISTS, AND MUSICIANS** extended aid to their colleagues and war victims throughout Europe. The American Poets' Ambulances in Italy, Robert Underwood Johnson, chairman, 70 Fifth Avenue, New York City, completed on December 15 a campaign to provide 100 ambulances. At the request of Italian authorities they also furnished five barrack hospitals and thirty-two tent hospitals. The Appui Aux Artistes maintained a canteen in Paris where needy artists could secure food at very low cost; and the Beaux-arts Comité Americain supported an information bureau for artists. The American Students' Committee of l'Ecole des Beaux-Arts for the immediate relief of art students in Paris and their families had collected \$40,170 by the close of 1917; its treasurer was Henry R. Sedgwick, 607 East Thirty-seventh Street, New York City.

**THE AMERICAN FUND FOR FRENCH WOUNDED** maintained fifteen motor cars and a well stocked depot at Paris. It distributed supplies by motor to hospitals throughout France, according to the reports of its field agents. Its cars were driven by girls from all parts of the United States. Its Paris depot was formerly the theatre Alcazar d'Été. Their distributing centres were established at Nice, Noyon, Pauchambey, and in Brittany.

**JEWISH RELIEF.** Jewish refugees and war victims constituted one of the most difficult problems of war relief. It was estimated that there were nearly 5,000,000 Jewish people scattered throughout Poland, Russia, southeastern Europe, Syria, Palestine, and Egypt, who had experienced undue hardships from the war conditions. In 1916 vigorous efforts were made in this country to raise funds for their relief, the organizations principally concerned being the American Jewish Relief Committee for Sufferers from the War, Louis D. Marshall, president, the Central Committee for the Relief of Jews Suffering Through the War, the People's Relief Committee, Meyer London, chairman, and the Joint Distribution Committee of American Funds for Jewish War Sufferers. The latter served as a clearing-house, secured the necessary coöperation of governments, pooled information regarding needs, and made appropriations. The total expenditures of these organizations to the close of 1917 approximated \$12,000,000. In 1916 was begun an effort to raise \$10,000,000 by the close of 1917, one-half in New York City and the remainder throughout the country. Mr. Jacob Bilnikopf was in charge of the national campaign. Active support was secured from President Wilson, Secretary of War Baker, and many others. Mr. Julius Rosenwald, of the firm of Sears, Roebuck, and Company gave \$1,000,000; eight men pledged 10 per cent of what their respective States would raise and 52 men and women pledged 10 per cent of what their respective cities would give. These eight men were: Governor Simon Bamberger of Utah; Governor Moses Alexander of Idaho; S. R. Travis of Oklahoma; William Topkis of Delaware; Jacob Epstein of Maryland; Ben Selig of Oregon; Adolph S. Ochs of Tennessee; and E. M. Chase of New Hampshire. By the

close of the year \$6,500,000 had been pledged outside of New York and something over \$5,000,000 in that city. Appropriations were made for food, clothing, medical supplies, hospital treatment, and other care of Jews throughout the world. Up to September 15 the principal appropriations by the Joint Distribution Committee had been as follows: Russia, \$2,582,300; Poland and Lithuania, \$2,821,200; Austria-Hungary (one-half to Galicia), \$1,583,700; Palestine, \$958,674; Turkey (outside Palestine), \$318,650; Alexandria, \$42,300; Greece, \$34,000; Serbia, \$19,500; Rumania, \$75,900; Bulgaria, \$18,500; Tunis, Algiers, and Morocco, \$9000. In addition, the American Jewish Relief Committee and the central committee had sent more than \$1,000,000 independently. The Transmission Bureau of the American Committee had conveyed \$500,000 from persons in America to relatives abroad. The Joint Committee had also made appropriations for Swiss University students and writers (\$7000), for destitute families of Russian Jews in France (\$5000), and for Turkish refugees in Spain (\$8000). For the work abroad the principal agencies were Jewish Colonization Association in Russia, the Jewish Relief Committee for Poland, the Israelitische Allianz of Vienna. The Russian organization includes the Central Jewish Committee for the Relief of Sufferers in the war with headquarters at Petrograd, territorial committees at Moscow, Kharkov, Kiev, and Odessa, and more than 125 local committees. There are also special committees on Health, Agriculture, and Industry and Education. Following America's entrance into the war the relief work in Poland was carried out through the Netherlands government.

**QUAKERS IN WAR RELIEF.** Within a few months after the outbreak of the war Quakers of the United States and England began relief activities among peasants of devastated areas in France and Belgium. By the fall of 1917 they had erected nearly 500 wooden houses for peasants and assisted in securing supplies of agricultural implements and tools, seeds, poultry, rabbits, etc., as well as household furniture and utensils. They established work-rooms for farm women, convalescent homes, a small general hospital, and a maternity hospital. They organized industries and recreation among the thousands of Belgians in refugee camps in Holland. Later they began similar work among Russians driven from home on the eastern battle line, this branch being in charge of the American Friends' Service Committee, assisted by a group of English Friends. This committee began in July also the training at Haverford College of 100 young men for reconstruction work in France, including agriculture, horticulture, building, repairing, sanitation, medical, and social work.

**OTHER FUNDS.** Other important funds, together with their New York headquarters and in most cases the amounts which they had collected from their organization to the close of 1917, were the following: the Secours National Fund for the relief of French women and children, of which Mrs. Whitney Warren, 16 East Fortieth Street, was the head, had collected over \$377,000. The Serbian Relief Committee of America, 70 Fifth Avenue, had collected \$375,500. The British War Relief Association (Inc.), 542 Fifth Avenue, organized the fund for Rumanian

War Relief, assisted relief work and hospitals in England, sent comfort kits to British soldiers, and materially aided in the relief of Halifax sufferers in December; it had collected \$131,500. The American Committee for Training in Suitable Trades the Maimed Soldiers of France, Edmund K. Baylies, the Biltmore Hotel, treasurer, had collected \$350,000. The Vacation War Relief Committee, Mrs. Valentine Schuyler, chairman, 20 West Twenty-third Street, had collected more than \$635,000; it had made and shipped during 1917, 31,000 garments, cut out and made 136,000 garments, sent abroad 50,000 cases of condensed milk, hundreds of talking machines, and more than 10,000 records. The Polish Victims Relief Fund, 33 West Forty-second Street, had collected over \$906,000. Its University Grants Committee sought funds for the Polish professors, scientists, and scholars made destitute by the war. The Lafayette Fund, which provided comfort kits costing \$2 each for soldiers fighting in France had collected over \$250,200. The American Girls Aid for the Collection of Clothing for the Victims of the European War in France, Miss Gladys Hollingsworth, chairman, 293 Fifth Avenue, had collected over \$114,000. The Duryea War Relief, Mrs. Nina L. Duryea, president, had headquarters at 9 East Thirtieth Street. The Trench Comfort Packets Committee for the United States and Allies, Mrs. Mary H. Williard, chairman, sent packets of towels, soap, razors, etc.; its office was at 2-14 West Thirty-ninth Street. The Stage Women's War Relief, Miss Rachael Crothers, president, 366 Fifth Avenue, sent surgical dressings, other hospital supplies, such as rubber gloves, anesthetics, and garments; it had a department for making wind-proof jackets and departments for surgical dressings and for knitting. The Committee of Mercy, August Belmont, treasurer, receives contributions at 360 Madison Avenue. Mrs. Gertrude Atherton carried on a vigorous campaign in behalf of *Le Bien Être du Blessé*, 360 Madison Avenue. The New York Committee of the Fatherless Children of France, W. W. Price, 111 Broadway, treasurer, had collected over \$290,700; it supported children at the rate of \$36.50 each per year. The Dollar Christmas Fund for Destitute Belgian Children had collected over \$43,000; most of this was sent to the Belgian Relief Committee which arranged for a special Christmas dinner for especially destitute children. The French Tuberculosis War Victims' Fund, 360 Madison Avenue, Charles H. Sabin, treasurer, had collected over \$122,000. The American Committee of the Scottish Women's Hospitals for Home and Foreign Service, 20 Nassau Street, sought to assist the soldiers of the Allied armies. The National Allied Relief Committee, James A. Blair, Jr., treasurer, 360 Madison Avenue, raised \$1,182,000 between July, 1915, and December 26, 1917; it benefited the sufferers of devastated France, disabled soldiers and their widows and children of Scotland, the Commission for Relief in Belgium, the French Tuberculosis War Victims' Fund, the London Motor Transport Volunteer Corps, the Balkan Refugees and Sufferers, Polish Refugees, and others. The War Babies' Cradle, Mrs. Jules S. Bache, treasurer, 360 Madison Avenue, provided nursing and food for destitute wives of French soldiers. The Polish Children's Relief Fund of the Women's League in Poland, Mrs. Herbert L. Sat-

terlee, 37 East Thirty-sixth Street, treasurer, had collected \$23,583. The American Committee for Armenian and Syrian Relief, Cleveland H. Dodge, 1 Madison Avenue, had collected about \$3,900,000. The New York Surgical Dressings Committee, Mrs. Edward R. Hewitt, chairman, 19 East Fifty-ninth Street, shipped during the year nearly 880,000 surgical dressings to the Allied armies and 8540 cases of ether, besides numerous knitted garments for soldiers and sailors. The Food for French Fund, Miss Carita Spencer, chairman, had collected about \$24,000; it shipped condensed milk, malted milk, chocolate, sugar, and various kinds of condensed foods; address 140 Broadway.

If any evidence further than the above list were necessary to show the great variety of relief organizations it would be found in the following list which includes most of the remaining organizations approved by the New York Charity Organization Society; Mutualité Maternelle de Paris; Serbian American Orphanage; Eastern Armies Relief Mission; Fund for Maimed Belgian Soldiers; Fund for Children of Northern France; French Widows' Aid; Belgian Commission for Mutilated Soldiers; American Society for Relief of French War Orphans; Permanent Blind War Relief Fund; French Heroes Lafayette Memorial Fund; Serbian Hospital Fund; French Heroes Fund; Russian War Relief Committee; Russian American International Reconstruction League; American Women's War Relief Fund; Authors' League Fund; British Sailors' and Soldiers' Tobacco Fund; Prince of Wales (National Relief) Fund; Professional Classes War Relief Council; Belgian Refugees Knitting Yarn Fund; Canadian Patriotic Fund; Committee for Men Blinded in Battle; Committee for Relief of Belgian Prisoners in Germany; Franco-American Committee for the Protection of the Children of the Frontier; Hospital Under Three Flags; Peoples' Relief Committee for the Jewish War Sufferers; Refugees Relief Fund; British-American War Relief Fund; Australian War Relief Fund; Armenian Medical Relief Association; Friends of Poland; Lithuanian Central War Relief Committee; New England Italian War Relief Fund.

**RELIGION, BOOKS ON.** See LITERATURE, ENGLISH AND AMERICAN.

**REMEDIAL LOANS.** One of the problems attacked by social workers with great vigor during the last half-dozen years is that of providing small loans to workers, clerks, and other propertyless persons to tide them over periods of stress. In the past such persons have been subject to brutal exploitation when they have become the victims of such inevitable contingencies as sickness, death in the family, unemployment, or other occasional cause of special need. At such times they were formerly and still are in many places under the necessity of resorting to private lenders, popularly known as "Loan Sharks," who were in reality unrestrained by any limitations except their own greed. Such loans are necessarily based in most cases upon a pledge of salary or wages, but also in many cases on the deposit of collateral in the form of small personal possessions of value. Rates of interest are necessarily high because of the expense involved in making such loans and in collecting them and the high risk involved.

The National Federation of Remedial Loan

Associations held its 9th annual convention at Cincinnati about June 1. This comprises over forty local societies formed to combat the loan sharks and to provide loans at moderate rates to deserving persons. In 1916 they made over \$30,000 loans aggregating \$29,500,000. These societies are not charitable but they limit their dividends. They have been active in promoting legislation with reference to small loans and in the formation of credit unions.

The American Association of Small Loan Brokers comprises State associations of licensed money lenders formed in Ohio, Maryland, Pennsylvania, Illinois, Michigan, New Jersey, California, Massachusetts, and various other States. They have been formed following the enactment of loans designed to drive out loan sharks. They have sought to standardize the small loan business and thus to raise the dignity of the occupation and at the same time increase benefits to borrowers.

**LEGISLATION.** The Division of Remedial Loans of the Russell Sage Foundation in cooperation with the foregoing association formulated a model bill which during 1916 and 1917 was introduced in many States in which approved legislation was lacking. This bill placed all lenders of \$300 or less under the control of a State bank examiner; limited interest to 3½ per cent per month on unpaid balances; prohibited the charging of additional fees or bonuses; and forbade the assignment of wages except with the consent of wife. Bills relating to this matter were introduced in at least seventeen States in 1917. In most cases these were pushed by the above organizations in cooperation with State associations of small loan brokers, local remedial loan societies, and social and civic organizations. These same agencies opposed some bills which ostensibly limited interest charges to 1 per cent or 1½ per cent per month but permitted the charging of special fees, on the ground that this loophole defeated the aim of such legislation. The model law was passed in Maine, New Hampshire, Indiana, and Illinois. Laws were passed in Utah and Colorado limiting interest charges to 12 per cent a year. The model law was upheld as constitutional by the supreme courts of Ohio, Oregon, and by two lower courts in Pennsylvania.

**OTHER AGENCIES.** Another important development in this field is that of the Morris Plan banks, the first of which was organized at Norfolk, Va., in 1901. Their organization has been pushed by the Industrial Finance Corporation with \$7,000,000 capital. These banks make loans to any person either on collateral or on a note signed by the borrower and two other persons. A charge of \$1 for each \$50 loaned is made to cover the cost of investigating the endorsers of the note. Loans are repaid by weekly installments. The interest rate which is normally 6 per cent as a rule in reality amounts to at least 16 per cent. Bills to legalize this plan of operation were introduced in Maine, Minnesota, New Jersey, Pennsylvania, and elsewhere in 1917, but because the plan provides for the charging of special fees such bills have not been supported by the remedial loan societies.

Credit Unions have grown rapidly in Massachusetts, New York, and certain Southern and Western States during the last few years. These unions, by pooling the resources and credit of

a group of persons well known to each other, make possible the securing of funds on favorable terms even though the members individually have little or no capital. While each member is made responsible only to the extent of his own stock, character is the basis of membership and of credit. The unions put a premium on thrift and personal probity and are thus considered socially constructive. They frequently combine with lending retail cooperative activities. The laws legalizing them require the unions to issue stock in amounts ranging from \$1 to \$5 per share; membership may as a rule include not only individuals but firms, corporations, and societies; unions are exempt from taxation; their dividends are limited; as a rule they may receive deposits; and in most States they may engage in a variety of cooperative undertakings. More than sixty such unions have been formed in Massachusetts, and over thirty in New York. They have been authorized also in North Carolina, Oregon, Texas, Utah, and Wisconsin. The 1917 report of the Massachusetts Credit Union Association showed that it comprised sixty-three locals with 20,000 members. Each union receives deposits, makes loans to members, and sells them shares on the installment plan. See AGRICULTURAL CREDIT.

**BENARD, ROSITA.** See MUSIC, Artists, Instrumentalists.

**RENSELAER POLYTECHNIC INSTITUTE.** A non-sectarian institution for the technical education of men, at Troy, N. Y. In the fall of 1917 there were 614 students and 63 members of the faculty. The institute received \$215,000 in benefactions in 1917. The productive funds amounted to \$1,700,000 and the income therefrom to \$82,500. Volumes in the library, which contains only scientific works, numbered 23,000 in 1917—12,000 bound and 11,000 pamphlets. Plans were made for doubling the capacity of the chemical laboratory and for adding new units to the dormitory system, each unit to be a three-story house to accommodate 12 students. The institute was founded in 1824. President, Palmer C. Ricketts, LL.D.

**REORGANIZATION.** See RAILWAYS.

**REORGANIZED CHURCH OF JESUS CHRIST OF THE LATTER DAY SAINTS.** This is a separate organization of Mormons claiming to be the true successor of the church founded in 1830 by Joseph Smith. It was reorganized in 1852. Its chief offices are at Lamoni, Iowa. In 1917 it had approximately 79,000 members, 1800 ministers, 800 churches, 750 Sunday schools, and 40,000 Sunday school scholars. Its officers are: Frederick M. Smith, president; Benjamin R. McGuire, presiding bishop; Richard S. Salyards, general church secretary.

**RESZKE, EDOUARD DE.** A Polish opera singer, brother of Jean de Reszke, born at Warsaw in 1855. For many years he was a member of the Metropolitan Opera House in New York City. He studied under Cialfei, Steller, Coletti, and Sbriglia. He took up music after devoting himself for some time to scientific farming on the family estate in Silesia. He made his first appearance at the Italiens in Paris in 1876. For the next quarter of a century he was famous as one of the greatest dramatic basses of his time, appearing at the Metropolitan Opera House of New York and at Covent Garden, London. Since the outbreak of the pre-

ent war, there had been reports that he was living in a state of destitution in Poland, although he was known to possess a large fortune. It was said by the Polish Relief Committee that he was forced to live in a cellar as a result of the German advance into Poland. He died c. May 30, 1917.

**RHODE ISLAND. POPULATION.** The population of the State in 1910 was 542,610, and on July 1, 1917, it was estimated to be 625,865.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture in 1916-17, were as follows:

		Acreage	Prod. Bu.	Value
Corn .....	1917	13,000	546,000	\$1,289,000
	1916	11,000	341,000	471,000
Oats .....	1917	2,000	62,000	46,000
	1916	2,000	54,000	37,000
Potatoes .....	1917	5,000	675,000	1,181,000
	1916	6,000	444,000	820,000
Hay .....	1917	60,000	a 90,000	1,827,000
	1916	58,000	78,000	1,560,000

a Tons.

**TRANSPORTATION.** The total mileage of main track in the State in 1916 was 1972, practically all of which was operated by the New York, New Haven, and Hartford, or its subsidiary companies.

**FINANCE.** The report of the State treasurer for the fiscal year ending December 31, 1916, shows receipts amounting to \$3,815,477, and payments amounting to \$3,782,639. There was a balance on December 31, 1916, of \$31,390.

**EDUCATION.** The total school population in 1916 was 129,985. The total enrollment was 89,879, with the average daily attendance of 71,613. The number of women teachers was 2540 and the number of men 233. The average monthly salary of women teachers was \$68.14, and that of men was \$142.32. The total expenditure for school purposes was \$4,136,492.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the State Hospital for the Insane, House of Correction, State Almshouse, the State Prison, State Providence County Jail, Sockanosset School for Boys, and the Oaklawn School for Girls. The Rhode Island State School for the Feeble-Minded is under the State Board of Education.

**POLITICS AND GOVERNMENT.** Both houses of the legislature, on April 17, approved the extension of presidential suffrage to the women of the State, and Governor Beecman, on the following day, signed the bill making it a law. Rhode Island was the first east of Ohio to give to women the right to vote for the presidential electors.

**LEGISLATION.** Among the more important measures passed at the legislative session of 1917 are those noted below. The laws relating to domestic relations were amended. It was provided that a person over twenty-one years of age may not unreasonably neglect to support parents who are destitute without fault of their own. The lease of prison labor to private contractors was prohibited. The laws relating to the workman's compensation were amended. Workmen are permitted to choose their own physician in case of injury. Educational laws were amended. The maximum school age was increased from fifteen to sixteen years.

**STATE OFFICERS.** Governor, R. Livingston Beecman; Lieutenant-Governor, Emery J. San Souci; Secretary of State, J. Frederick Parker; Attorney-General, Herbert A. Rice; Treasurer, Walter A. Read; Adjutant-General, Charles W. Abbott, Jr.; Auditor, Philip H. Wilbourn; Commissioner of Public Schools, Walter E. Ranger; Commissioner of Insurance, State Auditor, ex-officio—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Christopher F. Parkhurst; Associate Justices, Charles F. Stearns, W. B. Vincent, William H. Sweetland, Darius Baker; Clerk, B. S. Blaisdell.

**RHODESIA.** A British Protectorate north of the Transvaal under the administration of the British South Africa Company and consisting of Northern Rhodesia and Southern Rhodesia. Northern Rhodesia comprises the two former provinces of Barotseland and Northeastern Rhodesia. Its area is estimated at 291,000 square miles and its population at 877,100 of whom only 2100 are Europeans. The seat of the administration is Livingstone. The administrator in 1917 was L. A. Wallace, C.M.G. Among its exports are rubber, ivory, tobacco, and cotton. Southern Rhodesia comprises Mashonaland and Matabeleland, with an area of 149,000 square miles and a population of 777,882 of whom the Europeans number approximately 32,882. The seat of the administration is Salisbury and the administrator in 1917 was Sir F. Drummond Chaplin, K.C.M.G. The output of gold in 1916 was £3,895,311. Besides gold it exports silver, lead, copper, coal, chrome ore and asbestos. Throughout the Protectorate wide areas are cultivated and the country is well suited to stock raising.

**RHONDA, Baron.** A Welsh industrial peer and British food controller. He was born in Aberdare, Glamorgan, in 1856, the son of a small mine owner, from whom he inherited two coal pits. He was privately educated as a boy and eventually went to Caius College, Cambridge, and was a scholar of Jesus and Caius. Then he returned to the coal fields and gradually opened more and more pits until he used to be called the uncrowned king of the South Wales coal field. He served as a member of Parliament, representing Merthyr Tydfil. The most striking part of Lord Rhonda's career was his participation in war work. He was chosen by Lloyd George to go to Washington and Toronto to hurry up the first British munition supplies from the States. In one of these trips he and his daughter were rescued from the *Lusitania*. As a result of his work in this field of endeavor he was made a baron, and when it became necessary to regulate England's food situation, he was picked out for the position by Lloyd George. His name before receiving his title was David A. Thomas.

**RHONE CANAL.** See CANALS.

**RHOTANIUM.** See CHEMISTRY, INDUSTRIAL, Metals.

**RICE.** The rice crop of 1917 was satisfactory in most of the world's principal producing countries. The Japanese crop was estimated at 296,883,295 bushels, or greater by 4,668,060 bushels than the preceding crop, and about 32,000,000 bushels above the annual average. The crop of India was reported as also very promising, but in Siam floods damaged an area of about 400,000 acres and caused a loss of approximately 13,000,000 bushels. The Italian yield was esti-

mated at 25,097,800 bushels, which was about the normal production, and the Spanish crop of 11,373,000 bushels also constituted about an average yield.

According to estimates by the U. S. Department of Agriculture, the rice production of the United States in 1917 was 36,278,000 bushels as compared with 41,325,000 bushels in 1916. While the area in rice, 964,000 acres, was the largest ever sown and was greater by 95,000 acres than the acreage of the preceding year, the average yield per acre was ten bushels lower than the exceptionally high average acre yield of 47.6 bushels in 1916. The average yield per acre for the five years 1911-1915 was 33.8 bushels. The average farm value of rice on December 1, 1917, reached the record price of \$1.894 per bushel, as compared with 88.7 cents on the corresponding date the year before, and on this basis the total production represented the record value of \$68,717,000.

In Japan the price of rice reached \$2.34 per bushel during the year, this being 4 cents above the preceding record price in 1912. In the United States in 1917, 22 per cent of the acreage was devoted to Honduras, 13 per cent to Japan, and 43 per cent to Blue Rose rice. In California 94 per cent of the acreage was devoted to Japan rice.

**RICE INSTITUTE.** A university of liberal and technical learning at Houston, Tex. It was founded by William Marsh Rice and dedicated by him to the advancement of letters, science, and art, was incorporated in 1891, but was not opened until 1912. In the fall of 1917 there were 651 students and 45 members of the faculty, in addition to 6 fellows and 44 student assistants. Productive funds in 1917 amounted to approximately \$10,000,000 and the income to \$500,000. President, Edgar Adell Lovett, LL.D.

**RIGA.** See LIVONIA.

**RIGGS' DISEASE.** The reports of investigations of this disease during 1917 have been chiefly notable for their utter rejection of the theory of Bass and Johns, that the *Entameba buccalis* is the specific causative factor in its production, that emetin is a specific against it, and that the disease was present in 95 per cent of our population. A great variety of organisms have been found in the pus pockets about diseased teeth, but it is at the present time impossible to ascribe etiological significance to any particular germ. Staphylococci and streptococci are practically always present, and systemic infections, upon which so much stress has been laid of late, seem to be due to the absorption of the *Streptococcus viridans* and strains of hemolytic streptococci, rather than to other types. The consensus of opinion is that pyorrhea is due in no small degree to local infection, yet that malnutrition, lack of vital resistance, and local irritation are also very potent agencies.

**RIVERS AND HARBORS.** See CANALS; DOCKS AND HARBORS; INLAND WATERWAYS.

**RIVERSIDEITE.** See MINERALOGY.

**ROADS AND PAVEMENTS.** The need of carefully devised programmes for road construction and maintenance during the war became more and more apparent as the year progressed. Railway congestion forced motor trucks into use as never before. Some of these operated on regular schedules over long routes,

extending in some cases from points in the Middle West to the seaboard (see AUTOMOBILES). The weight of these motor trucks combined with the heavy traffic of motor vehicles of all kinds demanded road surfacing material of high quality placed upon solid, well-drained foundations. With the increasing number and weight of motor vehicles on country highways road construction assumed more and more the character of city pavements. Consequently brick and various kinds of bituminous concrete on good foundations of Portland cement concrete were becoming increasingly common on country highways and many long stretches of cement concrete pavement were being placed. Except in point of adaptation of the various types of road surfacing and pavement to changing traffic and to the war exigencies affecting the availability of different materials, their cost and the cost of labor, the technique of road and pavement construction followed the same general lines in 1917 as have been sketched in earlier issues of the YEAR BOOK.

**PROGRESS UNDER FEDERAL AID ROAD ACT.** In an address before the American Association of State Highway Officials at Richmond, Va., in December, Logan Waller Page, director of the U. S. Office of Public Roads and Rural Engineering, stated that of 228 projects submitted for the purpose of obtaining Federal aid, 168 had been approved and only six disapproved. The total funds involved amounted to \$13,583,578, of which \$4,052,143 were to be contributed by the general government and \$9,770,179 would come from State and local sources. The status of State aid to November 30, 1917, as reported by Mr. Page, is given in the table on the following page.

The Federal Aid Road Act was passed in 1916. Under its provision a total of \$75,000,000 was appropriated, of which \$5,000,000 was made available for the fiscal year 1917, the sum increasing annually by \$5,000,000 for each of the following years until 1921, when \$25,000,000 will be available. Each State receiving Federal aid must contribute an equal sum.

**STATE HIGHWAY EXPENDITURES.** Late in the year the U. S. Office of Public Roads issued statistics regarding rural roads in the various States, together with State expenditures for roads. During the year 1916 a total of 15,160 miles of roads were built by the several States alone or by States and localities under State aid. In the same year 75,311 miles of roads were maintained with State aid funds and 4490 bridges were built by the same means. Up to January 1, 1917, a total of 69,186 miles of State and State aid roads had been built. On the same date the total mileage of all public rural roads in the United States was 2,455,761. Of these, 287,047 or 11.6 per cent of the total, had improved surfaces. The percentage of surfaced roads was 47.6 in Massachusetts, 42.5 in Indiana, 40.5 in New Jersey, 36.5 in Ohio, 34.5 in Rhode Island, 23.6 in Kentucky, 22.6 in Connecticut, and 20.2 in California. From this point the percentages decreased to 1.0 in Iowa, 0.8 in South Dakota, and 0.3 in Oklahoma, which latter footed the list.

**PRIORITY ORDER No. 2.** On November 1 there went into effect Priority Order No. 2 forbidding the shipment anywhere in the United States of specified materials in certain types of freight cars. This order caused the shutting down of

large amounts of road surfacing and city pavement in all parts of the country, it not being possible to continue such work where the availability of material depended upon railway shipments. With the taking over of the railways of the country by the Federal government at the close of the year the effects of the order came to an end. A Highways Transport Committee of the Council of National Defense was created to take into account various matters relating to the subject indicated by the name

000. Volumes in the library numbered 71,749. The university was founded in 1850. President, Rush Rhees, D.D., LL.D.

**ROCKEFELLER, FRANK.** An American stock raiser, youngest brother of John D. Rockefeller, died in Cleveland, Ohio, April 15, 1917. He was born in 1845 at Richford, N. Y., and was early associated with his brothers in the oil-producing business, as a vice-president of the Standard Oil Company. A quarrel with his brother John ended in complete alienation many

FUNDS APPROPRIATED, MILEAGE, AND STATUS OF FEDERAL-AID ROAD PROJECTS—

<sup>a</sup> Connecticut Project No. 2 and Maine Project No. 2 withdrawn after approval.

of the committee, including routes and road materials.

**ROCHESTER.** See CITY PLANNING.

**ROCHESTER, UNIVERSITY OF.** A non-sectarian institution for the education of men, located at Rochester, N. Y. In the fall of 1917 there were 535 students and 53 members of the faculty; about 250 students, alumni, and members of the faculty were in government service in 1917. \$673,350 was received in 1917 from the estate of L. P. Ross to found a department of vital economics. Productive funds in 1917 amounted to \$2,280,000 and the income to \$92,-

years ago, although William Rockefeller had tried to bring the two together again. Since 1900 Frank Rockefeller had devoted himself largely to a stock farm of 12,000 acres at Belvidere, Kans., a model of its kind, personally supervised by the owner. He also had an estate in Cleveland. In comparison with his brothers he was not a wealthy man, his estate being estimated at \$800,000.

**ROCKEFELLER FOUNDATION.** See ROCKEFELLER PHILANTHROPIC BOARDS.

**ROCKEFELLER INSTITUTE.** See ROCKEFELLER PHILANTHROPIC BOARDS.

**ROCKEFELLER PHILANTHROPIC BOARDS.** The vast fortune of John D. Rockefeller has been used for the promotion of quite an array of charitable and educational activities. He has given many millions to Chicago University and numerous other institutions and organizations, but his most conspicuous donations have been to the Institute for Medical Research and the two bodies described below. The institute, founded in 1901, located in New York City, has funds and property of over \$15,000,000 and an annual budget of over \$500,000. Its three departments are its laboratories, its hospital, and the plant near Princeton, N. J., for the study of animal pathology. In 1917 a war demonstration hospital was built in New York City, upon the model of a recent base hospital actually in use on the Western Front. It is to be used to demonstrate to American surgeons the treatment for infected wounds, worked out by Dr. Alexis Carrel and Dr. H. D. Dakin.

**ROCKEFELLER FOUNDATION.** The most important of the boards and institutions founded by John D. Rockefeller is the Rockefeller Foundation chartered in 1913 "to promote the well-being of mankind throughout the world." To this Mr. Rockefeller gave securities valued at \$100,000,000. Since the beginning of the war the foundation has carried on numerous activities of its own and coöperated with multifarious organizations. On account of the extraordinary demands, due to the war it was voted by the trustees in May that "in addition to the income, the principal of the funds of the foundation to the amount of \$10,000,000 may be distributed from time to time." During the first six months of 1917 the total appropriations for war relief were \$6,137,500. Among these appropriations for war relief were the following: for agencies connected with training camps for American soldiers, \$370,000; for medical work, \$402,500, including a special hospital to teach the new methods of war surgery, a mobile hospital in France for clinical instruction, and such other policies as the appropriations of serums for war relief and special research in war medicine and surgery; and for humanitarian work, \$5,500,000, including an unconditional gift to the American Red Cross and considerable sums for the International Committee Y. M. C. A. foreign military work, Commission for Relief in Belgium, American Committee for Armenian and Syrian Relief, and \$100,000 for the work of the International Health Board of the Foundation for tuberculosis work in France. The war demonstration hospital above mentioned was constructed in New York and directed by Dr. Alexis Carrel for the purpose of demonstrating to American surgeons new methods developed in war hospitals of France. These methods at once found wide application in treatment of industrial injuries. The work on the prevention of tuberculosis in France was under the direction of a commission headed by Dr. Livingston Farrand, president of the University of Colorado, with the assistance of Professor S. N. Ginn, of Boston, Dr. James A. Miller, of New York, and Mr. Homer Folks, of New York. When the original endowment was given Mr. Rockefeller stipulated that \$2,000,000 of the annual income should be subject to specific appropriation by himself, provided the objects were within the purposes of the foundation. In July, 1917, this

privilege was surrendered by the donor. This released the sum of \$1,965,000 for purposes to be designated by the trustees rather than by Mr. Rockefeller himself. Among other appropriations besides war relief for the first half of 1917 were the following: The China Medical Board, \$814,837; International Health Board, \$951,150; for the study of Industrial Relations, \$20,000; for the Rockefeller Institute for Medical Research, \$2,087,156, of which \$2,000,000 was for additional endowment. Besides all of these expenditures there were appropriations amounting to \$960,370 for numerous religious, social, and civic organizations. In July Dr. Alden R. Hoover, medical missionary, made an extended report of investigation for the foundation into health conditions throughout Turkey.

On December 10 the Foundation announced that expenditures aggregating \$5,050,000 for 1918 had already been approved for war work alone, but chiefly for the promotion of health and the advancement of medicine. In addition to appropriations for the war work of the Red Cross, Y. M. C. A., Y. W. C. A., the Jewish Camp Welfare, and the Training Camps Commission, the list included: for work against yellow fever, hookworm, malaria, etc., \$1,076,000; for the tuberculosis commission in France, \$424,000; for medical colleges in China, \$918,000; for other medical schools and societies, \$927,000.

**GENERAL EDUCATION BOARD.** This board was chartered by Congress in 1903. It has sought to stimulate rural education and farming, especially in the South; high school development; negro education; higher education; medical education, and educational research. For these purposes it has spent an aggregate of about \$20,000,000 from its own funds, besides other millions from the foundation, and had induced colleges and universities to raise in addition about \$50,000,000. The funds of the foundation including reserve were reported to exceed \$34,000,000.

In January a resolution of Congress requested the secretary of the interior to furnish information regarding the relation of the Bureau of Education to the General Education Board or other private bodies. To this the commissioner replied that there was no relation of the bureau with the General Education Board or the Rockefeller Foundation, though coöperative relations for purposes of investigation did exist with several funds and organizations. On the ground that this relationship enabled private bodies to carry out inquiries under government auspices and use the franking privilege in disseminating literature largely propagandist in nature, Congress enacted that the bureau should spend no part of its funds "in connection with any money contributed by the General Education Board or by any corporation or individual other than State, county, or municipal agencies." It was charged that the General Education Board was controlling the policies of State and local boards of education and of State and sectarian colleges and universities; and that the board was impeding progressive legislation. A similar rule was made applicable by Congress to appropriations for the Agricultural Department.

In January the board announced that it would supply Teachers College of Columbia University with adequate funds "to establish and conduct a school for the purpose of constructive work in

the reorganization of elementary and secondary education." It was announced that this school would be better adapted to needs of modern life, would discard the "formal discipline" theory of education, and would substitute science, industry, and the domestic arts for Latin and Greek. This purpose was the result of papers prepared for the board by ex-President Eliot and Dr. Abraham Flexner. Professor O. W. Caldwell, of the School of Education, University of Chicago, was appointed director of the new "model school." See EDUCATION.

**BOOKS.** See GEOLOGY.

**RODIN, AUGUSTE.** A French sculptor, one of the greatest of all times, born in Paris November 4, 1840, of a poor family. He died November 27, 1917. He was educated at a school conducted by his uncle, and at the age of fourteen entered a free drawing school in the Latin quarter, and later went to the school of Barye in the Jardin des Plantes. When only twenty-two years old he modeled in clay one of his most powerful and characteristic works entitled "The Broken Nose." During the Franco-Prussian War he served in the National Guard, and after the war went to Brussels, where he executed a great deal of decorative work, besides sending two busts to the Paris Salon; both were accepted and were placed on exhibition in 1875. In this year he made a short visit to Italy, after which he modeled the "Age of Bronze," a work condemned by the more conservative sculptors on account of its radical naturalism. This was later placed in the Luxembourg Gardens. In 1878 he secured a commission to do a bronze door for the Musée des Arts Decoratifs. It was to be covered with figures suggested by Dante's *Inferno*. He never finished it, but the figures and groups intended for it are among the sculptor's best works. Among them are "The Thinker," and "Adam" and "Eve." The latter two are in the Metropolitan Museum, New York City. His "Bourgeois de Calais" probably ranks next in importance to these. In its intense naturalism and dramatic energy, this work represents the culmination of the genius of Rodin. His monuments to Victor Hugo and Balzac showed unquestioned power, but a great deal of eccentricity. The latter was rejected, but the original study for the head is in the Metropolitan Museum. At the time of its exhibition critics received it with jest and jibe. Balzac was represented in a voluminous dressing gown, the features and figure roughly sketched. Critics exclaimed that it was "An enormous porpoise, standing upright, draped in a thick bath robe." They called it grotesque, huge, and flippant, while the more radical critics saw in it "the incarnation of the great writer's soul." The Society of Men of Letters, which had ordered the work, held the majority view that the work was incomprehensible, if not ridiculous, and rejected it outright. During his later years he executed a series of small groups of marble, to be seen from all sides, such as "Ugolio," "The Kiss," and the "Danaiid," in the Luxembourg; "Pygmalion and Galatea," "Cupid and Psyche," "Orpheus and Eurydice," "The Hand of God," and "The Bather," in the Metropolitan Museum. He also executed a number of admirable busts of great power. There was a comprehensive exhibition of all his works at the Paris exhibition of 1900. Rodin was a tireless worker, the quantity of his work almost equaling its quality.

His greatest output was in 1889, when no less than thirty-one pieces of sculpture were put on view at the Georges Petit Gallery in Paris. Rodin is well represented in many museums, the Metropolitan Museum of New York City possessing, through the munificence of Thomas F. Ryan, twenty-one examples of his work, besides many studies, drawings, and casts. Rodin himself gave eighteen signed plaster casts. The original pieces in this collection were chosen with the advice and approval of the sculptor. Besides those mentioned above, the bronze "Martyr" and the "Old Courtesan" are important works in the Metropolitan.

The bronze bust of "La France" by Rodin was presented to the United States by the people of France during the Tercentenary Celebration of the discovery of Lake Champlain (1909) and has since been mounted as a monument to Champlain at Crown Point, N. Y.

Rodin in his later life received many honors. Upon the death of Whistler he became president of the International Society of Painters, Sculptors, and Engravers. Early in the European war he sent a collection of his works to England as a token of admiration of the British troops, and later he executed a deed of gift to the French government of the entire collection of his own works, other art objects he had acquired, and the Hotel Biron, in which they were assembled, for a museum. Rodin's drawings are almost as wonderful as his sculptor work, he having contributed illustrations to Bergerat's "Engnerrande," etc. He is the author of *L'Art; Venus; Les cathédrales de France*.

Rodin's art is the culmination of the naturalistic sculpture of the nineteenth century. He shows a wonderful knowledge of anatomy as well as a profound mastery of technique, which he adapts with equal skill to all materials, marble as well as bronze.

For an account of his life in English consult: Camille Mauclair, *Auguste Rodin* (English translation by Black, N. Y., 1906); Frederick Lawton, *Life and Work of Auguste Rodin* (N. Y., 1907); Rudolph Dircks, *Auguste Rodin* (London, 1909); Frank Harris, *Contemporary Portraits* (N. Y., 1915).

**ROENTGEN, ENGELBERT.** See MUSIC, Artists, Instrumentalists.

**ROMAN CATHOLIC CHURCH.** The most important event for the Catholic world during 1917 was the promulgation, on June 28, by Pope Benedict XV, in the constitution *Providentissimus Mater*, of the new code of Canon Law. This codification, begun by Pius X, on March 19, 1904, had been pushed to completion by a commission of cardinals aided by the best legal talent of the Church. It is a complete restatement of the law of the Catholic Church and is a work on canon law comparable only to that of Justinian in regard to the law of Rome, and is something no other Pope had ever done or even attempted to do. It is epoch-making for the fame of Benedict XV, in that, for the first time, there is collected, in a comparatively small volume of 448 pages, the entire law, and not the law of a period, and a code in the actual sense of the term. Grouped together there are (1) the restating of all current law in 2414 brief articles or canons; (2) the elimination of all obsolete and conflicting enactments. It is for the layman the body of law regulating the life of the great spiritual society of which

he is a member. The new code goes into effect May 19, 1918.

Complications growing out of the war continued to disturb the regular conduct of the details of the administration in Rome of the affairs of the universal Church. On August 1 Pope Benedict addressed peace proposals to the leaders of the belligerent nations. President Wilson replied on August 27 and Germany September 21. See WAR OF THE NATIONS; UNITED STATES AND THE WAR.

A brief lamenting the divorce evil was sent by the Pope to the hierarchy of the United States on January 15, and in August the Consistorial Congregation published a series of special rules for the bishops all over the world for the regulation of preachers and preaching.

**STATISTICS.** From the figures compiled for the *Official Catholic Directory* for 1917 it is computed that there are now 25,436,136 Catholics under the American flag; 17,022,878 in continental United States and 8,413,257 in the Philippines and island possessions. Fourteen archbishops, three of whom are cardinals, 96 bishops, and 19,983 priests govern the Church in the United States. Of the priests 14,602 are seculars and 5381 belong to the regular orders. There are 15,520 parishes; 10,190 having resident pastors and 5330 being mission stations. During the year 357 new parishes were organized. There are 102 ecclesiastical seminaries, with 6898 students; 216 colleges for boys; 676 academies for girls; 5687 parochial schools with 1,537,644 pupils; 293 orphan asylums; and 106 Homes for the Aged. Twenty-seven States have a Catholic population of more than 100,000 and they are rated in this order: New York, 2,962,971; Pennsylvania, 1,865,000; Illinois, 1,482,587; Massachusetts, 1,406,913; Ohio, 832,894; New Jersey, 712,000; Michigan, 631,000; Wisconsin, 586,857; Louisiana, 549,700; Missouri, 531,000; California, 524,233; Connecticut, 508,498; Minnesota, 478,335; Texas, 411,790; Maryland (including District of Columbia), 278,000; Rhode Island, 275,000; Iowa, 263,431; Indiana, 255,256; Kentucky, 181,686; New Mexico, 150,573; New Hampshire, 134,009; Maine, 133,627; Kansas, 131,128; Nebraska, 115,433; Colorado, 110,987; North Dakota, 104,371; Montana, 101,200.

Three cardinals died during the year: Diomede Falconio, former Apostolic Delegate to the United States (February 7); Charles von Hornig, Bishop of Veszprem, Hungary (February 9); and Francis von Bettinger, Archbishop of Munich. These made 16 deaths in the Sacred College during the pontificate of Benedict XV and reduced the cardinals to 64. Of these 34 are Italians; 30 of other nationalities; 37 are incumbents of sees and 27 reside *in curia* at Rome.

The American hierarchy lost by death: Archbishop James H. Blenk of New Orleans (April 20); Bishop James A. McFaul of Trenton (June 16); Bishop N. C. Matz of Denver (August 8); Bishop A. J. Glorieux of Boise, Idaho (August 25). Other notable deaths were: Archbishop Gonzales, Pueblo, Mexico (February 3); Archbishop Aversa, Apostolic Delegate to Munich (April 14); Archbishop Thomas J. Carr of Melbourne (May 6); Bishop E. T. O'Dwyer of Limerick (August 27); Archbishop Thos. F. Kennedy, rector of the American College, Rome (August 28). Others who died were: Brother

Potamian (Michael J. Walsh of the Christian Brothers), a noted scientist and educator (January 23); Thomas B. Minahan, first president of the American Federation of Catholic Societies (August 17); Eleanor C. Donnelly, author and poet (May 1); Sister Teresa Vincent (Jane C. McCrystal), head of the New York Foundling Hospital (May 23); Mother Francis Xavier Cabrini, founder of the Sisters Missionaries of the Sacred Heart (December 22).

Other notable changes among the hierarchy were: Consecration of Right Rev. William T. Russell of Washington, D. C., as Bishop of Charleston, S. C. (March 15); Alaska made a Vicariate Apostolic with seat at Juneau and the Rev. Joseph R. Crimont, S.J., named Prefect-Apostolic and titular Bishop of Ammedara (March 27); Very Rev. D. M. Lowney appointed Auxiliary Bishop of Providence, R. I., and Titular of Adrianople (July 13); Bishop J. H. Tihen of Lincoln, Neb., transferred to Denver (September 15); Very Rev. John Cantwell, V.G., San Francisco, appointed Bishop of Los Angeles and Monterey (September 15); Rev. John M. Gannon, D.D., of Meadville, Pa., appointed Auxiliary Bishop of Erie, and Titular of Nicopolis; the name of the diocese of Kearney, Neb., was changed to Grand Island and the see seat transferred to Grand Island (May 8); Archbishop Cerretti, Apostolic Delegate to Australia and formerly of Washington, D. C., was recalled to Rome to be Secretary of the Congregation of Ecclesiastical Affairs, and Mgr. Cataneo, Titular Archbishop of Palmyra, was made his successor in Australia (May 24); Bishop H. Gabriels of Ogdensburg celebrated his Silver Jubilee (May 8); and Archbishop S. J. Messmer of Milwaukee celebrated his Golden Jubilee (March 27).

The archbishops of the United States, in session at Washington, April 18, sent an address to President Wilson, reaffirming "in this hour of stress and trial our most sacred and sincere loyalty and patriotism towards our country, our government, and our flag." Right Rev. Patrick J. Hayes, Auxiliary Bishop of New York, was appointed chaplain-general for all Catholics in the American military forces (December 5).

Important conventions and conferences included: Catholic Educational Convention, Buffalo, N. Y., June 25-28; Supreme Council, Knights of Columbus, Chicago, August 12-16. Reports showed membership of the Knights of Columbus, June 30, 1917, to be 389,331, an increase of 27,000 during year. It was resolved to raise a fund of \$3,000,000 to enable the War Committee to provide chaplains and all material details for the welfare and recreation of Catholic soldiers. The sixteenth annual national convention of the American Federation of Catholic Societies was held at Kansas City, August 26-28. The federation was reorganized on the diocesan plan. The sixty-second annual convention of the Central Verein was held at St. Louis, August 19. The National War Council under direction of the hierarchy was organized at Washington, August 10-12.

The Lætare Medal was conferred on Admiral William S. Benson, U. S. N. (March 18).

**ROOSEVELT, THEODORE.** See UNITED STATES AND THE WAR.

**BOOT, ELIHU.** See UNITED STATES AND THE WAR.

**ROPE.** War bread as made in Great Britain

(1917) is composed of wheat and flour milled at 81 per cent with the addition of 20 per cent of maize products, barley, oatmeal, rye, rice, and beans. This bread is said to be more nutritious than ordinary white bread, and, while not unpleasant to most people, in not a few it produces indigestion, with skin eruptions, and the bread itself quickly becomes stale and uneatable. Moreover, a so-called disease of the bread—"rope"—has made its appearance in various sections. When a piece of ropy bread is broken its interior is found to be gummy, and when pulled apart the sticky substance is drawn out into glistening strands. The rope disease has been shown to be due to a microorganism called *Bacillus mesentericus*, which is generally present in dirt or dust found on the outer husk of wheat. The bacillus normally is quite harmless, but in favorable conditions, it causes fermentation, and the bread baked from it becomes ropy. It is at first unwholesome, and later becomes uneatable. Various explanations are offered for the production of this diseased bread. The bakers have found it impossible to maintain an exact weight of the loaf, as the law demands, and this has developed a tendency to underbaking. Again, after the bread is baked, in order to avoid loss in weight, the bakers may cover the bread with a damp cloth, thus encouraging the germ. The *Bacillus mesentericus* is able to endure a high temperature without being killed. One authority states that five hours' boiling is necessary for its destruction; thus the process of baking infected flour would only encourage the microorganism.

**ROSENTHAL, TOBY EDWARD.** An American landscape and genre painter, born in New Haven, Conn., in 1848. He studied in San Francisco and in Munich. He made his home for the most part in the latter city. His works are executed in the romantic, rather conventional style of the early Munich school, and contained nothing distinctively personal or American. They include: "Morning Prayers in the Bach Family," (Leipzig Museum, 1870); "Trial of Constance de Beverly"; "Dancing Lesson during the Empire"; and "Elaine." The last mentioned painting was the sensation of the year (1876). It was awarded honorable mention by the judges, and the artist was heralded as one of the most promising of the younger generation of American painters. It was sold for \$10,000 and was presented to the California Museum of Art at San Francisco. A short time later it was stolen from the museum and has never been heard of since. He died c. December 28, 1917.

**ROWING.** Practically every regatta of prominence was cancelled in 1917 as the result of the entry of the United States into the war. The only race of importance held was that between the Yale and University of Pennsylvania eights on the Schuylkill River in April. The distance was one and seven-eighths miles, Yale being the winner by one and one-fifth seconds. Yale also captured the event for junior crews. The triangular race of the Pacific Coast college eights, University of Washington, Stanford University, and University of California, was won by the Washington crew.

The board of stewards controlling the inter-collegiate regatta held annually on the Hudson River, near Poughkeepsie, settled a long controversy by voting to reduce the length of the varsity race from four miles to three. Charles

E. Courtney, the veteran Cornell rowing coach, and James Rice, the coach of the Columbia crews, were chiefly responsible for the change. They had long contended that the four-mile course was too great a tax on the strength of the oarsmen. It is to be noted in this connection that the authorities at Yale and Harvard still adhere to the longer course for their race at New London.

**RUBBER.** During 1917 the immense consumption of crude rubber, which characterized the previous year, still further increased in spite of the curtailment due to industrial chaos in Russia, and the war conditions in England, France, and Italy, where the high cost of gasoline and oil tended to confine the use of motor cars to government and essentially commercial purposes. While the production of pneumatic tires was greatly lessened during the year, the crop of solid tires was greatly increased, and trucks and motor wagons of many kinds came into wider use. The great demand for rubber for war purposes added to the consumption in America, where the universal use of automobiles was also a considerable factor.

The continued growth of the American tire industry and the demands of the war therefore made the year's consumption of crude rubber nearly equal to production. In spite of that, the world's available stock is now greater than ever. The total visible supply on December 31 was estimated at about 30,500 tons; 13,000 tons afloat and 17,500 tons in British, American, Russian, and East Indian stocks, or about 20,000 tons more than the production of 1916.

During the first months of 1917 the prices were generally favorable to sellers. In London, bale crêpe began at 3 shillings, and brought 3s. 5d. in February, after which prices declined until 2s. 5d. was accepted in June. During the last half of the year, considerable speculation was attempted by outside interests which endeavored to force prices upward on account of the German submarine activities and the scarcity of ship tonnage, and the fact that rubber is one of the few articles that had not advanced greatly in price. This attempt was entirely unsuccessful.

**WORLD PRODUCTION.** The total production of crude rubber of all grades in 1917 was estimated at about 245,000 tons, an increase of nearly 40,000 tons or about 20 per cent. The great crop from plantations in the Far East was chiefly responsible for this. About 80 per cent of the world's total production of crude rubber is now coming from this source. The following table shows the increase in production of crude rubber for the last three years.

	1917	1916	1915
Ceylon and India..... tons	25,000	24,500	20,600
Malaya, Dutch East India, etc. ....	165,000	105,500	72,800
Amazonas (Brazil, Bolivia) .....	31,771	28,255	30,700
Peruvian and Caucho....	9,729	8,245	6,800
West Coast, Africa.....	3,000	2,000	2,500
Benguela and Mossamedes			1,900
Loanda .....			600
Congo, French Congo, and Sudan .....	3,500	5,000	3,000
From other sources.....	2,500	4,500	7,100
Totals.....	240,500	178,000	146,000

\* Underestimated. Actual production about 201,600 tons.

The consumption of crude rubber of various grades exclusive of large quantities of reclaimed rubber was estimated as follows:

	1917	1916	1915
England .....	26,000 tons	25,000	24,000
Germany, Austria, etc....	1,000	1,500	3,000
France .....	10,000	8,500	7,000
Russia .....	7,000	20,000	16,000
Italy, Spain, Scandinavia, etc.	5,500	4,000	2,500
Japan and Australia.....	5,000	5,000	4,000
America and Canada.....	155,000	114,000	89,500
<b>Totals.....</b>	<b>210,000</b>	<b>* 178,000</b>	<b>146,000</b>

\* Underestimated.

All countries show increases except the Teutonic nations and Russia, the United States, France, and Italy being most conspicuous. It will be noted that the Russian consumption decreased nearly two-thirds as a result of disturbed industrial conditions following the revolution.

**RUMANIA.** A European constitutional monarchy, bordering on the Black Sea. It includes the former principalities of Moldavia and Wallachia, with the territory of the Dobruja. The country is separated from Hungary by the Carpathian Mountains and the Transylvania Alps, in part by the Danube River from Bulgaria, by the Pruth from Russia. The capital is Bucharest. Upon the occupation of a large part of Rumania by the Austro-German troops in 1916, the government was removed to Jassy, and Bucharest was captured by enemy forces.

**AREA AND POPULATION.** The area of Rumania is stated at 137,902 square kilometres (53,244 square miles). This includes the area of the territory acquired from Bulgaria by the Treaty of Bucharest (August 7, 1913), 7725 square kilometres (2983 square miles); this territory now forms two districts, Caliaera and Duroster. Area and population by districts will be found in the 1915 YEAR BOOK. The total population at the last census was 7,509,009.

**THE GERMAN INVASION.** In the most tragic situation, her soil under the heel of the invader, her rulers badgered to enter into a German-made peace, harassed by her own ally, Russia, and cut off from all help from England and France, her army trapped on Russian ground, and her king virtually a prisoner at Jassy, Rumania refused to desert the Entente or to conclude a separate peace. The Rumanian minister at Washington, Dr. Constantine Angelesca, received from his government the assurance that Rumania "will survive or perish with the Allied cause."

The Rumanian minister for foreign affairs telegraphed, February 7, 1917, to the Rumanian legation in Paris that Germany had begun to transport for internment in Germany all Rumanian males from sixteen to sixty-seven years of age; although the French, Russians, Italians, and Portuguese protected by the Spanish Legation were being left in the country.

Charles J. Vopicka, of Chicago, United States minister to the Balkan States for three and a half years, arrived in the United States March 19, 1917. In speaking of conditions in Rumania, he said that the Standard Oil Company had lost about \$35,000,000 through the damage to its property in Rumania, and that all the wells would have to be redrilled after the war. He

added: "After the entry of the German troops all the food supplies in the city were commandeered for the use of the soldiers. The poor of Bucharest besieged the gates of the United States Legation in such legions that the gates had to be closed. It was difficult to get food for the staff, and I had to obtain a permit from the German commander to obtain 2500 pounds of grain to make into bread."

Great Britain agreed to loan Rumania £40,000,000, according to an official statement issued at Jassy. The loan would be at 5 per cent interest.

**GOVERNMENT.** Persistent rumors emanated from Petrograd at the end of 1917 to the effect that King Ferdinand had abdicated in favor of Crown Prince Charles. King Ferdinand, who is a member of the Hohenzollern family, succeeded his uncle, King Charles, in October, 1914, King Charles having died at Sinaia on October 10. Rumania declared war on Austria on August 27, 1916, and King Ferdinand took personal command of the army soon after. King Ferdinand is the son of Prince Leopold of Hohenzollern-Sigmaringen, and two of his brothers are generals in the German army. He was born at Sigmaringen August 24, 1865. Crown Prince Charles was born October 3, 1893, and is an officer in the Rumanian army. He is unmarried, although early in 1914 it was reported that his betrothal to the then Grand Duchess Olga of Russia had been arranged. Queen Maria of Rumania, who was a duchess of Saxe-Coburg-Gotha, is a granddaughter of the late Queen Victoria and was married to King Ferdinand on January 10, 1893.

The ministry as announced on January 13, 1917, was as follows: Premier, M. Bratiano; Foreign Affairs, the Premier; Interior, M. Constantinescu; Education, M. Duca; Finance, M. Antonescu; War, Vintila Bratiano; Justice, Michael Contacuzene; Public Works, M. Justiano; Industry and Commerce, M. Greceanu; Agriculture and Domains, M. Mirecu; Without Portfolio, M. Jonescu, M. Continescu, and M. Ferekide; President of the Chamber of Deputies, M. Mirtzun.

**HISTORY.** During 1916 it was frequently rumored that the sudden collapse of Rumania was due to the secret policy of the Russian government, but so long as the old régime lasted nothing definite was openly said. After the revolution it was charged that the defeat of Rumania by the Germans was sought by the pro-Germans Stürmer, Protopopov, and the other reactionaries at that time in control of the Russian government. (See preceding YEAR BOOK, *RUSSIA, History*.) The details were published in 1917 by the former chief of staff of the Rumanian army, Gen. Iliescu, and it was said that the Russian provisional government had in its possession documents proving the treason of the czar's ministers. In the first place Stürmer was said to have dissuaded Rumania from her original design of attacking Bulgaria at the outset. He assured the Rumanians that the Bulgarians would never march against them. When the Bulgarians manifestly were about to fight, the czar promised to send some army corps into Wallachia, but through the intrigues of Stürmer this was prevented. Thereupon the Rumanians were obliged to withdraw their troops from Transylvania and this brought on the general retreat. Gen. Iliescu declared in April, 1917,

that the situation had been fully understood in Rumania for months and that he himself had realized it as long before as December, 1916. In journeying at that time from Jassy to Petrograd he had noticed at many stations vast numbers of freight trains, loaded with all sorts of munitions, standing on the side-tracks, neglected. They were marked, "From the war minister of France to the war minister of Rumania." Surprised at the sight he inquired about it at the stations of Kieff, Moghileff, Kichineff, and other cities and received the stereotyped answer: "Stopped by order of the government;" and this order was given at the very moment when the Rumanian army was making desperate appeals for supplies. Before that the treason of Russia had been suspected. The head of the French mission to Rumania had warned the king of it in October. It was further charged that the demand of the Entente Allies in July that Rumania should enter the war forthwith was made exclusively at the instance of the Russian cabinet, and that Stürmer was acting as the tool of the German government, which wished Rumania to come in at that moment. Germany was sure of crushing her at that time, and as there were signs of slackening on the part of Bulgaria and Hungary, here was the chance for Germany to appear as their savior by putting an end to the Rumanian peril. In short, Berlin knew that Rumania would enter sooner or later and took measures to insure her entry at the time when she could best be dealt with.

On the other hand, the Petrograd government knew that war munitions were inadequate in Rumania; that immense quantities were on their way to her from France and England; that Rumanian intervention was timed for the spring of 1917 when she would have been prepared and when her allies would have begun a new general offensive. Put off till then the entry of Rumania would have been a severe menace to the Central Powers. See **WAR OF THE NATIONS, Military Operations (2)**.

**RUPES.** See COINS.

**RUSSIA.** Geographically a country that includes a large part of eastern Europe and northern Asia; it extends from the Baltic Sea to the Bering Sea and from central Europe and Asia to the Arctic Ocean, and covers one-sixth of the earth's total land area. Politically, until March, 1917, an empire under the absolute rule of the czar. After the coup d'état which resulted in the abdication of the then czar, Nicholas II, a provisional government under the virtual leadership of Alexander Kerensky, remained in authority till overthrown by the Bolsheviks, headed by Lenine and Trotsky. At the end of 1917 Russia may be described as a conglomeration of nations without a head, made up of divergent elements without union or mutual loyalty, under a self-constituted government without power to rule, backed by an army without shoes, bread, weapons, or the will to fight. The capital is Petrograd.

**AREA AND POPULATION.** A complete table of area and population by districts, as well as a list of principal cities with their population, will be found in the 1916 YEAR BOOK. Area and population by great divisions, the area being exclusive of the great internal waters, in square versts (1 square verst = .439408 square miles), are shown below:

	Area Sq. Versts	Population 1897	1913
Europ'n Russia	4,238,711.7	94,215,400	125,684,800
Poland .....	111,554.2	9,455,900	11,960,500
Caucasus .....	412,810.8	9,248,700	12,512,800
Siberia .....	10,940,644.7	5,699,000	9,788,400
Central Asia...	3,110,623.7	5,724,700	10,957,400
Finland .....	286,041.8	2,555,500	3,190,700
Total.....*	19,099,886.9	126,896,200	174,099,600

\* 21,741,600 sq. kilometers; 8,394,018 square miles.

The various nationalities were represented about as follows: Russa, two-thirds of the whole population, or 65.5 per cent; Poles, 6.2 per cent; Lithuanians, 2.4 per cent; Germans, 1.6 per cent; Armenians, 0.9 per cent; Jews, 3.9 per cent; Caucasians, 0.9 per cent; Finns, 4.5 per cent; Turco-Tartars, 10.6 per cent; Mongols, 0.4 per cent; various, 2.0 per cent. The census for 1915 showed a total population of 182,182,600, an increase of 2.1 per cent over that of 1914.

The object of German machinations was to disintegrate Russia by breeding dissatisfaction among her peoples and splitting the former empire into numerous small principalities. Bessarabia declared its independence as the Moldavian republic to form a part of the Russian federated republic. Bessarabia is a government of southwestern Russia, adjoining Rumania. About half the inhabitants are Rumanians. The population is in the neighborhood of 2,000,000. Kishinev is the capital. Total area, about 18,000 square miles.

It was reported that an autonomous government had been formed in Turkestan, with M. Tynyssavaiff, a member of the second Duma, as premier. The Siberian district congress at Tomsk elected a provisional government headed by President Potanin, with a coalition cabinet which included Constitutional Democrats. The Finns were awaiting only the peace congress to accord them international guarantees for their liberty and independence, and the Little Russians of the Ukraine had organized an independent republic (see **UKRAINE**). Finnish independence, accompanied as it would be by the autonomy of Lithuania, Courland, Livonia, and Esthonia, would shut off Russia from the Baltic, while an independent Ukraine, including Odessa, as well as Kiev, Kharkov, and Poltava, would cut off Russia from the most fertile of European provinces and also from the Black Sea. In addition, the Caucasus, Turkestan, the Cossacks, the Mussulmans, and the Tartars had declared their autonomy and had established their own governments, or expressed their intention of doing so. The national sentiment of the Poles had come out of the ordeal stronger than ever, and they were united in demanding the status of an independent nation. In numbers, the Poles are capable of becoming a first class power, since it has been estimated on trustworthy information that the three Polands combined would show a population of 40,000,000. But the majority of the Russians want a federated republic. Ukrainia itself desired only to be an integral part of such a federation, not a completely independent republic.

The section of western Russia which Germany intended to retain at any cost, as vaguely defined by Gen. Hoffman to the Russian delegates at Brest-Litovsk, included a large part of the so-called Baltic provinces and nearly all of

Courland and Kovno. They intended to hold the entire eastern shore of the Baltic Sea south of the Gulf of Finland and to join this huge territory to East Prussia, which it touches on the southwest. This territory would include the western part of the province of Esthonia, most of Livonia, practically all of Courland and Kovno, and all of Poland. Reval, menaced with immediate seizure, is in the central part of Esthonia on the south shore of the Gulf of Finland.

While Russia is the largest homogeneous state in the world, she is also the most inaccessible. All Europe has a coastline of 19,820 miles, but Russia has less than one-sixth of this coastline, and the largest part is ice-blocked during a considerable period of the year, so that she is at times almost cut off from the sea. In addition, even the southern rivers freeze, so that during six months of the year navigation on

following passages from the reports reaching the ministry of railways:

"On the Moscow-Kiev-Voronezh Railway only 75 wagons of freight are accepted daily, instead of the normal 450, in consequence of the frequent failure of the engine personnel to turn out, owing to the lack of boots, the necessity of obtaining bread, etc. . . . On the southern railways the lack of conductors is causing an enormous congestion of wagons with freight, while on others the lack of fuel and engines, as well as the failure of the engine personnel to turn out for the performance of duties are creating serious difficulties."

Under date of May 30, 1917, the Central Statistical Committee published the figures of stocks in Russia, excluding territories in enemy occupation. Generally speaking, the data given are of stocks in traders' hands (in quintals), January 14, 1917, and December 14, 1916:

	Wheat	Rye	Barley	Oats	Wheat-Fl.	Rye-Fl.
1917.....	6,031,613	2,746,676	1,135,498	1,977,941	1,716,345	1,838,080
1916.....	6,658,657	2,757,650	1,914,876	2,015,943	2,025,771	1,975,483

the Don and on the Volga below the Kama is impossible. Petrograd is the most northern capital in the world. The best soil and most densely populated provinces lie along the great rivers in the south and on the seacoast. The river Don is 1325 miles long, is navigable for nearly 1000 miles, and with its tributaries drains a territory of 170,000 square miles. The Dnieper is 1100 miles long, is navigable for nearly 1000 miles, and drains a district of 242,000 square miles. The Volga, the largest river in Europe (with its tributaries, the Kama 1300 miles long, and the Oka 900 miles long, and innumerable smaller ones), has a length of 2400 miles, and serves a district of no less than 563,000 square miles, inhabited by something like 70,000,000 people.

**ECONOMIC CONDITIONS.** Details of production in pre-war periods and for three war years will be found in the YEAR BOOKS for 1916 and 1915.

The *Novaya Zhizn* quotes official figures showing that, whereas the average crops during the five years preceding the war amounted in European Russia, excluding the now occupied territories and the Northern Caucasus, to 3,830,000,000 poods, in 1916 it amounted only to 3,242,000,000 and in 1917 to 2,964,000,000, which makes a decrease of 23 per cent. The main factor responsible for this decrease is the depletion of the country population of its able-bodied males by the war, which, as is credibly estimated, has involved, from start to finish, the mobilization of 19,000,000 men.

The *Reich* of October 27, 1917, quotes the

Taking all grain and flour together, these stocks show 12,884,106 quintals in European Russia, 1,565,099 quintals in Siberia and in Central Asia, and 1,210,902 quintals in Caucasia. The aggregate decrease from December 14, 1916, to January 14, 1917, was 1,830,189 quintals.

**COMMERCE.** Totals and details (the latest available) of Russia's commercial operations for 1915, 1914, and pre-war periods will be found in the 1916 and 1915 YEAR BOOKS.

The following figures are compiled for half years (for the sake of accurate comparison, since totals for 1917 are not available) from Russian official statistics:

The total import trade of Russia over the European frontiers and with Finland for the first half of 1914, 1915, 1916, and 1917 was as follows: 1914—\$365,709,000; 1915—\$79,401,000; 1916—\$161,482,000; 1917—\$199,699,000. The marked increase in the value of imports in the 1917 period was due partly to higher prices, which were counterbalanced, however, by falling exchange rates, the conversion factors for the ruble being 51.5 cents (the normal rate) for the first half year of 1914, 43.15 cents for the first half of 1915, 31.55 cents for the first half of 1916, and 23.4 cents for the first half of 1917. Exports during the first half of 1917 amounted to \$26,017,000, as against \$53,246,000, \$40,634,000, and \$348,959,000 in the corresponding periods of 1916, 1915, and the normal year 1914 respectively.

The value of the goods received into European Russia and sent from European Russia by the European and the Black Sea-Caucasus frontiers,

	1914	1915	1916	1917
<b>Imports</b>

by way of Asiatic Russia and Finland, and in the trade with Finland, is shown in the table on page 595, for the first half of comparative years (values in thousands of dollars):

The amounts received and dispatched "through Finland" represent foreign products entering European Russia via Finland or Russian goods exported via Finland to other countries, of which the foreign origin or destination was declared. The merchandise noted as entering from and proceeding to Finland represents the actual exchange of Russian and Finnish products and also goods coming from or going to foreign countries whose source and ultimate destination were not declared. The imports from foreign countries by way of Finland should be credited chiefly to Sweden, the United Kingdom, and the United States. It is of interest to note that imports to Germany via Finland, which amounted to only \$357,000 in the first half of 1914, a normal period, increased to \$2,484,000 in the first half of 1915, fell to \$856,000 in the first half of 1916, and rose again to \$1,244,000 in the first half of the current year. In 1917 for the first time the value of goods received into European Russia through Asiatic Russia and registered at the custom houses on the European frontier is indicated separately in the statistics.

The United Kingdom sent 30 per cent and the United States 26 per cent of the imports into European Russia in the first half of 1917; but in the export trade the share of the United States was insignificant, while the United Kingdom received 21 per cent and Finland 64 per cent. The following table shows the total imports and exports of European Russia, by countries, for the first six months of comparative years (values in thousands of dollars):

Important in the list of imports from the United States are the following: Copper, \$3,299,000 in the first half of 1916, and \$5,468,000 in the first half of 1917; automobile bodies and chassis, \$2,679,000 in the former, and \$4,197,000 in the latter period; iron and steel manufactures, \$850,000 and \$1,594,000; machinery of iron and steel, \$2,358,000 and \$1,791,000; and passenger automobiles, \$1,357,000 and \$1,313,000.

**RAILWAYS.** From Vladivostok to Moscow is 5391 miles, and to Petrograd 5481. In pre-war times the fastest express train required nine days to make the run, while ordinary mail

trains took thirteen days. A first-class fare on the Trans-Siberian between Moscow and Vladivostok was approximately \$160. Russia's foreign supply of munitions has had to cross Siberia, either from the Arctic Ocean or the Sea of Okhotsk. On leaving Moscow, the Trans-Siberian road runs through about 300 miles of the great western plain of European Russia to the city of Ufa at the foot of the Ural Mountains. The railroad attains the summit of the Urals, 1850 feet above sea level, between Ufa and Tchelyabinsk. Crossing out of the Tomsk government into that of Yenisei, the road shortly reaches Atchinsk, the northernmost town of the railroad. In skirting Lake Baikal the road passes through forty tunnels, through numerous giant cuts, and over many bridges. It continues to climb until it reaches Sokhondo, 3100 feet. After passing the junction of the road to Mukden, it drops to 700 feet, then climbs again to 2100, and thence back to sea level at Vladivostok.

With the vast extent of territory belonging to Russia, transportation facilities are an important consideration. As such they figured at the time of the revolution, and the establishment of the provisional government, and the rehabilitation and extension of the Russian railways was one of the prime recommendations of the United States Railway Advisory Commission, under the chairmanship of John F. Stevens, which was sent to Russia in June, and which spent considerable time and energy upon an investigation of the transportation problems brought up by the war. A Russian Railway Service Corps consisting of 350 experienced railway operating and mechanical officials was recruited in the United States and sent to Russia, and before the Kerensky government was overthrown by the Bolsheviks, a beginning had been made in working out a plan for expediting the transportation of supplies to Petrograd and the army, and the adequate supply of coal and other supplies to Moscow and Warsaw.

Henry Miller, former operating vice-president of the Wabash, and a member of the Railway Advisory Commission, on his return to the United States, reported (*Railway Age Gazette*, November 30, 1917, page 979) that Russia had in 1917 approximately 50,000 miles of railway, of which about 60 per cent was owned by the government and the remainder by private corporations. There were about 20,000 locomotives in service, most of them compound, of which number about 15 per cent were in bad order; and there were about 580,000 freight cars with average capacity of about 16 tons, of which about 8 per cent were in bad order. About 20 per cent of these freight cars had brakes, but only 13,000 cars built in the United States had airbrakes. By 1917, the Trans-Siberian line, including a detour line constructed via the Amur River, was practically all double track from Vladivostok to Omsk, a distance of 4000 miles. At the latter point the line divided in the form of a "Y," with branches extending to Petrograd and Moscow.

The United States Railway Advisory Commission issued a proclamation to the Russian people on July 4, stating its policy in assisting the Russian people and the railway administration. This commission advised the immediate construction in the United States of 2500 locomotives and 20,000 freight cars, and a beginning was

made in shipping railway supplies to Vladivostok, where considerable material had been accumulated at the time when the Bolsheviks had supplanted the provisional government. The American commission found a lack of efficiency in operating conditions, as on the Trans-Siberian Railway the line was being operated to only about one-third the capacity that its physical equipment and personnel warranted. This line, as reported by S. R. Bertron, a member of the American Commission to Russia, had double the number of locomotives per mile and three times as many men employed as had the Pennsylvania. One result was the vast congestion at Vladivostok, which it was hoped would be removed by new locomotives and cars shipped from the United States, 75 of the former and 1000 of the latter being expected before the end of 1917. The American Railway Commission also took under consideration the increased efficiency of the Kola Railroad from the Port of Murman. This line was of great importance, as the port is ice-free when Archangel is closed, so that some 2000 tons of material a day could reach Russia via the Atlantic Ocean. With the change in political conditions in the autumn, the railway situation became worse, and consequently, the Japanese, representing the Allies, undertook guarding the supplies at the Pacific port. The general demoralization in the railways after the attempt at organization by the American commission culminated late in the year, when the commissioner of ways and communications under the Bolshevik government, sent telegraphic instructions to the Railway Men's Committee directing them to take control of the railroads in their own hands and stating that all high posts such as managers and department heads were abolished.

The new Bokhara Railway being constructed in Russian Turkestan under the auspices of joint Russian and British influences, acting in conjunction with local authorities, is described by Consul Henry D. Baker, formerly of Bombay, and also commercial attaché at Petrograd:

The three present railway activities in this transcontinental area are (1) the Bagdad railway to the south and its probable extensions east, through Persia and Baluchistan; (2) by way of the Caucasus district of Russia, Persia, and Baluchistan; and (3) the Afghanistan-Baluchistan route via Kusha in Turkestan to Herat and Kandahar in Baluchistan, the latter city being only 80 miles distant from New Chaman in Baluchistan, which is the terminus of the British Indian Railway systems.

The Bokhara Railway will go, with its extensions, south to the Oxus River and eastward along the north bank of this stream to the present terminus at Termez. Termez is only 550 miles from Peshawar on the Indian side of the Khyber Pass, which is in both a commercial and a military sense the gateway of India. The line will reach Sarai to the east, near the junction of the Kundus and the Oxus rivers, and then the task of tunneling the Hindu Kush will have to be undertaken. The distance from Sarai to the terminus of the Indian Railways is only about 400 miles, but it will involve the boring of a 13-mile tunnel beneath the Hindu Kush.

When the railroad is constructed, the distance from the Hook of Holland to the Indian

capital at Delhi will be as follows: Hook of Holland, Berlin, Warsaw, Moscow, 1836 miles; Moscow, Crenburg, Tashkend, 2082 miles; Tashkend, Kagan, estuary of Kundus River, 750 miles; estuary of Kundus River to Peshawar, 400 miles; Peshawar, Delhi, 627 miles. Total, 5695 miles. Methods of further shortening this route are under consideration.

Intended new construction: Moscow-Shterovka, about 700 miles; Kharkov-Penza-Inza, about 600 miles; Orel-Novgorod, about 450 miles; Rybinsk-Kishtym-Mishkino, about 1000 miles; Uman-Nicolaev, about 240 miles; Kertch-Tokapse, about 200 miles; Saratov-Azov Sea, about 600 miles; Kiev-Gitomir, about 150 miles; Alexandrovsk-Gay-Czardy, about 1200 miles; Kars-Borgom-Olty, about .... miles.

FINANCE. The extraordinary decline in the price of Russian ruble bank notes opened a discussion as to whether the bank notes issued by the Imperial Russian government previous to the war would be recognized by Russia after the return of normal conditions. Russian ruble bank notes, which before the war were quoted at \$51.50 for every 100 rubles, were selling at the close of the year in the neighborhood of \$9 for every 100 rubles, a discount of over 80 per cent. Concerning this question, Zimmermann and Forshay in a circular said: "The main reason for the extreme decline in the price of Russian rubles is an economic one and not merely an outcome of political disturbances. Russia, under the Bolshevik rule, is at odds with the Allied nations, and still being at war with Germany can expect no material help from that source. Her necessities, therefore, are partly supplied by the nations of the Far East, and conditions are such that she has to pay fabulous prices for commodities. The return to peaceful conditions will again open to Russia the markets of the outside world, and there seems to be good reason to believe that in time to come Russia will be in a position to reduce the amount of outstanding bank notes." Partial details of the budget for 1917 are given in the table below in thousands of rubles:

Revenue	1,000 R.	Expenditure	1,000 R.
Direct taxes....	568,057	Public debt....	720,795

The debt stood, January 1, 1917, at 25,990,936,895 rubles. The Bolsheviks propose to repudiate the Russian debt on the following grounds: The old debt, they say, was raised not for the benefit of the Russian people but to provide means for repression. When the loan of one hundred million pounds sterling was floated in London and Paris, 1906, the fate of the first Duma hung in the balance; the czar

was at the point of bankruptcy; money was absolutely required to pay the Cossacks and assure their loyalty. If the Duma could have wielded the deciding power, it would have been able to lay the basis for a sound constitution, according to this theory.

But London and Paris rejected the plea of the Russian liberals and provided the czar with the money he required; for which debt, the present régime contends, Russia is not morally liable.

**GOVERNMENT.** Until March, 1917, Russia was an empire. On March 11 two ukases issued by the czar suspended the sitting of the Russian Duma and of the Council of the Empire. The Duma unanimously refused to dissolve and the Council of the Empire appealed to the czar to reconsider his decision and listen to the voice of the people. The czar, who was at the front, immediately started for the capital. He never reached Petrograd. At Pavlov he was taken from his train and announced his abdication and that of the heir-apparent in favor of the Grand Duke Michael, who declined the undertaking. Meanwhile a new government was formed with Prince George Lvoff as Premier, Prof. Miliukoff, the leader of the liberals, as Minister for Foreign Affairs, and Deputy Kerensky, the leader of the workingmen, as Minister of Justice. The government imprisoned the former czar and czarina in Tsarskoe-Selo. March 22, the United States, through its ambassador, David R. Francis, formally recognized the new government. This example was followed, on March 23, by Great Britain, France, and Italy.

On July 20 Prince Lvoff resigned as Premier and Kerensky was appointed to the post. On August 2 Brusilov resigned as commander-in-chief of the Russian armies and was succeeded by Korniloff. August 7 Kerensky organized a coalition cabinet. On August 15 Nicholas and his family were removed from the palace at Tsarskoe-Selo to Tobolsk, in Siberia. Late in October the Bolsheviks openly opposed the Kerensky government, and on November 6 the revolt of the Bolsheviks began. On November 7 they seized Petrograd; Trotzky declared the government non-existent. On November 9 the All Russian Congress of Workmen's and Soldiers' Delegates named a cabinet, with Lenine as premier and Trotzky as minister for foreign affairs. Kerensky had fled from the capital. On December 4 a Bolshevik-German armistice was practically in effect, becoming actually effective December 7. At the end of the year Russia was in a state of chaos out of which loomed distantly the ideal of a federation of autonomous republics. For details, see *History* below.

### HISTORY

**EVENTS PRECEDING THE REVOLUTION.** The murder of Rasputin (see preceding YEAR BOOK), whose body was found in the Neva on January 1, 1917, instead of serving as a warning, drove the czar's government to more reactionary courses. On January 9 a staunch bureaucrat, Prince Nikolai Golitzin, replaced General Trepov as prime minister and soon afterwards several reactionaries supplanted liberals in the Imperial Council. It was said that Protopopov in January was planning to overturn the government in the interest of the czar and that he deliberately caused a shortage of food in

the capital in order to make the people demand immediate peace and, if riots broke out, to justify the dismissal of the Duma. The liberal elements now believed that the so-called "dark forces" were more active than ever. As a result of the complex political situation the reopening of the Duma and the Imperial Council was deferred from January 26 to February 27. On January 22 the czar in a rescript to the prime minister requested the settlement of the two great problems of supply and transport. Although the wisdom of these proposals was admitted there was criticism in liberal quarters of the arbitrary method employed, which it was said was now applied for the first time since the grant of the constitution in October, 1905. It was complained that nothing was done by the government in response to the emphatic demand of the nation's representatives for a responsible government—a demand that was supported by the people and the army. On the contrary ministers who were unacceptable to the nation were kept in power. Leading newspapers in Russia were now speaking plainly of radical changes in the government and were holding up England and France as examples. On the other hand, the so-called loyal element as represented by the "Black Hundred," urged the czar to pay no attention to the "monstrous, lawless Duma" in its demands for political reform, which, if carried out, would lead to the overthrow of the czar and the introduction of parliamentary government. At the beginning of February there was dissension in the Council of Ministers on the question of the representation of labor in the central industrial munitions committee, the majority, including the prime minister, being in favor of it and, M. Protopopov, minister of the interior, and a few others being opposed. In order to test the loyalty of the working class a midnight raid was made on the houses of suspects and evidence was reported of a secret organization for the purpose of directing strikes. Soon after this the arrest of fifteen workingmen, including eleven members of the workingmen's group of the central industrial munitions committee, was reported.

**THE REVOLUTION.** On the day of the opening of the Duma (February 7) about 100,000 workmen went on strike in Petrograd and 25,000 in Moscow, as a political manifestation on behalf of the Social Democrats. At the beginning of March the food crisis became acute. The people fearing a shortage of bread began to make raids upon the bake-shops. The streets were soon filled with mobs and cavalry patrols were moving in every direction. A good deal of damage was reported in the suburbs and in the manufacturing districts. On the evening of March 9 an extraordinary conference was held in which, at the instance of the president of the Duma, the management of all food supplies in Petrograd was placed in the hands of the city authorities. The riots continued and the government, as noted above under *Government*, ordered the prorogation of the Duma, March 11, but the Duma refused to dissolve. Meanwhile it had become clear that the military could not be depended upon. When ordered to fire upon the mob, many regiments refused to do so, and turned their arms against the police. There was sharp fighting in the streets but the number of lives lost was uncertain. Ac-

cording to some reports the number of deaths were placed as high as 2500, but in general the casualties were said to be comparatively slight. The police were the special objects of vengeance and were hunted down and killed in large numbers. Among the first acts of the revolutionary troops were the capture of the Viborg prison, the fortress of Saints Peter and Paul, and the Winter Palace, and the seizure of the persons of the cabinet ministers. Forcing their way into the administrative buildings they arrested former Prime Minister Stürmer, Prime Minister Golitzin, the Minister of the Interior, Protopopov, and other conservative members of the government. The members of the Duma except those of the extreme Right voted a resolution authorizing the executive council of the Duma to establish a provisional government. The czar was notified of the change of government and required to abdicate. On his way from the front to the capital, as above narrated, he was stopped at Pskov by representatives of the new government who persuaded him to issue a manifesto declaring his abdication and that of his son Alexis in favor of his brother the Grand Duke Michael (March 15). The latter declined to accept the throne except at the hands of a constituent assembly and after a popular vote. Other grand dukes and royal princes renounced their rights soon afterwards. The new government placed the Imperial family under arrest in the Tsarkoe-Selo Palace and the members of the former ministry in the fortress of Saints Peter and Paul. Meanwhile the government which had been in the hands of the revolutionary committee under the chairmanship of Michael Rodzianko, a member of the Octobrist party and former president of the Duma, gave place to a revolutionary coalition cabinet, under Prince Lvoff, conjointly elected by the labor leaders and the Duma on March 15. The three chief elements that had brought about the revolution were represented in the Lvoff ministry. Prince Lvoff himself, the organizer of the Zemstvo association (see preceding YEAR BOOK) represented the group of business men and landowners known as the Zemstvo patriots. The Constitutional Democrats or cadets were represented by Professor Paul Milyukof, Minister for Foreign Affairs, and others, the Octobrists by M. Gutchkov, and the third group, namely, the workmen and soldiers, which turned out to be the strongest, was represented by M. Kerensky, Minister of Justice. He was a revolutionary Socialist and expressed the popular demand for a more just division of the soil, in other words, for agricultural democracy. The workmen in the cities followed generally the leadership of the Socialist Tcheldze, whose principles were those of Marx, but at first they accepted Kerensky as their representative. On March 16 the government issued a manifesto demanding immediate reforms, including amnesty, liberty of speech and press, and of going on strike, abolition of social, religious, and national restrictions, substitution of a democratic militia for the police, universal suffrage for communal election, and a constituent assembly based on universal suffrage. On March 21 the government restored the constitution of Finland and promised Poland self-government and unity; amnesty for political offenders was granted on March 22. On March 26 it bestowed equal political, economic, and military rights upon the

Jews. On March 31 it abolished the death penalty; replaced the provincial governors by the elected heads of the provincial county councils, and fixed prices of food at rates from 20 to 50 per cent lower than before. An excess war profits tax was levied on the products of all war industries. The imperial lands and those of the monasteries were confiscated. Trade unions were organized and the eight-hour day was adopted in most of the cities. A hundred thousand exiles returned from Siberia.

**THE GOVERNMENT AND THE ARMY.** One of the first things that engaged the attention of the new government was closer coöperation between military headquarters and the government; that is to say, between the front and the rear, and after a conference on March 29 it was decided to follow the British plan and form a war cabinet. This was to consist of M. Gutchkov, Prince Lvoff, the Prime Minister, M. Kerensky, Minister of Justice, and the Ministers for Foreign Affairs, Finance, Agriculture, and Railways. There was evidence of disorganization and a lack of discipline in the army. General Alexeieff, who had replaced the Grand Duke Nicholas in the chief command, endeavored toward the end of March to introduce a number of reforms with a view to bringing the army up to a higher standard of efficiency. It was arranged that each unit should have a committee of elected officers and men to act as a conciliation board in matters of discipline and management. This committee was to be subject to an elected chief committee of officers and men attached to each of the staffs on the respective fronts and to headquarters. It was to be the source of information of all matters concerning the army. The main purpose of these changes was to introduce a system appropriate to the new order which at the same time would give the maximum efficiency. General Brusilov subsequently characterized the election of officers by the men as a dangerous invention, likely to turn the army into a mob.

**THE NEW GOVERNMENT AND THE WAR.** The Social Democratic party issued an appeal in March to the workers of all countries to unite in stopping a war which had begun and was carried on solely in the interest of kings, landowners, and banks. On March 27 the Petrograd council of the Workmen's and Soldiers' delegates held a monster mass meeting, at which more than 2000 were present to indorse this appeal. The attitude of this element may be summed up as follows: Down to the present time the Germans had looked upon Russia as a menace to peace and the Russian aggressions were supposed to be the forerunners of the Yellow Peril. Now that there was a free Russia which ceased to have any terror to the minds of the German masses, if the Russian nation would extend its hand to the German nation the latter would gladly respond and, following the example of the Russians, would overthrow its government.

On the other hand, representatives of other political groups urged the government early in April to pursue the war till liberty was won for the people and the army and denounced as shameful any peace that should be concluded without the consent of the Allies. About the same time the Prime Minister issued a statement in regard to military conditions and the war policy. He said that the negligence of the

previous government had left the defense of the country in a disorganized condition, that it had weakened the whole economic system, but that the provisional government was now devoting all its energies to repairing these serious defects. The government declared emphatically that it was not the purpose of free Russia to dominate other nations or take their territory. It was not its wish to subdue or humble any one, but it would not allow its own land to come out of the contest weakened and humiliated. Those are the principles on which the provisional government based its foreign policy. The government demanded a firm support on the part of the people and called upon every one to do his duty, for it frankly declared that the state was in danger. Every effort must be made to save it.

The question of Russia's part in the war, however, was complicated by the growing power of the Council of Workmen's and Soldiers' delegates, which, on April 16, declared that it was necessary for it to control the course of the provisional government and appealed to the people for support, saying it was the only body that could repress reactionary movements. At the session of its executive committee on May 8 the representative of the Scandinavian labor parties, M. Borgbjerg, invited all Socialist parties in Russia to the international conference at Stockholm. He said that after interviews and consultations he could give the peace terms proposed by the majority of the Social Democratic party. These were the organization of the right of nations to freedom of development and the approval of the principle of compulsory international arbitration; German restoration of all conquered territories; a popular vote in Russian Poland to choose between independence, annexation by Russia, or annexation by Germany; restoration of independence to Belgium, Serbia, and Rumania; the return to Bulgaria of the Bulgarian parts of Macedonia; and the cession to Serbia of a free port on the Adriatic. The Alsace-Lorraine question was left somewhat indeterminate but the opinion was expressed that through a friendly understanding the rectification of the Lorraine frontier could be secured. The committee decided to take the lead itself in calling this international conference and to issue an appeal to the people and especially to the Socialists of the Allied countries. M. Borgbjerg announced on May 13 that direct communication had now been established between the Council of Workmen's and Soldiers' delegates and the German Social Democratic majority. The question whether the Socialists should be allowed to participate in the provisional government had been long discussed. On May 15 the executive committee of the workmen's and soldiers' delegates decided in favor of the participation of Socialists in the provisional government on the understanding that the principles of the government should involve an active foreign policy with the aim of attaining peace as soon as possible without annexations and without indemnities on the basis of the right of each nation to dispose of itself, that decisive measures should be taken for the democratization of the army and for the increase of the military strength at the front, and that finally certain social, economic, and financial reforms should be introduced.

On May 2 the provisional government pub-

lished a note to the Allies saying that Russia would continue the war to a complete victory. This had been opposed in every way by the extremists or Maximalists. A large portion of the public were strongly influenced by the appeal of the Council of Workmen's and Soldiers' Delegates that there should be no annexations and no indemnities, and they were further influenced by the agitation of the group of Maximalists headed by Lenin who had been allowed to pass through Germany to attend the Stockholm conference, and who were charged by their enemies with having been bought by German money. The gap between the Council of Workmen's and Soldiers' Delegates and the provisional government was constantly widening. There was a long discussion between the two bodies before the note to the Allies was issued. The provisional government declared that it would resign unless the Council ceased to oppose this measure. On the evening of May 4 M. Milyukov and other ministers addressed the crowd at a demonstration before the Marie Palace where the government and the Workmen's and Soldiers' delegates were in joint session. They defended the government's attitude towards the war and declared that Russia would never consent to a separate peace. Finally on May 4 it was announced that the Council of Workmen's and Soldiers' delegates had passed a vote of confidence in the government by a majority of thirty-five, a very narrow margin in view of the fact that 2500 voted. The difficulty had been a distrust on the part of the Workmen's and Soldiers' Delegates of the words "complete victory" and certain other aspects of the note. Their confidence was restored by the explanation made by the government in a supplementary note subsequently issued in which it is said that the note, in speaking of a decisive victory, had in view the solution of the problems which were mentioned in the communication of April 9, namely:

"The government deems it to be its right and duty to declare now that free Russia does not aim at the domination of other nations, at depriving them of their national patrimony, or at occupying by force foreign territories, but that its object is to establish a durable peace on the basis of the rights of nations to decide their own destiny. The Russian nation does not lust after the strengthening of its power abroad at the expense of other nations. Its aim is not to subjugate or humiliate any one. . . . But it will not suffer that its own country shall emerge from the great struggle humiliated or weakened in its vital forces."

In May the course of events bearing on Russia's attitude toward the war was briefly as follows: The government requested the Allies to restate their peace terms. Nevertheless, the foreign minister, Milyukov, openly expressed the wish that Russia should obtain Constantinople. This provoked the anger of the anti-annexationists and on May 16 he resigned from the cabinet which was then reorganized, Tereshtchenko becoming foreign minister and Kerensky, minister of war. The new foreign minister, May 19, renewed the expression of Russia's desire for peace without annexations or indemnities, based on the principle that nations should have the right to dispose of themselves. At the same time the Russian government declared that it rejected all thought of a separate

peace. Peace was to be obtained by appealing to the Socialists of the Central Powers to overthrow autocracy. On May 23 it expressly promised aid to Belgium. The German chancellor had publicly offered on May 15 an immediate separate peace, and the Austrian Emperor repeated this offer on May 31. Russia returned an unfavorable reply. The Allies during this time were endeavoring to revise their secret treaties and restate their terms of peace. On May 27 the French premier apparently accepted the Russian programme for peace without annexations or indemnities, but at the same time demanded the restoration of Alsace-Lorraine to France and the payment of indemnities to France, Belgium, Serbia, Montenegro, and Rumania. President Wilson's acceptance on May 26 was qualified by the exception that there must be indemnities for manifest wrongs done, and he added that there were to be no annexations except for the purpose of securing for the inhabitants a fair chance of life and liberty. The special mission from the United States under Elihu Root designed to counteract German efforts for a separate peace was announced the day before the reorganized coalition cabinet was formed. The sending of the American railway commission to aid in the reconstruction of Russian railways was also announced.

**PROGRAMME OF THE REORGANIZED MINISTRY.** At a meeting of the provisional government, the executive committee of the Duma, and the Council of Workmen's and Soldiers' delegates the programme agreed upon was as follows: Unity at all the fronts; entire confidence of the democracy in a reconstructed cabinet; full powers for the government. It was announced that the provisional government had come to the conclusion that it could not accept the formula of foreign policy proposed by the workmen's executive committee, namely, a policy that was to aim at peace as soon as possible without indemnities or annexations, because to accept this would involve the renunciation of the policy already announced to the Allies. The government raised no objection to the financial and economic reforms urged by the committee.

The attitude of the provisional government was set forth in detail a few days later. It declared that now that it had been reinforced by the revolutionary democracy, it was resolved to carry into effect the ideas of liberty, equality, and fraternity which were the basis of the revolution. Its chief line of action was to be as follows: In the first place it rejected with the approval of the entire people, the plan for a separate peace; it sought a peace that should neither tend towards domination over other nations nor to the seizure of their lands, but should be a peace without annexations or indemnities and should be based on the right of nations to dispose of their own affairs. In the second place the government expressed confidence in the troops and the belief that they would not let the German troops prevail. It declared that it would proceed with its plans of democratization; that it would fight against economic disorganization and would establish systematic control of production, transportation, exchange, and distribution; that it would bring in measures for the protection of labor; that the land question should be deferred to the Constituent Assembly, but that the government would take preparatory measures and

would do all that was possible to promote the production of materials and to further the use of the soil in the interest of the working classes. As to reforms of the financial system on a democratic basis it would devote special attention to the increase of direct taxes on the rich, such as succession duties, excess profits tax, etc. It concluded by promising to bring about a Constituent Assembly at the earliest possible date, by calling upon all the people to support the government, and warning the public that it would adopt the most energetic measures against any attempt at a counter-revolution.

In spite of the confidence expressed by the ministry in the army, reports of disorganization at the front which had been circulated for some time were now becoming definite. It was said that the discipline in the Baltic fleet was completely passing away under the new system; that at the front there was a decline of interest in the war; that at some points military duties had been abandoned; that in other parts there were no officers, the soldiers themselves having usurped the commands; in short, that at the front there was a virtual truce between the Germans and the Russians, and that the Russian troops were fraternizing with the enemy.

In other respects the situation was also grave. Strikes were occurring daily. The Kronstadt Committee of Workmen's and Soldiers' Delegates, under M. Lamanoff, declared its independence of the provisional government, endeavoring to set the example for local autonomy on the part of similar committees throughout the country. General Alexeieff resigned and was succeeded by General Brusilov. The dominant figure was the war minister, M. Kerensky, who sought to prevent the complete collapse of the army and the disorganization of the economic forces of the government. In this he was supported by the All Russian Council of Peasant Deputies who voted against a separate peace and for a vigorous war policy and sustained his efforts to restore discipline in the army.

**THE SITUATION AT THE BEGINNING OF JUNE.** By June the situation in Russia began to seem in some respects less alarming to the Entente Allies. The Kronstadt movement was put down. The Socialist element in the Committee of Workingmen and Soldiers which had pressed for a separate peace and which at one time threatened to carry their point were not sustained by the majority. It had been feared that since the Committee of Workingmen and Soldiers as the representatives of labor and the army practically controlled the resources of the nation they would be able to carry out their programme in spite of the provisional government. The latter body had only a moral authority and the real seat of power was in the committee, but owing largely to the energetic efforts of certain members of the government, especially M. Kerensky, the plans of the extreme Socialists as represented by Lenine were thwarted. Finally the Congress of Workingmen and Soldiers gave up the idea of a separate peace and voted for the renewal of a military offensive. Apparently the Germans also recognized that their programme of a separate peace with Russia had failed. Toward the end of May and the beginning of June German newspapers published comments to that effect, and on the Eastern Front the Germans scattered among the Russian soldiers printed messages saying that the Ger-

mans were grateful to them for having stopped fighting and fraternized with them, for the German generals had thus been able to transfer large bodies of troops to the Western Front; they felt themselves strong enough in that quarter now and were ready to begin to attack the Russians. In the United States the chief of the Russian mission, Mr. Bakhmetieff, assured the American people that the provisional government was doing all that was possible to put the army on a sound footing; that it had won over all the leading men in the Soldiers' and Workingmen's party and that the mass of the people stood behind it; that all idea of a separate peace was given up; that Russia insisted on a peace without annexations or indemnities; that Russia believed that the defeat of the Allies would be the greatest misfortune that could befall her and that the Russian army would certainly do its part. The question of what was meant by no annexations and indemnities was widely discussed. Some contended that it was not meant to leave in Germany's hands territories acquired during the war or even Alsace-Lorraine. Mr. Vandervelde, the Belgian Socialist, interpreted the word annexation as not applying to the restoration of territory that Germany had unjustly seized. He said that to restore Alsace-Lorraine could not be regarded as an annexation on the part of France, but rather as a "disannexation" on the part of Germany.

During the last week in May M. Kerensky had paid a visit to the front where he was received with great enthusiasm by the soldiers. At the general congress of officers' delegates from the front on May 30 a resolution was adopted which, while approving the provisional government's ideal of brotherhood among the peoples, said that the only way to secure that object was to make the army a good fighting machine and to make an immediate offensive. At Odessa a meeting of delegates from the front declared that fraternizing with the enemy must come to an end and that those who continued it should be declared traitors and fired upon. The newspapers abounded in reports of the enthusiastic welcome to M. Kerensky at the front. At Kiev and Odessa he was received with especial warmth, in the latter place being carried on the shoulders of the crowd. In answer to questions asked by various military delegates M. Kerensky said that what had formerly appeared as the dying agony of the army was nothing but the struggle of the new Russian spirit, and that in spite of the destruction of the old discipline the real power of the Russian army was increasing every day, being based on a new and reasonable discipline. He declared that the fraternization with the enemy had ceased. On the other hand the Social Democratic papers were openly declaring that the army was tired of war and on the verge of starvation. Why carry on the war, they asked, in the interest of capitalism? Among the peasantry there was much unrest and there were signs that they would not wait for a Constituent Assembly to settle the land question. It was reported that the land was being confiscated everywhere by the communal authorities.

**OTHER EVENTS IN JUNE.** On June 2 the government accepted the resignation of the Ambassador to France, M. Isvolski, former for-

eign minister. On June 8 the commercial and banking institutions held a meeting at which they pronounced against a separate peace. On June 12 the committee of the Duma charged with the duty of arranging for a Constituent Assembly met and drew up a plan. The Constituent Assembly was to draft a permanent constitution and to solve internal economic, industrial, and racial problems, and was to be chosen on the basis of direct, equal suffrage without distinction of sex. The government established local self-government in the districts throughout the country and a peasant administration elected by universal suffrage; promulgated a law giving Finland complete autonomy; and repealed all laws discriminating against the Jews. On June 17 it was announced that the Duma in secret session had voted for an immediate offensive on the part of the Russian troops, declaring that a separate peace with Germany or even prolonged inactivity on the front would be treason to the Allies and would never be pardoned by the future generations of Russia. At the same time the Congress of Workingmen and Soldiers decided to approve the expulsion from Russia of the Swiss Socialist, Robert Grimm, which had been ordered by the provisional government (see SWITZERLAND). On June 17 a note was published requesting the Allied governments to meet at a conference in order to revise the agreements on the subject of the objects of the war with the exception of the London pact, which provided that no one of the Powers should conclude a separate peace. On June 30 the provisional government addressed an appeal to the people of Ukraine where the movement for independence and separation had plainly declared itself. See UKRAINE.

Nikolai Lenine, the radical Socialist, made a sharp attack in the middle of June on the policy of the cabinet, especially as regarded the war. He contended that the new offensive urged by M. Kerensky, minister of war, was an act of treason directed against the interests of international socialism. To this the minister of war replied with an energetic defense of his policy, remarking that the government must show the international that it is a power to be reckoned with and that it is resolved not to submit to the dictation of an isolated group having no organization.

**ABOLITION OF THE DUMA.** Upon the outbreak of the revolution the Duma ceased to exist as a legislative body. Just on the eve of its prorogation, at the beginning of the revolution, it appointed the Provisional Committee which supplanted it as an instrument of government. This Provisional Committee was regarded with suspicion by all the members of the Left. The Duma had in effect no power whatever. The real power in the new Russian state was in the hands of the Workmen's and Soldiers' delegates. The All-Russian Congress of Workmen's and Soldiers' Delegates which met in the third week of June passed a vote of confidence in the coalition government and then proceeded to the abolition of the Duma. All were agreed that while the Duma had played an important part in the first days of the revolution it was now useless and might even be made the instrument of a counter-revolution. The vote for its abolition was carried by 491 to 216, 41 not voting. The minority voted against the resolution because it

was not severe enough and not because they wanted the Duma.

**DISORGANIZATION OF THE GOVERNMENT.** The following account of the utter disorganization in July under the new régime is based on dispatches to the *London Times*. By the middle of July it clearly appeared that the morale of the troops was shattered. In northeastern Galicia the 607th Russian regiment between Batkow and Manajow left the trenches of their own accord, thus forcing the other units to do the same and giving the enemy a chance to advance. This was due to a large degree to the influence of the Maximalists who called meetings of the troops in order to discuss the question whether the commands of the officers should be obeyed. Regiments refused to obey the commands (July 20) and the same lack of stability was manifested on succeeding days. To the southwest of Dvinsk the troops were reported to have shown complete disobedience toward their commanders and were continuing the retreat. This movement went on almost without interruption in spite of the Russian superiority of numbers. The Russian retreat was becoming general along a front of more than 150 miles. On July 17 the leaders of the Maximalist party had tried to provoke a mutiny in Petrograd among the troops in the garrison and for a time there was some disorder in the streets. The military governor issued an order calling upon the people not to leave their houses and directing the troops to restore order. In the night several of the Maximalist leaders addressed their followers in the streets. They informed them that the Petrograd committee had passed a resolution condemning the capitalist ministers and demanding their immediate resignation. They said that the government must pass into the hands of the Council of Workmen's and Soldiers' delegates. On July 18 there was continued disorder and scattered shots were fired in the streets. The Executive Committee of the Council of Workmen's and Soldiers' delegates supported the provisional government in its endeavor to suppress the disorders, admitting that this should be done before a new cabinet should be formed. By July 19 there was comparative quiet in the city again. On July 22 a council of ministers was held and certain changes were made. There was difference of opinion as to proclaiming Russia a republic, some members considering it necessary to do so at once but others holding that it was not an opportune time. The prime minister, Prince Lvoff, resigned chiefly on account of the difference of opinion between him and the Socialists on the land question. He was succeeded as prime minister by M. Kerensky. The provisional government immediately issued a proclamation warning the people against the hidden forces of counter-revolution and the danger of weakening at the front. At the same time the government sought to make clear by its foreign policy that the revolutionary army could go forward in the firm conviction that it was not fighting for any foreign objects. The government intended, in accordance with its declaration of May 19, to summon the Allies to an inter-Allied conference in August, in order to decide upon the Allies' foreign policy and to bring it into harmony with the principles of the Russian revolution. In this conference Russia would not only be represented by diplomats but by

representatives of the people of Russia. The government had taken all the steps for the Constituent Assembly. The chief problem in the internal policy was to establish throughout the entire country self-government for the localities on the basis of direct, equal, and secret universal suffrage. On July 21 the prime minister, M. Kerensky, ordered the immediate dismissal of the Central Committee of the Baltic fleet and the election of a new committee; the arrest of the ringleaders at Kronstadt and on the battleships where mutinies had occurred; the removal at once from the Baltic fleet of all persons guilty of disobedience or inciting to disobedience. On July 23 the Council of Workmen's and Soldiers' delegates and the Council of Peasant Delegates passed a resolution saying that the country was threatened with military disaster and with anarchy, and that in view of the seriousness of the situation unlimited power be granted to the government to reestablish order and discipline in the army and to wage relentless war against the anarchic elements in the country. The Russian Council of Workmen's and Soldiers' delegates issued a stirring appeal to the soldiers, whether at the front or at the rear, calling upon them to save the country against the German barbarians. The principal problem, according to M. Kerensky, was that of concentration and union. The provisional government, he said, had no other purpose than to defend the state against disruption and anarchy and to uphold the army. It was absolutely necessary to check any movement to overthrow the government and bring back the old régime. Meanwhile the demand of Ukraine had led to the resignation of the five Constitutional Democrats in the Ministry (see *UKRAINE*). Kerensky's powers at this time were unlimited. He adopted stringent measures against deserters from the army and against revolutionary agitators. He was supported by the Council of Workmen's and Soldiers' delegates and the All-Russian Council of Peasant delegates.

**DISORGANIZATION OF THE ARMY.** The entire breakdown of discipline was evidenced by the retreat in Galicia in the latter part of July. It was due to the belief of the soldier that he was first of all a citizen and that military measures should not be taken without his consent. The generals found they were unable to carry out any plans without the consent of numerous committees of the troops. Large bodies of them retired before the enemy without striking a blow. During the first week of August the retreat of the Russian troops continued till nearly all of Galicia was in the hands of the enemy. As an illustration of the numerous instances of the lack of discipline, the following incident was reported on August 5. In the town of Kalusz, which was captured by the Russians before the retreat, there had been left by the Germans a large stock of wine and spirits. Despite the commands of the officers the Russian troops broke open the barrels and drank the liquor, and the attempt to restore order failed in the face of a mob of 4000 men maddened by drink. During this debauch the Germans attacked the town and captured it.

At the beginning of August M. Kerensky resigned the office of prime minister, but the provisional government refused to accept his resignation and called a meeting of the representa-

tives of all political parties, including the Duma, the Soviet, and the Council of Peasants. Kerensky, on being informed of the decision of the parties not to accept his resignation, issued the following statement:

"In view of the evident impossibility of establishing, by means of a compromise between the various political groups, Socialist as well as non-Socialist, a strong revolutionary government such as is required by the present threatening situation, I was obliged to resign. Friday's conference between the representatives of the principal Socialist, Democratic, and Liberal parties, after a prolonged discussion, resulted in the parties represented at the conference deciding to entrust me with the task of reconstructing the government. Considering it impossible for me in the present circumstances, when defeat without and disintegration within are threatening the country, to withdraw from the heavy task which is now entrusted to me, I regard this task as an express order of the country to construct a strong revolutionary government in the shortest possible time, and in spite of all the obstacles which might arise. I hope to find the solution of the problem in my unshakable conviction that the safety of the country and the Republic requires the renunciation of party quarrels and self-sacrificing work by all Russian citizens in the circumstances and conditions imperiously dictated by the stern necessity of carrying on the war, sustaining the fighting forces of the army, and re-establishing the economic strength of the state."

The party groups that had decided to recall M. Kerensky consisted of the Socialist Democrats, the Revolutionary Socialists, the Democratic Radicals, the Labor Union Party, the Popular Socialists, and the Cadets. M. Kerensky formed a new coalition ministry after negotiating with these five groups.

Meanwhile, General Korniloff, after painting the deplorable conditions in the army, requested the introduction of measures for the restoration of discipline. The new government accepted these terms, of which the main points were non-interference with the affairs of the chief command and the enforcement of punishments throughout the country for offenses. The whole country with the exception of the Maximalists who were still in evidence in the Soviet appreciated the necessity of restoring discipline in the army and the new cabinet gave that problem its chief attention.

**THE MOSCOW CONGRESS.** In view of the serious situation Kerensky decided not to wait for the Constituent Assembly but to call at Moscow on August 25 an "Extraordinary National Council" to consist of all parties for the purpose of effecting a compromise between the diverse elements and of reorganizing the military forces. The congress consisted of 2500 members, representing practically all the parties, but the Bolshevik or Maximalist element, which was to become powerful later, was not very strongly represented, because of the government's repressive measures. In his address, Kerensky repeated his declaration against a separate peace, and characterized the events at the front as shameful. And in regard to internal affairs he said that while certain nationalities which were part of the Russian state were none too friendly in their attitude, the provisional government, nevertheless, would give them all that

had been promised to them and all that the Constituent Assembly should decide to grant; but it warned them if they tried to take advantage of the government's difficulties they would be checked. As to Finland he declared that the government would forcibly prevent the reopening of the dissolved Diet. He concluded by saying that the government would try to protect the army against corrupt influences and would continue to struggle against the Maximalists and others who tried to break down the discipline of the troops. At the next important session, August 27, General Korniloff, the army chief, declared that discipline must be restored to the army. He demanded that his request that the death penalty be restored should be granted. As illustrating the disorganization and lack of discipline he said that in August soldiers had killed four regimental commanders and other officers and that they had not desisted from these murders till they were warned that they would be shot if they continued. Moreover, one of the regiments of Siberian rifles which at the beginning of the revolution had fought with great bravery deliberately left the front at Riga and did not return to their positions until they had been warned that otherwise they would all be shot. The situation at the front was so bad that all Galicia, all Bukovina, and all the fruits of Russia's recent victories had been swept away and at several points the enemy had crossed the frontier and was threatening the southern provinces. The most important measures of reform that he demanded were as follows:

1st. Restoration of discipline in the army by increasing the power of officers and non-commissioned officers; 2nd. Improvement of the financial position of officers; 3rd. Limitation of the power of regimental committees which should be confined to the management of the economic affairs of the regiments. He then referred to the disorganization of the railways, saying that the condition was so bad that by November the army would cease to receive supplies. He quoted a dispatch from the commander-in-chief of the southwestern front saying that the shortage of breadstuffs amounted almost to a famine. The output of munition works had fallen during the period from October, 1916, to January, 1917, as much as 60 per cent for guns and shells and 80 per cent for aeroplanes. If this continued Russia would soon find herself in the same state as at the time of the great retreat in the spring of 1915. These revelations made a very strong impression both on the members of the conference and on the press. M. Kerensky's declaration was applauded but subsequently criticized as containing nothing new, as leaving the situation indeterminate, and, in general, as betraying uncertainty and a lack of force. During the last week of August continued reports were published of retreat from the front without orders, and the congress had hardly closed when the news came of the fall of Riga. See **WAR OF THE NATIONS.**

**ORDER OF EVENTS IN SEPTEMBER.** The threatened German attack upon Riga was clearly indicated on September 2 and on the following day the Germans entered the city. On September 5 the news came that the industrial crisis and the crisis of transportation was growing worse. On September 9 General Korniloff summoned M. Kerensky to deliver over to him

the military and civil power. The latter refused and dismissed the general whom he replaced by General Kambolsky. The conflict between the provisional government and Korniloff became acute by September 11 and on the following day all the ministers placed their resignation in the hands of Kerensky in order to leave him complete liberty of action though they remained provisionally in power. On September 13 the provisional government named Kerensky commander-in-chief in order that he might withstand the attempts of Korniloff. On the following day the Korniloff movement was definitely checked. It had advanced to within thirty miles of the capital. Kerensky, in addition to the powers of commander-in-chief, now assumed those of a dictator. On September 16 the provisional government was reconstituted in the form of a directorate under the presidency of Kerensky and it proclaimed that Russia was a republic. This proclamation was placarded at Petrograd on September 17. On September 27 a Democratic conference, called by the Workmen's and Soldiers' Council, was held with a view especially to determine the form that the government should take until the Constituent Assembly should meet. It consisted of 1200 members of whom the Bolsheviks or ultra-radicals were in the majority. In a speech by M. Kerensky the German menace in the Gulf of Finland was pointed out.

**THE KORNILOFF MOVEMENT.** The following more detailed account of some of the events briefly mentioned in the preceding paragraph is based on dispatches to the London *Times* and on other reports published during the year in the newspapers and reviews, but the accounts were often conflicting and an authoritative record of the events was not available.

On September 8 General Korniloff, the Cossack commander-in-chief of the Russian armies, called on the prime minister, M. Kerensky, to resign and make way for a new government which should consist of a dictatorship under the rule of the commander-in-chief; thereupon the prime minister dismissed General Korniloff. M. Kerensky's account of the affair was to the effect that General Korniloff had sent a member of the Duma demanding that he, the prime minister, should turn over to the general all the civil and military powers in order that the latter might, according to his own judgment, set up a new government. This demand was confirmed by telephone conversation with the general afterwards. The government, thinking it necessary to cut short any attempts to encroach on the supreme power, ordered, first, General Korniloff to surrender his functions as commander-in-chief; and, second, the city and district of Petrograd to be declared in a state of war.

General Korniloff's side of the matter was presented in an open letter to the government explaining why he refused to resign the chief command. He said at this crisis of the country's existence when the way to both capitals is almost open to the enemy the provisional government, instead of taking energetic and decisive action, was frightening the people by reports of a counter-revolution. Its government was slack and incapable. Supported by the commanders of all the fronts, he had refused to resign and he demanded that the provisional government should come to his headquarters and

draw up along with him a plan for a government of national defense.

On September 12 M. Kerensky assumed the chief command of the Russian armies and General Alexeieff, the former commander-in-chief, was appointed chief of staff. In announcing this change, M. Kerensky declared that the foolish attempt at military mutiny had been put down without bloodshed. On September 11 a notice had been sent to the army generally and to the naval committees that General Korniloff at the head of troops was moving on the capital for the purpose of deposing the provisional government and seizing the power. It called upon the persons and authorities addressed to refuse obedience to any orders of General Korniloff or of the traitors who had joined him. Meanwhile the capital had been placed under martial law. The Cadet ministers resigned and there was evidence among the higher classes of sympathy with General Korniloff's attempt, as promising the restoration of order. On September 10 M. Kerensky received a deputation from the Cossacks which declared that it believed it to be a patriotic duty to prevent civil war and to try and settle the conflict between the general and the government. At the same time it was announced that the cavalry sent by General Korniloff were within thirty miles of Petrograd. On September 15 it was learned that General Korniloff had surrendered to General Alexeieff who had placed him under guard and on the same day the provisional government issued a manifesto proclaiming Russia a republican state. On the next day it announced that, while awaiting the definite constitution of the cabinet, the affairs of state were entrusted to a council of five of whom the chief was M. Kerensky, premier, and the other members were Terestchenko, Foreign Affairs; General Verkhovsky, War; Admiral Verderevsky, Marine; M. Nikitin, Posts and Telegraphs. An order of the day was issued at the same time addressed to the army and the fleet, calling upon them to cease all political disputes and do everything in their power to restore the army to a fighting basis, stop the arrests of commanders, and cease forming voluntary detachments on the pretext of fighting the counter-revolution. It also published an explanation of the rules in regard to the military commissaries saying that these officers were servants of the provisional government who were to establish discipline in the army on the basis of democratic revolutionary principles. There were to be a chief military commissary at army headquarters and special commissaries for the different units. Further manifestoes and declarations were made to the purport that order must be reestablished in the state and the fighting spirit in the army.

**THE COSSACKS.** In March the Cossack troops in Petrograd had joined the revolution and their act was approved at once by their kinsmen of the Don. On April 21 the provisional government issued a proclamation saying that the historic rights of the Cossacks to the land could not be violated. Soon afterwards reports of disorders among the Cossacks and of the seizure of their lands became frequent and on April 29 a congress of the Cossack government was called especially for the purpose of settling the great question of the land. This question among the Cossacks was altogether dif-

ferent from the problem that presented itself in the rest of Russia. There common ownership of land had become a familiar idea and among the peasants was almost an article of faith. In the Cossack provinces, however, while there was common ownership of land, there was a definite line of cleavage between the peasant and the Cossack. All the land was the property of the Cossack government which in those provinces was a military organization. A portion of the land was assigned to groups of villagers and cultivated by Cossack farmers. Another portion was assigned to officers or retired soldiers and became their private property. The rest of the land known as the reserve was rented to the peasants; who, being almost equal in number to the Cossacks, paid each year about 1,200,000 rubles as rent. The interests of the peasants and of the Cossacks therefore were opposed and the problem consisted in finding an arrangement that would avert civil war. The Cossacks felt safe under the first provisional government, but when that collapsed and a Socialist coalition took its place they became suspicious and from that time a conflict continued to grow between the Don province and the capital. Aside from merely economic measures the Cossacks resented the growing lack of discipline in the army which the first coalition government seemed unable to check. They prided themselves on the fact that there were no desertions among the Cossack troops. They were the most compact and orderly force in the state and grew more united as Russia fell more and more into confusion. On the other hand, the government at Petrograd suspected them of disloyalty to the revolution although they had supported it both at the capital and in their own province. On June 30 the Cossack congress declared that they would support the provisional government against the foreign foe and against internal anarchy and that the government could surely rely upon the Cossack regiments. Then came the July offensive which ended in a failure. The Cossacks now supported Korniloff's efforts to restore order. Toward the end of August they prepared to send to the new conference at Moscow representatives who would declare for the integrity of Russia and support a Coalition government, demand the reorganization of the army, and protest against socializing the land. They thus took up a more conservative position after the failure in Galicia than they had taken before and they were represented by General Kaledin who had been elected Hetman of the Don Cossacks on June 30 and whose views were characterized by Kerensky as ultra-conservative. It was announced on September 11 after Korniloff had made his ultimate demands upon the prime minister that Kaledin had gone over to his side and was threatening to cut off Moscow and Petrograd from the south. The provisional government declared him a traitor and ordered his arrest. On the other hand the provincial government of the Don denied the treason of Kaledin or the intention of the Cossacks to rise against the government. The condition in the following month was confused. In the Don province Kaledin was accused of starting a mutiny, whereas, as noted above, the union of the Cossack government in Petrograd was trying to bring about a compromise between Kerensky and Korniloff. In certain quarters Kerensky was

criticized for not having dealt more wisely with the Cossacks, who, it was said, had shown that they were not against the revolution by their union with the Cadets. It was pointed out that from July on Kerensky's only real enemies were the Bolsheviks and that in the circumstances he ought to have entered into an alliance with the moderate element as represented by the Cossacks and the Cadets.

**NEW COALITION MINISTRY.** The Democratic Congress of September 27 left the impression that the masses had little enthusiasm for the revolution and little respect for the Petrograd authorities. Kerensky declared that the only means of saving the situation was a coalition government. The outcome of the conference was an agreement upon such a government and upon a preliminary parliament with advisory functions. The latter could interpellate the government and the government must reply, but was not responsible to it. It was designed to last until the Constituent Assembly should meet in December. There was danger that the Socialists would insist that the Ministry should be composed exclusively of their representatives, but this was averted by Kerensky's threat to resign. As finally constituted the new Ministry was composed of six Socialists, four Constitutional Democrats, one independent, and six members from other parties. Its programme as announced in the press was as follows: Increase of the fighting power of the army and navy; suppression of anarchy; and the calling of the Constituent Assembly as soon as possible. In October the growing strength of the Bolsheviks was manifest and they made it clear that Kerensky's government had completely lost the confidence of the radical element throughout the country.

**THE FALL OF KERENSKY.** On November 7 the Bolsheviks, who constituted the extreme left of the Soviet, revolted under the leadership of the well-known Socialist, Lenin, and overthrew the Kerensky government. The preliminary parliament was dismissed, several ministers were arrested, and the headquarters of the general army staff were captured. Kerensky effected his escape and down to the close of the year there was uncertainty as to his whereabouts. The direction of the movement was in the hands of the Military Council of Workmen's and Soldiers' Delegates, under the guidance of Lenin and Trotsky. The first official announcement of the revolt declared that the Kerensky government had been overthrown without bloodshed and that the Petrograd Soviet of the Workmen's and Soldiers' Delegates welcomed the change and proclaimed the authority of the revolutionary committee until a government of Soviets should be established. It then set forth the following programme: 1st. The offer of an immediate democratic peace. 2nd. The immediate transfer of the landed estates to the peasants. 3rd. The transmission of all authority to the Soviets. 4th. The calling together of the Constituent Assembly after an honest election. Later the new government addressed to all the provincial councils of Workmen's and Soldiers' and Peasants' delegates proclamations declaring that all power belonged to the Soviets; that the government commissaries were relieved of their office; and that the death penalty that had been re-established by Kerensky at the front was abolished. Later M. Trotsky, who, with Lenin,

was a leader of the movement, declared that the Workmens' and Peasants' conception of democracy had united the ranks of the army. He accused Kerensky of trying to break the power of democracy by the aid of the Cossacks and he said that opposition to Kerensky was opposition to the landlords, the middle class, and the Korniloffs. On November 9 a new cabinet was formed by the council with Nikolai Lenin as prime minister and Leon Trotzky as secretary of foreign affairs.

There were many interpretations of the fall of the Kerensky government, of which the most common one was at first that it had been overthrown by the extremists or Bolsheviks. It was, however, due rather to the failure of the Kerensky government to meet the demands of the people generally for an early peace. Among the masses the Entente Allies were believed to be as imperialistic as the czar had been and in overthrowing czarism they held that they had broken with the foreign policy that czarism had embarked upon. The Russian democracy, said they, could not and would not carry out a foreign policy of imperialism, and they insisted that the new government should bring about peace. Kerensky, after being in power seven months, had failed to do this. He had not succeeded in making the Allies re-state their war aims. Thus Russia, if it continued with them as before, seemed to be carrying out the foreign policy of imperialism which it had repudiated. This drove many away from the government and finally Kerensky found the majority against him in the preliminary parliament. On November 6, when Kerensky demanded a vote of confidence after a debate on foreign policy, he failed to obtain it, and the Extreme Left carried its resolution blaming the government for its weakness in foreign affairs. Dr. David Soskice, who had been Kerensky's private secretary, declared the main causes of his fall to be the following: (1) The Korniloff mutiny, which most effectively prepared the way for the victory of the Bolsheviks in November; (2) the great anxiety and fear which Kerensky felt lest a general massacre of officers should take place both at the front and in the rear; (3) the lack of energy, if not direct disloyalty, among some of the higher officers in the military defenses of Petrograd; and last, but not least, the attitude of the Allies to Kerensky's government and their neglect of the public opinion of the Russian democracy, upon which Kerensky's administration was based.

**THE BOLSHEVIK GOVERNMENT.** The first step in carrying out the Bolshevik programme in regard to peace was taken by Lenin on November 8 when he telegraphed to all the belligerent governments a proposal for three months' armistice. Meanwhile the long threatened publication of the secret treaties signed by the former Russian government with the Allies had begun and were producing a deep impression on the public. As to the internal policy the new government indicated the course it was about to take by a series of decrees transferring property. One of them empowered municipal authorities to seize any houses whether inhabited or not and allow citizens who possessed no adequate dwelling to occupy them. Another decree declared that all factories had passed into the possession of the workmen. But the principal measure was the decree which under-

took to solve the land question. It declared all private ownership of land to be henceforth null. The land was to be nationalized and to be turned over to the people who cultivated it. Local committees were to dispose of all large estates and all lands belonging to the state, to the church, etc., until the Constituent Assembly should meet; and mines, forests, and waterways of national importance were to pass into the hands of the state. Smaller forests and waterways were to become the property of the village communes. Early in December the Trotsky-Lenin government issued a demand upon the Allies to re-state definitely their war aims within seven days. In presenting this ultimatum they were thought to be counting upon the Allies' refusal, for in that case they could tell the public that the Allies would not re-state their aims because their aims were really imperialistic. Thus Russia would be justified in breaking with them and in making immediately a separate peace. Meanwhile the movement for an armistice continued. Gen. Dukhonin, who held the chief command, having refused to offer an armistice, was dismissed, and was succeeded by Ensign N. Krylenko. The Russian terms for the armistice were published on December 5. They included two conditions: First, that German forces should not be sent from the Russian front to the front of the Allies; second, that the German troops should retire from the islands that they held in Russian territory. The Germans declared such conditions unacceptable. Nevertheless, the German government had expressed its willingness to discuss terms, and on December 3 had announced that an armistice prevailed from Pripet to the south of the Lipa River and that arrangements for its extension over the whole front were in progress. In the negotiations that were going on, Germany, Austria, Bulgaria, and Rumania were represented. On December 8 Trotsky announced that hostilities had been suspended for a week, and finally on December 14 the armistice was signed at Brest-Litovsk. It was to last twenty-eight days and could be extended. It provided that peace negotiations should begin at once. At the close of the year they were in progress.

**THE SITUATION AT THE CLOSE OF THE YEAR.** In November and December the country was a prey to internal dissensions. Ukraine again declared its independence. Finland did the same. Gen. Kaledin, the leader of the Cossacks, supported by Gen. Korniloff, proclaiming the purpose of saving the country, declared war against the Bolsheviks. Americans and other foreigners hastened to leave the country. Later the Cossacks and Ukrainians joined forces against the Bolsheviks and Siberia declared its independence. Neither Russia's Allies nor neutral countries recognized the new government. In December the Constituent Assembly met and was found not to return the great majority to the Bolsheviks which they had expected. The lack of a preponderant majority and the discord between the parties deprived it of all power.

**BESSARABIA.** After the outbreak of the Russian revolution there was a movement in Bessarabia for autonomy, as in Ukraine (q.v.), and in May a national Moldavian committee was formed which put forth the following programme: Religious and political independence; free use of the Moldavian tongue; a more just

distribution of land among the peasants; prohibition of foreign colonization; and the expenditure in the province of the revenue raised there. They did not demand separation from Russia. Their programme was at first opposed by the Ukraine which claimed the province a part of the new Ukrainian state, but later (August 8) on receiving the protest of Bessarabia the Ukraine government excluded it from its jurisdiction. The Central Rada of Ukraine afterwards admitted Bessarabia's right to independence and in November its official organ favored alliance and coöperation between the two new states.

**THE CHARGES AGAINST SOUKHOMLINOFF.** The charges against Soukhomlinoff which were published in the papers in June, 1917, attracted general attention as explaining the long series of Russian military disasters. In general they were that despite the urgent demands of the generals in the field for supplies and munitions he remained indifferent and inactive. On several occasions in October, 1914, he was informed by the generals that they could not continue operations if provisions and ammunition did not arrive and there was soon a great scarcity of guns. It was said that the reinforcements sent to the front had only one gun for each two men and later even fewer. Finally whole detachments of troops were sent to the seat of war without any arms whatever. By the middle of October, 1914, the number of guns lacking was placed at 870,000, and as there was a shortage of machine guns there was soon a dearth of munitions, especially in Galicia, where certain elements had to abandon their position on account of having nothing to shoot with. The generals declared in their charges that all the Russian reverses from Lodz in November, 1914, down to August, 1915, were due to the lack of munitions, which weakened the defense by making reinforcements impossible and even necessitated the reduction of many regiments to three battalions. Soukhomlinoff's reply was that he had faithfully followed the programme as to arming and equipping the army, which the high committees of national defense had worked out in 1904 after the Russo-Japanese war, and he referred the failure to the lack of financial resources, saying his demands for necessary money had been systematically refused.

**SEE UNITED STATES AND THE WAR.**

**BUTGERS COLLEGE.** A non-sectarian institution for the education of men, at New Brunswick, N. J. In the fall of 1917 there were 461 students and 82 members of the faculty. Volumes in the library numbered 91,000. Productive funds in 1917 amounted to \$960,000 and total income from all sources to about \$300,000. The college was founded in 1766. President, W. H. S. Demarest, D.D., LL.D.

**RYDER, ALBERT PINKHAM.** An American painter, died at Elmhurst, L. I., March 28, 1917. He was born in 1847 at New Bedford, Mass., and studied under the engraver, William E. Marshall, and at the National Academy School and in Europe. He never sought publicity for his work, and when he did exhibit, which was seldom, his pictures did not attract the public because of a certain unreality or ideal quality. He viewed nature through the eyes of a visionary, or a poet, and did not object to the appellation, "the last of the Romanticists." He was, in fact, the last important survivor of the

notable group of landscape painters, led by George Inness. It is said that all his work was done laboriously, a method that would account for the comparatively small number of canvases that he produced. In the Metropolitan Museum of Art are "Bridge," "Curfew Hour," and "Smugglers' Cove," and the Brooklyn Institute possesses eight examples. A few collectors became ardent admirers of Ryder, especially a group of Canadian connoisseurs. His "Temple of the Mind," one of his best works, is in Montreal. Originally the wooden panel that this picture was painted on had, on the reverse side, a fine "Moonlight," by the same artist, but these two subjects were sawed apart when Thomas B. Clarke was the owner. Other of his pictures, privately owned, are, "Jonah," "The Flying Dutchman," "Macbeth and the Witches," "The Race Track," "Moonlit Cove," "Siegfried and the Rhine Maidens," "Interior of Stable," and "Resurrection." Mr. Ryder was elected Associate of the National Academy in 1902 and Academician in 1906, and he was a member of the National Institute of Arts and Letters.

**EYE.** The average annual world's rye production is about 1,750,000,000 bushels, but as the belligerent countries are the principal rye producers statistics with reference to this crop in 1917 were very incomplete. In six out of eight European countries from which statistics were received by the International Institute of Agriculture at Rome, the production was lower than in 1916, and in all of them it was below the average production for the five years, 1911-15. As estimated by the Department of Agriculture, the production of the United States was 60,145,000 bushels, on 4,102,000 acres, as compared with 48,862,000 bushels and 3,212,000 acres in 1916.

The average yield was 14.7 bushels per acre which was lower than the average acre yield of 1916 and the average for the five years, 1911-15. The average farm value, December 1, 1917, was 166.3 cents and on this basis the crop was valued at \$100,025,000, while the crop of the year before, when the corresponding bushel value was 122.1 cents, was valued at only \$59,676,000. The acreage, production, bushel value, and total crop value of 1917 all constituted record figures, but the average yield per acre quite generally had been surpassed. The area sown to rye in the fall of 1917 for the 1918 crop was reported as 6,119,000 acres, of which 2,345,000 acres were in North Dakota, the only State having over a half million acres.

The Canadian production was estimated at 4,240,000 bushels, valued at \$6,059,000. This production was greater by about 45 per cent than that of the year before, which was due to an increase in acreage, the average yield per acre for the two years being about the same. In common with wheat and other cereals, the international and domestic trade in rye of most countries, and especially those engaged in the war, was subject to governmental regulation to assure their own bread supplies and to keep them from going to any extent to opposing nations. Most countries also fixed prices for ordinary transactions as well as for requisition for army use. Germany in March, 1917, fixed the price at \$1.66 per bushel, Austria in August at \$1.55, France in October at \$1.55, Italy in August at \$2.13, the Netherlands at 92 cents.

etc. These prices were changed as conditions demanded or a definite increase per month was allowed as the commercial season progressed.

**SAFE OCCUPANCY.** See FIRE PROTECTION.

**SAFETY AT SEA.** The United States Steamboat-Inspection Service was active in spite of the fact that its officials were assigned to various war duties in addition to their regular work of inspection. The Steamboat-Inspection Service was called upon by the United States Shipping Board to examine interned German vessels after seizure by the government, and reported on the damage done by the officers and crews of these vessels. The Inspection Service furthermore co-operated with the United States Shipping Board in recruiting the merchant marine, and also in facilitating late commerce, which was greatly expanded on account of the war conditions.

There were reported by the Steamboat-Inspection Service 257 accidents resulting in the loss of life, or an increase of ten over the record of the previous year. Of these disasters the following were the more significant:

The freight steamer *Frederick* sailed from New York in January, 1916, loaded with munitions. She was unheard from except in February a bottle containing nine messages from members of the crew was washed ashore at the Orkney Islands. The crew of thirty-three men was believed to have been lost and the vessel to have sunk from some unknown cause.

On July 4, a collision took place between the schooner *Emma Lord* and the seagoing barge *Harry Morse*, anchored in lower Mobile Bay during a hurricane. Both vessels foundered, eight lives were lost.

On July 13, 1916, in a hurricane, the barge *South West* and the barge *North West* were lost, together with five of the crew of the former.

July 14, 1916, freight steamer *Ramos*, with coal from Philadelphia to Cartagena, Colombia, was lost in a hurricane with eleven of her crew.

August 16, 1916, the freight steamer *Admiral Clark* and twenty of crew were lost during a hurricane off San Antonio, Tex.

August 17, 1916, steamer *Pilot Boy* foundered off the coast of Texas; six of crew were lost.

October 20, 1916, freight steamer *James B. Colgate* and *Merida* foundered in a severe gale in Lake Erie and twenty-four of the crew of the former and the entire crew of twenty-three of the latter vessel were lost.

The towing steamer *T. A. Scott, Jr.*, was sunk on November 17, 1916, by a collision with the German merchant submarine *Deutschland*, which she was convoying to sea. The entire crew of five men on the *Scott* perished.

The steamer *Rambler*, on November 20, 1916, was destroyed, along with the crew of four men, by a boiler explosion at Commercial Wharf, Brooklyn, N. Y.

The freight steamer *Maryland*, a vessel sent to the Atlantic seaboard for freight service, was supposed to have foundered about 300 miles off New York during a severe storm in the latter part of December, 1916. The entire crew of twenty-six was lost.

In a severe storm on November 26, 1916, the freight steamer *Orleanian* left New York for Malta and was supposed to have foundered with her entire crew of thirty-six men.

On February 5, 1917, the barge *Iowa* with a crew of five men being towed by the steamer

*Covington* was sunk in a northwest gale off Highland.

On March 16, 1917, the towing steamer *Bertha*, in tow of the steamer *Chief*, broke loose and was supposed to have foundered with her crew of nine men.

On March 16, 1917, the steamer *Vigilancia*, bound from New York to Archangel, was torpedoed by a submarine without warning, in latitude 48° 57' N., longitude 9° 34' W., and in lowering the lifeboats, fifteen of the crew were swept overboard and drowned in the rough sea.

On March 21, 1917, the steamer *Heraldton* was torpedoed without warning by a submarine in the North Sea, and nineteen of the crew were lost either by being unable to get away from the vessel or being capsized in the lifeboats.

April 1, 1917, the steamer *Astec*, bound from New York to Havre, France, was torpedoed by a submarine off Oushant Island on the French coast. Twenty-nine of the crew perished.

On April 26, 1917, the steamer *Vacuum*, without cargo, leaving Liverpool, was struck by a torpedo from a submarine and sunk with twenty-two of the crew.

On May 1, 1917, the steamer *Rockingham* was torpedoed by a submarine without warning in latitude 55° 10' N., longitude 12° 30' W. and sunk with a loss of two of the crew.

On May 16, 1917, the steamship *Hilonian* was struck by a torpedo on the port side and sunk in about three minutes, with four of the crew being lost.

On June 12, 1917, the steamer *Moreni*, after a battle lasting two hours, was sunk by a submarine south of Tabasca Island on the southern coast of Spain.

On June 30, 1917, the steamship *Christopher Columbus*, while passing out of the Milwaukee River stern first, struck a high steel structure on the wharf, causing a large water tank to topple to the deck and killing fifteen passengers. This accident was caused by high water and a strong current.

During the fiscal year ending June 30, 1917, the United States Steamboat Inspection Service reported that 317,095,171 passengers were carried on steam vessels that are required by law to report the number of passengers carried. Of this number 71 passengers were lost, so that for each passenger lost 4,466,129 passengers were carried in safety. The total number of lives lost on all ships subject to the United States Inspection from all causes, passengers and crew, was 592.

One of the accidents of the year was the loss of the British transport *Aragon* in the Mediterranean, sunk on December 30, at practically the same time and place as the transport *Osmenich* was lost.

**ST. CHRISTOPHER.** See ST. KITTS AND NEVIS.

**ST. HELENA.** An island in the south Atlantic Ocean; a British possession. Area, 47 square miles; population, 3520. The capital and only town is Jamestown (1439 inhabitants). Steamers arrive from England every four weeks, the time from Southampton being seventeen days.

**ST. KITTS AND NEVIS.** A presidency of the Leeward Islands colony (q.v.), consisting of the islands of St. Kitts (or St. Christopher, 67 square miles), Nevis (50 square miles), and Anguilla (35 square miles), with their de-

pendencies. Basseterre, the capital, in St. Kitts, has over 8000 inhabitants; Charlestown, the principal town in Nevis, about 1500.

**ST. LOUIS.** See CITY PLANNING.

**ST. LUCIA.** A British West Indian island; one of the Windward Islands colonies. Area, 233 square miles; population in 1911, 48,637. The capital is Castries, with 6266 inhabitants; Soufrière has about 2300. Most of the inhabitants speak a French patois. The chief products are sugar, cacao, logwood, spices, rubber, and limes.

**SAINT MARY'S FALLS CANALS.** See CANALS.

**SAINT-PIERRE AND MIQUELON.** Islands off the southeastern coast of Newfoundland, which, with a number of islets, constitute a French colony. Area, 241 square kilometres (93 square miles); population in 1911, 4209.

**ST. THOMAS.** See SÃO THOMÉ AND PRÍNCIPE.

**ST. VINCENT.** A British West Indian island; one of the Windward Islands colonies. It occupies between 140 and 150 square miles, and had in 1911, 41,877 inhabitants (estimate of March 31, 1914, 45,605). Kingstown, a port of registry situated at the southwestern extremity of the island, has about 4300 inhabitants. Other towns are Georgetown and Barrouallie. St. Vincent is of volcanic origin. The Grenadines, a chain of small islands, chief of which is Bequia, are comprised in the government of St. Vincent. Products for export are sugar, rum, cacao, arrow root, ground nuts, and spices.

**SAKALIN.** An island off the eastern coast of Siberia. It is crossed by the fiftieth parallel of north latitude, the part north of that line being Russian and the part south Japanese. The Russian portion forms a province, with an estimated area of 14,668 square miles and a population, as calculated for January 1, 1915, of 34,000. Karafuto, the Japanese portion, has an estimated area of 95,194 square miles and a population, as calculated for December 31, 1916, of 95,134. Japanese colonization and timber exploitation are encouraged by the government. See KARAFUTO.

**SALMON.** See ALASKA.

**SALONIKI.** See WAR OF THE NATIONS.

**SALVADOR.** A Central American republic, situated on the Pacific Coast east of Guatemala. The capital is San Salvador.

**AREA, POPULATION, ETC.** The estimated area is 21,160 square kilometres (8170 square miles). The population in 1917 was probably about 1,300,000. Nearly two-thirds of the people are mestizos and nearly one-sixth Indians. In 1915, births numbered 51,058, and deaths, 37,447; in 1916, 46,568 and 41,750. The population of San Salvador is estimated at 66,800 (or, with environs, 75,000); Santa Ana, 48,000 (59,400); San Miguel, 25,000 (30,000).

Elementary instruction is free and nominally compulsory. Children of school age (six to fourteen) in 1914 were reported to number 274,000. In 1916, there were enrolled in the public elementary schools 47,371 pupils. The total number of schools in that year (not including a few professional schools) was 989, with an enrollment of 57,555. There is a national university at San Salvador.

**PRODUCTION, COMMERCE, ETC.** The most important crop is coffee; other products of the soil are corn, sugar cane, cotton, cacao, beans,

peanuts, yams, rice, indigo, tobacco, rubber, and balsam of Peru. Gold and silver mining are of considerable importance.

Import and export values, computed in American money, have been reported as follows:

	1913	1914	1915	1916
Impts. .	\$6,178,544	\$4,958,624	\$4,022,167	\$5,823,619
Expts. .	9,928,723	10,796,495	10,563,871	11,604,751

The principal export is coffee, reported to amount in 1916 to 357,567 metric quintals, valued at 23,373,936 pesos silver; of this export, 29.4 per cent went to France, 20.5 to the United States, and 20.4 to the Netherlands. The chief imports are cotton goods, hardware, drugs and medicines, machinery, and flour. In 1916, imports from and exports to the United States were valued at \$3,586,508 and \$4,102,410 respectively; United Kingdom, \$1,338,700 and \$67,253; France, \$316,136 and \$2,779,179.

Railway in operation, 264 miles. Telegraphs, 2412 miles of line, with 215 offices. Post offices, 139.

**FINANCE.** The legal standard of value is silver. The silver peso, which was worth about 42 cents in 1916, advanced rapidly in 1917, with the rise in price of silver, being quoted at about 71 cents on October 1. Converted to American money, revenue and expenditure in 1915 were \$4,250,000 and \$5,291,000 respectively. Reported revenue in 1916 was 12,779,065 pesos, nearly two-thirds being derived from customs. The budget for the fiscal year 1917-18 placed the estimated revenue at 14,153,950 pesos and the estimated expenditure at 14,060,413 pesos; estimated customs receipts, 8,828,250 pesos. Public debt, as reported for January 1, 1917, 27,950,383 pesos, of which 15,002,635 pesos foreign debt and 12,947,748 pesos internal debt.

**GOVERNMENT.** The legislative power is exercised by the National Assembly, a single chamber of 42 deputies elected for one year by direct vote. The president and vice-president are elected for four years by direct vote. President in 1917, Carlos Meléndez, inaugurated March 1, 1915. Vice-president, Alfonso Quirón Molina. See VOLCANOES.

**SALVARSAN.** Owing to the difficulty of obtaining this drug from Germany, the Federal Trade Commission issued licenses to three firms to manufacture and sell arsphenamine, the chemical name of salvarsan, the orders for licenses to be subject to stringent stipulations made by the commission. The three firms licensed were the Dermatological Research Laboratories of Philadelphia; Takamine Laboratory, Inc., of New York; and Herman A. Metz Laboratory of New York. The right to fix prices was retained by the commission, and while this right had not been exercised in 1917, some of the licensees stated that the drug would be sold at \$1 per dose to the army and navy, \$1.25 per dose to hospitals, and \$1.50 per dose to physicians. The Trade Commission's action was taken under Section 10 of the Trading With the Enemy Act. The Public Health Service prepared rules and standards for testing and were to supervise the making of the drug. See SPIROCHETE BRONCHITIS.

**SALVATION ARMY.** There were in the United States in 1917, 967 corps and outposts, 2848 officers and cadets, 53,483 converts, 200,678
